The political changes in French Equatorial Africa have been keeping Magliozzi busy since the consulate was opened in January. Previously the State Department lookout was conducted from Leopoldville, across the river in the Belgian Congo.

Like Americans in remote posts before him, Magliozzi brought his hobby with him. It happened to be baseball. He found the barefoot youngsters curious, then interested, but their entire athletic orientation—as in most Europe and Latin America—was toward soccer. Players were quick on their feet, but awkward with their hands. The whole idea of catching a ball was new to them.

Coach Magliozzi was both stubborn and persuasive. He decided to use, not a real baseball, but a hollow rubber ball with mock seams. This was economical in itself and was compatible with the lack of gloves.

Bases were sewn together fairly easily and a segment of an old tire with pegs through it made a pitching rubber. When it came to bats, the project was better equipped. In Gabon, a territory north and west of here, there is a reddish wood called Ogouwe. A friendly Swede did the lathing—and voilà, les bats.

BATS WELL BALANCED

A visitor, taking a practice swing with one, found it well balanced and altogether good to grip. The league's bat-bag is the trunk compartment of Magliozzi's car.

Albert Ondongo, who works in the consulate, was one of the earliest candidates. Albert, who might be taken for a kid brother of Jackie Robinson, caught on quickly. Like young ballplayers from Maine to California, he seemed to enjoy batting most.

The grand frappeur—mighty blow, or home run—was the big thrill, Albert found out. He did not know how many other players, from the first day they swung a bat, had reached the same conclusion. And naturally, the most enviable man in baseball was the grand frappeur.

That was how Ernie Banks came into it. Magliozzi wanted to cite an example of a star who could hit homers. But he also wanted one who played the infield, because he felt that the secret of the Africans' progress lay in their development around second base.

Banks was an obvious choice. So gradually the Cub shortstop's name became a byword in the dusty streets off the Avenue Foch, and in the native section of Poto-Poto. And more than that, the example proved practical. The infielding improved.

Magliozzi has tried to get photographs of Banks to prove to the boys that he is a real person. So far, requests have gone unanswered.

The baseball project is personal with the young diplomat. He snorted a little unhappily when it was suggested that the games were serving to keep him in touch with future nationalists.

PROUD OF VICTORY

The truth is in the young New Englander's voice and eyes when he tells of how his team beat a team of Europeans, 10 to 1, a few Saturdays ago. Robert Rogers, the vice consul, a Californian, was on hand, too. During the league's early stages, in fact, the Americans coached, played, umpired, and generally held things together.

Now the structure is firm. Boys like Albert Ondongo, and others from the Ba Kongo, the Téké and the M'Bochi tribes—citizens of a young republic of 750,000 inhabitants of whom more than 100,000 live in Brazba—are getting to be ballplayers.

"They have no shoes, no gloves, no anything," Magliozzi said. "And you saw the ball we use—not even a softball. But you know what makes it all more than worthwhile? The way they go for the force play. You ought to see them—the instinct is there, and the timing. The first time I saw them pull a force play——"

The consul's face lit up. It was as if the scout who discovered Ernie Banks were reliving Ernie's first day in Chicago.

Expansion of Federal Responsibility in Field of Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. NEUBERGER. Mr. President, often we are told that it is dangerous or unwise to expand Federal responsibility in the realm of unemployment insurance. Evidently 21 experts in the field of economics and social science do not think so. Meeting at Ann Arbor, Mich., they have recommended that the national responsibility for unemployment compensation be strengthened on a permanent and lasting basis. This eminent commission was headed by Dean F. F. Fauri of the School of Social Work of the University of Michigan.

Such recommendations are unusually significant, in view of the fact that many of us believe Federal standards in the field of unemployment insurance must be established. I have a particular interest in this subject because my own State of Oregon has suffered heavily during the past 6 years from joblessness in our key lumber industry, and our State unemployment reserves are at a low level.

Mr. President, I ask unanimous consent to include in the body of the RECORD an article describing the action taken by the 21 academic and campus experts in unemployment insurance, as reported in the New York Times of April 12, 1959, under the title of "Jobless Pay Role Proposed for United States."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOBLESS PAY ROLE PROPOSED FOR UNITED STATES—GREATER RESPONSIBILITY FOR ENSURING ADEQUATE FUNDS URGED BY ECONOMISTS

ANN ARBOR, MICH., April 11.—A group of 21 experts in economics and social insurance recommended today that the Federal Government be given a greater responsibility in the field of unemployment insurance.

In a statement issued here they proposed that Congress establish a national reinsurance fund to equalize excessive costs of unemployment insurance in States experiencing high and prolonged unemployment.

They also recommended legislation to insure Federal standards for the amount and duration of benefit payments and broadened coverage to include all those with a substantial attachment to the labor force.

"The changes recommended," the statement said, "would retain the basic responsibility for unemployment insurance in the individual States. At the same time, however, recognition is given to the fact that the Federal Government should have a responsibility to assist the States to meet unemployment which cannot effectively be handled exclusively on an individual State basis."

INITIATED BY DEAN

The statement was initiated by F. F. Fauri, dean of the school of social work at the University of Michigan.

The statement declared that the Federal-State unemployment insurance system in its present form was inadequate to protect the unemployed during a recession.

"Early in 1958, after the recession had begun," the statement continued, "the executive and legislative branches of the Federal Government concluded that the Federal-State system of unemployment insurance was not adequate to meet the unemployment emergency without Federal action. As a result, Congress passed, and the President signed, an emergency stopgap bill to provide temporary unemployment compensation benefits by advancing funds to the States to increase the duration of State benefits by 50 percent.

"At the time Congress took emergency action there was in excess of $8 billion in the State unemployment insurance reserve funds. But a very large proportion of this money was not available in States experiencing heavy unemployment.

"As a result, on January 1, 1959, there was a total of nearly $7 billion in these unemployment reserves which was available but had not been used. Yet, during the last 6 months of 1958, the Federal Government had to advance to the States over $300 million out of general revenues, under the temporary unemployment compensation program, to meet the need for increased duration of unemployment benefits.

"The weaknesses in our Federal-State unemployment insurance system thus were clearly demonstrated by this need for emergency Federal legislation for loans while there were substantial overall reserves.

"This recent experience demonstrates the need for strengthening the national responsibility for unemployment insurance on a permanent basis."

Our Country's Crisis

EXTENSION OF REMARKS
OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. DOOLEY. Mr. Speaker, the Manion Forum, one of the last remaining unhampered mediums of communication in America, being free as it is of the restraints of commercial sponsorship or advertising of any kind, recently presented over the air the voice of the former President of the United States, Herbert Hoover.

Mr. Hoover spoke provocatively of our country's crisis. The message is comprehensive and thought provoking, and I feel it should be included in the Appendix of the RECORD:

OUR COUNTRY'S CRISIS

DEAN MANION. Comes now the highest honor ever to be conferred upon the Manion Forum and the greatest opportunity ever offered to our millions of listeners. Ladies and gentlemen, the former President of the United States, the Honorable Herbert Hoover.

Mr. HOOVER. Thank you, Dean Manion. The Sabbath is a day of reaffirmation of religious faith and the moral foundations of life. It is also a day more free from the routines of life. Therefore, it can well be a day for the consideration of some principles of conduct and morals in this world crisis.

The greatest problem before us is to find some road to lessen the repeated tensions created by the Communists over the world.

The Communist ultimatum as to the free people in Berlin is only their latest. But in fact it involves all free peoples. For behind these tensions lurk the dangers of war more dreadful than mankind has ever known.

A great conference is now proposed with Russia in the hope that it will bring some relaxation of this world crisis.

For over 40 years, most of the Western World has been engaged in an effort to find some workable relationship or some basis of peace with the Communists.

In these efforts, the Western World has had some bitter experiences and by now should have learned some lessons as to the whole Communist purpose.

During these years, either through my official duties or my interest in peace, there has been imposed upon me some awareness of these problems.

From our long national experience, it would seem appropriate to shortly review some of the lessons learned and the principles upon which we must stand fast.

The first of these lessons is a realization of the utterly different concepts of international relations between the Communists and ourselves.

We are a Nation whose actions are based upon religious faith and the moral codes which have sprung from it.

The atheistic Communists, who deny all religious faith, have no code of morals such as that to which we must adhere.

This reflects itself in our sense of moral obligation to agreements into which we have entered; whereas, the Communist concept is that agreements and treaties are an obligation only so long as they are of use to Communists.

I do not need to quote the abundant statements of their leaders themselves admitting this bare fact, nor the long list of treaties they have violated.

For a recent example, I need only point to the agreements at Yalta and Potsdam, which provided for free elections in Poland, Czechoslovakia, Hungary, Yugoslavia, and Rumania to establish their own forms of free governments. Those elections were prevented, or they were never free.

OUR WEAKNESS WELL KNOWN TO SOVIETS

The bitter lesson from this experience was that the Western World failed to stand firm and united in holding to those agreements. And so we stood by and witnessed the death of freedom in five nations.

At this moment, we are again confronted with precisely the same Conmmunist concept of agreements. The number of human beings in Berlin is not large. But the principles of decent relations betwen nations and the moral standards vital to a peaceful world are at stake.

Fortunately, as never before in my recollection have our leaders and the American people been so united in their feelings that the time has come for a determined stand.

President Eisenhower alone can speak for the American people. He has spoken. And our support to him must be unwavering.

The unity of the free world is also today at stake. The agreements as to Berlin must be upheld. They can only be modified by mutual consent in a fashion which truly protects the free people of Berlin and gives hope of a step toward peace.

Firmness today alone can bring a halt in the creeping Communist conquest of Western Europe, and prevent the breakdown of principles and morals in international life into a third world war.

Our people are not frightened by the unceasing blustering threats and warnings showered upon us from the Kremlin. We are used to them. We can defend ourselves.

I scarcely need mention that, in the face of these perils we must maintain such military strength as will deter an attack. And we must continue the development of scientific research and invention which will keep the Western World in the lead in weapons of defense.

Another principle in our relations with the Communists deserves mention. They have at various times proposed peaceful coexistence, the abolition of nuclear weapons tests, the reduction or limitation of armies, and other seeming ideas of promoting peace.

Our people are not adverse to such steps. But, from our bitter experiences, we have learned that, if we reach such agreements, there must be set up independent machinery to enforce such agreements on both sides.

President Eisenhower has stood firm in this principle. The Communists have refused.

THE MYSTERIOUS MR. MIKOYAN

I may well spend a few moments on the mystery of the recent visit of Mr. Anastas Mikoyan, the Deputy Prime Minister of the Soviet Union. It has some lessons on our relations with the Communists.

Mr. Mikoyan announced the purpose of his visit was to discuss the expansion of trade between Russia and the United States. He repeatedly stated that such expansion would be an important step in lessening the tensions of the cold war.

During his visit, he was extended the courtesies and hospitalities due a representative of another nation. Our State Department stimulated a series of dinners or luncheons where he was given the opportunity to freely discuss his project with our businessmen and to expound his ideas over our radio and in our press.

Mr. Mikoyan is an intelligent, highly informed man and his proposal should be analyzed as to its possibilities as a way toward peace.

It is, however, a down-to-earth fact that there never has been, nor is there ever likely to be, such consequential trade with Russia as would thaw out the cold war.

Russia, like the United States, is a great reservoir of raw materials. We have no need for consequential amounts of Russian raw materials. Their natural market is Western Europe, which does need them.

And Western Europe can make manufactured goods to exchange for these raw materials cheaper than we can at our wage levels. Therefore, any volume of such exchanges is most improbable.

And, in support of this, I may call up a little statistic. In the 6 years from 1934 through 1939, until the interruption of the Second World War, there were no important restrictions on trade between the United States and Communist Russia.

But our exports to their 180 million people averaged only about $40 million yearly. Our imports from them averaged about $20 million each year. This microscopic amount of trade is a little less or a little more than our trade today with Denmark or Finland or the Dominican Republic or Ecuador or Liberia.

Also, as to Mr. Mikoyan's proposals to our businessmen, we must remember that there is no such thing as free action between our free enterprisers and the Russian people.

Our people must deal with a Communist agent in New York.

Further, there arises here again a fundamental difference in moral concepts between the Communists and ourselves.

When the present Department of Commerce building was under construction during my administration, I chose a sentence from Benjamin Franklin to be emblazoned over one of the portals of the building. It says: "Commerce among nations should be fair and equitable."

As to fair and equitable, I may mention that there is an International Patents and Copyrights Agreement among free nations by which discoveries, inventions, and the writings of citizens of the free world are protected for a just and fair return for their contributions of new ideas. These agreements have been one of the great stimulants to progress.

The Communist governments have not only refused to sign this agreement but they have ruthlessly appropriated these ideas from the whole free world.

In summing up Mr. Mikoyan's visit, it may be that he had in mind something beyond his idea of the expansion of almost nonexistent trade to thaw out the cold war.

Perhaps he wanted to discover if our people were united behind the President. Also, if we were determined to insist upon certain principles in our foreign relations.

He no doubt discovered an adamant people. And I trust he discovered that we are prepared and that we are not afraid.

As I said at the outset, we continue to strive for world peace. We have great hopes that the impending negotiations may at last bring it to the world.

But the successful negotiator is one who approaches his problems with a clear head, a sharp eye, a long memory. President Eisenhower has that awareness and he must have the unwavering support of a united people behind him and a people who are not afraid.

DEAN MANION. Thank you very, very much, Mr. President Hoover.

Financial Assistance From the Practice of Educational Thrift

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. GRANT. Mr. Speaker, there was recently held at the Alabama Polytechnic Institute, at Auburn, Ala., an industrial seminar on credit unions. Mr. Fred M. Lyon, president of the Opp-Micolas Cotton Mills Co. and chairman of the board of the Alabama Textile Manufacturers Association, made a most interesting talk which I am privileged to insert in the RECORD:

FINANCIAL ASSISTANCE FROM THE PRACTICE OF EDUCATIONAL THRIFT

A majority of speakers start their talk acknowledging the pleasure and privilege of appearing on a program. I am not doubting the sincerity and honesty of those speakers, because I think in most cases it is a pleasure. It is quite an honor to be singled out and use the occasion to exercise your talent, if you have any, on the subject of which you are speaking.

I will start the same way, but to me I get a little more pleasure appearing here today, because even though I fail to qualify in any way as an expert on the operation of employee credit unions, I am happy to be a part of an organization that has learned the operation from the bottom up. It may be that I have little to tell those in the audience who daily work directly or indirectly with company credit unions. I realize there are some people in the audience who have not had the pleasure of working with a credit union of their own. It is to them I bring this talk in hopes that they may share some of my enthusiasm.

I would like to ask a few questions. Have you ever taken time from the problems of the day to reflect upon good fortunes belonging to others? Have you ever been left with a warm glow of satisfaction by the accomplishment of others? Have you ever been so proud of the acknowledged results, when perhaps only the germ of the idea was yours, and even though you gave passive approval, you had little part but merely watched the progress which gradually matured and progressed? This group of ours deserves praise for their stamina, fortitude, and ability of handling.

We are all interested in credit. Even though my knowledge on company credit unions is limited, I have been quite exposed to credit matters since credit is an everyday problem in the running of cotton mills. You know our customers do not knock us down to buy goods or send money ahead of billings. I think back to years of long ago when I had hoped to see a credit union in our organization. As much as I wanted it, I could think of many reasons not to broach the subject for fear the imagination of our well-qualified and loyal workers would pester me into the formation of such a union. For years I had observed monthly reports of various company credit organizations and was astounded by their results. The more I thought how profitable it would be for our employees, the more my resistence to such hesitancy crumbled in favor of the starting of one in our own organization. With our passive approval, it fell to those interested workers within our organization to take the initiative and learn about the workings of company credit unions in general.

Today I am proud of the results and hope to take a few minutes of your time to give you figures you will find hard to believe. In the presentation of this talk may I express to you my own deep feeling of satisfaction toward those from within our ranks who have made this possible. They are not supermen and the same results can be obtained by your workers. I think it only fair, however, to tell you that unless you have employees, experienced from years in the organization, men who are not afraid to work, you had better forget the idea right now. You need workers who will give unselfishly of their time to at least get the formation of a credit union off to a sound start.

When Mr. Jerry Anchors asked me to appear on this program, it was because of his satisfaction that the credit union of the Opp and Micolas Mills was truly a representative one and a unit with which they held in pride. He wanted me to tell you something of the story. He knew that we, in top management, had not hindered their progress, that we had given them the early encouragement without dictating in any way. Neither Mr. Anchors nor I wish to cast any reflection on any of the credit unions which may be directed from the top. It is merely the fact that we have attempted to run ours in this fashion, and the results have been encouraging enough to show you, who may have interest, that the same can be accomplished by your plant personnel.

I think it only fair to express that besides my pride in their accomplishment and the interest for our employees' needs of financial independence, we at the Opp Mills had a selfish motive in wanting this credit organization founded. To give you a brief example: From the beginning of the mills operation we maintained a petty cash account of a moderate amount. From this checks were drawn only for loans made to the employees. The money was paid back in stipulated amounts as agreed upon by the employee and the mill official. In many cases when an employee's needs arose, the one in authority was not always available for such approval or else with his many other duties, prompt handling could not be consummated. I have known employees worthy of a loan suffer from this cumbersome method because there was little other way to handle in the absence of the mill manager.

Credit is a vital function, involving everyone no matter what his economic station in life happens to be. The proper control and sensible handling is the link that must be considered for the borrower to be fully benefited. I do not care how much income anyone has, credit for the long term or for the short term is necessary in cases of unusual circumstances. To create a source of credit for provident and productive purposes is a normal, healthy, and beneficial action. The mills' petty cash fund had to go a long way so as many as possible could secure the amounts they needed. Looking back on this method, I feel a slight sense of nostalgia, because there was no question about the many times we were able to be of help. I have become more sensible than merely a dreamer of the past because our former method was as outdated as the horse and buggy period and especially when compared to the advent of the smooth, easy-working and businesslike way the modern credit union operates.

Toward the end of 1953 we had several conferences with representatives of the Alabama Credit Union League with reference to the mechanics of starting a credit union at our Opp and Micolas Cotton Mills. These talks were most beneficial, as the help given proved fruitful enough that now looking back over the 5-year period, it seems impossible that such progress could have been achieved.

Perhaps at this point, it may be interesting to review some results that have transpired during this period from baby existence to the full-grown vigor of maturity. You may not like statistics, but since they are a necessary function of any well-run business, we realize without this yardstick, past results could not be studied or plans made for the morrow.

The bylaws and charter were completed instruments by February 2, 1954. As the year ended, loans outstanding stood at a modest but impressive first-year record of $13,646.34. December 1955, they had risen to $34,600.26 and showed still further rise at the end of 1956 by increasing to $55,492.15. Nineteen hundred and fifty-seven figures showed an increase, but here a period of digestion and consolidation occurred that gave the year-end figure an increase, but somewhat less impressive. The figure at the year end amounted to $64,619.22. We finished the year ending December 1958 with loans outstanding of $101,919.48.

Now if you will travel with me for a moment through some additional figures which illustrate the needs and services of our fellow workers, I am sure they will interest those of you who could gain for your employees the same benefits. During 1954 loans were made for every conceivable purpose, some say from babies to bathtubs. We are not as interested in the statistical study of what the loans were for as to the amounts. In 1954 the amount loaned was a very impressive $41,942.80. This activity increased during 1955 and amounted to more than $146,000. For 1956 loans were $253,691.70 and for 1957 a hefty $290,000. Last year the one-third of a million-dollar level was surpassed and loans made totaled nearly $378,000.

Gentlemen, a Herculean task was achieved many times over when you consider that since the second month of 1954, 6,757 loans totaling $1,104,632.37 were made to our members for many useful purposes that have made better living and insured better health, while relieving the temporary strain in which we often find ourselves.

Yes, a company credit union run by company workers for the benefit of the members can be one of the grandest financial pillars to security. This is evidenced by the credit union's assets which have grown from the first-year figure of $17,860.71 to a credible figure of $132,139.25 at the end of the fifth full year. I understand from the hard-working secretary-treasurer, Fred Kirkland, that at the end of January of this year the total assets reached $150,207.36 or an increase for January of some $18,000. It is estimated that today the total assets have now surpassed $165,000.

The loans to individual members for necessary purposes is one thing. What about thrift? Time would not permit me to give you the interesting facts that I have available. I could recite many stories which would be hard for you to believe; husband and wife teams both working for their welfare and for the future needs of their families. The encouragement of thrift is after all the finest thing that could happen to any individual. It is so easy to have your money deposited because a written and signed slip channeled through the credit union's office speedily reaches the payroll department, and the deductions from the pay records are made and thrift is started. The shares of members have increased from $15,348 in 1954 to $120,000 in 1958. You do not have to be a mathematician to see that a small amount of money can be safely turned over several times for the benefit of many. This is certainly better than dropping an occasional coin in the sugar bowl or tucking a couple of dollars under the mattress.

Besides the advantage of thrift and the utilization of employees' money for loans, let me tell you of the monetary gains of those who build for the future by systematically investing their deposits into the shares of the credit union. Dividends have been paid each year since 1955 and at a rate varying from 3 to 6 percent per year. This policy, with good management, should be continued throughout the years and still leave a comfortable amount for safety and in accordance with sound rules and regulations of any banking department. These dividends have amounted to $9,901.14 while leaving undivided profits at the end of 1958 of $7,809.27. I think some of the large commercial banks should take notice of the efficient way employees run their credit business, because for the entire year of 1958 the bad debts amounted to the staggering sum of $15.75.

In summing up my statistical review, I would like to repeat that the total dividends, increased shares saved and accumulated do not tell the entire story. The main thing is that those hundreds in our organiaztion who have showed the way by their participation are setting an example for those who have not availed themselves of this opportunity. Many of your workers may find they will be unable to meet emergencies or plan for the future. They need to enjoy some of the interesting gadgets of this modern era while at the same time benefiting by thrift, as well as the furtherance of a fuller life in cooperative venture run by people who live and work with them daily. It is human nature to spend a little more when money is in your pockets. Joining a credit union is the means for dollars that seem impossible to keep to start working for the future while relieving the temporary urge to spend.

I feel sure you gentlemen will pardon my personal references to our credit union, but I know of little else that would serve to illustrate the history and functions of general credit union procedures. I am so sold on the need and use for this general organization that I can afford to be partial in my using our own figures and story. Our people are part of the approximately 7 million members of some 20,000 credit unions scattered in various industries and plants over the entire United States. This impressive total illustrates the mushroom acceptance of a sound institution. Each day men and women are finding easy, friendly, and convenient credit unions solving their personal money problems.

As I said earlier, the Alabama League of Credit Union Officials think our setup to be a model one, because it is run completely and exclusively by those people within our organization, who are not directly associated with top management policies. The Opp & Micolas Credit Union was organized in 1954 by the employees and has been continually run by them. It does have the full cooperation of the company officials and while the general rank and file executives are helpful, they do not have any shares and are not on the board of directors or meddle or dictate in any way. The board of directors and credit committee members are elected by the membership. The only paid worker is the treasurer, and in our case, we would have to give praise to those others who worked long and hard hours without any pay at all. As the business grows I feel sure additions to the staff will have to be added, but the extra business will more than compensate for the additional expense. As a safeguard, irrespective of the number of employees, the ones handling the affairs are bonded for total assets up to $1 million. The daily work goes along, serving members by promoting thrift. Some of the outstanding cases of savings are those who admit they have never saved before and now have several hundreds of dollars to their account.

The interest charge is very low and is computed at 1 percent per month on the unpaid balance. This is generally figured not to cost over 6 percent for the duration of the loan. These loans take care of emergencies, for the purchase of appliances, as well as automobiles. A typical case of savings is $50 to $100 on appliances and $100 to $300 on the purchasing of an automobile. They are also able to consolidate debts with payments low enough to eliminate financial strain. A further help in the case of our workers has been the avoidance of the facilities that are handy, but expensive.

I mentioned earlier it has been a relief to the company in that it has completely eliminated borrowing by the employees; it has also helped the company, as well as employees in the reduction of garnishments. This reduction amounts to 75 or 80 percent. Our people feel more secure in that they have financial relief as well as savings—all this with possibility of a return from their investments. This chain of events can be accomplished by payroll deductions as low as 25 cents.

One of the most attractive and valuable services of the credit union is the life insurance its members have at no extra cost. All the premiums are paid by the organization. A member's certificate is given each showing the table of benefits paid in event of death or total disability, for each $1 savings up to $2,000. This ranges from 25 percent to 100 percent, varying according to age. No insurance is available on deposits made after age 70, but the insurance is good on any money you deposit before age 70 unless withdrawn, or for as long as you live. While no loan insurance is available after age 70, all personal loans are covered up to $10,000 before age 70.

From a very humble start in 1954 with the beginning by seven charter members, the Opp and Micolas Credit Union has shown steady growth. There are now approximately 625 members, with an average savings of $241.45. Inasmuch as 126 new members joined in 1958, the average has been reduced from a more creditable figure of a year ago. The highest family unit savings account is $4,400.26.

About half the loans carry additional signatures and the average loan balance is about $306. The State League is ever ready to be helpful, but by no means are they the boss of the local credit union. The losses have been small, amounting to $206.80 in 1956; 1957, $325.53; and 1958, $15.75. From this total of losses, recovery has been $51.58.

An example of how our employees are using the facilities for thrift is indicated by the large deposits. One employee is depositing biweekly $100; 1, $80; 3, $50; and 15 depositing $25.

The important thing is to get credit union members in at first who are sold on the organization and who have been employed long enough to know the people. The all important credit committee must have as members those individuals who know people and conditions at the respective plants.

Each year when dividends are declared, they are posted to the credit of the individual member and remain for further investment or are available for his withdrawal. As a matter of fact, any deposit can be made one week and withdrawn the next. An interesting example is one that actually happened at our mills. One member deposited $1,000 in January. In February he withdrew to buy a house. The seller of the house came in the following day and deposited the $1,000 in the credit union and thus kept the money in the credit union for further use for others, while at the same time, investing for the future by possible realization of income. The largest loan made so far has been $6,000 with the smallest loan $5. At this time the real estate loans run about 9 percent of the total loans.

There are many details connected with any credit union's operation and the Alabama Credit Union League will be more than willing to assist in the formation of such an organization at your plant. With the many thousands of these scattered over the country, and with literature, periodicals, and pamphlets available from the Credit Union National Association, Inc., no one should have any trouble starting. It is advisable to secure information from those who have made a success and our directors, credit committee, or secretary-treasurer would be more than willing to give anyone information and the benefit of their experience. The members have to own at least one share to become a full-fledged member; this share is valued at $5. This enables you to become eligible for a loan up to $300 on your own signature, or at the discretion of the credit committee, borrow $300 in excess of amount of saving or $300 for each cosignature. With suitable collateral, there is no limit to your borrowing.

If I have used too many personal allustrations, I beseech your apologies. If I have seemed over enthused in my references, it is because I have seen the incalculable benefits that the credit union of the Opp and Micolas Cotton Mills has brought to our personnel. We in top management have offered our cooperation and support but have not pried into their affairs.

If I have even seen an organization within an organization work independently of each, it is the directors and officers of the company's credit union. I do hope I have been able to impart to you some enthusiasm as to the results which can be obtained. My appearing on this program today was solely because of my interest, and my pride in their accomplishments should show you my wholehearted endorsement to the unlimited possibilities of such an organization for use in savings, the foundation for thrift, and the bridge to span the yawning chasm of mis-

used credit that afflicts the everyday lives of us all. Credit is economics, so let us be economical in the use of money, and soon we will find that the paths of loyal workers, handling more efficiently their money problem, can be one answer to a more satisfied person when he faces the realities that often confront families and friends.

Albert J. Hayes, President, International Association of Machinists

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. HUMPHREY. Mr. President, in the past several months there has been a great deal of attention focused on the misconduct of certain union officials. It is important, however, that a proper perspective be kept. The betrayal of a sacred trust by a relatively small number of union officials should not serve to obscure the fact that the vast majority of labor leaders are sincerely dedicated to honestly serving the rank-and-file union members.

One of our country's outstanding labor leaders is Albert J. Hayes, president of the International Association of Machinists. Mr. Hayes exemplifies the spirit of the leadership of the American labor movement—service to the union membership and to the community at large.

The Christian Science Monitor on February 25, 1959, presented an excellent article entitled "Albert J. Hayes Came Up From the Ranks."

I ask unanimous consent that this article describing a great labor leader and great American be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALBERT J. HAYES CAME UP FROM THE RANKS

Last year when the International Association of Machinists marked its 70th anniversary Senator HUBERT H. HUMPHREY, Democrat of Minnesota, paid an unusual tribute to a labor leader on the Senate floor: "It is one of the great attributes of democracy that the democratic process produces leaders who are imbued with the spirit of justice and freedom and who typify and reflect, to a great extent, the qualities of the men and women who raise them to office.

"Such a leader is the international president of the Machinists Union, Al Hayes. I have known him for quite a few years now. I admire him for his personal qualities and for his personification of what is good about the American labor movement," Senator HUMPHREY told the Senate.

Criticism of a James R. Hoffa makes news, praise for an Al Hayes seldom does. And, unfortunately, the questionable circumstances which permit the emergence of a Hoffa to power become widely known—and condemned as a labor fault—while the democratic processes by which a Hayes rises through union ranks to leadership too often go unnoted. In the Machinists, and most other unions, carefully planned checks and balances assure that democratic practices are not only written into union laws but are also enforced.

The president of the International Machinists, Albert J. Hayes, is a 59-year-old machinist who worked his way up through union ranks to be elected president in 1949. The organization's most dramatic growth in numbers (nearly doubled since 1950) and in prestige has taken place under his administration, recognized and respected in labor as highly competent and businesslike. The IAM was an independent union when Mr. Hayes was elected president. Within a year, Mr. Hayes successfully eased strained jurisdictional relations with a number of AFL unions and led the machinists back into the federation. At the same time, he negotiated a no-raiding agreement that smoothed relations with the rival United Auto Workers (CIO). This pact served as a model for a no-raiding agreement between AFL and CIO—and helped clear the way for the merger of the two major labor bodies in 1955.

KEYMAN IN AFL–CIO

Since the merger, Mr. Hayes has had a key role in the AFL–CIO as a vice president and executive council member, as chairman of the ethical practices committee, and currently as one of the four members of a special top-level committee working for the passage of constructive anticorruption legislation in the 86th Congress.

When Congress acts, and there is little doubt that it will, chances are that the law it passes will have no major effects on the Machinists Union. So far, the reforms proposed on Capitol Hill—intended to guarantee democratic processes in unions and to safeguard labor funds—provide no more stringent controls than those written into the Machinists constitution.

Not long ago, an irritated employer criticized the Machinists Union for practicing too much democracy. He suggested that life could be made a lot simpler for everybody through a few shortcuts. What he urged was not dishonest or uncommon. He wanted certain shop officials appointed, not elected.

IAM negotiators explained that they couldn't be appointed; under the union's laws and traditions, they have to be elected. The men and women in shops, the machinists' rank and file, exercise authority. Power doesn't flow from the top down but upward from the membership, individual by individual. It may not make life any simpler,, but it does make actions more democratic.

The principle of power rising from the ranks is reinforced by the fact that all of the IAM's officers and all but a handful of its staff, those who require a special training or professional background, come out of the shops.

The basic unit of the IAM is the local lodge, which may range in size from 25 to 25,000 members. The lodges enjoy a high degree of autonomy. Their members set their own duties and elect officers annually. Local officers usually receive no pay, although many lodges make up whatever pay officers lose if they take time off from jobs to take care of union business.

LOCAL LODGES COOPERATE

Where there are clusters of lodges, the local units can, and usually do, coordinate their activities through district lodges. Such a lodge generally has the money, the pooled resources of affiliated locals, to employ one or more business representatives to conduct the affairs of the local lodges—grievance handling, contract negotiations, and so forth. The business representatives are elected either by delegates to district conventions or through a referendum vote of members of all local lodges. Their salaries are set and paid by the district, but up to $500 a month is repaid by the international union.

Local and district lodges in most States are organized into State councils, largely to further legislative and educational activities. In many instances, they may also be part of industry-wide or company-wide conferences created to coordinate contract bargaining.

While local lodges enjoy considerable autonomy, they may be suspended or put under a trusteeship where serious charges of misconduct are involved. During the past year of Senate labor investigations, trusteeships have been criticized sharply as undemocratic. The IAM, however, believes that trusteeships are necessary if union policies and standards are to be policed; the evil is in misuse of suspension powers, not the existence of takeover authority. Trusteeships are limited by a system of checks and balances in the Machinists Union. Since 1947, only six locals have been suspended.

Locals can suspend members for violations of the laws and policies of the IAM, but only under carefully specified procedures. Formal charges must be presented to the accused member, who must also be given time to conduct his defense—and to have another lodge member serve as his counsel. Charges are heard by a three-member trial committee, which reports its findings and recommendations to the local lodge. Members vote, by secret ballot, first on the guilt of the accused member, second on what, if any, penalty should be invoked. The local's decision may be appealed to the international president, the executive council, and finally the Grand Lodge convention.

The basic law of the IAM is its constitution, a comprehensive document that spells out, in detail, all rights and duties of members. Under it, the supreme governing body of the union is the Grand Lodge convention, which meets every 4 years or upon call of at least 20 percent of all local lodges.

Each convention reviews and conducts the general business of the organization. It may recommend changes in the constitution, but it cannot make them. Amendments must be submitted to the entire membership to be approved by a secret ballot referendum.

International officers are elected in the same way, by referendum, with every member of every lodge given an opportunity to vote by secret ballot. The election of union officers by secret vote is one labor reform proposed on Capitol Hill.

If vacancies occur, they must be filled through elections, not by interim appointments.

Quadrennial conventions are far less ideal than more frequent meetings; congressional proposals would bar, as undemocratic procedure, stretching the interval between conventions beyond an absolute 4-year limit. But conventions are a heavy drain on union finances and they're getting more expensive year by year.

The Machinists seek to meet this problem by giving between-conventions executive and judicial powers to the 11 general officers of the union, who sit as the executive council, and by giving local lodges a checkrein—power to institute recall procedures and, with the support of 15 percent of all lodges, to force a recall election.

The funds, property, and assets of the IAM are protected by strict constitutional control similar to those that guarantee democratic procedures. Eric Peterson, a former Union Pacific machinist, elected secretary-treasurer of the IAM in 1944, is the principal guardian of the union's financial integrity. When AFL–CIO decided to draft a code of ethics to govern financial practices of its affiliates, Mr. Peterson was one of the first men it called on as an adviser.

FUNDS CLOSELY CONTROLLED

IAM lodges control their own funds, but under the constitution they must give monthly financial reports to their members and to the international. Loans or appro-

priations for any purpose other than the legitimate work of the local are prohibited. Loans to private individuals, for any purpose, are strictly forbidden.

Local funds must be audited once every 3 months by an elected committee of three lodge members. Officers can't serve on the committee. The quarterly audit reports must be submitted to the lodge membership and to the international union's secretary-treasurer.

To make double sure that the books of Machinists locals are always in order, the international employs 25 full-time, trained auditors who are constantly on the move, from lodge to lodge, conducting thorough audits of all local funds.

The international—the Grand Lodge—has about $20 million in assets. The 11-member executive council, rather than any single officer, exercises control over the union funds and property. And it is limited in what it can do. For instance, the council may invest funds only in U.S. and Canadian Government bonds and such other securities as are approved for trust funds by the Probate Court of the District of Columbia.

The Grand Lodge publishes and submits to all local lodges, once a month, a report of its receipts and expenditures. If any local requests it, the Grand Lodge must also furnish a copy of the expense account of any paid representative of the union.

The international's books are audited every 6 months by a three-man committee elected by local lodges within a 40-mile radius of the IAM headquarters in Washington. The committee is authorized to select and employ a certified public accountant. A report on the audit findings must be published and circulated to members.

Stringent rules also apply to IAM health and welfare plans. Competitive bids must be obtained if they are to be underwritten by a commercial insurance company. No paid union representative is permitted to collect extra pay for services in administering such a plan or to have any connection with an insurance company or agency that handles such a plan.

According to the IAM, few organizations of any kind, in business, banking, or the professions, can surpass the record of financial integrity established by Machinists Union over the past 70 years.

The Late Robert Aufderheide, Supervisor of the Willamette National Forest in the State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the RECORD an editorial from the Bend (Oreg.) Bulletin of March 30, 1959, paying tribute to the late Robert Aufderheide of Eugene, supervisor of the great Willamette National Forest. Bob Aufderheide, who recently died at the untimely age of 50, was a splendid conservationist and forester who served his State and Nation well. I concur in the sentiments of the Bulletin editorial which is entitled "Bob Aufderheide, 1909–59."

I ask unanimous consent that the editorial appear in the Appendix of the RECORD, so my colleagues may know the qualities of a man who was a custodian of one of our great Federal forests and watersheds in the Pacific Northwest.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOB AUFDERHEIDE, 1909–59

Few in Central Oregon—outside of professional foresters—knew Bob Aufderheide, who died from cancer in Eugene Saturday.

Aufderheide was supervisor of the Willamette National Forest at the time of his death. A graduate of Oregon State, he had been employed by the Forest Service since his college days.

Although few over here were personally acquainted with Aufderheide, all of us owed him much.

Bob Aufderheide was in charge of one of our largest natural resources, the Willamette National Forest, which alone cuts more timber each year than 10 of 12 regions of the U.S. Forest Service.

He was our hired manager of this resource.

And we could not have had a more devoted man working for us.

Aufderheide was an exceptionally good forest supervisor—one of the two best we have seen in Oregon in recent years. It is ironic that the other, Jim Egan, should also have died of cancer in recent months.

Prior to going to Eugene, Aufderheide had made his reputation, and an excellent one it was, on the Umpqua and Siletz forests.

One of an editor's most difficult jobs is to note the passing of one whose ability he admired or whose friendship he enjoyed.

In the case of Bob Aufderheide, forester and friend, this is doubly difficult.

Oregon's Centennial Celebration Uncarths Interesting Douglas County Data

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, during this Oregon centennial year a number of interesting facts about my State and the 36 counties in it are coming to light.

Douglas County of Oregon's Fourth Congressional District can cite a good number of features which are found in no other area. These have been listed in the Roseburg (Oreg.) Douglas Fir of April 3, 1959, which is published by Dick Gilman. The article, "Know Your County," follows:

KNOW YOUR COUNTY

There are many items of interest in Douglas County and about Douglas County that everyone should be prepared to give the thousands of visitors who come here this year. This being our centennial year, we can expect many extra thousands to visit our area too.

Douglas County has four leading industries and they are, in order: Lumbering, mining, agriculture, and tourist trade.

Here are just a few of the interesting things you should know about our country and pass on to others.

We are the heart of the largest remaining stand of Douglas fir timber in the Nation.

The North Umpqua River is the longest river to originate, flow through and end in one county.

The only place in the world where two rivers meat head-on is where the North Umpqua and Little River meet at Glide, Oreg.

We have the lowest recorded wind velocity of any city in the world.

Douglas County has more square miles of land than three of the States in the Union. We are larger than Connecticut, Delaware, and Rhode Island.

At Tiller, Oreg., is the tallest Cedar tree in the world.

What Mutual Security Funds Buy

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mrs. BOLTON. Mr. Speaker, one of the common misunderstandings about the mutual security program is the belief that all these funds are spent abroad. As a matter of fact, more than 75 percent of all mutual security appropriations are spent in the United States, accounting for an estimated 500,000 full-time jobs for our citizens.

In the April 4 edition of the Christian Science Monitor, Mr. Neal Stanford has written an illuminating article on just how mutual security funds are used. In the belief that this article provides a valuable insight into the operation of the program, I include it in the RECORD together with my remarks:

WHAT MUTUAL SECURITY FUNDS BUY
(By Neal Stanford)

To understand the $3,930 million mutual security program you really need a primer or handbook, for how many people really know the difference between military assistance, defense support, technical cooperation, special assistance? And what about the mysterious pipeline that plays such a large part in mutual security programs, or section 402 that deals with surplus agricultural products?

Before getting into these terms and their meanings and differences it is necessary to correct a misapprehension, in fact, a great big mistake, namely, that mutual security is foreign aid.

The trouble with the foreign aid handle to this program is that it suggests a give-away, a handout, Operations Santa Claus. The fact is that while mutual security is aid it is not foreign. The only foreign thing about it is that its end products wind up abroad.

Actually more than 75 percent of all mutual security appropriations is spent in the United States; and that which is spent abroad benefits the American economy, for it makes it possible for the countries where mutual security money is spent to do just that much more business with Uncle Sam through trade. Also, mutual security spending in this country accounts for over 500,000 full-time jobs from Maine to California. Now, on with the primer:

Pipeline: This term refers simply to money committed but not spent. For example,

some jet planes are to be built for an ally with mutual security funds. They have to be ordered, manufactured, delivered. It may be 3 years between the order and the delivery. But the money for these planes is earmarked for that purpose all this time.

Six years ago there was some $8,500 million in the pipeline. This has been cut over the years to $2,600 million. It possibly could be reduced more, but not much. In other words there always will be a pipeline. In a sense mutual security has been living off its pipeline these last years to the tune of nearly $1 billion a year. But that process cannot go on forever. Today's pipeline is down to about its irreducible minimum.

Section 402: This is the amendment to the mutual security act that requires that a minimum specified amount of MSA funds be used to buy and export surplus agricultural products, in exchange for foreign currencies. To date nearly $2 billion worth of wheat, $2½ billion worth of cotton, and half a billion dollars of both corn and fats and oils have been exported under this program.

Military assistance: Of the $3,930 million the President is asking for mutual security, $1,600 million is scheduled to go for military assistance. This means the military equipment, training supplies, and services going to foreign military forces as part of America's own military defense program.

Defense support: This is the second largest item in the MSA program—$835 million this year. It covers the economic assistance that the United States will make to 12 countries—in effect subsidizing their economies to make it possible for them to maintain larger military forces than they otherwise could afford.

Most of this goes to Korea, Formosa, Vietnam, Turkey—and except for Spain these 12 countries lie around the southern and eastern boundaries of the Sino-Soviet empire.

Development Loan Fund: This new Government corporation set up to make soft loans to underdeveloped countries would get $700 million out of 1960 MSA funds. It could do a land-office business if it had more money. There are some $3 billion in requests on hand—but the Fund has had only $400 million to work with. Loans from this Fund go for power, transportation, and communication projects, for health and sanitation programs, industry and agricultural development.

Special assistance: This is the economic aid going to countries that do not get economic assistance through defense support that accompanies military assistance. The President is asking for $272 million for this coming year. It is economic aid that does not come under other specific categories.

Contingency fund: The $200 million the President wants for this emergency fund would give him the means to meet economic and political crises without having to ask Congress for special funds. In the past, money from such a fund has gone to keep Jordan from collapsing, to help Chile when copper prices collapsed, to rush aid in case of flood, earthquakes, hurricanes.

Technical assistance: This is just what its name implies—the sharing of U.S. know-how through training foreigners in this country, sending U.S. specialists abroad. Last year nearly 10,000 foreign nationals came to the United States for training; nearly 7,000 U.S. technicians went abroad under this program.

And, finally, other programs—a catchall phrase to cover whatever is left out of any operations and also pay increases.

Bataan Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BOLAND. Mr. Speaker, the evil days of World War II bequeathed us many unhappy memories and untold miseries. For more than 3 years our fate and future seemed to be in jeopardy, and at times the whole issue was kept in precarious suspense. The day of infamy, which began with Pearl Harbor, cast a pall over the Nation that grew darker with the fall of Bataan 4 months later. During those months and long thereafter the whole free world, and we in the United States as its leader, were on trial—physically, spiritually, ideally, and morally. And in that supreme trial, that life-consuming and soul-scorching trial, many had their finest hour. We survived; we overcame the enemy; and finally were victorious through the sterling qualities of our fighting forces on all fronts. And those qualities: resourcefulness and resiliency, tenacity and ingenuity, proved their worth better at Bataan than anywhere else during the early phase of the war.

OUR FORCES OUTNUMBERED AND EXHAUSTED

Our forces, numbering about 20,000, plus about 100,000 Philippine citizen army, were not match for Japan's more than 200,000 seasoned troops. The enemy had succeeded in eliminating our Air Force there; the island was cut off from the outside world; and the best of the combined American-Filipino forces were cornered at the strategic Bataan Peninsula. At Bataan our isolated and far outnumbered forces withstood the unrelenting and intensive enemy attack for more than 3 months. Finally, when sheer physical exhaustion doomed our forces, they surrendered to the enemy on April 9, 1942, 17 years ago. In that great battle, waged far from our shores, our men proved their bravery and courage, and they willingly sacrificed their lives for the good and glory of their beloved country. On this anniversary we bow our heads and pray for their blessed memory.

CURRENT AMERICAN-PHILIPPINES RELATIONS

Mr. Speaker, the New York Times of last Thursday printed a timely editorial on the Bataan Day anniversary and it pointed up recent events in American-Philippines relations which should be of concern to every Member of this House.

I had originally asked permission last Friday to include this editorial with my remarks above, but later I learned that the New York Times editorial had been inserted in the RECORD by Senator KEATING of New York. I want to take this opportunity to express my complete agreement with the editorial relative to Filipino loyalty and the matter of outstanding Philippine claims.

Wonderful Wilderness Areas

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. HUMPHREY. Mr. President, in its March 23 issue, the New Leader magazine published an excellent article written by William E. Bohn about our country's wonderful wilderness areas. This is one of the finest pieces of writing I have seen in support of the National Wilderness Preservation Act, S. 1123, which I have introduced on behalf of myself and several colleagues from both sides of the aisle.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPEAKING UP FOR WILDERNESS
(By William E. Bohn)

When in the great assizes of creation the judge's voice rings out: "Who speaks here for the trees, the animals, the birds, the flowers?" one determined voice answers back: "I do." That reply is launched by Joseph Wood Krutch, the shy, thoughtful, and accurately informed disciple of Henry David Thoreau, who went west some years ago in search of health in the pure air of mountain elevations.

I wrote a week ago that my guess was that the wilderness bill which had been introduced into Congress would pass triumphantly. I laid that optimistic wager because the bill is supported in the Senate by 15 of the finest fellows, most of them Democrats, but a few of them the very pick of the Republican crop. I can't imagine defeat for a bill supported by such men. But friend Krutch writes under a recent date: "The bill is having a tough time. The Arizona hearing ended by voting against it, too many interests unwilling to have withdrawn from possible future exploitation of 'resources' on which they might make a profit. If you can say a word in favor of the bill, it might help."

I can do better than that. Krutch has sent me a couple of pages about our woods and given me permission to print them. I challenge anyone to read this declaration without being thrilled. If there is a Member of Congress who can read this without feeling his patriotism tingle clear down to his boots, he must be a dead man. Krutch writes:

"A few years ago the distinguished English naturalist, James Fisher, made a 20,000-mile trip through 'Wild America' in the company of our own ornithologist, Roger Tory Peterson. His parts of the book which he wrote in collaboration with his companion are exclamations of wonder and paeans of praise for a land for whose richness, beauty, and variety even all his book knowledge had not prepared him. 'Why is it,' he asked, 'that Americans show us Europeans so little of their earthly paradise and publicize too little their determination to share it with wild nature?' And he concluded with this tribute which the wisdom of our fathers earned for us: 'Never have I seen such wonders or met landlords so worthy of their land. They had, and still have, the power to ravage it; and instead they have made it a garden.'

"All too ominously true is the last part of that sentence: 'They had, and still have, the power to ravage it.' Theodore Roosevelt asked us to stay the hand, and we did. Will an American Congress of this generation follow the example set a generation ago, or will it deny the wisdom of that example and reserve no areas as not to be ravaged?

"What we have are things which no other nation can recover. If we permit them to be lost, we cannot recover them, either. This generation may very well be the one which will make the irrevocable decision whether or not America will continue to be for centuries to come the one great nation which had the foresight to preserve an important part of its heritage. If we do not preserve it, then we shall have diminished by just that much the unique privilege of being an American.

"The natural areas which the wilderness bill proposes to establish are logical and necessary corollaries of the system of national parks which the wisdom of our fathers set up some 40 years ago. Those parks are now the wonder and envy of Europe which can boast nothing remotely comparable because no European nation had the foresight to establish anything of the kind while there was yet time. The question now is whether or not we can be as farsighted as our immediate predecessors or whether we shall soon be compelled, like the inhabitants of Europe, to admit that we let the last opportunity slip by.

"If it should be asked why, since we have the parks, the wildernesses are also logical and necessary, the answer is simple: It is because parks are inevitably partly tamed and our descendants have a right to know also the beauty and the majesty of Nature herself as they can exist only when it has been neither exploited nor 'improved.'

"That such unspoiled wild beauty was once everywhere had much to do with the foundations of American character. It is as much of our past as Mount Vernon or Williamsburg. But it cannot be preserved in books or museums. Not to preserve some specimens in the only way they can be preserved is to be guilty of vandalism comparable to the razing of Mount Vernon or the burning of the Congressional Library.

"The grandest feature of grand nature is her forests and they are nowhere grander than they were (in some places still are) in America. But things move fast in the United States. Not long ago the problem was 'to clear the forests'; today it is to preserve at least a few of them. Trees are useful of course—for lumber and for paper. But are they not useful also for themselves? And who can say that we are too poor to afford a few examples of what we can so easily destroy but cannot possibly create?"

Interstate Highway Repayment Act

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. BUCKLEY. Mr. Speaker, I have today introduced H.R. 6303, designated as the "Interstate Highway Repayment Act," authorizing appropriations to reimburse States which have built toll and free highways which have been made a part of the national system of interstate and defense highways.

The proposed bill authorizes the appropriation over a 15-year period of the total net reimbursable amount shown on the annexed exhibit A. This amount is based upon the report—House Document No. 301, 85th Congress—of the Secretary of Commerce concerning the depreciated cost of the free or toll roads, or portions thereof, included in the Interstate System.

All funds proposed to be appropriated under this bill are required to be used by the States solely for highway construction on the Federal Aid Primary System. These funds are to be expended under the present Federal aid legislation with certain exceptions. No matching by the States is required. The bill provides for the apportionment of the funds on the basis of the relative contribution made by each State so that the result is that at the end of the 15-year period each State shall have received the matching ratio of its depreciated cost, less any Federal aid payments already made.

This statement supports the proposed bill for the following reasons, each of which is discussed below:

First. There is an obligation to the contributing States.

Second. This obligation should be met at once.

Third. It is feasible to meet it now as done in the proposed bill.

Fourth. Toll roads are entitled to the same credit as free roads.

Fifth. The national interest is well served because the proposed bill provides for the construction of roads where the need is great.

I. THERE IS AN OBLIGATION TO THE CONTRIBUTING STATES

The construction of the Interstate System is a project national in scope. This is recognized by the Federal Aid Highway Act of 1956 when it states in section 108(a):

> It is hereby declared to be essential to the national interest to provide for the early completion of the National System of Interstate Highways.

That section further states that:

> It is the intent of the Congress * * * that the entire system in all the States be brought to simultaneous completion. Because of its primary importance to the national defense the name of such system is hereby change to the "National System of Interstate and Defense Highways."

This declaration by Congress made only a few years ago would seem to make it clear beyond any doubt that we are dealing with a national project.

Other factors also indicate that this conclusion is inescapable. The Federal share payable for this construction varies between 90 and 95 percent of the cost. The standards are uniform throughout the country and are so developed that the highways and bridges will carry military equipment, which was not the case formerly, since in some States the bridges were not designed to support heavy loads and the grades were too steep or the roads were too narrow. It was planned and designed as a National System of Interstate Highways as indicated by the requirements of section 7 of the Federal Aid Highway Act of 1944.

Since in law and in fact it is a national project, it is distinguishable from the usual Federal aid concept. Federal aid is given to the States for a multitude of purposes including the construction of roads. In the usual Federal aid case, funds are required to be matched by the States on a 50 percent basis. Generally Federal aid highway projects are dispersed into a number of different places within a particular State so that all of its counties within a few years may receive the benefit of some new Federal aid road construction. The aid is given to assist and foster highway construction within that particular State. This is a vastly different concept than the concept of the Interstate System which is a National System of connected roads, which is to be brought to simultaneous completion, and constructed because of a national interest in its construction.

The difference is emphasized by the difference in mode of payment. The amount of Federal aid authorized to be appropriated in any given year has been based in a general way on the realization that the States needed assistance in road building and the amount has been gradually increased over the years. But there has been no criterion other than the general need. In the case of the Interstate System the amount of the authorization was based upon the original estimated cost. For ordinary Federal aid, the amount authorized has been apportioned to the individual States on old and established formulas of area, population, and road mileage. The apportionment in the case of the Interstate System is based upon the cost of construction to the individual State of its specified mileage in that State, and when such construction has been completed the apportionment ceases.

Once the difference between usual Federal aid and the construction of the Interstate System is clearly understood, few will dispute that a State which contributes highways or a portion thereof to the Interstate System is entitled to a credit for that construction. The point can be illustrated in numerous ways. For example, if the Federal Government in connection with its establishment of post offices should find certain public buildings in some States adequate and adaptable for use as post offices, certainly no one could contend that because these had already been constructed and were ready for use, the Federal Government would not be required to pay for them; but that it would be required to pay some other State to construct a post office which was not at the time in existence. The position that payment should not be made in either case is clearly untenable. The reason that it seems so clear in the post office case is that the establishment and operation of post offices is a Federal function carried out entirely by the Federal Government.

There is no distinction between the post office case and the highway case, once it is conceded that the construction of the Interstate System is a national project 90 to 95 percent of the cost of which is paid for by the Federal Government. If a State has supplied a road, or a portion thereof, already constructed, it is just as entitled to a credit for this as it would be if it had con-

tributed an established public building that could be used as a post office.

This point of view has important backing. The Clay Committee report which was submitted to the President in January 1955 after stating that some States had already constructed sections of the Interstate System made this comment at page 21:

> Such construction should not be discouraged by this report since our goal is maximum highway improvement.

It continued at page 22 with the definite recommendation that:

> Those States in which sections of the Interstate System have been provided to meet the presently established standards for the completed system should receive appropriate credit.

The suggestions in this report were incorporated in H.R. 4260 and similar bills introduced in 1955. These bills were generally believed to be the administration bills, so that as late as 1955 it may be said that the administration was in favor of giving States a credit for their road construction to the Interstate System.

While it is a fact that in the following year the Secretary of Commerce reversed this position and opposed the inclusion of a provision authorizing a credit in H.R. 8336 it was opposed not so much on the ground that the States were not entitled to a credit, as on the ground of expediency. In his statement to the committee the Secretary said that he did not favor a credit at the present time—see hearings before Subcommittee on Roads, 1956, page 11. He also stated:

> Obviously more roads can be completed, if those already built are not bought. Furthermore, the States would not appear to be hurt by failure to extend credit for such roads. In general, toll roads have been set up on a sound fiscal basis, and have not cost the States a penny. No amount has been included in the authorizations for the Interstate System for toll and free road credits, and it would, therefore, be necessary to increase the authorizations or cancel a part of the needed program if such credits are to be extended.

The last sentence probably expresses the fundamental reason for the change in position of the Secretary of Commerce. It is usually the principal reason relied on by other persons who oppose recognizing this obligation. The argument is that there is not enough money; that it is not feasible. These persons do not take the position that it is unfair to give the States credit, but rather that it is not feasible so to do. Few persons say that it would be unfair. It is difficult to see how they could.

In conclusion, fair play and equity demand that this obligation be recognized and that a credit be allowed those States which have constructed highways or portions thereof on the Insterstate System, and thus relieve the Federal Government of a tremendous expenditure for a project of national scope which was planned in the national interest.

II. THIS OBLIGATION SHOULD BE MET AT ONCE

Four years have elapsed since the Clay report and the introduction of the first bills with respect to authorizing funds for the Interstate System. Three years have elapsed since the passage of the Federal Aid Highway Act of 1956 which did authorize the necessary funds. Section 114 of the Federal Aid Highway Act of 1956 represented a temporary solution of the controversy between those persons favoring a credit for free and toll roads and those opposed. It was a solution that seemed sound at the time. No one could state with any accuracy at that time which roads would be incorporated into the Interstate System and what they cost. A definite basis for action prior to a final decision by Congress seemed advisable. This was accomplished by section 114.

The report called for by section 114 was transmitted to the House on January 7, 1958, and has been designated as House Document No. 301. A hearing was held on this report before the Committee on Public Works on March 25–26, 1958. No action was taken following that hearing.

The necessary facts are set forth in that report and there is no reason for further delay. Fair play requires the immediate recognition of this obligation to the contributing States. It is no answer to say that the Federal Government cannot afford at this time to meet this obligation. These are the most prosperous times according to all business statistics that this Nation has yet encountered. If this obligation cannot be met today, it never can be met. Postponement is not an answer.

Most persons who urge postponement, and yet do not argue that it would be inequitable or unfair to allow this credit, are in effect stating that the Federal Government is not in a position to meet its just obligations. It is, indeed, a sad commentary on our moral conscientiousness that expediency should rule, rather than equity. There is an obligation or there isn't an obligation. If there is one, it should be repaid at once. Part I of this statement clearly demonstrates that there is such an obligation.

III. IT IS FEASIBLE TO MEET THIS OBLIGATION TODAY

The proposed bill authorizes appropriations over a 15-year period commencing with the fiscal year ending June 30, 1962. While these authorizations total the net reimbursable amount shown by exhibit A of $4,295,600,000, the amounts involved for any one fiscal year range between $225,000,000 and $360,000,000. These annual authorizations are clearly within a feasible area.

Apportionments for the fiscal year ending June 30, 1962, must be made prior to January 1, 1961, and therefore will be made probably in the fall of 1960. Thus, the States will be entitled to contract for the work on the basis of the apportionments next year. They will also have the knowledge of the definite amounts that will be apportioned to them over the ensuing 15 years.

The proposed authorization for a 15-year period departs from the usual authorization of Federal aid for roads in that the regular Federal aid authorizations are generally for a 2-year period. However, this would not be the first departure from the usual practice, since the Federal Aid Highway Act of 1956 authorized the entire original estimated cost of the interstate system to be spread over a 13-year period. The reason in that case was the need for constructing the interstate system as an entirety, and for the States to have knowledge of their apportionments so that they could engage in long-range planning. The reason was adequate, and Congress approved the long-term authorizations spreading over 13 years. There is also an adequate reason for a similar long-term authorization in the proposed bill. There is an obligation to be repaid, and the only way to repay it is to authorize payment of the entire obligation. Spreading it over a 15-year period does this in a feasible way.

It is provided in the bill that appropriations can be made from general treasury funds, not otherwise appropriated, rather than from the highway trust fund created by section 209 of the Highway Revenue Act of 1956. The reason for this is clear. The Federal Government is repaying an obligation. The repayment of an obligation should not be contingent. It should be certain and fixed. The highway trust fund is contingent, depending upon the amount of revenues collected. The proposed bill is a clear authorization for appropriations and apportionments which will permit contracts to be entered into by the States after the apportionments have been made. The only way the Federal Government can repay its obligation is to make it fixed and certain.

Certainly it is clearly feasible in this day of $70 billion budgets to authorize the appropriation of from $225 million to $360 million per annum over a 15-year period. The contention that the Federal Government cannot afford to meet its just obligation to the contributing States has no basis whatsoever under the proposed bill.

IV. TOLL ROADS ARE ENTITLED TO BE PLACED IN THE SAME CATEGORY AS FREE ROADS

At the outset, it is important to understand the distinction between Federal aid for the construction of a toll road and the inclusion of a toll road on a Federal aid system. In 1921 Congress enacted a provision—section 9—in the Highway Act of that year to the effect "that all highways constructed or reconstructed under the provisions of this act shall be free from tolls of all kinds." At the time of the enactment of this provision there were many toll bridges throughout the country, toll ferries, and also some toll roads. Many of these facilities were entirely private; that is, had been constructed by privately owned corporations for profit. Congress undoubtedly felt that it was undesirable to have Federal money go into private enterprise. It is important to bear in mind that there was no opposition to toll facilities as such, but rather to the use of Federal funds in their construction. The proposed bill contemplates the construction of free roads, like any other Federal aid funds.

That the Federal Government was not opposed to toll roads as such is indicated by the fact that in many instances toll bridges and toll ferries were included in the Federal aid primary system. There has not been any opposition to this inclusion down to the pres-

ent time. In fact, in the Federal Aid Highway Act of 1956 Congress included section 113 which specifically provides for the inclusion of toll roads, bridges, and tunnels within the Interstate System. The entire history of Federal road legislation therefore indicates clearly that the Federal Government has never opposed toll facilities. It not only has made use of them to complete its earlier Federal aid systems, but now is making use of them on the Interstate System.

Not only is the foregoing true, but since 1927 the Federal Government has participated in the cost of toll bridges and tunnels. The 1927 act and subsequent acts have been incorporated into section 129 of title 23, United States Code. While Federal participation is subject to certain restrictions principally directed towards making the facility free as quickly as possible, it is clearly another indication of the fact that the Federal Government, far from opposing toll roads, even goes to the extent of participating in the cost of the construction of toll roads and bridges.

In view of the foregoing, it is difficult to understand the objection to giving a credit for toll roads. One of the most frequent arguments used is the statement that the traveler has to pay a toll, as well as a tax on gasoline, motor fuel, and any other so-called highway user taxes, the proceeds of which are used for highway construction. An analysis of this argument indicates that it is based upon a false premise. The false premise is that the highway user taxes in all States are the same. In fact they are not. The rates of these taxes vary from State to State.

If these taxes were uniform in all of the States it might be claimed that the toll road user was being subjected to an extra burden for the use of the highway. Whether such an extra burden should, by itself, warrant a refusal to allow a credit for a toll road is highly questionable. The road is there and available for use. Its use must be economical or travelers would not pay the tolls. The construction of a free parallel road would be an economic waste. All of these considerations indicate that the contention is invalid even if the premise were sound.

However, these taxes are not uniform. A person traveling across the country pays one tax in one State and another in another. When a traveler goes from State A where he has paid a 4-cent tax into State B where he has paid a 7-cent tax he is paying more for the use of the highway just as he is when he uses a toll road and pays the toll. Can it be claimed that State B, because it charges a higher tax, should not receive credit for its free roads since it places an extra burden on the traveler from State A? To put the question is to answer it. Obviously our whole form of government contemplates that the different States may have different laws and different taxes. When the user of a toll road pays a toll, he does no more than pay a higher tax, just as he does in a State which charges him a higher tax for his gasoline. Certainly the payment of the toll cannot be a fair ground for differentiation between giving a State a credit or not giving a State a credit.

This is clearly true when it is borne in mind that roads usually are paid for by the people who use them. It is indeed difficult to understand why the form of the tax should require a distinction. In some States roads are paid for out of the general treasury and it is not possible to trace just which taxes were used, although the so-called highway user taxes contribute to the general funds. In other States containing constitutional provisions against diversion of certain highway user taxes it is easy to point to the particular tax which pays for the roads. In the case of toll roads the construction is paid for by the person who actually uses that particular road. Whether the taxes are paid from the general funds, from specific so-called highway user taxes, or by the person using the road is immaterial insofar as the ultimate fact is concerned that the road is there, that it is being used, and that it is part of the Interstate System.

Another argument advanced against the recognition of toll roads is that those States contributing toll roads would not be hurt, because the toll roads do not cost the States a penny. In the first place, the question is not whether the States would be hurt or would not be hurt, but whether they are entitled to a credit. It has been pointed out above that, since these States have supplied the roads and the toll is merely another form of tax, they clearly are entitled to a credit. Accordingly, this negative approach or argument loses its force at the outset.

However, it can be said with equal force that the free roads have not cost the States a penny where there is a constitutional provision against diversion of highway user taxes, or where there has been no increase in such taxes since the passage of the Hayden Cartright Act by Congress. In these States the highway user taxes are paid, but they are not received by the State as general funds. They are required to be used only for road construction purposes, and for no other purpose. What is the difference between one of these States and a State that has created an authority for the construction of a toll road which is being paid for by those persons actually using the toll road. In neither case has the State paid a penny out of its general funds. In both cases the tax or the toll has gone directly into the roads. Whether it cost the State a penny is immaterial to this discussion. The effect on the State treasury is the same in both cases. When these considerations are taken into account it is indeed difficult from this point of view to distinguish between free and toll roads in many of the States of this country.

Before closing on this point the actual economic benefit of the toll road should not be forgotten. The toll road would not have been constructed at the outset unless it was believed that the need was there. In most cases the estimates were accurate enough so that the toll roads have succeeded. They must be considered beneficial by the traveling public or persons using them would not continue to do so. It is also true that no one is compelled to use toll roads and that there is always a road paralleling the toll road which may be used by a person not desiring to pay the toll. Toll roads are not monopolies, but the traveler always has his choice and can take either a toll road or a free road.

Toll roads are entitled to consideration and should be placed in the same category as free roads. The Federal Government has not been opposed to toll roads and in fact has included them in the Interstate System. It is therefore getting the use out of them. The toll in fact is analogous to a user tax. Taxes vary in the different States so there is no uniform base upon which a person from one State can claim to be penalized by traveling through another. There is variety in every State. It is a question of degree rather than kind. The contention that a toll road does not cost a State a penny is a negative argument rather than a positive argument, and is equally applicable to many States with antidiversion provisions. Finally, the proposed bill does not contemplate the use of Federal funds in the construction of toll roads. It will not be contrary to the longstanding provision of the 1921 act that highways constructed with Federal funds shall be free from tolls.

V. THE NATIONAL INTEREST IS WELL SERVED BECAUSE THE PROPOSED BILL PROVIDES FOR THE CONSTRUCTION OF ROADS WHERE THE NEED IS GREAT

The proposed bill requires the States to use the funds authorized for construction of highways under the Federal aid primary system. It limits the use of these funds to this system because it is felt that the primary system is the most important system and construction of roads on it will contribute most to the present highway needs. It does not provide for use of these funds on the Interstate System because it is felt that the mileage of the Interstate System should be limited to the 41,000 miles now authorized, at least until those 41,000 miles have been entirely completed.

Use of the funds for more roads on the primary system will be helpful in contributing to the highway needs of this country where the need is clearly apparent. The States which built the free roads and toll roads in the decade following the war did so to meet the pressing needs of that decade. No toll road could succeed unless the demand of the traffic was sufficient to insure its use. No freeway would be necessary except for heavy traffic. It must be borne in mind that all these roads eligible for the interstate system were built to standards which accommodate a heavy traffic load. Those States which were the largest contributors to the interstate system had the heaviest traffic demands. It seems likely that this demand will continue just as heavy in the ensuing decade. The proposed bill will contribute to this need and will place the

funds in those States where the need is clearly urgent.

VI. CONCLUSION

The proposed bill will accomplish two important objectives.

In the first place, it repays a valid obligation of the Federal Government to the States. The Federal Government has used facilities of the States to support a project clearly national in its scope and purpose, and their contribution to this national project is an obligation which in all fairness and equity should be repaid.

In the second place, it requires the funds to be used exclusively for highway construction, and they will be so used to the greatest extent in those States where the need is clearly urgent. Both objectives make serious consideration of the proposed bill imperative.

EXHIBIT A.—INTERSTATE HIGHWAY REPAYMENT ACT

Net reimbursement amounts based on 90 percent of depreciated original cost less Federal aid already paid toll and free roads

[Dollar amounts in millions]

State	Miles	Total cost less depreciation	Less State's share of cost	Less Federal-aid payments already made	Net reimbursable amount	Percent of national total	State	Miles	Total cost less depreciation	Less State's share of cost	Less Federal-aid payments already made	Net reimbursable amount	Percent of national total

Crucible for the Future

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an important address made by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the Department of the Army to the members of the State Club of Boston, entitled "Crucible for the Future" on April 2, 1959.

There is no one better qualified to express the thoughts and opinions in the address than General Trudeau, who is a dedicated American:

CRUCIBLE FOR THE FUTURE

Colonel Bunker, Mr. Adams, distinguished guests, members of the State Club, fellow Americans, I consider it a distinct privilege to address you today. It is a stimulating experience for me to sense the history, courage, determination, and sense of duty that is so much a part of your heritage here in the great State of Massachusetts.

This month of April is an auspicious time of year in this cradle of liberty. I need not remind you of the momentous events, some 184 years ago that started the most significant chain reaction in history by establishing a free Republic and the greatest power the world has yet seen. A nation of free citizens extending into the Arctic regions of the north and into the blue vastness of the Pacific Ocean. A Nation which embodies the finest hopes of mankind.

Since the battles of Lexington and Concord, your forefathers, and yourselves, have fostered the pattern of growth and development that has continuously established the highest standards for all of the Nation to follow. Your eminent colleges and universities, important factories, and your vital defense industries and laboratories contribute so much to both the moral and physical strength of our country.

Today, I am very much concerned about our national moral and physical stature in the face of the vicious challenge of communism. We must recognize that this threat endangers your splendid accomplishments that I have just noted. We must recognize, also, that preparedness and readiness to meet this challenge is the key to the survival of Western culture and that scientific, technological, and social progress are the essential ingredients if we are to meet the challenge of the future.

I submit, then, that the amalgam of preparedness and progress form a crucible for the future. It is on this subject that I wish to speak to you today, and I am delighted to have such a distinguished audience whose forefathers sacrificed and contributed so much during the growth of our country.

Preparedness is a condition that has affected our Nation's course throughout the fabric of history. We have seen the cycle vary from complete indifference to serious concern too many times. From the days of your Minuteman to today's great national debate on the adequacy of our defense program, the tides of preparedness have risen and fallen so sporadically that it is difficult to evaluate our national posture based on past events. Too often these tides have been inadequate to bolster a positive and dynamic foreign policy.

However, we have survived the earlier challenges to our national existence and the question in our minds now is: "Can we do so again?" Can we do so now in the face of the most insidious threat the world has yet seen? I am not going to attempt to answer that question—because I don't know the answer—but I do want to emphasize why we must be prepared and what your Army is doing about it.

During the time of the Revolutionary War and the heroic actions of those patriots who fought to gain our freedom, there was no question about peaceful coexistence or the type and kind of a threat to our fledgling Nation. Those staunch citizens took the action they devoutly believed was necessary and banded together to fight at Concord, Lexington, and Bunker Hill.

I know all of you have seen Bunker Hill and thought about its meaning. It is not a very impressive hill, at first glance, in fact it is not a very big hill at all—but it is preeminent among American hills because the men who fought there were very tall men. They stood for principle and determination. When our country takes a firm position today with respect to Quemoy and Berlin or the Middle East as frontiers of the free world, it is taking the same firm attitude that those couragous men took at Bunker Hill long years ago, even though the purpose might be somewhat different and despite the dissenting notes of those appeasers who haven't the courage or loyalty to support our national position in these difficult and delicate times.

Like the immortal fighting patriots of our American Revolution, you citizens of Boston are still dedicated to preparedness and to preserving and defending our Nation, and I urge you to let no other motive disrupt this high sense of purpose,

Once again, we are in a most severe crisis: An implacable threat stares us in the face—today, next year, and on into the foreseeable future.

The name of this threat is communism—godless, imperialistic, materialistic communism—which aims at the destruction of individual freedom and justice and our Amer-

ican way of life, and the creation of a world slave state.

The Communists regard the struggle between themselves and us as a matter of life or death—as it truly is.

Lenin put it this way: "A funeral dirge will be sung over the Soviet Republic or over world capitalism."

Khrushchev says it in just four words: "We will bury you."

The question is often asked: "Why can't we coexist peacefully with the Communists?" Perhaps the best answer comes from them, embodied in their dogma, their policies and clarified by their leaders.

Basic Communistic doctrine states that peace can only exist in a classless world and that any means used to achieve that goal is justified and, hence, peaceful.

Lenin said the existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end.

The latest Communist communicator, Khrushchev, said last year: "Of course, we must recognize that we cannot coexist externally. One of us must go to the grave. We do not want to go to the grave. They (the West) don't want to go their graves, either. So what must be done? We must push them to their graves."

That sort of talk is the answer to any peaceful coexistence question, as far as the Communists are concerned.

As a result, they have initiated an endless, an all-out, and an all-around offensive against us. They attack on every front and by every tactic—ideological, technological, political, and economic—as well as military.

In the ideological field you must have noted the subversion and brain washing that some of our citizens undergo and some of our soldiers succumbed to in Korea. Are our homes, our churches, and our schools doing enough to indoctrinate, motivate, and orient our children? How about your own part of the effort? Do you still feel a thrill of pride at the sight of Old Glory waving in the breeze? If all the flag poles from which she flies were of solid gold, they still wouldn't pay for the treasure, the blood and the suffering it has cost to keep her on high. And the cost is higher every day; but better that it be paid in treasure for defense than with blood for indifference.

It is interesting to note that Napoleon, in his biography, said:

"Is not Russia the head of Hydra, the Antaeus of the fable, which can only be subdued by seizing it bodily and stifling it in the embrace? But where is the Hercules to be found? Should there arise an Emperor of Russia, valiant, impetuous, and intelligent, a tzar with a beard on his chin, Europe is his own * * *. When I am dead and gone my memory will be esteemed, and I will be revered in consequence of having forseen and endeavored to put a stop to that which will yet take place. It will be revered when the barbarians of the North will possess Europe."

Napoleon recognized the potency of the Soviet's central position on the Eurasian land mass with its great manpower and natural resources, and so have Mackinder, Haushofer, Beukema, Walsh, and other geopoliticians and strategists. We must be sure that our policymakers do likewise.

I would also like to mention a remark made in 1915 by Hudson Maxim, the great inventor and stanch patriot who was also a very farsighted man. Maxim said, and this is something we hope will never come true in this country: "Fate has decreed that our pride shall be humbled and that we shall be bowed to the dust. We must first put on sackcloth, ashed in the embers of our burning homes. Perhaps when we build anew on the fire blocks and desolation, our mood may be receptive of the knowledge that we must shield our homes with blood and brawn and iron."

Today, we see Soviet rubles going into Egypt's high dam at Aswan; Soviet arms and technicians moving into Egypt, Syria and Iraq; Soviet puppets in East Germany putting the squeeze on the brave enclave of West Berlin; Soviet propaganda and falsehoods being broadcast worldwide 24 hours a day; Soviet agitators infecting the Near East and Middle East with their vast oil reserves that are so vital to the survival of Europe; serious Soviet subversion in Africa and Latin America; Soviet submarines charting the seven seas; and Soviet Ambassadors practicing "sputnik diplomacy" and ballistic missile blackmail in the capitals of the world. All of these constitute the most concerted, deliberate, and abominable attempt ever perpetrated to shatter and disrupt the peace and stability of the world and reduce it to anarchy.

Let me refresh your memory very briefly on the two facets of the overall Communist threat that most directly concern you and me—the military and economic threats.

As you know, the Soviets have more than 25,000 warplanes. Many of these, such as their Bison and Bear, are long-range bombers capable of destroying this Boston metropolitan area with just one hydrogen bomb.

The Soviets have about 500 submarines. We have about 200.

The Communists have 175 standing divisions in Russia alone, plus 2½ million men in the Chinese Communist Army, and another 1½ million in the satellite forces. We have less than 15 ready U.S. divisions, the same number as Rumania.

In atomic firepower, Khrushchev is talking about dismantling some of his atomic and hydrogen bombs because he already has more than he needs.

In rockets and missiles, Khrushchev claims a missile with a range of more than 8,000 miles. Even as long ago as 1957 the Communists claimed an intercontinental ballistic missile capable of reaching any target on earth. The three sputnik satellites lend substance to these claims and their lunar probe should clinch it.

Next, let's consider very briefly the Soviet economic threat:

Through Stakhanovism, slave labor and one ruthless 5-year plan after another, they are making themselves a truly formidable industrial power. Now Khrushchev is pushing through his new 7-year plan, the most ambitious yet.

When you compare the figures since World War II on American industrial production versus Soviet industrial production, you see that the Soviet production base has expanded at a rate about double that of our own and for the year 1958 I believe it may be nearer 3 to 1.

When you extrapolate the present yearly rate of increase, you can see that before many years Soviet industrial production may exceed our own, particularly if you contrast our shrinking markets and sources of raw materials to the economic autarky established by the Soviet bloc over more than one-third of the world's underdeveloped surface and its population. If this happens, our American arsenal of democracy will be surpassed by the Soviet arsenal of communism.

This could spell disaster for America. And this is just exactly what the Soviets are determined to do, by further reducing our access to the markets and raw materials of the world and the absorption of fringe areas now contiguous to the Iron and Bamboo Curtains. Now their concerted and expanding activities on the awakening African continent and among our Latin American neighbors are becoming more apparent. Our actions to meet these challenges will go far in determining whether our way of life can continue and whether world trade by the year 2000 will be based on 4 rubles to the dollar or 4 dollars to the ruble.

In this duel of industrial expansion and production, let us therefore keep a wary eye on the Russian Bear—but let us not become so preoccupied that we forget the Chinese Communist giant or the basic cleavage in ideologies which is the keystone to the arch of our problems.

The Red Chinese, in their current industrial revolution, are achieving greater industrial gains faster than ever known in the world before but from a very low starting point as of now.

Let me suggest, parenthetically, that it may be well, too, for the Russian Bear to keep a wary eye on the Chinese Communist giant—for the pupil may outdo the master, even ultimately absorb him. Red China is quite unhappy today over the diversion of Russian aid and machinery to others.

I have given just a few highlights of the Communist military and industrial threats. Let us also keep in mind all the other facets of the Communist offensive. Let us remember that the Communist threat is a monolithic whole, using, seriatim, whatever means or tactics seem most likely at that moment to penetrate and crumble free world defenses without regard to morals or ethics, in fact our western code is anathema to the men who rule the Kremlin.

Obviously, our superior industrial and military strength are both indispensable parts of our over-all defense against this all-out Soviet offensive—and this is the measure berof the responsibility you and I and all Americans share to help keep Americans strong and safe.

I know that your sense of dedication to this responsibility has always been outstanding. And I hope that in this time of crisis you share with me an increasing sense of urgency about matching our industrial and military strength to the Soviet threat I have outlined. I consider it of real significance that the Soviet claim superior military strength and announce belligerent policies at this time.

As your Congressman McCormack has said, "It is only from a position of strength that our diplomats can negotiate with the Kremlin, for their anti-God ideology not only denies, but fights God. They have no moral origin, therefore Communist ideology has no idealism. We cannot deal with them on a moral level, or the level of idealism, but they cannot deny that the law of self-preservation applies to them as well as to other nations and other peoples.

"If I am going to err in connection with our defense posture, in the world of today, I prefer to err on the side of strength rather than on the side of weakness."

In those fringe areas where the will to resist communism still exists and in those great underdeveloped areas of the world in Asia, Africa, and Latin America, we must by direct aid, if necessary, and by private enterprise, where possible, launch a more dynamic program to weld the free peoples of the world more closely together.

Not only is the Soviet ready conventional military strength far greater than ours today but their industrial base, presently 40 percent as great as ours, continues to expand at a rate more than twice as great as ours. Even this doesn't quite paint the full picture as their denial of consumer goods to their own people plus their absolute control of the price structure permits an unusually large portion of their gross national product to be devoted to military goods and selected items for export to areas where they seek economic and subversive penetration. For instance, we know shoes are expensive and limited in Russia but the fact remains that a tank only costs the equivalent of 2,000 pairs of shoes in Russia while a tank for our Army costs us 20,000 pairs of shoes in our price structure.

We have much to do in this particular area to meet the Soviet challenge. It is a real challenge to the Nation and to the free world to match the wide and shifting range of

Soviet capabilities. Within our country, we must do it in many ways: leadtime of developing and producing weapon systems must be reduced; management of our human and material resources must be improved; and we must shake ourselves loose from the complacency that continues to engulf us.

Malcom P. McNair of the Harvard Business School restates it like this, and I cannot overemphasize the real significance of this statement if we are to emerge victorious: "As individuals we shall have to change our scale of values so that we do * * * such things as spending more on defense, taxing ourselves more, working harder, sacrificing something from our standard of living, disciplining ourselves more, curtailing special and costly benefits to privileged economic groups, developing rigorous standards and competitive excellence in education, and channeling our best brains into needful activities for national survival."

I deal daily with outstanding scientists in our country and I fully appreciate the important part they play in our fight for survival. With all due respect to them however, I must say that the future of America depends just as much on developing more Ch. D.'s as it does on developing Ph. D.'s. Not everyone can be a Ph. D. but all can be Ch. D.'s, and by that I mean doctors of character, if we will but return to the faith and ideals of our fathers. Where is the real faith in our institutions, the burning patriotism, the adventuresome spirit that challenged the unknown, the steadfastness to principle, the courage to seek the harder right rather than to accept the easier wrong, the pride in personal accomplishment and reputation and the willingness to sacrifice for God and home and country? We must actually live by this code, now as never before if we are to emerge victorious. The hypocritical acceptance or profession of such a code is inadequate and the eagles of victory will not perch on false colors. There is still a greater destiny for our country, if we have the courage and wisdom to seek it. We need the boldest of the clipper ships that carried our flag, our philosophy and our trade to the farthest corners of the globe as they set sail from this New England coast.

No military expert can prophesy exactly what kind of war we may have to fight, or with what means, or when, but I give you my own reasoned and very earnest conviction that if war should come, no matter what kind it might be, there, in the thick of the action, we'll still find "the loneliest man in the world"—the man on the ground—the combat soldier—you, your husbands or your sons.

This leads me into the second part of my remarks: What progress is the Army making toward a real state of preparedness?

First of all the mission of the Army is synonymous with being prepared. Our mission is to maintain a fighting force that can win the land battle as well as defend the Nation and its armed services from air attack. We accomplish our mission, in part, by maintaining the necessary forces all over the world, forces that embody the motto of our Strategic Army Corps, STRAC: "Skilled, Tough, Ready-Around-the-Clock."

The other way we accomplish our vital mission is by a dynamic and vigorous research and development program. It is our objective in Army research and development to provide the most effective weapons and materiel for our future Army. The scope of this research and development mission covers an extremely wide spectrum of developments and we feel our responsibility very keenly whether we are predicting future needs in mobility, communications, firepower, or logistical support.

Our efforts with satellites and space vehicles, for example, have been reasonably successful; but insofar as it lies in my power, I intend to see to it that no single part of our space effort within the Army is made at the expense of building land combat power as the foundation of our military strength. Only on terra firma can man be sustained for any period.

Rather, our space effort must contribute to our land combat power. I believe that it does, and will continue to do so.

As you remember, Explorer I was placed in orbit by the Army on January 31, 1958, and others followed.

Together, America's satellites and space probes have gained for us our first real knowledge of conditions in outer space—particularly with regard to electromagnetic radiation, micrometeorites, and density of the earth's atmosphere on the fringes of space.

Incidentally, speaking of spatial transmissions, the Army was proud to participate in the latest and most successful moon probe that the free world has yet placed in space. I think that the most significant result of Pioneer IV was the transmission and receipt of a radio signal over the longest distance in history—over 400,000 miles. This tops the Russians or anybody else, as far as we know. This was a distinct milestone in space when you realize that we surpassed over twofold the distance it takes an electromagnetic signal to travel in one second. It is an equally amazing fact that the transmitter power for that signal was only one-quarter of a watt.

A satellite communications relay shows real promise of helping to solve the growing traffic jam in the radio wave spectrum in worldwide ground-to-ground military communications. We still need satellites or space vehicles to gather data for mapping and geodesy. We need better communications. We need more meteorological data. We need data for terrain appreciation and for navigation. Finally, we need data for ballistic missile warning; for satellite tracking and identification; and for missle defense systems. As you see, each of these needs is not only related to the needs of the ground combat soldier and the Army but to our country and our people as a whole.

We look to you for your help in giving us all the support you can. The accomplishment of all these goals is no longer primarily a scientific problem. It is well within our current technological capabilities and is only a question of policy, management, and funding.

Recently at the 21st Congress of the Soviet Communist Party, the facts were made plain to us that the might of the long-range Soviet artillery—their ICBM's—were trained on targets in our Western world. When the enemy artillery has you in range during combat, there are very few conferences on the battlefield. That is the time to act, devise a plan, make decisions, and do what is necessary to counter the threat.

I believe we are in that position now. Is there any room for complacency, for wishful thinking, for anything but action? The fate of our Nation depends on our determination, vigilance, and preparedness. We must replace fear with faith, complacency with courage.

Adlai Stevenson said it this way recently: "I doubt if any society in history has faced so great a moral challenge as ours, or needed so desperately to draw on the deepest source of courage and responsibility * * * what we decide to do, we can do."

We need a resurgence of faith and confidence and the "can do" attitude in all of our citizens. This must be translated into action, a public reaction that bridges the gulf between easy living or indifference and the aroused temper of a free nation and provides the base for positive and dynamic policies.

Our potential enemy's capabilities are unbelievably great and are growing greater in both the military and economic fields. The hour grows too late to tolerate that seed of death called complacency any longer. Arnold Toynbee has pointed out that 19 of 21 notable civilizations have died from within and not by conquest from without. We must not be number 20.

I opened my remarks with the observation that the month of April has been significant in your history here. April has been noteworthy in recent history, also; just 1 year ago Khrushchev, while visiting the scene of the Hungarian Revolution, said that the Soviet Union will help crush any future satellite uprisings. And now he has pointed his guns, missiles, and insinuations at the free world. We must be alert to further veiled threats and be prepared to unmask them for what they are and stand up to the real purpose of the Communist master plan: to dominate the world. There will be more Bunker Hills, Quemoys, and Berlins, and we must meet the test again and again.

That vital challenge of tomorrow is our greatest opportunity today—the opportunity to so advance, so build, so defend, and so cherish this land of ours that in the far distant America will still be enshrined and sustained as the leader of free men in the hearts and hopes of all the people of the world.

I believe that we can accept our guidance for preparedness and progress for the future from your Massachusetts State motto. It aptly sums up my remarks and reflects your heritage as we prepare the crucible of the future. The motto reads: "By the sword we seek peace, but peace only under liberty."

The kind of spirit I believe we should have was expressed clearly by a fellow Vermonter of much earlier vintage. His name was Ethan Allen.

After he had captured Ticonderoga and turned in the booty, the Congress in its timidity considered turning the captured cannon back to the British, whereupon Ethan Allen wrote a letter to Congress, and this is what he said, among other things:

"I wish to God that America would, at this critical juncture, exert herself. She might rise on eagle's wings and mount up to glory, freedom, and immortal honor if she but knew her strength."

Thank you very much, ladies and gentlemen. It has been a pleasure to be with you.

Ocean "Farming" To Provide Fish for Starving Millions

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, the struggle to provide assistance to the needy countries of the world is only one aspect of the cold war between the United States and Russia; however, it may well prove to be the decisive factor. Just as the people in our own country have responded to the political party which displayed a genuine interest in the people's needs, so will the population of needy foreign countries respond to the great power which has the basic human requirements of their country at heart.

Distribution of our surplus food products to foreign countries, after assuring that our own needy are adequately provided for, is an excellent short-term solution to this problem. However, if we are even to begin to solve the food shortages faced by many of the world's undernourished countries, we must locate new food sources.

The following article originally published in the New Bedford Standard-Times, suggests a solution to this problem in the development of increased oceanographic research. We are certain that the Soviet Union has not hesitated to institute a crash program in this vital field. But what of the oceanographic program of the United States? Not only the food requirements of the world but also our very physical survival dictate the urgent necessity for adoption of the National Academy of Sciences program for increased oceanographic research:

SEA BATTLE 1958: KEY TO SURVIVAL, X—OCEAN "FARMING" TO PROVIDE FISH FOR STARVING MILLIONS

(Whether it be for war or peace, the oceans of the world probably hold the secret to humanity's future. The nation that unlocks those mysteries first will direct the future course of mankind. One of the world's outstanding ocean study centers is the Woods Hole Oceanographic Institution. There and at other marine-science research centers in the East the Standard-Times conducted a 2-month study to determine who is ahead. These stories tell the results of that research.)

(By Everett S. Allen)

The ocean will turn over by itself, if given a slight push, because it is basically unstable. Marine scientists already are experimenting to determine what kind of a push is most effective. Once the problem is solved, it will be possible to plow much of the coastal sea areas of the world, turning them over as soil is overturned and for much the same reason—to renourish the ocean and increase its productivity.

Here is a way it could be done: In most areas, a vertical pipe shoved down into the sea would carry a stream of water either up or down, once it was started, and, if uninterrupted, would go on forever.

This is because ocean surface water is saltier and, therefore, heavier, than deep water, when the two are at the same temperature. As surface water goes down the pipe, it tends to be cooled to the same temperature as the water outside the pipe—but being heavier because of its salinity, it keeps on flowing downward.

WORKS IN REVERSE

It works in the opposite direction, too. If bottom water is started up the pipe, it tends to get warmer—becoming the same temperature as the water surrounding the pipe. But because bottom water is slightly fresher, it also is lighter than the surface water surrounding it, so it tends to rise and flow out the top of the pipe.

It is the unequal salinity distribution in the water that tends to make the ocean unstable when water from the top and bottom of the sea are brought together at the same temperature.

The French Government already is experimenting with a system of such pipes. In this instance, the French seek to produce fresh water from the ocean, by utilizing these temperature differences to operate a distillation process, but such an operation would serve very well to turn over the sea.

There are many situations in which such installations would work and be helpful. They could be placed around all islands and continents and provide fresh water, or power; they also would serve to pump up plant nutrients now lying on the ocean bottom. This would increase the amount of plant fishfood in the area, and ultimately, the amount of fish, too, per cubic foot of water.

BIRDS CATCH MOST FISH

With regard to the world fisheries, there are many paradoxes and problems which now are the concern of marine scientists looking toward the day when increasing humanity must turn to the sea to feed itself.

At present, sea birds catch millions of pounds more fish a year than do men. And some of the most productive areas of the world are not fished at all, for various reasons; Argentina is a good example—its waters abound with fish, but fisheries are limited because the nation has a beef economy.

Further, of the 16,000 or so species in the sea, only a dozen or two are utilized in any quantity commercially; thousands of marine creatures are good eating and nutritionally valuable, but men don't eat them because they haven't been accustomed to doing so—and, up to now, they havent' felt they had to. But the world is tightening its belt, even now.

The fisheries of the world are very unevenly distributed, undoubtedly due in large measure to the lack of stirring in the ocean. Roughly 98 percent of the fisheries are located in the Northern Hemisphere, although the Southern Hemisphere has much more water.

CHEAP FOOD POSSIBLE

Here are some of the things ocean scientists think about with regard to better utilization of fish as a food:

All the modern developments in fishing are keeping fish from going where it is needed—to hungry people who don't have much money. Only Portugal continues to encourage the production of cheap fish, once properly called the poor man's meat, since it, like meat, is a valuable protein source.

It is virtually impossible to think of reviving or improving the fishing industry in any country without finding some way to make fish less expensive. With existing techniques, it is possible to make money with a fish product selling as low as 1½ cents a pound, but nobody, except possibly the Russians who, from a background of starvation, can appreciate the value of cheap food is thinking about moving fish where it's really needed.

A chemical engineer unquestionably could convert food fish into some form, perhaps like a sausage meat, that could be stored indefinitely without canning or freezing.

Ideally, this material should be cooked on the boats that catch it; as it is, draggers spend far too much time coming and going, and too little fishing—some redfishermen, for example, take 3 days each way to go to the Grand Banks for 36 hours' fishing. All of that nonproductive time makes the end product cost more.

SALT COD IS GONE

Who would buy this product? Millions of the world's hungry—the people who want and need fish in their diets, but who can only afford to pay what salt cod used to cost.

The freezing of fish, one of several steps aimed at upgrading the product, ruined the salt-codfish industry Down East, because everybody would rather freeze it and get more for it. Consequently, the people of the West Indies go without Newfoundland salt codfish, even though they can't afford the frozen product that has taken its place.

Fish is a luxury on the market these days. Very little of it, worldwide, penetrates more than a few miles inland, even in a country like India, where hundreds of thousands are starving for lack of the very nutrition it could provide.

As an example of what can be done, South Africa has a very effective fish-meal process; a certain amount of this product is combined with hominy, as part of a government policy of providing cheap fish protein.

OCEAN CULTIVATION

Ocean cultivation to increase the efficiency of production and harvest is the other principle concern of marine scientists studying the food problem.

No one yet has invented a fence to aid harvesting in the ocean, to keep what man wants to grow in a given area from wandering off. A farmer grows grass, cows eat it, and he catches the cows and sells them. But if he had to drag a net around on unfenced field, he wouldn't catch many cows becouse they would stray away.

In the ocean, there is no ownership, no fences; these factors make it difficult for mankind to introduce the elements of cultivation, even though in terms of increasing food needs, this is highly desirable.

Local resources, such as salt ponds, are being wasted, for there man could enter into cultivation. The Woods Hole Oceanographic Institution staff estimated that one New England harbor (Barnstable) could produce 9 tons of clam meat per acre per year if cultivated efficiently. This is three times better than the best Ohio farmer can do on his land.

CRABS FOILED PLAN

The experiment didn't work, because in order to harvest the ocean successfully, one must be able to control the environmental situation. What happened was that horseshoe crabs ate the small clams in prodigious numbers; if the harbor could have been "fenced" off, the flats could have been reseeded with clams and the program would have produced as anticipated. But blocking off a harbor that is used regularly by marine traffic obviously is impractical and impossible.

Other salt-pond efforts in New England have been frustrated by similar circumstances, in which ducks, gulls, crabs, and humans all have played a part.

But the opportunity for marine farming remains, and as the worldwide food demand increases, it will be practiced more. Surely, the pioneers of land agriculture had their difficulties, too.

Right now, however, there doesn't seem to be a way to make money in farming the sea. Ocean scientists say what is needed is an experiment station on a large enough scale to be meaningful to commercial interests. This is reasonable; if all the corn in America were confined to a handful of laboratory specimens, no farmer would be interested in raising it.

It is only a matter of time before some marine-minded country looking for more cheap food will start a large-scale marine agricultural station. Whether it is Russia or the United States—and these are the two most likely prospects—the world's hungry will look in that direction with even more respect than was generated by sputnik.

A Member of Congress Takes the Pulse in Iowa

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks, I include, with pleasure, an excellent article about our distinguished

colleague the gentleman from Iowa [Mr. WOLF] appearing in the New York Times magazine of April 12, 1959, entitled "An magazine of April 12, 1959, entitled "A Member of Congress Takes the Pulse in Iowa."

While a new Member of Congress the gentleman from Iowa [Mr. WOLF] has already evidenced his great ability, as well as devotion to his duties and to the people of his district, and has made a most favorable impression upon his colleagues.

A MEMBER OF CONGRESS TAKES THE PULSE IN IOWA

(By Cabell Phillips)

WASHINGTON.—Congressmen are back in their offices in Washington this week after the 10-day Easter recess, which provided many of them with the first opportunity for serious fence-mending and pulse-taking among their constituents since the session began last January. One such is Representative LEONARD G. WOLF of the Second Iowa Congressional District.

An exuberant 32-year-old, LEN WOLF is the first Democrat to serve his stanchly Republican district in more than 20 years, and a devout internationalist who paid his own way on a factfinding tour of Europe and Russia last year. I went along on his visit home to see the fence-mending process and—particularly—to learn what the people in a presumably typical slice of the Middle West feel about the current state of our foreign affairs.

"You'll find that I'm a pretty controversial fellow out here," he told me over coffee late on the night of our arrival in Dubuque, where his tour was to start. "Years ago this used to be isolationist country. That label doesn't mean much any more. But my predecessor, who represented this district for five straight terms, generally took a pretty dim view of such things as foreign aid and cooperation with other nations through the U.N.

"My outlook is frankly internationalist. I stressed it in my campaign and I've taken as active a part as I could in foreign policy matters in the 3 months I've been in Congress.

"My feeling is," he went on earnestly, "that there's nothing more important for humanity today than seeing to it we don't destroy ourselves and everything else in another war. This country has got to lead the way in that—nobody else can do it. And that means that we have got to do a hell of a lot more than we have done in resisting Communist expansion and in helping the emerging new nations of Asia and Africa to stand on their own feet.

"I can't say I got any clear mandate on that in the election. My margin of victory was just barely over 1 percent, and I'm still breathing hard. I think most of my people are with me, but I can't be sure. Anyway, that's what I'm here to find out."

Congressman WOLF's district, with a population of 414,000, comprises 12 counties in the northeast corner of the State, stretching about 150 miles southward from the Minnesota border and, at its widest, some 100 miles westward from the Mississippi River. Its only cities are Dubuque, Cedar Rapids and Clinton, but industrially it is the most important district in the State, with manufactures valued at $303 million annually.

Beyond the cities the landscape stretches in limitless vistas of rolling prairie dotted here and there by villages and small towns, with occasional clumps of trees on the high land and with rivers and streams snaking through the valleys. This is corn-hog country, among the best anywhere in the world. These incredibly fertile stretches of black glacial loam yield annual harvests of up to 100 bushels of corn per acre. Town and country, the impression you get is of substantial middleclass well-being.

To keep in touch with his constituents, Congressman WOLF has converted a house trailer into a mobile congressional office, with a private conference room in one end, a waiting room in the other. At regular intervals his resident administrative assistant, Al Link, a former Dubuque newspaperman, hauls the trailer around the district, setting up shop in one small town after another.

The trailer was our portable headquarters for the pulse-taking tour. After a 6:30 factory gate appearance at the John Deere works on the morning after our arrival in Dubuque, we set off westward for Manchester, a county seat of about 5,000 population. Our itinerary had been announced in the weekly paper a few days earlier and when we pulled up to the parking space reserved for us before the courthouse a little after 9 o'clock a score of men and women, most of them farmers, to judge by their mud-stained galoshes and striped overalls, were waiting for us.

The Congressman greeted them genially, shaking hands all around, calling most of them by name, asking about their crops, their infirmities, their families. His natty attire and brisk youthfulness were in sharp contrast to the stolid, weatherbeaten appearance of his visitors, but they seemed to respond warmly to his presence.

"Come on in out of the cold, folks," he said, leading the way to the trailer, "and let's get this show on the road. Al, you be sure to get everybody to sign the guest book so we can make certain they are on our mailing list. * * * Now, who's first?"

For the next 3 hours LEN WOLF took the political pulse of some 40 of his constituents. Singly and in groups, often a husband and wife with their brood of children, they filed through the doors and sat for a few minutes or as much as half an hour.

Some just wanted to say a friendly hello and to assure their young Congressman that he was doing fine. Some came by for no better reason than to salve their self-importance. Some came to complain and to criticize. But mostly they came with problems, real, or imagined, that involved them in some way with the great, distant bureaucracy in Washington.

"Congressman, there's four of us families on this mail route that have to go as much as half a mile to our boxes. We've talked to the postmaster about it, but he says, * * *."

"I'm a Purple Heart veteran from the First World War, Congressman. Now, I just got this letter from the Veterans' Administration * * *."

"My boy, here, Mr. WOLF, wants to go to the Naval Academy next year * * *."

"I hope you'll vote against that bill to make us pay a dollar and a quarter an hour for farm labor. * * *."

"I had a heart attack last winter, Congressman, and if my boy has to go up for the draft I just don't know how we are going to make out. * * *"

From early morning to late at night, in one small town after another, the routine often interspersed with a Lions Club luncheon or an impromptu stop at a farm home, we heard hundreds of such observations and petitions as these during the week we were on the road. Rarely did a visitor broach a subject touching on foreign policy, but frequently the Congressman would bring the matter up himself, and we were often surprised by the intensity of the response.

"A summit conference? Sure, why the hell not? What have we got to lose? The cold war don't get any colder as long as we and the Russians sit and glare at each other there in Berlin and sort of dare each other

This was from a small town auto dealer, who added that his information was "pretty skimpy, because there's not much to read to make the first move."
about these things in our papers, you know."

Often, discussion of the Berlin crisis elicited a note of skepticism: "I just wonder if it's worth going to war over," a gray-haired farmer with two draft age sons observed. But most frequently we were told such things as: "We can't afford to back up 1 inch there, that's for certain"; or, "If we let the Russians push us around in Berlin they'll wind up pushing us out of Germany and everywhere else"; or, "I'm glad to see Eisenhower has got his mad up enough to stand his ground at last. I thought he'd never get around to it."

Strangely, to me at least, there seemed very little apprehension about the prospect of another war. In the district there are many German, Czech, and Scandinavian families with strong roots in Europe, and each has had at least one close kinsman soldiering somewhere in the world during the last 10 or 15 years. Yet, while their political esteem for President Eisenhower runs the gamut from active dislike to high praise, they all seem to have faith in his ability to keep us out of war.

"I think those Russians are just pulling a bluff in all this war talk," said Joe Holthaus, who raises hogs and beef cattle on 220 acres just outside of Oelwein, and with whom we had an impromptu 7-o'clock breakfast one morning.

"Look what the paper says this morning." He held up a copy of the Oelwein Daily Register with an 8-column banner proclaiming: "McElroy Says United States Is Invincible."

"Well, I figure that's just about right, and that the Russians know it. We've got bases all around them—87 I think I read somewhere. If they send up a plane or a rocket against us we can loose planes or rockets against them from all those bases.

"They won't want a war as long as we keep strong ourselves. I think Ike is handling it just about right."

The topic on which they were most articulate was foreign aid, for this is something they can translate into terms of their own experience. In general, they are opposed to the idea of the Government handing out large sums in grants to foreign powers—"You give a man something, he doesn't appreciate it; but if you sell it to him, or make him a loan, he respects you. We gave Nehru $100 million around Christmas time, and I can't see that we have made any better friends of the Indians."

On the other hand, they seemed generally to accept the obligation of the United States, or even of the United Nations, to help the underdeveloped nations of the world to get on their feet; this country, they said, was once a struggling colonial nation itself.

But why, many of them asked, could not our vast and so far, useless food surplus be used instead of dollars to further our mutual aid program?

"Why can't we send them corn and wheat and dried milk and even processed meat instead of money?" one asked. "Most of those people over there can't do a decent day's work because they are hungry all the time. And here we sit with more than we know what to do with. If they had enough food in their bellies they could build the roads and the dams and the things they need instead of our building them for them."

They were keenly interested in the Congressman's plan to introduce legislation to expand the operations of Public Law 480, which provides for a limited use of agricultural surpluses in the foreign aid program. Many, it turned out, had written to him in Washington about this. For this is a subject that has been much discussed in farm organization bulletins.

More often than not, the Congressman's visitors protested embarrassedly that they just didn't keep up very much with what went on in the world beyond their own farm gates. But occasionally his probing would strike an unexpectedly sensitive nerve, as it

did one night in the little city of Vinton. His visitor at the moment was a stolid, leather-complexioned farmer he called Emil. When the business at hand was concluded the Congressman tilted his chair back and asked speculatively:

"How do you think we are doing in the field of foreign affairs, Emil? Do you have any special thoughts or worries about that?"

The older man's forehead was furrowed momentarily in thought, then he said:

"You want to know what I'm worried about, LEN? It's that we ain't getting anywhere with the Russians on this atom bomb testing. I'm as sure as we are setting right here that if we keep it up—and they keep it up—all that fallout is going to affect our land. It's going to get into the crops we grow and it's going to get into our hogs and cattle, and God knows what it will do."

The Congressman's chair came down with a bang.

"Say, that's an interesting viewpoint, Emil. How much are other people around here worried about this? Let's call in some of these other folks waiting in the other room there and let's kick it around some."

He opened the door to the waiting room of his trailer, where a dozen men and women were awaiting their turn to see him.

"Some of you folks crowd in here," he called. "Emil was just telling me that one of the things he's most concerned about is what the fallout from atomic explosions might do to a farmer's crops and his cattle. Any of the rest of you been thinking about that?"

"You danged right we have over in my neighborhood," an overalled farmer said belligerently. "We were talking about it at the Farmers Union meeting just the other night. 'Course you can't see where it's done any harm now. But the thing about this stuff, as I read it, is it creeps up on you, and once you've got it, or once it gets into your soil, it's there for good."

"I read in the paper the other day," a woman broke in, "that Iowa and Minnesota get more of this strontium 90 than any other States in the Union. It gets into the milk * * *."

"Looks to me," said another, "that the Russians are willing to call a halt but that our people ain't. Why should that be?"

"You know you can't trust the Russians. Look what they are trying to do in Berlin, right now. * * *"

"All right; but if they sign an agreement not to fire off any more bombs, and then they do fire one, we've got ways of finding out about it. * * *"

"One thing for sure, the United States ought not to be the one to back away from trying to get an agreement on this thing."

After about 10 minutes of this lively colloquy the Congressman held up his hands for quiet.

"OK, OK," he said. "This is real news to me, to find out how you feel about this. I agree with you that it's a terribly important problem. Now what can I, as a freshman Congressman, do about it? What do you think I ought to try to do about it? * * * Emil?"

"Well, I don't hardly know, LEN; if we could just get to some sort of understanding with the Russians. * * *"

In a week of such give and take as this, repeated many times a day in communities all over his district, Congressman WOLF did not pick up many usable ideas on what to do about the Nation's ills, but he got a vivid picture of which of those ills are closest to the hearts and minds of his constituents. Price supports, mounting surpluses of corn and wheat, the price of hogs and milk, unemployment and inflation, how to get a job as a mail carrier—these are universal concerns.

But a great many of those who came to see him—one in four or five, perhaps—voiced more cosmic worries. Volubly sometimes, haltingly at others, rarely with sharp insight and definition, they talked feelingly of things beyond the limits of their own creek bottoms and townships.

"What they want," Representative WOLF said at the end of his visit, "is more information about these things than they are getting from their local newspapers and radio and television stations. They have begun to see that the problems of Berlin, of the underdeveloped nations, of international control of atomic energy all have meaning for them as farmers and businessmen.

"I'm going to give very serious thought in the next few weeks to trying to set up a series of foreign affairs forums for them, bring out some experts from Washington. I believe it would go over big."

These people's range of interests has expanded substantially in the past 10 years—since, say, an oldest boy came home from Korea or since they have become aware of the brutal paradox of their bulging grain bins and the starving masses of Asia.

They may not be attuned to the subtler nuances of the international power struggle, but they firmly believe that American abundance is a good currency with which to buy world peace. Food, they have been told, is our greatest natural resource, and the only one that is replenishable year after year. Someway, somehow, they believe, the answer to the cold war lies in their hands.

Firm Answer to Gloomy Prophets

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Firm Answer to Gloomy Prophets," which appeared in the Rockford (Ill.) Register-Republic of April 9, 1959:

FIRM ANSWER TO GLOOMY PROPHETS

The number of Americans holding jobs increased by 1,106,000 persons between mid-February and mid-March, a gain about twice as large as normal for that period, the U.S. Department of Labor said Tuesday. Although the rise in employment was greater than the drop in unemployment, the number of persons without jobs declined 387,000 during the 30-day period.

These official Government figures clearly refute the prophets of gloom in Congress, who want to pour hundreds of millions of dollars into pump-priming and spending programs, such as Illinois Senator PAUL DOUGLAS's area-redevelopment bill and the catchall public housing measure in the Senate.

The Labor Department's report also shows the muddied thinking of economists who have been telling the Joint Congressional Economic Committee that another round of inflation is preferable to the balanced budget called for by President Eisenhower.

Employment statistics speak for themselves. There are nearly 64 million Americans gainfully employed; those who obtained jobs between February 15 and March 15 included many housewives, students, and others not normally in the labor force—but at the same time, practically all the decline in unemployment was concentrated among men 25 or older who comprise the Nation's primary working group.

Equally significant were the reports by Labor Department statisticians that both hours of work in manufacturing industries and weekly earnings of factory production workers increased during March.

The President's campaign for a sound dollar, an end of deficit spending, and for Government economic policies which encourage business growth—and thus create employment opportunities—is continuing to show results. By keeping the national economy strong, the administration is protecting the purchasing power of Americans, millions of whom are living on pensions or fixed incomes, and is avoiding the inflation-stoked boom which brings on a business downturn to correct the excesses.

As Congress returns to Washington after the Easter recess, its Members should take due note of the improvement pointed up by the current report on employment. The freespenders who wring their hands in despair can no longer claim that administration fiscal policies are leading the Nation on the path to ruin. Instead, as Secretary of Commerce Lewis Strauss points out, American business is much better than was anticipated at the start of the year. Moreover, the economy is expected to show further gains, due to seasonal factors.

Mutual Security and Africa

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mrs. BOLTON. Mr. Speaker, nowhere in today's world is the pace of change greater or more significant than in the vast continent of Africa. The onrushing tide of African nationalism has brought profound economic, political and social change to nearly all of her 220 million people. Independence has been attained by a half dozen countries, and as many more stand on the threshold. In recent weeks we have seen violence erupt in areas where progress toward self-determination was deemed insufficient.

In our hearings on the mutual security legislation for the coming fiscal year, the Committee on Foreign Affairs has been well-briefed on recent developments and problems in Africa. The background statement on April 10 by Mr. Joseph C. Satterthwaite, Assistant Secretary of State for African Affairs, was particularly helpful to an understanding of those problems and the role played by our mutual security program.

Believing that Mr. Satterthwaite's statement will be of wide interest, I insert it in the RECORD at this point together with my remarks:

STATEMENT OF THE HONORABLE J. C. SATTERTHWAITE, ASSISTANT SECRETARY OF STATE FOR AFRICAN AFFAIRS, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE IN SUPPORT OF THE MUTUAL SECURITY PROGRAM FOR FISCAL YEAR 1960, APRIL 10, 1959

Mr. Chairman and members of the committee, I am glad of this opportunity to discuss with you the mutual security program and Africa. My appearance before you may in itself be of some significance, since it is the first time that an Assistant Secretary of State for the Bureau of African Affairs has made such an appearance before this Committee on

the mutual security program. This fact, of course, reflects the recognition on the part of the Congress, which last year approved a new position of Assistant Secretary of State to head the Bureau of African Affairs, of the growing importance of Africa to the free world.

I hardly need emphasize the fact that there is probably no area on earth today more alive with change, more politically, socially, and economically on the move than Africa. Seldom in history have such tremendous changes come to any continent as those we have seen in Africa since the end of World War II. The pattern of the new Africa is unfolding rapidly. While we still talk of much of this vast continent of 220 million people as an uncommitted area, it is difficult for me to emphasize sufficiently the urgency of the problems we face in Africa. As nation after nation reaches independence—and we have seen this happen in Libya, Morocco, Tunisia, Ghana, and Guinea since World War II—almost the first concern of these new governments is the imperative need to show reasonable results in improving the standard of living of its people. This becomes of decisive political importance to the survival of these new governments. One thing is certain: We must understand the vast political potential of this great continent, and to do so we must understand the aspirations of Africa's people. The surge toward self-government will again be reflected during 1960 when Nigeria, Cameroun, Togo, and Somalia will emerge as independent nations.

The past year in Africa has been marked by this onrushing tide of African self-determination. Nationalism has erupted in area after area in places where a year ago its rise would have seemed most unlikely. Some of the most recent manifestations were the achievement of full independence by Guinea, as a result of its voters' decision in a referendum on September 28, 1958; the All-African Peoples Conference at Accra, Ghana, in December 1958, and the riots in Leopoldville and Nyasaland. In short, little of Africa remains unstirred by the desire for greater self-expression. The disorders we are now seeing in Africa can be infectious and the separate but spreading outbreaks over the continent of Africa are disturbing. While there is great distance separating these disorders, there is for many of them a basic common denominator. It is the struggle for independence, the powerful appeal of nationalism even before institutions to channelize it constructively can be evolved.

The aspirations of the Pan-African independence movement were recently highlighted by the gathering of nonofficial delegates from all over the continent at Accra to the aforementioned All-African Peoples Conference. One result of the conference was to set up headquarters in Accra to coordinate the various nationalist movements. Although some of the resolutions adopted at Accra were controversial, it is evident that they generally reflected the aspirations of the Africans for self-government and economic and social progress, as well as their basic and determined opposition to colonialism and racial discrimination.

The new African states which have emerged—as well as those of longer duration—are governed by regimes which are moderate, friendly, and dedicated to the maintenance of their independence. In this we are most fortunate for these are tremendous assets to the free world which must be conserved and strengthened. But if these moderate regimes are to maintain themselves and justify their present orientation, they must be able to demonstrate to their peoples, in concrete and understandable terms, the advantages of cooperation with the West and of middle-of-the-road approaches to the solution of their current pressing problems.

I do not believe I need stress the importance of Africa to the free world, because by now this has become an accepted fact. We all know of Africa's strategic importance to the free world as evidenced in the major U.S. air, naval, and communications facilities maintained in Morocco, Libya, and Ethiopia. There is also of course a direct relationship between north African stability and peace and that of the European and Mediterranean areas. Sub-Sahara Africa's contribution of strategic raw materials—uranium, diamonds, manganese, tin, copper, chrome, to mention a few—is of vital importance to Africa's own development and to free world strength and security. The influence of African leaders and African "blocs" in world affairs and in international councils is growing. The use of this influence voiced in support of free world aims is a significant factor in debates on international issues.

THE COMMUNIST THREAT TO AFRICA

The yearnings and aspirations in Africa that I have previously discussed indicate quite clearly that we must accept the fact that the Communists will seek to gain influence on this great continent. It has been demonstrated time and again that they have techniques with which to exploit local difficulties and emotional issues. They particularly espouse nationalism in dependent areas and in new nations outside their own zone of influence. Above all they seek to exacerbate difficulties from whatever trouble they spring—economic, racial, and tribal—and there is always an adequate quota of trouble in new, inexperienced States.

During the past year, the outlines of the Communist offensive in Africa have emerged with startling rapidity. The organizational groundwork for Communist penetration was laid at the Cairo Afro-Asian Peoples Solidarity Conference in January 1958, with the establishment of a permanent secretariat under indirect Communist control.

In addition to the utilization of the Afro-Asian solidarity mechanism, the Communist bloc has made considerable progress in establishing diplomatic, cultural, and economic ties with the newly independent African states. Trade agreements have already been signed with Ethiopia, Morocco, Tunisia, and Guinea, while full diplomatic relations are now established with Ethiopia, Libya, and Morocco, and are about to be established with Guinea and Ghana. Communist offers of loans, grants, and technical assistance are being effectively exploited on a widespread basis in conjunction with anticolonialist and pronationalist propaganda. It is anticipated that Communist efforts to infiltrate and dominate trade union, student, and professional groups will be greatly intensified and will take advantage of the various conferences of such groups organized under the auspices of the Afro-Asian Solidarity Council.

The immediate Communist objective in Africa is the liquidation of all Western and particularly U.S. influence. In the pursuit of this objective, it can be anticipated that diplomatic, economic, cultural, and subversive weapons will be employed in coordination to exploit to the full the openings created by the revolutionary political and social ferment now sweeping the continent.

Thus far the Kremlin has appealed to the instinctive neutralism of the newly independent nations, which are eager for economic as well as political independence. Soviet officials have hitherto used Cairo as a platform from which to offer sweeping easy trade and aid terms to all of Africa.

ECONOMIC PROBLEMS AND THE MUTUAL SECURITY PROGRAM

Our most important tool in helping Africa with her economic problems is the mutual security program, through which we can help the many emergent nations in their need for the technical and managerial skills which are a must before any country can hope to start on the road toward development. Without these skills, no amount of capital will bring about growth.

Africa's economic and social needs, like its political and racial problems, are as great as the continent itself. The realization of its economic potential is a tremendous task which has barely begun.

Unemployment, trade deficits, scarcity of skilled labor and managerial personnel, lack of resources, lack of educational and health facilities, paucity of private and public investment capital and economic dislocations arising from uncertainties in their foreign relationships with other countries are but some of the problems facing the independent nations of Africa today.

All of these social and economic problems constitute a major challenge. No one nation can possibly solve them alone. Africa must have and deserves the cooperative support of her free world friends in this endeavor. To the extent that the African states are successful in maintaining their independence, in developing their human and natural resources, and in assuming a constructive and responsible role in world affairs, so will they inspire others and demonstrate to those about to achieve self-government the practical results of moderation and cooperation. In this context it is clear that external aid is a key to the realization of these advantages.

European countries continue to play a major role in the economic advancement of Africa, particularly in the dependent territories. European governments through bilateral efforts have been providing significant amounts of assistance and investments in African areas, much of which is for economic development. The International Bank for Reconstruction and Development and United Nations Technical Assistance have also been making valuable contributions to Africa's growth. In addition, private capital has made an enormous contribution to the development of Africa. I cannot emphasize too strongly the urgent need for additional private investment abroad and the enlistment of private managerial and technical talents so desperately in demand in Africa.

The mutual security program, as a vital arm of U.S. foreign policy, is becoming an increasingly important factor in Africa in achieving both short- and long-term objectives in that continent. Its personnel carry out programs which are often as important to the success of our foreign policy as the efforts of our more traditional diplomacy.

U.S. objectives in Africa are simply stated. As a responsible world power the United States seeks to contribute to the peace, stability and prosperity of the African continent. We favor the orderly development of the area toward self-government. To the extent possible, we stand ready with positive programs to assist the newly independent states to remain strong and able to work out their own destinies without outside interference by inimical interests.

The United States encourages these developments without seeking to displace anyone in Africa. We regard sympathetically the legitimate aspirations of the African peoples, while at the same time encouraging their retention of mutually advantageous ties with European powers.

Mutual security assistance is now being provided to six independent African countries and five dependent areas, two of which, Nigeria and Somalia, are scheduled to become independent next year. The interest of the United States in the progress of these areas has led to the expansion of economic and technical assistance programs. The major increase is in the field of technical cooperation in order to provide skilled technicians and administrators on whom will

rest the responsibility for manning the institutions of a modern economic society.

By our economic and technical aid programs, we are assisting the leaders and people of Africa to tackle their pressing internal problems and giving them a sound basis to hope for meaningful progress through nontotalitarian methods. This hope, and the challenge to make good on it, offer a healthy focus for the strong nationalism of the newly independent peoples, a focus much needed to nullify the appeal of irresponsible extremist movements which feed on hopelessness.

While economic development is primarily a task for the peoples of Africa, our mutual security program is helping to remove such bottlenecks to development as a lack of capital and a shortage or lack of certain kinds of technical and administrative knowledge and skills.

Africa's most pressing needs for economic growth are in the infrastructure of the economies—communications, transportation, power, ports, and public services. It is in these areas of development that the Development Fund will become one of the most important elements of our mutual security effort in Africa.

Because of the uncertainties we face in Africa, with new nations being born almost overnight, we must have flexibility to handle the unforeseen situations and emergencies. It is for this reason that I consider a substantial contingency fund an indispensable element in this year's aid request.

I am convinced that the yearning of Africa for a better way of life presents us with one of the great challenges of our time. If we fail to respond adequately, we may stand accused as a people who proclaim our own satisfaction with the benefits of freedom and well-being, but who are insensitive to the yearnings and needs of others. We must recognize that our posture before the world can be no better than the manner in which we fulfill obligations that flow from our status as the most materially favored nation in all history. The objective must be to help raise other peoples' standards of living. In doing so we shall also help to quicken the pace of personal and political development, a goal which is impossible of achievement in the absence of economic growth.

The orientation of Africa will, in the long run, depend on where the leaders and peoples feel their best interests lie. The ability of the West to encourage the pro-Western orientation of Africa will, moreover, probably depend less on our ability to convince Africans of the dangers of communism than on our demonstrating to them in positive terms the advantages of cooperation with the West.

A responsible Africa is emerging on the world scene. We must stand prepared to give it sympathetic support and assistance if its great potential is to be achieved in a manner which will also benefit the free world.

Letters to the Editor

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. HERLONG. Mr. Speaker, you will remember that sometime ago Elmo Roper made a study of the earmarks of of the active citizen. One of these behavior patterns was the habit of writing letters to the editor. It is for that reason that I call your attention to two major articles in the Editor and Publisher, the fourth estate's trade journal, dated January 31 and February 14. These articles were based on two reports issued by the Center for Practical Politics located at Rollins College in my Fifth Florida District. These reports, in which there has been national interest, are entitled "Policy of Florida Newspapers on Letters to the Editor" and "Letters to the Editor," a content analysis case history of letters written by a citizen with a socialist background to a conservative southern newspaper.

Now, Mr. Speaker, my reason for mentioning these studies is that the Orlando Sentinel, one of the great newspapers of America, is located in my district, prints more letters to the editor than any other newspaper in Florida. The study makes that fact clear. Martin Andersen, the Sentinel's publisher, says he thinks he publishes more letters than any other newspaper in the world. Anyway, I want to emphasize the importance of these letters in our great democracy. The Sentinel says it has found it good business, that it gets more reaction per printed word from its 100,000 circulation than most newspapers twice the size. It provides readers with a voice of their own. The Sentinel uses that voice to back up its editorial policy or to make the editor back down. In either case, it circulates ideas for the improvement of the Sentinel's service to the community.

Mr. Andersen says he gets letters written in stubby pencil on penny tablets and old wrapping paper; on rag paper with electric typewriters; on special stationery from elderly people; on childish sheets from youngsters just beginning to form words. About half the daily volume of letters are handwritten.

I wish to say "on the record," Mr. Speaker, that the Orlando Sentinel is operating as an engine of democracy in providing this important channel for the interaction of opinions. I congratulate Martin Andersen and the Center for Practical Politics on their teamwork in encouraging active citizenship.

Democrats Give Washington State Highest Sales Tax in Nation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PELLY. Mr. Speaker, the State of Michigan may be shorter of money or more insolvent, but my State of Washington heads the list when it comes to collecting the highest sales tax of any State in the Nation. That is the situation since the recently adjourned special session of the Washington State Legislature, which broke every record in Washington State's history for imposing new taxes.

Heretofore the average family was taxed $345 per biennium for the State's general fund. Now that family will pay about $125 more, and in all fairness Democratic State legislators must take full blame or credit for establishing this record of increasing taxes, because our State senate and house of representatives are two-thirds Democratic and likewise the Governor who ran for office on the platform of no taxes needed is also a Democrat.

One of our able new Republican State representatives, James A. Anderson, had the following to say after the recent session of the State legislature on the subject of the increase in Washington State's taxes, which indicates that taxes may be a State partisan political issue in my area in 1960. Meanwhile, may I suggest it is not the first time Democrat politicians have risen above the principles and platform when it comes to observing their New Deal-Fair Deal policy of spend and tax—spend and tax:

What a difference there is between promise and performance.

The Democratic platform on which all of the Democratic legislators ran in the last general election not only opposed any increase in the sales tax but advocated removing it entirely. The Democratic majority, however, at the session just concluded raised the sales tax to 4 percent. This is an 18 percent increase in the sales tax and gives Washington the highest sales tax in the Nation.

UNFAIR TO BUSINESS

The Democratic platform also decried the business and occupation tax as being a grossly unfair burden on business and urged its removal. Yet the Democratic 2-to-1 majority in both the senate and the house solidly supported and passed a large increase in this tax.

Every single one of the Republicans in both the house and the senate voted against these tax bills rammed through the special session by the Democratic majority. The Republican position reduced to its essence is simply that these huge new tax programs would not have been necessary if the legislature had faced up to the task of insisting upon some basic commonsense economies in government.

The Republican sponsored program aimed at reforming existing abuses in the welfare laws would, alone, have saved approximately $60 million, but the bills containing these programs were handily killed by the majority party.

The Greater Cleveland Council No. 440 of the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mrs. BOLTON. Mr. Speaker, in January of this year, Greater Cleveland Council No. 440 of the Boy Scouts of America adopted an ambitious 10-year program known as the Greater Cleveland plan. It is designed to make possible a tremendous growth in Boy Scout membership each year until 1968, when it is hoped that the Greater Cleveland area can serve some 82,000 boys. This would be 50 percent of all available boys at that time. The plan not only envisions reach-

ing all boys who desire to be scouts, but provides for a continual up-grading of the program offered.

It was gratifying for me to learn last week, Mr. Speaker, that the plan now having been in effect for 3 months, can point to more than 110 new scout units registered during that short period. One hundred ten units in 3 months is more than the number registered in any previous 1-year period.

I wish to congratulate the leaders in the Greater Cleveland council. They are men of vision and high purpose. They seek to make the opportunities of Scouting possible for thousands of new boys each year, and they are ever alert to see that the quality of the program offered shall be increasingly good. During these past 3 months, the leaders have seen that the master plan of operation was carefully drawn and is both practical and workable. The one element yet to be proven in their faith that the people of Greater Cleveland will back their council with the necessary support, in both time and money.

Service hours totaling hundreds of thousands are given each year by dedicated volunteers in order to make effective the splendid character-citizenship training program of the Boy Scouts of America. If these hours were to be translated into dollars and cents, the price of the Boy Scout program would be staggering. Since this is not the case, however, Scout budget needs are very very modest indeed. Particularly is this seen by comparing the Scout budget with a recent request from two correctional institutions in the Cleveland area, which have asked for $185 million for rehabilitation purposes. How much better to put only a fraction of this cost into the ounce of prevention the Scouting movement represents.

The Boy Scout program all over America is doing a truly magnificent job in fostering the ideals of true Americanism in our growing boys. In fact, I am inclined to agree with the statement once made by the beloved Will Rogers, "The only trouble with the Boy Scouts is there just ain't enough of them."

The Greater Cleveland council is to be commended on making a sincere effort to remedy that situation.

President Carlos P. Garcia of the Philippines

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD a very interesting letter I received from an old friend, Mr. P. W. Reeves, and since the letter relates to the Philippines and President Carlos P. Garcia, I feel that the letter would be of interest to my colleagues in the House:

MARCH 24, 1959.

Hon. GEORGE ANDREWS,
Washington, D.C.

MY DEAR FRIEND: When the United States is sending the Secretary of State to the four corners of the world to patch up differences with other nations, when U.S. Government officials are being sent all over the world on goodwill tours, it seems foolish for certain American magazines to continue dishing out irresponsible journalistic tripe which is utterly unfounded and unwarranted.

An American magazine's ill-timed article recently provoked rioting in La Paz, Bolivia, and caused the American Embassy in La Paz to be stoned. At least three leading magazines in America have recently attacked President Carlos P. Garcia of the Philippines. America can ill afford to lose friends in any part of the world at this time.

There is a political group in the Philippines which has done everything conceivable to undermine President Garcia since he assumed the office of President on March 17, 1957. This is understandable. Those fellows are out of power and they are anxious to get into power, but it is beyond me to figure out, as an American, why certain writers in the United States have joined in this fight on President Carlos P. Garcia. Since April 21, 1958, seven different vicious attacks have been made on President Garcia and the Philippine Government, and the attacks were made by two leading magazines in the United States.

The Philippines tries to emulate the United States in the operation of its government. More than 95 percent of the Filipino people love America. No Filipino loves America better than President Carlos P. Garcia. On March 10, 1959, while addressing a group of American business executives in Manila, President Garcia stated: "I don't want to see the Philippines veer away from America. God knows I am not anti-American. I want to make the Philippines a bridge between America and Asia * * *."

On June 24, 1958, speaking in New York City, President Garcia stated: "I give this pledge on behalf of the Filipino people that we shall stand with the American people in defense of freedom as we have stood with them in the past—loyally without counting the cost. It would appear that a policy of neutralism has the net effect of abetting the aggressive purposes of international communism. The proof of this is to be seen in Asia and Africa where neutralism is a much-favored philosophy and where communism has been encouraged to make heavy inroads by stealth or armed intervention. In Western Europe, where communism has been rejected, communism has found it less easy to pursue its objectives. I dare to stand and be counted with the American people on the side of freedom."

President Carlos P. Garcia stated his public service 34 years ago, in 1925 as a Congressman. He served as Congressman 6 years, 9 years as Governor of his home Province, almost 14 years as Senator, 3 years and 3 months as Vice President, and 2 years as President. He has not been touched by the breath of scandal during these 34 years. President Garcia has not lost any of his popularity. The small group in the Philippines which is opposing him in 1959, also opposed him when he was elected President in 1957; and the opposition to President Garcia now was the opposition to him when he was elected Vice President in 1953 when he was the running mate of the late Ramon Magsaysay.

The Garcia administration has taken steps to harness the resources of the country. A program has been charted to improve the country's economic position, both agriculturally and industrially. In trying to industrialize the nation, it has been necessary to help many new industries. Assisting these new industries during the past 2 years has been a heavy strain on the dollar reserves of the country.

When I saw the President a few days ago, he quoted the immortal Abraham Lincoln when he said to me: "I do the very best I know how, the very best I can, and I mean to keep on doing so until the end."

The facts which I have conveyed to you have not been told to the American people by the poisonous pen writers in the United States who are attacking this man whose honesty, integrity, statesmanship, and faithful service is unimpeachable.

With kindest regards.

Sincerely,

P. W. REEVES.

Journalism, They Call It

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I wish to insert a letter which I received from an attorney in Manila, together with an editorial from the Daily Mirror, published in Manila, dated March 7, 1959.

This letter together with the editorial show how our relations with a friendly ally can be severely damaged by irresponsible attacks upon the administration of one of our allies.

Our relations must be cemented by patience, understanding, and cooperation.

The letter and editorial follow:

MANILA, PHILIPPINES, *March 29, 1959.*

Hon. JAMES UTT,
House of Representatives Building,
Washington, D.C.

DEAR CONGRESSMAN AND SIR: I am sending you an editorial from the Daily Mirror, one of the leading newspapers in Manila, of date March 7, 1959. I thought you would like to include this in the proceedings of the daily CONGRESSIONAL RECORD.

It is a shame the way Time has attacked our President. Time did this dirty work in six different issues. The first attack was in August or September 1957, and we ignored that one. The next attack was April 21, 1958, and we staged a rally of more than 25,000 Filipinos. We bitterly denounced Time and Time's reporter. We burned Time magazine in front of the crowd at Plaza Miranda.

Since that attack in 1958, there have been four more attacks by Time on our great President. We are not perfect but we do not need anybody from Time magazine to wash our dirty linen. We have enough dirty linen washers of our own right here in Manila.

Time has done much damage here. Pickets marched in front of American Ambassador's office, also his house. Signs appeared on some streets telling Americans to go home. That is just a sample. Our people—95 percent—love the Americans and we want to keep it that way by throttling filthy magazines like time. Time apparently has two objectives in making all these attacks, viz: (a) to turn our people against our President; and (b) to make trouble between America and our country.

Hope you publish the editorial from Daily Mirror of March 7, 1959.

Yours for justice,

REMIGIO V. BARNES.

[From the Manila Daily Mirror, Mar. 7, 1959]

JOURNALISM, THEY CALL IT

Not the least of the matters brought up at the World Press Congress in Columbia, Mo., was the case of Time magazine. This is the first time that an international conference of journalists and publishers has dealt with this subject. Heretofore, responsible newsmen in the United States have privately deplored the brand of journalism practiced by Time, but have not seen fit to express their opinion in any public forum. Even their remarks at the World Press Congress were more inclined to deplore than to condemn. This is perhaps understandable; among the intelligentsia in the United States, Time is known for what it is, namely, a weekly entertainment rather than a source of news.

But one may well wonder how long Time will go on its merry way amusing Americans and insulting the governments, leaders, and institutions of other peoples. When a U.S. Embassy in a friendly South American capital is stoned because of what Time attributed, allegedly in jest, to one of its officials, it can no longer be taken lightly, even by Americans. Because it is identified with the interests of the Republican administration, what Time prints about the affairs of foreign countries will always be taken seriously. This weekly has been banned abroad time and again for ridiculing leaders and regimes it dislikes. When the targets were dictators with a bad name to begin with, Time was able to cloak its officiousness with the mantle of democracy. But Time, now accustomed to the sport, has made the mistake of lumping Afro-Asian nationalist leaders with Communists. And in Latin America, Time treats presidents and ministers as if they were straight out of a comic opera.

The latest Latin-American incident concerning Time occurred while the World Press Congress was still sitting. This was a providential event, for it forced the delegates to take cognizance of the happening. Quoting a U.S. Embassy official, Time said that Bolivia should be divided among her neighbors. The Bolivians reached by stoning the American Embassy. It would have done no good to explain that the supposed diplomat was jesting. The seeming levity of the remark, whoever its author was, was an obvious shield for a malicious intent, namely, to influence international opinion against the Bolivian Government.

When Vice President NIXON was stoned and spat upon in the other South American capitals he visited, the people of La Paz made the headlines by giving him the most cordial reception of his trip. No one would have suspected then that the same people would be stoning the American Embassy within such a short time. But it has happened, thanks to Time's handiwork.

It would be comforting to know that Time intends to mend its ways from now on. But there is no sign of repentance, and probably there never will be as long as the weekly's circulation remains unaffected by isolated boycotts abroad. To the contrary, the more people it offends the more arrogant and unfeeling Time seems to get. Americans may have learned to live with it, but not the people of most other countries, especially the newly independent countries of Asia and Africa. It is in these areas that a magazine like Time does the most harm, and much of this is harm to America and what it stands for.

A Constitutional Amendment to Control Federal Spending

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to a House concurrent resolution which has been introduced in the Iowa Legislature by State Representative Kenneth Stringer, of Scott County, and two of his fellow representatives, Grassley and Flatt.

The resolution proposes an amendment to the U.S. Constitution for the purpose of holding Federal expenditures within income. In view of the mounting national debt and the pressure to run the Government on a deficit basis, I feel that the resolution has so much merit that we should give every consideration to its promotion.

The resolution follows:

HOUSE CONCURRENT RESOLUTION 8

Concurrent resolution making application to the Congress of the United States for the calling of a convention to propose an amendment to the Constitution of the United States

Whereas there is much concern about Federal spending and the Federal debt; and

Whereas article V of the Constitution of the United States provides that upon application of two-thirds of the States, Congress shall call a convention for proposing amendments to such Constitution, which shall be submitted to the State legislatures or State conventions for ratification: Therefore, be it

Resolved by the General Assembly of the State of Iowa, That this general assembly hereby makes application to the Congress of the United States to call a convention for the purpose of proposing one amendment to the Constitution of the United States, such amendment to provide for the following:

1. That the annual appropriations of Congress shall not exceed the estimated receipts which shall be transmitted to Congress by the President on the first day of each regular session of Congress. Such estimated receipts shall be for the ensuing fiscal year under the existing tax laws. If, however, Congress revises the tax laws, the President shall estimate the effect of such revisions and transmit a revised estimate of total receipts to Congress, which shall be the amount to which appropriations shall be limited.

2. That if Congress appropriates money in excess of the estimated receipts for said fiscal year, the President shall be authorized and directed to reduce such appropriations so that they do not exceed the receipts transmitted by the President.

3. That the foregoing limitations shall not apply in time of war or during the period ending on the date of the expiration of 1 full fiscal year after the termination thereof.

Resolved, That the secretary of state of the State of Iowa is hereby directed to send certified copies of this concurrent resolution to the Secretary of the Senate of the United States, to the Clerk of the House of Representatives of the United States, to each Member of Congress from the State of Iowa, and to the Chief Executive and presiding officers of the legislative bodies of each of the several States.

Contrasting Political Philosophies

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. PELLY. Mr. Speaker, families living in the United States who were on moderate and fixed incomes suffered great hardship due to rising prices and the cost of food, shelter and clothing from 1939 to 1952 when, except for the 80th Congress, control of both the legislative and the executive branches of the Federal Government was in the hands of the Democrats.

On March 9, 1959, the House-Senate Joint Economic Committee issued its 12th annual review of the President's economic report and the budget. The 10 Democrats on this committee must have forgotten about what happened during those previous years because in their views on the review they charge the present Republican administration policies reflect too much concern with price rises. Committee Republicans reject that criticism, as do, I am sure, all lower income persons who have experienced the effects of a shrinking buying power of the dollar.

Very rightly, it seems to me, an administration must concern itself from day to day and month to month with the threat of the possible diminishing value of the dollar and a resultant rise in the cost of living. The time to give attention to such a situation is before any such drop in the value of the consumer dollar occurs—not afterward when counteraction is too late.

Let us remember that prior to 1952 under Democratic administrations, the cost of living rocketed some 90 percent, shrinking the value of wages and true income to about 52 cents. A $1,000 laid away in a savings account in 1939 for a rainy day as a result shrank to about $520 by 1952.

Let us not forget either another thing which added to the economic plight of the wage earner during this same period. In addition to the cut in income dollars of nearly one-half, due to lower value of the dollar, his burden of taxes was increased. Between 1939 and 1952, lower

income groups were drastically hurt by the Democratic Congress through a reduced personal income tax exemption from $2,500 to $1,000 for a married couple, and from $1,000 to $500 for a single worker.

On top of this, adding to a worker's woes, the Democrats increased the minimum rate of taxation from 4 percent on the first $4,000 of income to 23 percent on the first $2,000 of income.

This is the record as to the treatment of lower income workers and retired persons.

Furthermore, only once during those years was there a tax reduction—that occurred in 1948 when the Republican 80th Congress, over the veto of a Democratic President, increased exemptions and reduced the minimum income tax rate.

Of course, the New Deal-Fair Deal philosophy of economics embraces bigger taxes and more spending. The Democrat Party in its basic principle has been consistent in this respect over the past 27 years. It is still the party of high taxes and a shrinking dollar. The Democratic Advisory Council goes further and advocates keeping Federal spending of borrowed, deficit dollars as a vital factor to a growing national economy.

Not all Democrat legislators believe in Federal Government controls and big spending. Many Democrats oppose the welfare state idea, but these are out of step with the program of the majority party of the Congress. The outstanding Democratic savers, economizers, and those who consistently represent a basic ideology contrary to their own party leadership, of course, are entitled to full credit as individuals. However, under our political system it is the party that offers a program and, Mr. Speaker, in my opinion the record is clear that between the two political philosophies it is the Republicans who favor low taxes and seek to protect the economy of the consumer.

TVA Spends Your Tax Dollars Abroad

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. JENSEN. Mr. Speaker, the inabilty of our own U.S. industry to compete with foreign made goods is becoming a threat to labor and to our entire economy. The latest example being the purchase by the Tennessee Valley Authority of a huge generator from a foreign concern, at a price far below the bids submitted by Westinghouse and General Electric.

The two domestic manufacturers are being criticized by certain union bosses for their inability to submit a winning bid. Hence, I felt it my duty to get the facts, as stated in a letter to me from Westinghouse under date of April 3, 1959, and which I here insert in the RECORD.

Now, of course, the Tennessee Valley Authority would like to have all the American taxpayers believe that by accepting the low foreign bid for this generator, they saved money for all the American taxpayers—but, to a very great degree it is only the people in the Tennessee Valley who will benefit, since it is only those people who profit by the cheap subsidized TVA electric power made available to them due to the over $3 billion of all the American people's tax dollars, which Congress has appropriated interest free and tax free to TVA over the past 25 years.

If the businessmen and the farmers of a neighboring State, Iowa for example, were furnished all the money they would need to buy a business or a farm—stock and equipment—interest free, and then be tax free, they would soon drive every Iowa businessman and farmer to the wall. Is it any wonder TVA can sell electric power far below private power producers, who pay both interest and taxes?

And Mr. Speaker, a comparable competitive situation applies with almost equal force as between Westinghouse and General Electric and the successful foreign bidder. The Westinghouse letter follows:

WESTINGHOUSE ELECTRIC CORP.,
Pittsburgh, Pa., April 3, 1959.

Hon. BEN F. JENSEN,
Congress of the United States, House of Representatives, Washington, D.C.

DEAR MR. JENSEN: We appreciate your interest in getting the facts concerning the TVA 500,000-kilowatt steam turbine order referred to in the letter you have received from the United Electrical, Radio, and Machine Workers of America.

In this letter, the general president of the UE has done a great disservice to the union's membership and to the Nation with absurd charges of 265 percent profits in the electrical industry of the United States. The letter presents an argument based on false assumptions, incorrect figures and distortions of fact. Its resulting conclusions are ludicrous.

For example, while the UE does not deny that U.S. electrical manufacturers pay wages at least 2½ times those paid in England, they somehow calculate that our labor costs on this $18 million job are only $91,000 more than Parsons labor costs.

They calculate further that the total cost of building this giant steam turbine generator would be only $5,300,000. The fact is that this amount wouldn't cover the cost of materials—to say nothing of wages and salaries, the costs of providing and operating our factories and their great number of machine tools, transportation, research and development, and many additional expenses.

I am sure that Westinghouse stockholders would be delighted if our profits could be a little closer to the 265 percent that UE says we earn, instead of the 4 percent or slightly less that we actually have earned in the last several years.

The UE letter bases its charges of profiteering on what it says are company figures. It then quotes a statement by Mr. A. C. Monteith which appeared in the Westinghouse News to the effect that the TVA order in question would have meant 1,080,000 man-hours of work for Westinghouse employees at the Lester and East Pittsburgh, Pa., plants and 375,000 man-hours of work for employees in plants of supplier companies.

What the UE does not say is that these figures represent only the direct factory labor which would have been involved in production of the steam turbine generator—the labor of those factory employees who would have been working full-time on this particular job and who are directly affected by the loss of this order. When we cited these man-hour figures to show the possible effect of this lost order on employment, we were intentionally conservative, limiting the figure to direct labor only.

The figure does not include the host of service personnel such as crane operators, materials handlers, production clerks, plant guards, supervisors and others. Such indirect labor costs are at least double the direct labor costs. This means that the total labor cost of manufacturing this type of giant electrical equipment is approximately three times the actual direct labor cost. And that covers only the people in the manufacturing plants. In addition, there is the cost of the people in the research and development departments and laboratories whose efforts keep American electrical apparatus ahead of the world in reliability and efficiency. And there are sales costs and administrative costs. The UE letter ignores all these.

As a second step in its series of miscalculations, the UE takes this small portion of total labor cost and multiplies it by several industry average wage figures—which also are incorrect when applied to the Westinghouse plants involved. The skilled employees who build these giant machines earn well above the average industry wage.

Then, to muddle even more the already completely inaccurate "calculation," the UE applies a mythical productive efficiency advantage which, they imply, the heavy electrical manufacturers in this country have over similar plants abroad. This, they claim, is 244 percent. If such an advantage exists in the production of heavy electric power apparatus, we are not aware of it. And judging from the low bids of foreign electrical manufacturers, they haven't heard of their great disadvantage either.

It is indeed unfortunate that the officers of a national labor union who represents thousands of American workmen spread this type of economic nonsense which can only work against the best interests of their members in a segment of industry where reduced employment has been and still is a problem.

Such propaganda is serious also in that it encourages those who fail to see the dangers involved in our Government buying heavy electric power apparatus from foreign companies which could not provide the necessary repairs and maintenance in time of war.

The UE letter dismisses the security question as a "hypocritical issue" raised to justify our inability to meet the low bids of foreign suppliers. We are willing to leave to your judgment whether or not the continuous supply of electric power to key defense production areas of the country during a national emergency is a real or a "hypocritical" issue. In 1957, TVA supplied more than half the power used by the U.S. Atomic Energy Commission, for example.

Despite TVA reassurances on the ability of foreign suppliers to provide service, the fact remains that the Parsons company does not have a steam turbine generator manufacturing plant on this continent. Nor is there any plant in Canada capable of handling major repairs of large steam turbine generators. Parsons, in its bid, said it has just three technical men in all of North America to handle repairs and maintenance. By contrast, Westinghouse has more than 1,000 field service engineers, and, in addition to our major manufacturing plants, we have service and repair plants throughout the United States. Any major repair or replacement on such a steam turbine generator

as the TVA Colbert Station unit would require Parsons to ship the unit overseas or ship parts from overseas—something which could be impossible in time of war or other national emergency.

This very real issue of national security should not be screened from view by the smoke of misinformation emanating from UE or any other source.

Sincerely yours,

C. H. BARTLETT,
Vice President.

James H. Gray, Editor and Publisher of the Albany, Ga., Herald, Named Citizen of the Year

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. FORRESTER. Mr. Speaker, on March 24, 1959, Hon. James H. Gray, publisher and editor of the Albany Herald and owner of WALB radio and television station, received the highest honor that can be bestowed upon a Georgia citizen for loyal and outstanding services to his State, when he accepted the Georgia Citizen of the Year award from the Association of the County Commissioners.

The county commissioners are the managers of the affairs of their respective counties and the action of the Association of the County Commissioners reflect the views of the people of all the counties of Georgia as no other organization can.

A short newspaper account of Mr. Gray's nomination and acceptance reads as follows:

"MAN OF YEAR" STATE AWARD GOES TO EDITOR

ATLANTA.—James H. Gray, editor and publisher of the Albany Herald, today was presented the Association of County Commissioners' citizen of the year award.

The presentation was made by Dr. W. A. Blasingame of Moultrie, past president of the association. He described Gray as a native of Massachusetts but a Georgian by choice.

Blasingame said Gray "sees and understands our situation * * * above all he is a Georgian."

In a brief acceptance speech the Albany publisher said he was "profoundly grateful for this significant award."

TIME OF STRESS

"You and I are living in highly emotional times for the Nation and our beloved State," Gray said. "The isues—political, economic, and social—are many-sided and susceptible to solutions that do not come clear, unfortunately."

He told the commissioners that clamor is most apt to drown out the voice of reason. The result is "confusion that we find swirling about us."

Gray then added: "The colossal folly of our history, that here and nowhere else will we find the clues to solving our problems."

FREEDOM'S DANGER

He said freedom gets lost in big government and that as a government grows its spokesmen "presume to tell the people what freedom is and what freedom is not."

Gray said the South has seen such an interpretation "infringe upon our freedom in such highly exclusive matters as social relationships and the education of our children."

Gray then added: "The colossal folly of this unholy business has been well illustrated. It leads to the rule of force which completely ignores that old American principle of consent of the governed."

Mr. Gray came to Albany, Ga., from Springfield, Mass., and, as he says, he "became a southerner by choice." Mr. Gray has great respect and admiration for the people of Georgia and the South, and we think "Jimmy" Gray is one of our outstanding citizens, and that we are lucky indeed to have him. The experience of "Jimmy" Gray is simply additional proof that prejudice is something a person must help build up against himself, while friendship can never be denied to a genuine friend.

Mr. Speaker, I have the idea that the Georgia people would not deny "Jimmy" Gray any honor he might seek.

Greek River Became a "Horn of Plenty"

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the second article written by Mr. Coleman A. Harwell, editor of the Nashville Tennessean, while on a world tour under the auspices of the State Department Exchange Program.

This article on Greece will be of particular interest to each Member of the House and I commend it to your reading.

The article follows:

GREEK RIVER BECAME A "HORN OF PLENTY"

(By Coleman A. Harwell)

ATHENS.—The other morning we were having breakfast at the Mediterranean Hotel, in Salonika.

A couple seated at the table next to us was in animated conversation. They were speaking German.

"The place is loaded with German salesmen," said my companion.

FOREIGN AFFAIRS

"Yes, so we noticed today," I replied. "As we drove through the Thessaly Plains, we saw a tractor being demonstrated to a village crowd. It was a Porsche."

That is item number one in a series of three which are being cited under the heading: Little Things May Have Big Meaning.

The others are these: (1) Ground has been broken on Queen Sophia Avenue for the $7 million Athens Conrad Hilton Hotel, and (2) French and German private capital is supporting the bid of an American firm to construct the largest powerplant in Greece.

PROGRESS AHEAD

These facts add up to such an impressive total, in my view, that the following rash forecast is justified: Greece will make significant economic progress in the next 10 years.

Few people qualified to do so will make such a forecast openly. There are too many hindrances. But conversations with several informed people whose confidential predictions range from hopeful to positive, plus some readily available encouraging data, strengthen my conclusion.

The importance of economic stability here is obvious. With a strong economy, Greece is a vigorous ally in a key spot between East and West. Without it, communism is a continuing threat, and that in the face of the fact that Greeks on the whole are as strongly antagonistic to communism as any people could be.

Consider some obstacles:

1. Lack of economic confidence: Monetary values have been wiped out three times in a lifetime for the Greeks. So now, when they have money they put it in real things: Houses, automobiles, household items, etc. Bank savings, which spur industrial development, are negligible, despite 8-percent interest.

2. Lack of political confidence. The nation's sentiment is largely middle of the road, perhaps a little to the left. (It is overwhelmingly Greek Orthodox in faith, which is rightist, anti-Communist). Its heavy unemployment spurs the leftist party. And the big problem is that the center groups are split up in squabbles, causing many voters to turn right or left, with the result that leftists get more votes than justified.

3. Heavy industry which is necessary to create jobs, is contrary to Greek tradition. Instance: Family loyalty is the big thing. Everybody wants to help Uncle Vasilly or Cousin Costas, but no one is inclined to do and die for deal old Westinghouse. Instance: Department stores and supermarkets don't exist. Business is small, run by the family. Instance: Greeks buy suits from tailors, shoes from cobblers. No Fashion Park or Genesco here.

4. Cafeneion-itis: The cafeneion is the world's foremost coffee klatche. It is no casual thing, such as the guys or gals slipping out for a quick cup of java at Do's Grill. It is a fundamental social institution for all men, morning and evening. A tiny cup of coffee, a huge amount of talk. What started as a relaxing social event has become a symptom of frustration, in the opinion of many Greeks. Problems that might be solved are talked to death. Cyprus is an encouraging exception—and Greeks "blame" this on U.S. pressure.

So much for the negative. On the positive side, we submit these points:

1. An industrious, buoyant people.

2. World interest centered on Greece, politically and militarily.

3. An historic attraction that no area can outdo, increasing in value as Western culture advances. Our civilization came to life here; the spread of Christianity began here. Climate is a plus factor.

4. Industrial potential that has been underestimated.

We will let the first three points speak for themselves at this time, taking up No. 3 (including the Conrad Hilton) in a subsequent article on tourism. For now, consider No. 4.

PLENTIFUL RESOURCES

Greek resources have long been underrated. For instance, it has bauxite deposits in the hundreds of millions of tons, sufficient to establish an industry. It has similar deposits of chromatic iron ore and of lignite, some of which is being used already to create power. It has large amounts of unused waterpower.

Greek powerplants, water and lignite, produce 490,000 kilowatts of energy today, thanks, in large part, to U.S. aid. This is more than twice the prewar figure, and since

a grid system has boosted efficiency, it amounts to an actual increase of 5.9 times the prewar rate.

At long last there is reason to hope, even to believe, that the great Achelos River Dam, or dams will be built soon. There has been a good deal of waste motion, starting with a survey by Ebasco, the U.S. engineering firm which, incidentally, faced considerable criticism for a survey in the TVA area. For whatever reason, it was only a partial survey.

Now bids have been made, based on that survey. The bids must obviously be inexact because they cover not only construction and financing costs, but also a completed survey setting out final details of the project. So, the bids are based on what the bidder considers the most feasible way to develop the site. Thus, they vary widely and the Greek Government must choose between them in that light.

It is understood that the United States is trying to persuade the Greeks to have a final detailed survey made, and take bids on that. That sounds reasonable.

Meanwhile, Morrison-Knudsen, U.S. engineering firm, has private German and French financial support in its bid of $44 million. This firm, incidentally, built Boulder Dam, has done much work in Europe, and is doing the big Helmland project in Afghanistan, where we go soon.

MAJOR COMPETITOR

Considered a major competitor for the job is an Italian group, bidding $37 million, financed in part by money from war reparations due from Italy to Greece. The time factor is perhaps as important as the basic money bid and Morrison-Knudsen is ahead in this.

Incidentally, Greece's Deputy Premier Kanellopolous, who is in the United States for NATO's 10th anniversary fete, is reported planning to discuss development loan funds in Washington for the project. Request for such a loan already was in. It is understood that this would not give American bidders any preference in the competition.

These factors to one side, however, there is reason to be encouraged toward realization of this long-discussed project which would add 180,000 kilowatts to the Nation's power grid from the river in western Greece. It is understood that an additional 60,000 kilowatts would be readily available with a fourth turbine, and even this might be increased.

Thus, there is within sight (for the optimist) 1 million kilowatts of power, many times Greece's prewar production.

CAN MAKE ALUMINUM

And what could be achieved thereby? For one thing, instead of shipping its bauxite ore for $5.40 per ton, most of it to Russia, and importing aluminum products at $500 per ton and up, Greece might be processing its own bauxite all the way to the finished products. Greek workers would benefit, stockholders would make profits, more foreign exchange would be provided, fringe industries would spring up, etc.

Upon these things is the optimism for Greece based.

Bear in mind, she had only 10 years of peace, and 4 of those wracked by Cyprus, compared with nearly 14 continuous years for the rest of Europe. If war clouds stay away, Greece may have a sunny future.

The Achelos River is no exception to the fact that the Greeks have a legend for everything. Hearing it, I am reminded that we are similarly blessed as to the Cumberland and Tennessee Rivers—with Indian legends.

The Greek legend is that Achelos fought Heracles twice for the love of Deianira. He was defeated both times and took the form of a snake, then that of a bull. Heracles seized him, wrenched off a horn and threw him into the river Thoas, which was thereafter called the Achelos. Then, says the legend, the horn was rescued by the Naiads, who filled it with flowers and it became the horn of plenty.

The legend might well apply to our rivers, too.

Jobless March Flops: Too Much Work

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. MICHEL. Mr. Speaker, last week we witnessed the so-called march on Washington, by members of the AFL–CIO in an effort to stampede the Congress into enacting their grandiose schemes for further Federal support programs.

I am happy to report that in my congressional district, where last year we were suffering considerably from layoffs in the heavy machinery industry, practically all of the men furloughed have now being recalled. As a matter of fact, following the editorial entitled, "The March on Washington," I include for printing in the RECORD the news dispatch entitled, "Jobless March Flops: Too Much Work," appearing in the April 7 issue of the Peoria Journal Star:

[From the Peoria Journal Star, Apr. 8, 1959]

THE MARCH ON WASHINGTON

Because the 1-day AFL–CIO conference today has been called a march on Washington, many of us have visualized a parade of some kind. Actually it is a shrewdly timed device to remind Congress that organized labor is looking over its shoulder; shrewdly timed becaues the House Ways and Means Committee was scheduled to start hearings yesterday on general unemployment compensation proposals.

By meeting in Washington today, some 5,000 representatives of labor unions will dramatize their insistence on Federal broadening of unemployment compensation. But we think President Eisenhower's position on this question is right. The Federal Government ought to wait to see what State governments do before it considers any permanent revision of Federal law. The extension of unemployment compensation to July 1, already passed, is a stopgap measure.

On March 23, the President told the executive committee of the governors' conference that States have the authority and responsibility to provide adequate benefits under the Federal-State unemployment insurance program. Governors agree that it is primarily a State program. It is to be dealt with "without imposition of Federal standards, governing eligibility, duration, or the amount of benefits." Basic reason is that the States should act first because they can act quickest, each to suit its own needs.

The President recommends that States pay benefits of 50 percent of average weekly wages for a minimum of 26 weeks. Of the 49 State legislatures, 46 are meeting or have met this year. When Congress sees what these legislatures have provided, then, and not until then, can it make a decision on broadening the law.

The Georgia Legislature has met and gone home without doing anything. Montana made some changes but they were vetoed by the Governor. Six other legislatures have voted to increaes benefits and duration in various degrees.

Present maximum payment of unemployment varies from 36 weeks (Utah) to 16 weeks (Florida). Maximum amounts range from $26 to $70 a week.

These basic conditions will not be changed by labor's march.

[From the Peoria Journal Star, Apr. 7, 1959]

JOBLESS MARCH FLOPS: TOO MUCH WORK

Unemployed? OK so try to find some.

United Automobile Workers, Local 974 had to go into the ranks of its retired members to find delegates to send to an AFL–CIO unemployment demonstration Wednesday in Washington, D.C.

Other Peoria area labor locals also had some trouble finding members to attend the conference which will be given a start by Walter Reuther, president of the UAW Wednesday morning at the National Guard Armory in Washington.

The Caterpillar union will send a contingent of 20 retired members, but Fred Schraeder, business agent of the Brewery Workers said his local has notified the international union that delegates will have to come from eastern locals where there is more unemployment.

The Peoria Trades and Labor Assembly is not sending a delegate, according to T. C. Salzer, president. Canton's United Automobile Workers local at the International Harvester Co. plant will send a dozen men to join an expected 1,000 leaving Chicago this afternoon by special train.

Reds Sell Wares on TV

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an article written by Arthur E. Fetridge, and appearing in the Boston Sunday Herald of March 29, 1959:

REDS SELL WARES ON TV—PROPAGANDISTS GET FREE HAND

(By Arthur E. Fetridge)

Television and radio have been patting themselves on the back for the wonderful so-called news-in-depth programs they have been offering. Many of them are wonderful and deserving of high praise, yet I have a reservation because of what the producers of these programs thus far, to my knowledge, ignore.

I have yet to hear the narrator, moderator or host of any of these news-in-depth programs say, either at the start or end of the program, "We realize that this interview or film presents only the side of the person interviwed of what our cameraman was allowed to take."

Let's take a recent film taken inside China. Since Red China is a police state, no one takes photographs or makes motion picture films without the express sanction of the Communist government.

GREAT SELLING

When this particular film was shown on television the Reds were hard at work establishing communes, which in this country would be tantamount to slave labor camps.

As I watched this film I was struck by the happy attitude of the people, by the

willingness with which they threw themselves into their work and by their general acceptance of regimentation.

It was a great sell for this type of living and for communism. Everyone was working away merrily. Everyone loved to work 12 hours a day. Everyone loved living in communal bunkhouses and not having to worry about getting meals, or taking care of children, or having their own home or own land to till.

Somehow I suspect every scene shown in that film was carefully staged by the Communists. Since seeing the film I suspect it all the more by small items I've seen in the daily press telling of people who have risked their lives to escape the communes.

RED PROPAGANDA

I wonder why no mention was made of this staging by the narrator of the film? He must have realized it.

As another example let us consider the interview by U.S. newsmen in Russia with Russia's dictator, Nikita S. Khrushchev, on June 2, 1957. This interview received wide publicity and without doubt was an outstanding bit of brilliant coverage. However, it stands out as one of the best examples of television in this country being used to spread Red propaganda.

When a newspaper runs such an interview, either in the story containing the interview or in an adjoining column we'll find an interpretation of various statements. If the man being interviewed comes out with an outright falsehood the reporter has the opportunity of saying so. If he evades or delivers doubletalk that, too, is pointed out in the story.

This is rarely done in these news-in-depth programs. It almost seems as though they are granted of a take-it-or-leave-it basis.

ANSWERS UNTRUTHS

In that particular interview, of which President Eisenhower was rather critical, we saw Khrushchev give a masterful exhibition of sidestepping critical questions. Some he evaded. Others he pretended to answer by launching into long harangues that had little to do with the subject at hand.

His interview was filled with propaganda galore, with not a soul to answer it. The questions were perfectly all right but the answers were not.

Many people who do not follow newspapers too regularly could not be aware that some of Khrushchev's answers were untruths. They would not catch the evasions because of their lack of knowledge of world affairs. Many others, for similar reasons, missed the veiled attack on the United States.

All of this could be cleared up if the producers of these programs would point out the omissions in the interviews at its close, or even warn the viewer that some of the material to be heard is pure propaganda. However, our feeling is that they have no desire to rob the show in any way of the glory they hope will be heaped on it.

Pennsylvania Supreme Court Justice Michael A. Musmanno Delivers Brilliant Address on the Sacco-Vanzetti Case

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. FULTON. Mr. Speaker, on April 2, 1959, my good friend, Pennsylvania Supreme Court Justice Michael A. Musmanno delivered a brilliant address before the joint judiciary committee of the Massachusetts Legislature on the celebrated Sacco-Vanzetti case, which, I believe, will take its place in the literature of eloquent expression in behalf of the sacred principle of justice. I have followed the Sacco-Vanzetti case ever since I was a student at the Harvard Law School and I have always felt that somehow here justice went astray. It certainly appears to me that the men did not get the kind of a fair trial which everyone is entitled to, in accordance with the best traditions of a fair trial in America.

All of America is interested in the Sacco-Vanzetti case. It is being studied in many universities and colleges throughout the Nation, and I am certain that every lover of justice will be enlightened and gratified to read what Justive Musmanno has to say on the subject. I am, therefore, pleased to submit Justice Musmanno's address to the Congress:

ADDRESS BY PENNSYLVANIA SUPREME COURT JUSTICE MICHAEL A. MUSMANNO BEFORE THE JOINT HOUSE AND SENATE JUDICIARY COMMITTEE OF THE MASSACHUSETTS LEGISLATURE CONSIDERING THE CELLA RESOLUTION, CALLING FOR THE POSTHUMOUS PARDON OF SACCO AND VANZETTI, STATE HOUSE, BOSTON, APRIL 2, 1959

Mr. Chairman and members of this distinguished joint judiciary committee of the Massachusetts Legislature, this committee is undertaking a task which is destined to inspire mankind everywhere, because it is dedicating itself to the most sacred cause which can exist in the relationship between human beings, and that, of course, is justice. The resolution introduced by Representative Cella seeks to do justice for whom? It asks for justice for two humble creatures, creatures so humble that they are not even listed among the living. To what greater heights of nobility can the human spirit climb than the desire to do justice to men who cannot pay, who cannot vote, and who cannot even proffer a hand of gratitude? But though these two men do not live, their lives and the true, unimpeachable story of their death may well become the moral barrier to save other men from annihilation for the gratification of venal ambition.

While nothing can be done to bring back the lives of a good shoemaker and a poor fish peddler, now dead over 31 years, your acknowledgment of their tragedy will still fulfill their profound aspiration, as it was eloquently and touchingly spoken by Vanzetti: "Never in our full life could we hope to do such work for tolerance, for justice, for man's understanding of man as now we do by accident."

However, what you accomplish will not be the result of accident; it will be the result of study and of dispassionate consideration. What you do will be done in accordance with the traditions of the just and equal laws enunciated in the Mayflower compact and which have been the guiding genius of the Commonwealth of Massachusetts. Your conclusions will show that if Massachusetts departed from her traditional path of tolerance, justice, and man's understanding of man, it was not because of the will of the State but because of some men who erred unintentionally, some who erred maliciously and purposefully, and some who simply were not worthy of the honored accolade of Massachusetts citizenship.

I pray of you that when you open the book of the Sacco-Vanzetti case you will read all its pages. And as you turn those pages, do not let your eyes leap over the passages of unworthy deeds committed by unworthy men. Massachusetts does not need to fear for its greatness because of a few individuals who wore robes of office too big for their moral frames and accomplished evil which spread far beyond the shadows of their boundless conceit and selfish projection.

No worthy citizen of Massachusetts today would entertain any qualm about criticizing the prosecutors of Rogers Williams, even though it was the Massachusetts General Court, presided over by the then Governor, which condemned that great man whose only crime was that of advocating liberty of conscience. No estimable person today would hesitate to censure the same General Court of Massachusetts which in 1637 condemned the ineffable religious leader Anne Hutchinson to perpetual banishment. I am sure that this committee approves, without reservation, the action of your legislature, and the action of Governor Furcolo, taken only 2 years ago, in pardoning Ann Pudeator and other women who were hanged as witches in 1692 after a so-called trial in Salem. By suitable legislation you removed from the glorious escutcheon of Massachusetts the last lingering stains of the Salem witchcraft executions by pardoning those who had not been exonerated in 1711.

Whether it is pleasant to contemplate or not, it cannot be denied that in 1927 the world saw a similar type of stain appear on the resplendent banner of this State when two men were executed while efforts were still being made by their attorneys, of whom I was privileged to be one, to obtain a stay of execution from members of the Supreme Court of the United States where a petition for a review of their cases had already been filed. That stain had begun to form 7 years before when these two men were cast into prison, and ambitious prosecutors with clever brains and ingenious plans plotted to entangle them in a series of circumstances, some real and some invented, so as to make them appear robbers and killers, never pausing to reflect on, or care about, the possibilities and probabilities that their quarries might be innocent. That stain deepened and widened through 7 years of misconduct, fabrication, perversity, and willful blindness to fact and truth, all performed and perpetrated in the name of Massachusetts by ambitious men unconcerned about the badge of shame which might follow after they had left the scene of action.

District Attorney Frederick G. Katzmann was so lacking in shame that he connived with a firearms expert, Captain Proctor, to have him testify in such a manner as to deceive the jury into believing that a bullet found in the body of one of the dead payroll guards had been fired through Sacco's pistol when he knew that Proctor had no such evidence. He and the witness even agreed upon the lying language which was to be used.

The prosecution connived to keep away from the trial an eyewitness to the murder, Roy E. Gould, who told the prosecution that one of the bandits shot at him at a distance of 10 feet, the bullet perforating his coat, and that he got a good look at the man the Commonwealth claimed was Sacco. Gould said it was not Sacco. Gould was not called as a witness nor was his name given to the defense, as in law and conscience the district attorney is required to do.

When a proved criminal by the name of Celestino Madeiros confessed to being a participant in the South Braintree crime and declared that Sacco and Vanzetti were not in the crime, the district attorney's office, instead of immediately launching an investigation to determine the truth of Madeiro's statement, assumed an air of indifference to this extraordinary development in the case and then later manifested opposition and hostility to any revelation which supported Madeiro's confession. It

was left to Herbert B. Ehrmann, a highly reputable and exceedingly able lawyer, to make an independent investigation, and the material which he found in exoneration of Sacco and Vanzetti was not disproved. An honest and conscientious district attorney and staff would have been as eager as defense counsel to inquire into the Madeiros confession because the district attorney is not hired by the people to obtain convictions at all costs, but to see that justice is done.

It is not my purpose here, nor, of course, would there be time, to review all the evidence in the Sacco-Vanzetti case, but I confidently make the statement that in my 27 years as a judge and some years as a practicing lawyer, and in all my wide study of cases, I have never encountered a case where the forces of the prosecution were so unscrupulous, so unethical, and so diabolically skillful, as they were in the Sacco-Vanzetti case. Nor have I ever encountered in life or even in fiction a judge presiding over a murder trial who was so lacking in the high standards which make an upright judge, so deficient in jurisprudential knowledge, and so saturated with personal animosity and prejudice against the men on trial before him, as was Judge Webster Thayer who presided over the murder trial of Sacco and Vanzetti at Dedham and over the attempted robbery trial of Vanzetti at Plymouth.

It is not a pleasant experience to have to criticize a judge or a State's attorney, but the unbudgeable facts justify the assertion that Judge Webster Thayer and District Attorney Katzmann contributed an enormous share of the taint and tarnish which went into the stain on the banner of Massachusetts; and I urge you not to assume that in removing that stain you may be reflecting on the honor and dignity of Massachusetts. On the contrary, I respectfully submit that by scouring away that stain, and thereby restoring the immaculate beauty of that banner, you will demonstrate where the fault lay for the great injustice for which the Commonwealth of Massachusetts suffered in a moral way as much as Sacco and Vanzetti suffered physically.

To speak of the greatness of Massachusetts is indeed to gild the lily. Daniel Webster rightly eulogized her:

"I shall enter on no encomium upon Massachusetts; she needs none. There she is. Behold her, and judge for yourselves. There is her history; the world knows it by heart. The past, at least, is secure. There is Boston and Concord and Lexington and Bunker Hill; and there they will remain forever."

But it was in the hallowed environs of Lexington and Concord and in this illustrious city of Boston that there was committed the judicial offense which blemished the fair name of Massachusetts throughout the world. It was in the very shadow of the immortal Bunker Hill that two men were killed without a fair trial, one of the things for the attainment of which blood was shed at Lexington and Concord.

Even a slight reading of the history of the Sacco-Vanzetti case must reveal that Sacco and Vanzetti did not have a fair trial. For instance, after the Dedham trial it was discovered that Walter Ripley, the foreman of the jury, had taken into the jury room some cartridges of his own which he exhibited to the other jurors in support of his argument for conviction of Vanzetti. This illegal performance was in itself enough to vitiate the verdict. And then there was the affidavit of William H. Daly who had known Ripley for 38 years. Mr. Daly declared under oath that prior to the beginning of the Dedham trial when Ripley knew he was going to be called as a juror for that trial, Daly asked Ripley about Sacco and Vanzetti, stating that he did not believe them guilty. Ripley replied: "Damn them, they ought to hang them anyway." In the whole English-American legal world, this would have constituted an ironclad reason for ordering a new trial. That is, anywhere but in the courtroom of Judge Webster Thayer who abhorred the idea of doing anything to change the verdict of guilty which he had labored so much to bring about. Throughout the trial he made degrading and profane remarks, both inside and outside the courthouse, against the defendants. One of the almost conclusive evidences of this judge's rabid incapacity to insure the defendants a fair trial resides in his hateful utterance that he would "get them good and proper." His appalling misconduct did not even exclude the shameful offense of misrepresenting the official record.

Mr. Chairman, I assert that Sacco and Vanzetti did not receive what we Americans regard a fair trail, which makes no distinction between original nationalities, races, creeds, colors, or political opinions. Both defendants were ridiculed and lampooned by the prosecution in a manner which today would draw the reprobation of every court in the land.

But Thayer did not only not stop Katzmann in this degrading practice. He found ways to participate in it himself. At the Plymouth trial Katzmann made light of Vanzetti's defense witnesses because they were Italian. But what was sinister about that? Vanzetti was Italian, he lived with Italians, as a fish peddler practically all of his customers were Italians, he associated with Italians. Naturally the majority of his witnesses would be Italians.

Katzmann and the entire prosecution staff used other devious means to prejudice the defendants in the eyes of the jury. An atmosphere of terror was purposely built up so as to convey the impression that Sacco and Vanzetti were desperados of the most dangerous character. Uniformed guards brandishing rifles, shotguns, and pistols patrolled the courthouse, inside and out. The defendants, manacled to officers, were marched back and forth between the jail and the courthouse by 28 of these guards bristling with firearms. Four times a day this miniature army tramped in and out of the courtroom, awing the jury and electrifying the surroundings with suggestions of mysterious foes to be met and combated. Doors were barred and all visitors searched for concealed weapons. Even defense counsel were subjected to this treatment. Place a harmless gazelle into a cage and surround him with guns and other paraphernalia of assumed defense against an assumed ferocious creature, and spectators will quickly conclude (especially if the view is reinforced by oral exhortations about the savageness of the animal) that they are looking upon a beast of maneating propensities. Yet it must be noted that neither before nor during the trial did there occur the slightest incident or even the remotest suggestion of a threat which justified the arsenal and the daily parade of armed might in the Sacco-Vanzetti trial.

I submit to this committee that the conviction of Sacco and Vanzetti constituted a monumental miscarriage of justice, which this committee should be eager to correct. A study of all the evidence will show that not a single witness who placed Sacco or Vanzetti at the scene of the murder displayed that caliber of reliability which, in an American trial, is absolutely required to support the irrevocable penalty of death. The main witness, Mary E. Splaine, testified that while looking through a window she saw Sacco at a distance of 70 feet. This was 14 months after that look, which incidentally was limited to a frightened glance of two seconds' duration. Yet on April 20, only 5 days after the murder, she had identified a totally different person as the robber she saw, a Tony Palmisano whose picture she selected out of a series of photographs exhibited to her.

Another witness, Frances Devlin, also looked through a window and saw the murder car before her panicky view for less than 3 seconds, and she also testified that the man she saw in that fragment of time was Sacco. But at the time of Sacco's arrest she looked at Sacco and said she could not say that Sacco was the bandit she saw. In fact, like Miss Splaine, she also claimed that Tony Palmisano was the bandit she had seen.

Louis Pelser was another person who was close to a window when the robbery occurred. When Sacco and Vanzetti were arrested, Pelser was taken to the police station to study the prisoners for possible identification. He said: "I did not see enough to be able to identify anybody." He lost his job. Later he was reemployed. His foreman talked to him, and now he went on the witness stand and said that Sacco was the "dead image" of the man who did the shooting.

Another witness, Mr. Levangie, testified he saw Vanzetti at the wheel of the murder car. There was not the thinnest shadow of the remotest evidence that Vanzetti, the fish-selling pedestrian-philosopher had ever driven a car in his life. But Levangie's testimony was further discredited by the fact that all the other Commonwealth witnesses testified that the driver of the car was a lighthaired, light-complexioned man, which Vanzetti certainly was not. Levangie's testimony was utterly untrustworthy, but Katzmann leaped into the breach. He told the jury that what Levangie really meant was that Vanzetti was sitting in the back seat of the car. But if Levangie could make so gross an error as putting a backseat passenger at the driver's wheel, what reliance could be placed in his testimony at all? Moreover, if Vanzetti was in the back seat, nobody could see him, as the curtains of the car were down.

Judge Thayer collaborated with Katzmann on this point, as indeed on practically all points. He said to the jury:

"The law does not require that evidence shall be positive or certain in order to be competent. Overpositiveness in identification might under some circumstances and conditions be evidence of weakness in the testimony, rather than strength."

Why shouldn't a witness be positive when his testimony may invoke the awful penalty of death? And why would overpositiveness be weakness? Judge Thayer said further: "Any evidence that tends in any degree, however slight, to prove a likeness or similarity between the defendants and the assailants is admissible." This would mean that if a fleeting glimpse of a murderer revealed that he had black hair, then every person with black hair could be accused of the murder.

Sacco testified that on the day of the murder he was in Boston arranging for a passport at the Italian Consulate in anticipation of his forthcoming visit to Italy. Vanzetti testified that he was in Plymouth selling fish, his normal occupation. This alibi evidence on the part of both defendants, supported by 18 witnesses in all, built a formidable bulwark of security against the terrible charge of murder. If true, the men had to be innocent. Vanzetti could not have been at South Braintree and at Plymouth at the same time; Sacco could not have been in Boston and South Braintree at the same time. The Commonwealth did not call witnesses to challenge the veracity or accuracy of the alibi witnesses. Thus it was imperative that the jury be instructed fully by the trial judge on the importance of the alibi evidence. The jury should have had from the judge at least a résumé of the testimony which, if believed, could only lead to a verdict of not guilty. The alibi was entitled to as much attention

in the judge's charge as the Commonwealth's theory. But how did Judge Thayer balance these two conflicting contentions? He devoted 10 pages to a discussion of identification testimony, inanimate exhibits, and consciousness of guilt on the side of the prosecution. To the alibi he gave two paragraphs.

Berliners' Worry Is a Starve-Out, Not a War

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. COHELAN. Mr. Speaker, in a radio broadcast to the Seventh Congressional District of California I have discussed my observations of the situation in Berlin and West Germany while on a military inspection tour as a member of the House Armed Services Committee.

In this same regard, of great pertinency are the observations of Robert H. Estabrook, editorial page editor of the Washington Post, who has also just returned from a European tour. His thoughts are recorded in an article in the April 12 edition of that newspaper and I wish to include them in the RECORD for the attention of all Members of Congress, as well as my constituents in California:

BERLINERS' WORRY IS A STARVE-OUT, NOT A WAR

(By Robert H. Estabrook)

The closer one gets to the epicenter of the Berlin crisis, the fewer are the overt signs of tension. West Berliners, as they stroll through the spring blossoms in their beloved Tiergarten, display no apparent uneasiness over the squeeze threatened by Nikita Khrushchev. There is far more alarmed discussion in London or Stockholm or Paris.

Partly, this appearance of unconcern may result from the feeling that Berlin is merely a tool in Khrushchev's plan to force Western acceptance of Communist East Germany. Partly, too, the absence of visible worry may result from the conclusion that Khrushchev does not really intend war.

This is a conclusion easier to understand when one views the ghostly ruins of war 15 years ago which still are seen at every hand in West Berlin and make up unrelieved miles in East Berlin.

SOME CHANGE ACCEPTED

Yet there is an undercurrent of apprehension—an awareness that the fragile freedom in which West Berliners lead a politically comfortable if economically subsidized existence might be quickly suffocated if the pall which covers East Germany were extended.

There is confidence that the West, particularly the United States, will not allow this to happen. At the same time there is recognition that it will be difficult to maintain the status quo in negotiations with Russia, and that in fact some change may become necessary.

In other circumstances, the announcement in Bonn of Chancellor Adenauer's impending retirement to seek the presidency of the Federal Republic might be expected to cause some political satisfaction in West Berlin. The Social Democrats, or SPD, predominate in Berlin in contrast with the hold of Adenauer's Christian Democrats, or CDU, over the Federal Republic. Governing Mayor Willy Brandt has had policy disagreements with the Chancellor, not about Berlin, but about the larger problem of settlement with the Russians.

Khrushchev, however, has deflated the SPD hopes by making clear to other SPD leaders in East Germany that they do not hold the secret of agreement. He was scarcely less emphatic in his demonstration of contempt for SPD views than in his denunciations of Adenauer. At least in Berlin, this performance dashed some of the fancier hopes for disengagement.

AIRLIFT OUTDATED

Virtually no one expects a clash with the Russians involving allied military convoys. But there is considerable apprehension that if the coming East-West negotiations go badly the Communists may attempt to blockade German civil traffic to and from West Berlin.

This would create fantastic problems for the 2¼ million West Berliners. The city's economy has expanded fabulously since the 1948–49 Soviet blockade, when the allied airlift maintained a subsistence level for the population.

Today enlarged demand for food and goods, plus exports from West Berlin's considerable electronics and metal industry upon which employment and prosperity depend, would make another airlift impractical except as an emergency expedient. Besides, the Communists presumably could jam the radar used for bad weather landings at Tempelhof airport and the two military fields in the British and French sectors.

Mayor Brandt and his colleagues have been working hard to prepare West Berlin against such a contingency. There are now stockpiles of most basic commodities for at least 6 months, and supplies of food and coal are being doubled—with Soviet knowledge. A rationing plan is ready to take effect within 2 hours.

Such measures are designed to insure the continuation of industrial and business activity at reduced levels and to give the West time to make a deliberate decision in the event of a blockade.

ONE HUNDRED AND TEN MILE GANTLET

Still, over a longer period, Berlin inevitably would feel the effects of strangulation. It would be virtually impossible to export manufactured goods without use of motor, rail, and canal transportation through 110 miles of the Communist state to the West German border.

Allied planning is in hand to cope with any Communist interference with military convoys. The approximately 11,000 British, French, and American troops in West Berlin—4,000 of them American under Maj. Gen. Barksdale Hamlett—would strive to avoid shooting first but would resist if there were military interference.

There is no thought that Allied troops could hold out long against the more than 20 Soviet divisions in East Germany, but any direct clash in all probability would mean major war. The recent assertion of the intention to fly American military cargo planes at higher altitudes through the corridor from West Germany was only a step in the constant jockeying.

Such Allied access to West Berlin, however, is by legal right through the Potsdam agreement and the 1949 agreement with the Soviet Union following the Berlin blockade. That right, resting upon the military occupation, is flimsy enough, but the right of civil traffic to proceed through East Germany to and from Berlin is much flimsier.

It depends upon inter-German agreements under which East Germany controls and inspects shipments. Such traffic could be cut off at any time. Here is the heart of the problem as respects Berlin itself.

POOR LEGAL POSITION

In the event of a Communist stoppage of civil traffic, the West probably could surmount narrow legality and make it clear that access for such traffic would be enforced by military means. This might be justified in the larger sense that the Communists were trying to change the existing situation.

In such circumstances, if there were to be any shooting it would not particularly matter who shot first because Communist action would have precipitated the crisis. Interference would be deterred, in other words, by the possibility of war.

But such a position would have some moral drawbacks because of the poor legal underpinning. Unless there were a willingness to guarantee civil traffic by the sanction of military force—something American generals do not even speculate about—additional legal rights would have to be sought in order to insure continuation of even the present situation. To obtain such rights would, in the judgment of some observes, involve paying a price to Khrushchev.

Technically, all of Berlin remains under four-power military control, but West Germany has gone far in seeking to incorporate Berlin into its realm. Twenty-odd representatives from West Berlin have nonvoting membership in the Bundestag at Bonn, and there is voting membership for Berlin in the upper house or Bundesrat.

The West German Bundestag meets in Berlin once a year. There are numerous preparations to make the city the future capital of the Federal Republic, including the rebuilding of the old Reichstag and the readying of Bellevue Castle for occupancy by the Federal President.

A LEVER FOR KHRUSHCHEV

No doubt the Communists, who also have talked of incorporating Berlin and have their capital at Pankow within the city limits, want to end the pull to the west. Berlin is important as a symbol, and Khrushchev and the East German leaders surely would like to make it the capital of a Germany oriented toward the east.

But more important, Berlin to them is a lever by which to pry forth a larger agreement on Germany. Because the Allied position in Berlin is weak, Khrushchev hopes to use the issue to formalize the division of Germany along the present Elbe River line and perhaps to disarm West Germany and detach it from NATO.

In a word, he is attempting to compel acquiescence to the status quo in Germany as a whole by threatening to change the status quo in Berlin. One knowledgeable Berliner believes on the basis of information from East Germany that the November ultimatum by Khrushchev was planned as long ago as last May.

What is now altogether clear is that Khrushchev has no thought of any compromise which would endanger the sociopolitical system of East Germany. Indeed, Communist boss Walter Ulbricht, a holdover from Stalinism, is said to have something of a veto over Soviet policy as it effects East Germany.

Industrial revival has made East Germany the second largest producer in the Communist empire. Moreover, Ulbricht has cozied up to Communist Chinese leaders and ranks closely after Mao Tse-tung in the international Communist hierarchy. According to one theory, a major purpose of Khrushchev's recent trip to East Germany was to tell Ulbricht, over the latter's demand for a tougher line, that he had decided to postpone the May 27 ultimatum to the West.

It is doubtful that the Communist moves are prompted by West Berlin's position as a showpiece. Showpiece it certainly is, propped up by a substantial subsidy from the Federal Republic and by American aid. The plush, almost tropical style Hilton Ho-

tel to which Berliners flock in awe is a symbol of this emphasis on material wealth.

The contrast with East Berlin remains great. There has been little rebuilding in the east sector except along the gaudy and tasteless Stalinallee where Communist Party officials live. East Berliners can be distinguished readily by their drab clothing and woebegone look.

But the East German economy and standard of living have been expanding remarkably. The Russians have lavished economic benefits on East Gremany since the June 17 uprising 6 years ago and particularly since the Hungarian revolt. There are many articles in stores now which shoddy as they may be, were unobtainable a year ago.

This improvement emphasizes Khrushchev's determination to maintain the Communist hold on East Germany. The liberation policy so blithely proclaimed by American politicians in the past is as dead as the mastodon, at least without a war which no one wants.

What then is to prevent the West from acquiescing in the division of Germany and acknowledging the existence of a separate East Germany as Khrushchev seems to want? There is no burning enthusiasm for reunification in most of Western Europe, and even in West Germany reunification is more a political slogan than a practical hope. West Germany has in effect recognized East Germany de facto in the extensive trade between the two parts.

Several points must be considered. First, there is the argument that any formal acknowledgment of East Germany would end whatever moral leverage the West still exercises on the regimes imposed by force behind the Iron Curtain. A secure Western flank might encourage liberalization in the Soviet satellites, but it also might worsen the situation of such countries as Poland.

More important, sanction for the permanent division of Germany might purchase short-range accommodation at the expense of long-range instability. Whatever the present complacency and fatalism of many Germans, it is unlikely that over the years a dynamic people could be kept apart.

Finally, there is no convincing reason to think that Khrushchev would be satisfied with mere Western acknowledgment of East Germany. Despite his caution in so far avoiding a military clash, there are many evidences that he is in a cocky mood and determined to exploit what he believes to be an advantage.

Could the West afford to pay anything to promote a satisfactory agreement? The purpose of this article is not to propose solutions. Suffice it to say that there is disenchantment in Western Europe with the present possibilities of disengagement or troop withdrawal. There is discussion in Berlin and elsewhere of some sort of staged thinning out of troops back from the Elbe line, of inspection and control, of a freeze on nuclear arms and missiles—with no firm indication that Khrushchev would be willing to make equivalent concessions.

Whether any of these devices would be practicable would depend in the final analysis upon the situation of Berlin. So far, the Western position is that the status quo will be maintained by military force if necessary. But this begs the real question unless the West also undertakes to make a military guarantee of access for civil traffic—which it does not now seem prepared to do.

Many proposals have been advanced for West Berlin, ranging from Khrushchev's amorphous "free city" scheme, to plans for a unified neutral city under United Nations superversion, to offers of cessation of cold war activities in return for explicit rights of access.

Some persons, like Mayor Brandt, believe that the Russians will agree in the end to maintain the status quo and that this would be preferable to any change for the sake of change. Others think that standpatism leaves the West in a weak and perhaps untenable position.

There may well have been times in the past when realism and initiative in the West might have exerted more telling pressure upon Khrushchev. Even today, however, the West is not without bargaining points. One of these is nuclear weapons in West Germany. Another is the power to withhold the acknowledgment of East Germany which Khrushchev and Ulbricht plainly want. They also may be asked to pay a price.

The status quo may finally be the best that can be achieved, or it may be more than can be achieved; but the one obvious conclusion is that to cling to it, as respects either Berlin or the larger German questions is really to settle nothing. The West will not know what is possible until it proceeds beyond the "standfast" slogan to a more refined position based upon a candid survey of weak as well as strong points.

Meanwhile Berlin, the historic capital of Germany, is in the position of a piece of steel between two magnets.

Unemployment Compensation—Clash of Viewpoints

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ALGER. Mr. Speaker, in the Washington Post and Times Herald of April 13, 1959, a portion of the transcript of the unemployment compensation hearings before the House Ways and Means Committee quoted Mr. George Meany, president of the AFL–CIO, and me.

Since this exchange between us represents a sharp conflict in basic ideology of the role of Federal Government in our lives, I feel that my colleagues and others would be interested in the entire transcript which follows; and I believe speaks for itself:

Mr. ALGER will inquire, Mr. Meany.

Mr. ALGER. Mr. Meany, I had the privilege and pleasure of reading and studying your statement last evening. I want to stick close to this statement and limit my questions to the subjects I am particularly troubled about.

On page 1 and at the top of page 5 you discuss the people who are unemployed, and the figures keep coming up of labor force compared to unemployment. Here it is 5.8 million or 7.6 percent of the labor force.

Has the AFL–CIO made a comprehensive study at any time of the constituency of this labor force that is unemployed? Specifically, how many of them are heads of families with dependents, as compared with single people or wives or seasonal workers by choice that do not have to work? Have you ever broken it down in that way? I tried with the figures I have here, and I must tell you I have some, but I am not satisfied with the figures I have.

In fairness to this entire subject, I believe this committee should have such a breakdown, and we ought to benefit from whatever you have to give us.

Mr. MEANY. Our own unions have done it; we have not done it ourselves on a national scale. However, we have a report of findings made up by a special group, by the University of Michigan. We have that report which gives some information on it.

Mr. ALGER. I am particularly interested because I see in the report that I have here—and this is available for you to study later, to give us more information on if you can—that this particular publication shows that Michigan has 37 percent of the workers that are drawing unemployment compensation at this time—and this is a typical week—did not have dependents.

That is the exception almost to the rule of the other States. In almost all of these other States 50 percent or in some cases more than 50 percent of the unemployed had no dependents. Then before this committee, the gentlemen from Arkansas, Kentucky, Indiana, Utah, and elsewhere have pointed out and additional information has been submitted to us in the record that a number of workers are of the seasonal type where there is another breadwinner in the family.

I am not saying that single workers who are only supporting themselves do not need protection. Of course, they do. But if we are trying to eliminate the greatest suffering and need, we ought to work more with the family breadwinners.

That is what is troubling me in these things.

Mr. MUNSEY. Could we have the page reference there, please?

Mr. ALGER. Yes. It is table B–12.

I am mentioning these things, Mr. Chairman, so that if the record could be left open we could benefit from the help of the legislative staffs of the AFL–CIO to add to these figures.

I certainly will study them myself as you present them to us.

The CHAIRMAN. Mr. Meany, if it is the thought that any additional information can be added to this record in answer to any questions, we would like to have it.

Without objection, that information will be inserted in the record.

Mr. MEANY. Yes; we will be glad to supply, to whatever extent possible, any of the statistical data that either we have available or that we can secure for you on any of these questions.

(Material not furnished reporter.)

Mr. ALGER. What percentage of unemployment would you consider to be minimum if you defined minimum unemployment as the number of people who really do not have to work or are working by choice, or possibly too lazy to work unless they get exactly what they want? I think this is important.

Mr. MEANY. You are not talking about what we call technological unemployment. You are not talking about people who are between jobs. You are talking about people who just should not figure in the working force at all. In other words, they do not need to work or they are too lazy.

During the war there was a figure came up which was one-half of 1 percent of the working force.

Mr. ALGER. I appreciate your point on that. I have a feeling from some of the material I am getting that the figure is larger than that. But again I think here is an area that needs to be explored so that we do not feel mistakenly that a certain percentage means there is heavy unemployment when actually a lot of these people are the secondary breadwinners.

Mr. MEANY. Could I say this, that, by rule of thumb or some more or less accepted theory, with the potential work force of 65 million, something under 2½ million would be considered, let us say, a normal unemployment. In other words, people between jobs and people not seeking work because they want to lay off for a while and do not need work and so on.

Mr. ALGER. That sounds fair, and certainly I want to keep that in mind.

Mr. MEANY. In other words, we never got excited when the unemployment was at that figure or below, but when it starts to go up, then we get concerned.

Mr. ALGER. To continue on in the middle of the next page, page 2, and it refers again to it on page 3, you state, "When the fundamentals are so generally accepted, when the sights of so many are fixed on the same target, why is it that year after year we continue to fall short of the mark?"

I am impressed that the States are trying to do a job and that they seem to be doing it.

We of this committee report back to the people, and so do the State legislators. As a matter of fact, the State legislators have less latitude than we do, I think. They are right there at home with their people.

Has it ever occurred to you that, good or bad, the present unemployment compensation system is what the legislators and the people themselves actually think is proper?

Mr. MEANY. I cannot buy that.

When you say the people themselves, I do not know who you mean. You are surely not speaking for the potential beneficiaries of the system.

Mr. ALGER. These legislators keep going back home and are buttonholed by their constituents, and then they are reelected or rejected, and you mention Texas on the next page of your statement, and you find fault with our system.

But you know we have to go back to our people, and justify our positions up here. Even more with the State legislators. If they have not been pleasing the people in this matter of providing unemployment compensation, I am sure the people back home would have gotten after them. Or, to put it another way, maybe the people feel the unemployment compensation system is coming along satisfactorily enough. And they do not want us to cram something down their throats.

Mr. MEANY. You realize that the State legislature is made up of people with diverse backgrounds and obligations and from various areas, and the legislators who are in a nonindustrial area do not hear from the people on this because there is no problem. The problem lies in the large urban areas where you have an industrial situation.

Mr. ALGER. We all have unemployment whether industrialized or urban, and I think all of us are troubled by it.

Mr. MEANY. I might say in my State the dice are loaded against the industrial areas by a system of representation that has existed for many, many, many years. The people in two small counties, for instance, over in the southern tier of the State of New York, from the point of view of representing people, outweigh the cities 30, 40 to 1.

Mr. ALGER. I can appreciate that, and a lot of us have been very puzzled frankly by the pattern or the path that Michigan has taken and the city of Detroit. Is seems very odd to me that this heavily industrialized and heavily unionized area should be the one most in trouble.

Mr. MEANY. Your theory would be correct, I would say, if the legislators voted on the basis of numbers of people they represent affected by this law and the numbers of people they represent also who are unaffected by the law. In other words, if it was a weighted vote, if everybody had a numerical vote the same as we vote at AFL–CIO conventions, I would accept your theory that the law is what the people want it to be.

Mr. ALGER. That is a very interesting thought. In fact, I would like to paraphrase that this way:

If there are 67 million people in the work force, or whatever that total is, and 13½ million of them are unionized and use that union properly to direct their own legislative thinking and then try to effect changes in legislation, here we legislators are torn between what the entire work force of 67 million want from government in protecting labor as against what 13½ million want.

Mr. MEANY. May I submit to you that you do not know what the rest of the work force wants, and there is no one in America that can say that they speak for the rest of that work force.

The only work force that has a voice is the work force that is organized, and I challenge you to show me anything, any single little item that gives anyone the right to say that he speaks for the other 50-odd million of the work force who are not organized.

Mr. ALGER. I respect your opinion, but you are hearing my opinion, that I, as a Congressman, and my colleagues are hearing from our constituents all the time.

Mr. MEANY. But you say it is the weight of the 13½ million or the 17 million that are organized as opposed to the nonorganized work force. I say that nobody can speak for the unorganized work force because they do not speak for themselves, by the mere fact that they are not organized.

Mr. ALGER. I agree with that, but let me get back to my point.

The legislators and the Texas legislature, representing the entire constituency, which includes that percentage of the total work force that resides within the boundaries of Texas, have seen fit to set up the kind of unemployment system we have.

You can say we are wrong, and you are entitled to your opinion. But the people in Texas think that we are right.

Now, are we to completely negate what they say, at a Federal level, from 1,500 miles away, laying down the law and saying, "No. You legislators who are elected every 2 years, and you people whom they represent are wrong. We in Washington know better and feel that these Federal standards would be better for you than what you think yourselves."

That presents a dilemma, in a sense, which I think all the legislators face.

The Texas legislature sent me a resolution saying they feel that unemployment compensation should be left to the State.

Mr. MEANY. Is it not a historic fact that most of the legislators did not act until the Federal Government acted in this field?

Mr. ALGER. I think that is partly true, but I do not believe that that means the States do not have initiative. They have, but it is being taken from them.

I might say to you that when labor succeeds, if you are to succeed, in completely imposing Federal control on the States, labor itself could easily be the greatest loser. I do not think that is what you intend.

Mr. MEANY. I do not think this is so. But actually what we have here is Federal standards that are now imposed upon the States in this field, and we are pointing out from years of experience where we think these standards should be improved.

Mr. ALGER. I certainly appreciate your interest.

Mr. MEANY. We are arguing for a complete law, and certainly we do not agree there should not be any Federal standards, because the States have accepted some Federal standards, and Congress has enacted them.

We are saying, in fact, that the time has come to evaluate our experience in this field, and that the effect of Federal standards should be amended in certain respects.

Mr. ALGER. You mentioned original intent several times in your statement. While I was not so active in the original intent as certainly you were, I did listen with some interest to the gentleman from Texas [Mr. FARMER], plus men from four other States of the Interstate Conference of Employment Security Agencies who testified about how the States they represented and the organizations in which they participated, the employment security commission, I think it was, say as to how the States felt with regard to original intent.

The original intent, according to their understanding, was that are areas of decision on such things as eligibility, duration, benefit amount, and the other provisions to be made in the compensation field were to be left to the States for the reason that they were closest to the people. They know the local and State needs better than the Federal Government. So, by intent, the States were to follow that. Is that not correct?

Mr. MEANY. Yes; I think so, but now we are saying it has not worked so well, and there is a precedent for Federal standards in this field. The Labor Department can verify that, and we are saying that the law has not worked so well. We are pointing out where, and we feel that the correction can be made by improving the Federal standards.

Mr. ALGER. In the final paragraph, on page 4, Mr. Meany, you mentioned something that I think is at the heart of this, and sometimes we miss the obvious. You point out that the question of where Federal responsibility starts and where it ends is what we should be studying.

This is something that has troubled me and possibly some of the other Members of Congress. I went back to find out and I got the Employment Act of 1946. If I am not mistaken, that came about at the end of the war when people thought there was going to be large-scale unemployment. We passed the bill, and yet the unemployment did not materialize as many people thought might be the case. But there is still the law today, and if you read the language in the preamble of that particular act, every conceivable Federal regimentation or control of the work force can be justified by this language; or the labor unions as a work force, and the working people, or of all of us throughout the entire economy. It is all covered by that particular bill.

I do not know whether you recall that language, but it is all-inclusive.

Mr. MEANY. You are referring to the Full Employment Act of 1946?

Mr. ALGER. Yes.

Mr. MEANY. That is another story, and I would like to discuss that some other time.

We like the act, and we wish someone would give real effect to it.

Mr. ALGER. I just wish that this committee and the rest of Congress would study the language of that act, and think about communism, socialism and free enterprise at the time they read the act.

I submit to you that every single facet of socialism is found in that one preamble of the Full Employment Act of 1946, and I think that is some of our trouble now. Once we admit that that is the law, then there is no reason why Federal standards cannot be imposed on everything, including everything the working force does.

Mr. MEANY. The Employment Act of 1946 has contributed nothing to our problem. In fact, it has not done anything one way or the other. It has just not been implemented.

Mr. ALGER. I guess it has just contributed to my problem. It is difficult to justify. Providing jobs is not the role of government.

On page 5 you mention the Temporary Unemployment Compensation Act, and the fact that it is being continued partially for another 3 months shows a recognition on the part of the Congress of a degree of Federal responsibility in this area.

I can only speak for myself on the committee, but the termination of the TUC, as far as I was concerned, showed that we did not feel that it was the responsibility of this Congress but, rather, that it should be handled another way, if even we should have

had it in the first place. After all, only 17 States took advantage of it.

Mr. MEANY. But you will concede that the Congress felt that there was some responsibility when they enacted the law last year and said it would be in operation until April 1 of this year.

Mr. ALGER. Most certainly. But you are pointing out that our continuing it at this time shows our recognizing our responsibility. You are interpreting it for us quite the opposite of my own interpretations. I simply do not want that to stand.

I say I am among those who terminated it because we felt it was no longer our responsibility.

Mr. MEANY. You did not terminate it. You extended it to a degree, which we say indicates the acceptance of a degree of Federal responsibility.

Mr. ALGER. No, Mr. Meany; we did not intend to continue it, we "feathered it off" so as not to hurt those already qualified. We did not want to be unfair with the people who could qualify.

Maybe this Federal standard for unemployment compensation coming so soon after, was the reason that there was such quick agreement. I do not know, but I want you to know that that was not the entire concensus of this committee.

To move on quickly, the experience rating has been treated. I shall not dwell on that although I must tell you in fairness, after reading your statement and listening to the gentleman from Michigan who has been a fine spokesman for his viewpoint, Mr. MACHROWICZ, I am still slightly bewildered by the fact we are told you are giving a choice in this bill.

When I read the language on page 6 I think either it will result, intended or not, in destroying experience rating. I just leave it there. I realize it would be quite a debate in itself. I think we are going to have to resolve that before we are through.

Mr. MEANY. I am not going to argue that point except to say that, according to our experts—and I consider these people experts—they tell me that it does not wipe out the experience rating.

Mr. ALGER. I appreciate your statement. You did say in your statement that you did not think it was relevant. I maintain this is the one of the most relevant things in the act.

You say on the bottom of page 6 "it is not relevant to the proposals now before this committee."

I believe that experience rating is one of the most relevant things we are talking about because the whole idea of it is to preserve the incentive in the employer for stable employment, and this will make less unemployment, which is certainly desirable.

Mr. MEANY. We said it was not relevant because the bill does not wipe it out, and you disagree with that.

Mr. ALGER. On page 8 you quote the Manufacturers Association of Connecticut. This is what they say, as you quoted them:

"Our State is competing today for more markets and new industries. Hiking the cost of doing business in Connecticut is not the road to more jobs, but to less jobs."

As I read it, I do not find fault with competition because we all agree that competition is the heart of the free enterprise system, of course.

This matter of hiking costs and doing business. I wonder if study has been given this matter of purchasing power and the fact that if you hike the cost to a businessman he has got to pass it on. If he does not pass it on and collapses, then all the people he hires are unemployed and you have more unemployed. If, however, he passes on this cost to the consumer it makes higher prices of things that the entire working force of 67 million must buy, therefore limiting the purchasing power of all of them.

So on the one hand, if you unduly help provide money for those who are unemployed—it does have this effect of raising prices throughout the country—are you not hurting the very thing you would protect, and that is your purchasing power?

Mr. MEANY. You evidently have not studied the economic history of the last 50 or 60 years in this country, because actually purchasing power accompanied by increased production per man leads not to a greater cost but, in the final analysis, to a lesser cost and a wider market.

If you accept your theory, then there should never be any wage increase that is passed on to the consumer.

Mr. ALGER. Mr. Meany, I have not been a student as long as you because I haven't been here as long, but I think in the time I have studied and I have tried hard to understand, that the increased productivity you mention has not accompanied the increase of prices and wages in this country, and I think that is one of our problems.

Mr. MEANY. I think statistically you can be proven wrong on that.

Mr. ALGER. If we increased the prices of these items without increasing productivity through putting additional cost on business which they pass on in higher prices, do you not then, by the very definition, cut down the purchasing power of the entire work force of this Nation?

Mr. MEANY. But the history of it shows it does not work that way.

Mr. ALGER. This is what history exactly shows, Mr. Meany.

I think you and I can agree that neither one of us has to yield to the other as to sincerity and interest in these workers.

I simply feel that is exactly what it shows, and if you can understand my concern and provide more information to me, you will help me in straightening out my thinking on this matter if that's what I need.

Mr. MEANY. We certainly can supply more information on that subject.

Frankly, we have a high price-high wage economy here in this country, and under it we have more prosperity compared to any other part of the world. I can remember when eggs were 25 cents a dozen and butter was 25 cents a pound. Of course, now they are almost three times that, but there are more people now who have the 60 and 70 cents than there were people who had the 25 cents during those days.

Mr. ALGER. That is exactly right. But that does not prove that increasing inflation necessarily solves the buying problem. We have got to have increased production to match the increased wages, else we are not accomplishing what we both want, that is, real increased purchasing power.

That study is actually in the field of the joint economic committee. I realize that, and I should not take more time on it now. But I want you to know, Mr. Meany, that unless I can have a little help solving this, you will have to recognize I might be opposed to Federal standards in all sincerity, not because I am opposed to solving the problem. As a matter of fact, I can go further and say that, based on what this committee has been told, this bill imposing Federal standards, if enacted, will actually limit purchasing power; it will create more unemployment, and therefore will accomplish what you, least of all, want to see accomplished—more unemployment and reduced purchasing power.

Mr. MEANY. I think you will concede that we do not want to cause more unemployment, we do not want to limit purchasing power.

Mr. ALGER. That is what I said. I know you do not.

Mr. MEANY. And I presume you do not want to either.

I do not question the sincerity of anyone who disagrees with me on this problem. But we certainly are prepared to try to convince you by whatever statistical data we have that we are right in our position on Federal standards.

Mr. ALGER. I know you feel that, and that is one reason I am taking the time to question it, because I am benefiting by what you are telling me.

Do you believe at this time that employees should match the employer in unemployment tax or not, to make it actually more an insurance program, since you have spoken so strongly and well for the need of preserving insurance feature as a basic principle?

Mr. MEANY. You have got me in an embarrassing position because from the very earliest days—and I took a large part in the writing of the New York State law; was a member of the commission that was set up by the Governor to study the problem before the bills were presented to the legislature—and I have always believed in employee contribution. However, some of our people do not so believe.

But you run into the problem of merit rating immediately as part of this problem.

Personally I have always felt and still feel that employees should contribute, if for no other reason than that it gives them a greater sense of responsibility for better administration of the law, and also a greater voice in improving the law on the basis of experience. But that, of course, is a case where there is a difference of opinion among labor people themselves.

Mr. ALGER. Mr. Meany, I believe that there should be retained in this bill the right for the States to disqualify a worker in cases of fraud, dishonesty, or other matters. As I read the bill, unless I am wrong, it says that the State cannot disqualify.

Mr. MEANY. I don't think it says that.

Mr. ALGER. It is on page 3. Let me read it:

"Compensation shall not be denied to any eligible individual for any week of total unemployment during his benefit year by reason of exhaustion or reduction of benefit rights or cancellation of wage credit until he has been paid unemployment compensation for not less than 39 weeks during such year."

Am I misinterpreting that?

Then the next paragraph 9 restates that.

Would you be agreeable, in other words, to amending it?

Mr. MEANY. If it meant what you said I would be agreeable to that. I am not so sure it does.

Mr. ALGER. I read the exact language and am just talking about the idea now. But I am disturbed that from the States is entirely taken the right to disqualify who gets the unemployment compensation.

Mr. MEANY. I think this is subject to legal interpretation. I do not interpret it just the way you do.

Mr. ALGER. Mr. Chairman, I appreciate the indulgence of this committee and yourself. This is the first time I have had the privilege of even meeting Mr. Meany much less questioning him on something with which I am so vitally concerned.

If I may, Mr. Meany, I want to compliment you further for what you had to say to Mr. Mikoyan and others of his type when they were here. The only thing that troubles me deeply is this—when I analyze the legislative program of the AFL–CIO that Mr. Biemiller and others send us every year and the critcism that you and the other members of the union send to us—but the criticism of legislative stands and legislative programs you ask.

I cannot determine in my thinking the difference between your program and what is honest-to-goodness socialism. If there is a difference—I am not talking just about wages, which is your field in economics, but the entire program you ask of us as Congressmen. I cannot see the difference be-

tween this total program and socialism, by basic definition. If there is a difference I would like an answer now or at any time you can give it to me.

Mr. MEANY. Let me say this. I do not know what socialism is. I have read Marx and I have read all the people who interpret him, and I still do not know what socialism is. If socialism is public ownership of the means of production, we are a little bit socialistic in this country, and we were before I was born and we have continued in that direction. In my lifetime, I have seen the means of transportation in the large cities of the country converted from private ownership to public ownership. Of course, that was always one of the things that the so-called socialists advocated.

Back in the early days of this Republic, water for instance was a medium for private profit. There were private water companies all over America. They sold water to the people. The people decided that they did not want water to be a medium of private profit. By process of legal condemnation and other processes, they put these people out of business and took that particular public service over themselves.

We hear about the socializing of the Bank of England. Our British friends claim that in 1916 America went much further in socializing banking and finance than the Britains have gone to date, when we established our Federal Reserve System. I am not an expert on that, but I am saying that is one of the charges.

If it is socialization to use public money to supply milk for school children—and of course, that charge is always made that it is socialization—then is it socialization to supply the airline companies, through the means of Federal subsidy, with an incentive to develop an airline industry, which we badly need in times of war? Was it socialization to appropriate $2 million to rehabilitate an abandoned lead mine in Colorado because the country happened to need some lead? Was it socialization when we subsidized a railroad company some years ago, when they pushed on to the Pacific coast?

I do not know, but I do know this: that during the Roosevelt administration, many things were done by the Federal Government, and very few of them that were advocated by the President under the so-called New Deal were not characterized as socialism. However, one of the officers of one of our national business organizations, according to the record, pleaded with President Roosevelt in the early days of March 1933 to take over all business at the time the banks were closed.

A few years ago I picked up, in about 1953, a brochure issued by the Central Hanover Bank of the city of New York. This is a bank which has the cream of the crop. This is a bank that is a private bank for the private fortunes of practically all of the big millionaire set in the city of New York, with a branch at 62d Street and Fifth Avenue, or somewhere close to that so-called "Gold Coast" up there. This brochure was written by some economist working for the bank, and it was distributed to the depositors of the bank. It said that there was going to be a slight recession, there was a slight recession on the way, which did come, of course, in 1954. This economist in this brochure distributed by the bank to its upper crust customers said that they did not have to worry too much because, unlike in the thirties, we now had built-in safeguards in our economy that would prevent this thing from going too far. He pointed out what they were: unemployment insurance; that we had a reservoir of money waiting to give something to the unemployed so that they would not be totally out of the market as customers of business the day after they got unemployed. That was one of the things. The Federal Deposit Insurance business was another thing, under which you did not have the problem of long runs on savings banks when people got unemployed, because the Federal Government, through this deposit insurance system, insured the savings accounts of the small people. I guess it is safe to say that there is hardly a savings bank in this country that is not under that system.

He pointed out that the Securities and Exchange Commission, with its restrictions on gambling in the stock market, keeps that down.

These were the safeguards that were going to prevent us from being in real trouble in 1954 because of a slight recession. May I point out to you, Congressman, that every one of these safeguards was characterized as being socialistic at the time they were before the Congress, every single one of them.

I still do not know what socialism is, despite the things that I have read. But if socialism means that under a democratic system this republican form of government that we have, there are people who desire to secure for the great mass of the people, the workers, the wage earners, the farmers, and others, a better share of whatever wealth the economy produces, and that by providing that better share we provide a broad base of purchasing power to keep the economy moving forward—if that is socialism, then I guess I am a socialist and have been a socialist all my life. I do not figure that, but if that is what socialism means, that is the sort of thing I am interested in.

Despite my belief in the American system, despite detesting almost everything I see done in other parts of the world under the banner of socialism, I am not too concerned when I am charged with being socialistic because I advocate something that brings a little more sunlight into the lives of the great mass of the people in this country.

I submit again that the record will show that almost everything that meant a better life for the little people was attacked as socialistic. I can recall when the National Association of Manufacturers, through its State branches, was opposing the installation, the mandatory installation of dust-eliminating devices in factories where abrasive materials were being used, materials injurious to the health of the workers were permeating the air. It was demanded that there be devices in the way of small fans, and as a matter of law employers were compelled to put in these devices to protect the health of their employees. There were safeguards on the cutting tools so that there would be less chance of an employee losing a hand through some kind of a cutting device. Many of the States have these laws, but I can recall, in every one of the States where these things were advanced, the National Association of Manufacturers and its State branches opposed these things, and they opposed them on the ground that they were socialistic in nature.

So the mere characterization of some proposal as socialistic does not bother me at all. I know that I believe in this American system, and there is no other system on earth I know of or that I can read about that ever compares with it. I believe it is the best system because under this system, a little better share of the wealth that is produced by management, labor, finance, and industry gets down to the little people; and that is the thing in which I am interested.

Mr. ALGER. Mr. Meany, you have done a magnificent job of telling us here how you feel, and I think you practice in your daily life what you have told us here. But I want to close by saying this in rebuttal, since I asked you the question in the first place:

Some of us with children and others with grandchildren, possibly yours, are very concerned that in this concern for little people——

Mr. MEANY. That is one thing you and I can agree upon, is grandchildren.

Mr. ALGER. There are several other things we can agree on, Mr. Meany, including providing safeguards for workers and purifying the air. In fact, I suspect you and I, in our views as opposed to foreign isms witness Mr. Miyokan, are like two fingers on a hand. Maybe it is just that we do not get together enough to talk about it.

But I do feel this, Mr. Meany: generations yet unborn cannot vote, yet we are loading on their backs now not only taxes, if you please, but a staggering debt which they must inherit because we perpetuate what we are doing; we are not facing up to eliminating programs or paying as we go. We are passing on to future generations a staggering load.

Without discussing with you any one of these things you have mentioned, although I would love to discuss some of them with you, to try to find out where we could have drawn the line, I simply say you and your generation and now I in mine ought to do something instead of coming to Uncle Sam demanding more Federal control, more Federal expenditure. We ought to do something now to try to cut down this staggering cost.

All we are doing is coming up here and demanding more Federal programs and demanding more spending. Some of us have got to say, "No. We can't vote for that."

Why? Why not just vote for all these things?

It would be a lot easier when we got back home maybe. But it is because we are trying to cut the cost to be fiscally responsible.

If I can paraphrase everything you said, although that may not be a fair way to do it—I am oversimplifying it.

But what I think we are talking about are two ideas like this: On the one hand some believe in this country that we can all have more by sharing more equally what there is now here. On the other hand some of us believe that the only way for more of us to have more is to produce more.

I say we are not making the effort to produce more, but spending too much of our time trying to divvy up what already is here, and in the course of all this we are creating Federal centralization of power and the abridgement of personal liberty and freedom.

This is how I would like to take every one of these issues and talk about—What are we doing to a man's freedom?

Obviously when you protect him in his factory you are helping his freedom, but there are times when you are saddling generations coming on with bills and bills of debt that we are not paying for because of our nice cars and clothes and the way we think we should live today. I do not think it is right.

I have only made this little speech to you because I do not want you to think that whenever I criticize your viewpoint I am criticizing your sincerity, as some folks on your side have done to me and others. They have left the impression, when they have taken sides in this and come down to my district, since I am a zero according to labor's box score, to give me heck, saying that I am not interested in the little fellow.

I do not know who the "little people" are. Down in my country everybody thinks he is as big as he wants to be.

But whoever they are I am just as interested in feeding and clothing the poor as anyone. But I do not want to subsidize goldbricks or those who want to sit on their rockers and draw as much money as they can through almost a guaranteed annual wage proposition.

Some of the people coming in here representing the AFL–CIO seem to feel that we ought to give a man a guaranteed annual wage under unemployment compensation for doing nothing.

To close, I simply say to you that it looks to me in this bill like we are trying to do two things that this bill is not intended to do: On the one hand we are treating it as relief or welfare, and on the other hand we are faced with the stark realization there must be more jobs. That is what you want, and more jobs are not provided by the unemployment compensation bill. What we are doing is treating the result of the sickness in this bill and not the cause of one sickness itself.

Thank you, Mr. Chairman. I surely appreciate your forbearance.

Senator John F. Kennedy Moves Ahead—Joseph Alsop's Views on the Wisconsin Swing

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. BOLAND. Mr. Speaker, one of the best-informed and most astute of all newspaper columnists is Joseph Alsop. His opinions, his wealth of information and his conclusions are followed avidly by untold thousands of people throughout the country and the world. Apparently, he gets his information through incisive probing and hard digging of the facts. Thus, when he writes, he does so with knowledge and conviction. He goes to the scene of activities and the heart of the matter. His on-the-spot analysis of Senator JOHN F. KENNEDY'S visit to Wisconsin last week is worthy of note and study. It impressed me greatly and I am sure that it will so impress anyone who reads it. For here is a hardheaded, precise reporter—one who is not swayed by suave rhetoric or histrionic flair—jotting down his reaction to what he terms "the Kennedy question." He looks at the story and writes of the public's and his reaction to it.

Mr. Speaker, what Joe Alsop found in Wisconsin last week was not a new but an ascending KENNEDY—knowledgeable, eloquent, and persuasive to varying peoples and differing groups. His meteoric rise over the past few years has caught the favor of the crowd and the respect of a great part of our Nation. This stature has been acquired because the junior Senator from Massachusetts has dared to speak out in terms that are clear and in manner that is courageous. All the qualities that go to make a great leader and an outstanding statesman are wrapped up in his personality and his character.

Mr. Speaker, I am convinced that all of this points to the daily increasing fact that the Democratic Party's finest and best choice as its standard bearer for President in 1960 is Senator KENNEDY.

Under unanimous consent, I insert with my remarks Columnist Alsop's report on "The Kennedy Question," clipped from the Washington Post of April 13, 1959. I recommend it as thoughtful reading to the membership of the House:

THE KENNEDY QUESTION
(By Joseph Alsop)

MILWAUKEE.—What may be called the Kennedy question is now the most interesting, or at least the most puzzling, question in American politics. Unless the opinion polls are totally misleading, millions of Americans are eager to elect this still young, still incompletely tested man to the Presidency. But why?

To be sure, JOHN F. KENNEDY is no dully ordinary, ordinarily ambitious politician. Admiration or envy, or both, are equally inspired by his war record and his wife, his fortune, and his appearance, his public charm, and his private capacity for unlimited grim hard work. When there is so much to envy or admire, the result is a kind of glamor, no less real because it is indefinable.

All the same, one suspects that Alcibiades—even the Alcibiades of the great years before the fleet of Athens set sail for Syracuse—would not have appealed greatly to American voters. He might have succeeded in the movies, but hardly in the Senate. In short, the KENNEDY glamor, while it may highlight his other political qualities, is not the answer to the Kennedy question.

To try to find the answer, this reporter came out here to Wisconsin, where Kennedy has been looking over the ground in preparation for the crucial Democratic primary. The 2½-day barnstorming tour was a gruelling business. The pace was breathless. The crowds were stifling. And when KENNEDY and his beautiful wife escaped the crowds, coveys of politicians descended upon them.

KENNEDY positively seemed to enjoy it; but that is a usual requirement for a successful candidate. With the exception of a shrewd discussion of the great contest for Asia, KENNEDY'S speeches were also usual enough, at least in content. Republican sins, Democratic virtues, the needs of the old, the hopes of the young and the challenge of the age, were the topics.

But the style of the speeches was not at all usual, to begin with. When KENNEDY rises to speak, he seems angular and tense, despite the disarming grin. At first you think of an earnest, high school valedictorian. Yet he is eloquent, decidedly eloquent, his is a highly literate eloquence, too, with an odd reminiscence of Adlai Stevenson. In a single speech, before a university audience to be sure, he quoted Bismarck, Goethe, Swift, John Quincy Adams, Clay, Calhoun, Thomas Hart Benton and Queen Victoria. And then, as though to show he could do just as well without advance preparation, he added a verse by Robert Frost and a quotation from Winston Churchill in the question period.

Furthermore, this odd, almost aggressively literate KENNEDY eloquence can be exceedingly moving on occasion. When he was talking about the right attitude to the harsh perils of our time, he told the same university audience about the sudden darkening of the sun, which led the good people of 18th century Hartford, Conn., to think the Day of Judgment was at hand. The legislature was sitting in Hartford. The speaker of the house stilled the commotion by declaring that the darkness did not matter unless it announced the world's end; and if the world was indeed ending, he chose to meet his Maker while doing his duty.

"I ask that candles may be brought," the old man concluded, "so that this House can continue its business." When KENNEDY spoke that culminating line, it made the short hairs prickle on the neck.

Nor is the peculiar Kennedy style the only unusual feature of his public performance. The twin themes that recur in almost all his speeches are not exactly usual either, at least among politicians. The first is the theme of deep respect for the intellect and even for intellectuals (which is not surprising, considering KENNEDY'S huge private stable of egghead consultants).

"What we need now in this Nation most of all is a constant flow of new ideas * * *. We cannot obtain new ideas until we have a government and a public opinion which respect new ideas and the people who have them * * *. Our country has surmounted great crises in the past, not because of our wealth, not because of our rhetoric, not because we had longer cars and whiter ice boxes and bigger television screens than anyone else, but because our ideas were more compelling, and more penetrating, and more wise, and more enduring."

These are typical sentences on the first theme. The other theme is the gravity and novelty of the problems now confronting the United States. The following sentences are representative:

"For now the age of consolidation is over, and once again the age of change and challenge has come upon us. * * * The next year, the next decade, in all likelihood the next generation, will require more bravery and more wisdom on our part than any period in our history. We will be face to face, every day, in every part of our lives and times, with the real issue of our age—the issue of survival."

The note is unexpected, at least in a presidential candidate in a period of flaccid outward complacency. The performance, overall, is quite impressive enough to explain why KENNEDY has become a very serious candidate indeed in the past 2 years, but it remains for KENNEDY to outline his new ideas for meeting the new challenge which he so starkly and stirringly portrays.

Window Dressing at the Taxpayers' Expense

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. DEROUNIAN. Mr. Speaker, there appeared in the New York World-Telegram, on April 9, 1959, an editorial which is brief and to the point. I place it in the Appendix of the RECORD for the benefit of my colleagues:

PRESTO CHANGO, JOBS

Whatever else may have been achieved, if anything, the AFL–CIO unemployment rally in Washington seems to have inspired Senator LYNDON B. JOHNSON, the Democratic leader. He is the chief sponsor of a resolution—announced at the rally—to beef up support for bigger Government spending on housing, airports, public works, and aids to local areas.

Senator JOHNSON told the rally in almost (but not quite) so many words these things would put 4½ million idle back to work. The resolution calls for a committee "to get the facts." The committee would report to Congress in 60 days.

Then, presumably, Congress would pass all these bills and everybody would go back to work.

All of which remains to be seen, to say the least.

The Senator from Texas, and all the other speakers at the rally who clamored for this mountain of Government spending, seem convinced that is the way to solve the unemployment problem easily and quickly. They said nothing about raising the money.

If all this spending were to come out of debt, it would further deflate the savings of the people whence comes the capital which makes jobs. And, in that case, these same prestidigitators before long would be looking for new cures for another wave of unemployment.

What You Should Know About Washington

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. WILSON. Mr. Speaker, since coming to Washington, D.C., I have been searching for some means of describing in as few words as possible the beauty and scope of our Nation's Capital. Recently I obtained a copy of a speech made by one of our U.S. Information Agency representatives to an audience in far away Australia. It seemed to me to be the best description I have ever seen of the city and its functions. The speech was given by Miss Carol V. Harford to the Quota Club in Canberra, Australia. Miss Harford is cultural affairs officer with the U.S. Information Agency in Canberra. Under unanimous consent, I include her speech as a portion of my remarks:

WHAT YOU SHOULD KNOW ABOUT WASHINGTON

(By Carol V. Harford)

A white haired gentleman of 58 years, who had gained a somewhat renowned reputation as being resourceful, a stern disciplinarian, a leader of extraordinary ability, and the one strong, dependable force for unity in the recently organized National Government was given an additional responsibility which by executing he effected an everlasting tribute to his decisiveness, his perception, and his remarkable ability to accommodate the future.

The gentleman under discussion is George Washington. The task was that of choosing a site for the Federal Capital of the United States of America. The action under discussion was prompted by the nomadic existence of our first National Government—the Continental Congress—during its early days. The action was acutely prompted when the Congress was set upon by irate continental soldiers demanding their long overdue pay, and Congress fled to Princeton, N.J. Following this, the need of a permanent seat for the National Government was no longer in doubt. But though all were agreed as to the need of a Federal town, the bitter dispute that raged between North and South about the site threatened to disrupt the Union. However, final agreement was reached to authorize the President to choose the site, limiting the region to the Potomac River, and the size to 10 square miles. Within 6 months of the passing of the residence bill in July 1790, George Washington had methodically investigated the various possibilities, and drawing upon the resources of the States of Maryland and Virginia, he proclaimed the District of Columbia. But even with his powers of perception, it would have been impossible for Washington to have realized when he appointed the commissioners and called in his wartime aide Major Pierre Charles L'Enfant, who used a combination of diagonals, squares, circles and parks to compound the plan for the new city, what proportions this dream would realize.

For Washington today is many things, many moods, it's brass hats and Presidents; it is white stillness at the Tomb of the Unknown Soldiers in Arlington National Cemetery; it's gossip-prone, celebrity-laden cocktail parties, and it's a city capable of the unpleasant little juxtaposition, and of many carefully designed green landscapes of undeniable beauty; it's summer concerts on the Potomac's floating stage; it's almost any modern city in the United States of America; it's golf in Rock Creek Park, or dining at any one of numerous colorful restaurants; it's history and reverence for the past; it's an electric understanding of today. Whatever the description, underneath it all is a treasured realization of the American heritage which makes itself felt, and all around you is knowledge in atmosphere that there's something terribly special and significant about this place. For no matter why you visit Washington, or what you plan to see, or what you're going to do, Washington, D.C., has but a single purpose, a single business—Government. It is an artificial creation, it is the city of the one big idea.

As you first walk about in the District, as Washington is usually called by its inhabitants, you discover countless monuments to this idea, and the figures and the words carved in stone, of men who have believed in it. Seeing the monuments, which are mostly large, and mostly marble, you are impressed and reassured by the durability and the simplicity of the idea, the big idea that freemen are wise enough to govern themselves.

It's in the simplicity of the Washintgon Monument, the immense white paperweight which looms 555 feet 5⅛ inches high. Since the late 19th century, the innate dignity of this monument has marked an appropriate memorial to the first President of the United States. An elevator, as well as 898 steps for the hardier souls, ascends to a chamber at the 500-foot level, from which the visitor may view a panorama of the city and surrounding countryside. Facing the Capitol on the east, the White House on the north, and the Jefferson Memorial on the south, the monument casts its first reflection on the waters of the Reflecting Pool looking west to the Lincoln Memorial.

"A shrine at which all can worship, an altar upon which the supreme sacrifice was made for liberty; a sacred religious refuge in which those who love country and love God can find inspiration and repose," so spoke Chief Justice Taft at the dedication of the Lincoln Memorial. This monument is created in memory of the man who promoted the big idea during the bitterest years of the Civil War. This white marble temple—for it cannot truly be said to be less—embraces the essence of his character, steeped in tolerance, in the belief that all people shall be free, free to think, free to see expression, and free above all else to apply themselves to all enterprise. The memorial is magnificent in the daylight, but perhaps even more breathtaking in the dim light of eventide when it's almost possible to see Lincoln breathe, for sculptor Daniel Chester French fashioned a gentleness, a power, and a determination which encourages you to await with expectation the words which you are sure Lincoln is soon to speak. Above the statue is carved these words: "In this temple, as in the hearts of the people for whom he saved the Union, the memory of Abraham Lincoln is enshrined forever."

A circular colonnaded structure of white marble rises from the banks of the Tidal Basin as a memorial to the author of the Declaration of Independence, Thomas Jefferson. The classic beauty of the Jefferson Memorial is further enhanced by its reflection in the waters of the Tidal Basin.

This building expresses the architectural preference of America's third President, being designed in the style of the circular-domed Pantheon of Rome, a structure Jefferson mentioned several times in his writings. On the interior walls of the memorial room are four panels bearing excerpts from Jefferson's writings. The first is the Declaration of Independence; the second, his Virginia statute for religious freedom; third, is his concept in the belief of freedom of education for all people; the fourth relates the tenets of his political philosophy, which was fundamentally that a nation's laws and constitution must change with circumstances.

The responsibility for implementing the big idea is vested in the three branches of Federal Government—the executive, the legislative, the judicial. It would hardly be fair to take even a brief glimpse of the Capital City without mentioning the grandeur of the Supreme Court Building, which has housed the members of the highest tribunal of the land since 1935. Upon approaching the building, the first tier of broad, white marble steps leads to a specious plaza of marble flagstones of subdued and slightly contrasting color, laid in simple geometric design. On either side are large fountains set in the landscaped terrace. The second and third tier of steps leading to the main entrance passes between two massive marble buttresses. On the one side is a majestically sculptured figure of a man guardian or authority of law, and on the other side a female figure of appealing beauty in contemplation of justice. Eight 50-foot Corinthian columns of white marble front the portico of the structure, and over this colonnade is carved this promise to the American people: Equal Justice Under Law.

Inside, the main corridor leading to the Supreme Court chamber is an avenue of quiet and simple dignity, all interior furnishings are also in keeping with the quiet thoughtfulness embodied in the stately silence of the chamber of the Court. When the Supreme Court was established there were six Justices; there are now nine. It is a thrilling reminder to the greatness of this body to be in the chamber when the Court convenes and the crier announces the formal opening of the Court "Oyez, Oyez, Oyez. All persons having business before the Honorable, the Supreme Court of the United States are admonished to draw near and give their attention, for the Court is now sitting. God save the United States and this Honorable Court."

Washington might realistically be called the city of magnificent distances, for the vistas to the north, south, east, and west are superb in natural and architectural beauty. Additional evidence to this fact is to be found in L'Enfant's placing of the Executive Mansion which was chosen first, followed by the location of the site of the Capitol Building, 1 mile southeast atop Jenkins' Hill.

Because of the import L'Enfant attached to the building of the White House it was the first public building erected in our Nation's Capital. Its cornerstone was laid on October 13, 1792, nearly 1 year before George Washington laid the Capitol cornerstone. The original manse, burned in 1814 when the British entered the city, was a light-gray sandstone. However, when the home was rebuilt, the exterior was painted white, and from that day forward the

Executive Mansion has been known as the White House. The Interior has suffered constant changes with each administration, its most recent refurbishing taking place between the years 1949–52, but the house is now well constructed to cope with the rigors of time and a constant swell and flow of visitors.

No thumbnail sketch of Washington, D.C. would be complete without reference to the Capitol Building where the big idea is repeatedly tested and tried by the representatives of the American people. For here, in the Senate and House Chambers is to be considered the legislation affecting 170 million Americans, and quite often a few more millions of peoples in other sectors of the world. It is reported that L'Enfant said in choosing Jenkins Hill for the location of the Capitol, "It is a pedestal waiting for a monument". Any American, and possibly other visitors, will testify that the edifice he chose to place on the site quite properly belongs on a pedestal, for all of a sudden, settled back in your seat in the Senate or House Gallery, with your chin resting in your hands, you're quite overcome with the high responsibility with which we have charged our statesmen and our representatives. At the same time, sitting there watching you wonder how they can ever pull anything out of the seemingly disorganized morass of men and speech. But if you stick around, listen and watch carefully, you remember that this is only the showcase of the system which insures the big idea, the visible tip of the huge legislative iceberg. Work is being done, and done to the accompaniment of politeness, protocol, long-windedness and a system of complex and cumbersome rules, but freedom must go slowly; it must take time for the expression of doubt, for disagreement, even for demogoguery. Pride comes from the realization that the system works nevertheless, for the big idea is preserved by the rules, and its daily work is accomplished. All the politeness and rules are a discipline, a highly necessary habit, that allows human and hard-working men to get their work done in a respectable banner, without an intrusion of violent personal and partisan feelings. Watching Congress at work the observer suddenly realizes that this after all is humankind at work under rules and restaints; it is civilization.

It is civilization composed of individuals who, as my Congressman expressed it, are "deeply moved by the challenges and the opportunities offered to a Member of Congress. Serving in these traditional Halls is far more than drafting a bill that becomes a law, far more than making a speech before the world's largest debating society. It is being the agent for Uncle Sam, with the power and prestige to open the doors of the Government to anyone who asks, to offer the services of the Nation to her smallest common denominator, an ordinary American citizen, to search out a solution to unseemingly unsurmountable human problems, and somehow finding a way of working them out. Being a Congressman means being a chaplain, a counselor, a tightrope walker, and a miracle man, all at the same time. It means listening to sad stories and corny jokes, to accepting insincere pats on the back along with tearful thanks for unknown or unremembered favors. It means opening the day's mail to find yourself called down and built up, torn to pieces or deified. It is excting, frustrating, nerve-wracking, and tremendously rewarding."

Somebody once threw a cat off the top of the Washington Monument. It spun, volplaned, did several half gainers and tucks, and landed, uninjured, on all fours. Several years later, the story goes, the cat finally died, probably from boredom, and somebody had it stuffed and had it sent to the Smithsonian Institution. The Smithsonian, to the best of anyone's knowledge, has never thrown anything away, and for this reason it has often be called the Nation's attic, housing over 30 million keepsakes.

And there's the National Gallery of Art, housing over 26,000 works including paintings, sculpture, prints, and drawings and examples of decorative arts. And the Federal Bureau of Investigation, considered the splashiest show in Washington, where no doubt is left in anyone's mind that crime never pays. And the Library of Congress, which needs no further introduction, as well as the National Archives, where historic documents and charters are displayed and promotion of the efficient management of records is kept current.

And so it goes, on and on and on.

But whatever your impression of Washington after its short, furious and often preposterous history, I hope you will agree that amidst the magnificent beauty of this Capital City, all persons concerned are trying to make the right decisions to insure the success of the one big idea, the idea that men can rule themselves.

The Appeal of U.N. "Presence" in Berlin

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a copy of a press release from my office, dated April 10, 1959, and a feature story by William R. Frye in the Washington, D.C., Sunday Star, April 12, 1959.

PRESS RELEASE, APRIL 10, 1959, FROM THE OFFICE OF REPRESENTATIVE CHARLES O. PORTER, WASHINGTON, D.C.

The U.S. Department of State has commented officially on the proposal by Members of the U.S. House of Representatives and the British Parliament that the whole of Berlin should come under United Nations responsibility.

In a letter dated April 9, 1959, addressed to Representative CHARLES O. PORTER, Democrat of Oregon, the Department of State termed the proposal "among the most carefully thought out of the various proposals on this subject which have been brought to the Department's attention" and said that it "has a very definite appeal."

The resolution was sent to the Department for comment by Representative PORTER on March 31. He conferred with members of the Parliament when he was in London about 2 weeks ago.

Answering for the Department of State, Assistant Secretary William B. Macomber, Jr., said the joint British-American proposal would be given serious study. In his letter to PORTER, he said:

"While the idea of United Nations action has a very definite appeal, the specific proposals generally overlook two important factors of the Berlin situation. The first of these is the special responsibility which the United States, the United Kingdom, France, and the Soviet Union bear for Germany as a whole and for Berlin. This responsibility is based on the Four Powers' occupation of Germany and upon the agreements which they concluded among one another during and after World War II. The problem which has arisen with regard to Berlin has its origin in an attempt on the part of the Soviet Union to evade its obligations under those agreements, notably the obligation to restore German unity in peace and freedom. The second factor usually overlooked in proposals for United Nations action is the danger of attempting to deal with the Berlin question in isolation. A real and lasting solution to the problem of Berlin can be found only in German reunification, and it is the Department's view that primary emphasis should be put on making progress toward a resolution of the larger underlying problem rather than on interim or palliative measures to deal with the lesser problem."

PORTER said he had hoped the Berlin proposal would be considered at the Foreign Ministers' meeting "along with other proposals." He said he was not ruling out such action.

Among the six British Members of Parliament signing the proposal was Clement Attlee, former Labor Prime Minister.

Signing the original proposal in this country were 10 House Democrats: STEVEN V. CARTER (Iowa), FRANK M. CLARK (Pennsylvania), BYRON L. JOHNSON (Colorado), WILLIAM H. MEYER (Vermont), CLEMENT W. MILLER (California), CHARLES O. PORTER (Oregon), HENRY S. REUSS (Wisconsin), GEORGE M. RHODES (Pennsylvania), RALPH J. RIVERS, (Alaska), and LEONARD G. WOLF (Iowa).

Other House Members indicated interest in the resolution. One of them, Representative CHESTER BOWLES, Democrat, Connecticut, wrote PORTER Thursday, "I agree that the suggestion for a United Nations force in Berlin is a constructive and meritorious one. I have felt all along that if there was some way to involve the U.N. more directly with the Berlin controversy, it would be helpful."

[From the Washington Sunday Star, Apr. 12, 1959]

USE OF U.N. PRESENCE ADVANCED AS A SOLUTION TO BERLIN PROBLEM

(By William R. Frye)

UNITED NATIONS, N.Y.—To one who has just returned from 6 weeks in the Middle East, talk of a United Nations presence in and about Berlin has a familiar ring.

The U.N. has established its presence in the Middle East in a variety of forms, ranging from one man (Pier P. Spinelli) with a small staff in Amman, Jordan, to a 5,000-man army in the Gaza strip.

The U.N. is present on Israel's borders in the form of a small corps of observers (the Truce Supervision Organization). The U.N. came and went in Lebanon as a very different kind of observer team.

Exactly how the idea could be borrowed for Berlin, and in what form, is by no means easy to foresee. It depends in large part, of course, on Soviet Premier Khrushchev.

A good deal of preliminary thinking and planning has been done, however, on the Western side—notably by the Canadians, who are credited with the original proposal, and by Secretary-General Dag Hammarskjold, who has just come back from Moscow. Some of the thinking is still secret; some can be reported.

HOW IT MIGHT BE DONE

The starting point is that no conceivable U.N. army could be mustered to hold open the approaches to Berlin by force. Even if it did not have to clash directly with the 350,000-man Soviet occupation force in East Germany, it would still have an East German Army of some 200,000 men to deal with.

A military operation on this scale, against organized opposition, is well beyond the U.N.'s capacity. It would require, in practice, the deputizing of NATO forces to act on behalf of the U.N.—something the Security Council could not do, because of the Soviet veto, and the General Assembly would not do, out of fear of world war.

The U.N.'s role, therefore, would be that of executing, or supervising the execution, of a plan agreed upon by the great powers.

If the Big Four were to agree to make West Berlin a free city under international auspices, the U.N. could provide the government, and Western occupation troops could be called U.N. troops. The U.N. has never done this kind of job—governing a city—but was prepared to do so both in Trieste and in Gaza until events removed the necessity.

If a summit conference were to agree upon a new formula for Western access to Berlin, giving East Germans some or all of the functions now exercised by Russians, U.N. observers of the TSO type could be stationed along the route to see that there was no interference.

ANALOGY IN MIDDLE EAST

The analogy perhaps is not auspicious, but the TSO does this kind of thing now in relation to Mount Scopus, the Israeli enclave inside Jordanian territory in Old Jerusalem, next to the Mount of Olives. TSO observers check cargo manifests and try to make certain Jordan does not interfere with legitimate Israeli convoys.

There has been intermittent trouble despite the TSO's efforts, but no one doubts that it would have been much worse without the U.N. on hand.

If the East Germans must check Western convoys to Berlin—and Khrushchev seems inflexible on this point—the West obviously would rather have the U.N. there than leave the job wholly to the Germans.

There should be no illusions about the extent of the U.N.'s potential authority. It would not have power to compel the East Germans to do or not to do anything. It does not have that power today in the Middle East. The U.N. is not a super government.

If Khrushchev (and the East Germans) would let the U.N. actually man the checkposts, it would be a different matter. But preliminary soundings in Moscow appear to rule out that idea. Possibly—just possibly—the point can be negotiated.

In practice, however, the best attainable solution probably will be one in which the U.N. role would be that of a troubleshooter who would observe the checkposts, investigate complaints, iron out genuine misunderstandings, and publicize willful violations, depending on the pressure of world opinion in the latter case to provide the necessary sanction.

From the point of view of real politik, this would mean that if the West were forced to ram its convoys through to Berlin by force, the moral justification for such action would have been established in advance by an authority few would challenge.

All this, of course, is in the realm of preliminary thinking and planning. There are those within NATO who resist the whole idea.

Why, they ask, should the West purchase from Khrushchev at the price of a considerable contribution to the stability of Communist East Germany—including its de facto recognition by the U.N.—a set of rights and privileges which should belong to the West in any event? There should not, of course, be any challenge to the West's position in Berlin. A U.N. role should not be necessary.

Those who argue in favor of the purchase contend that, like it or not, the West's position in Berlin has been challenged. That position, they say, cannot be maintained by force without unacceptable risk of world war. A segment of NATO is unwilling to face up to that risk.

This preliminary question—whether to accept any change in the status of Berlin—will obviously have to be settled before the West dickers with Khrushchev over the nature and functions of a U.N. presence there.

A FACE-SAVING DEVICE

If, however, the ultimate decision is to buy off the threat to Berlin at the lowest price available—and Chancellor Adenauer's sudden decision to give up the reins of power in Bonn suggests that it probably will be—then use of the U.N. should be an excellent face-saving device.

A U.N. regime in and about Berlin need not look like a diplomatic defeat; it might not even be one. It would not be a defeat if the West, as part of the same package, got from Russia compensatory advantages, say in the field of inspection and arms control.

For maximum face saving, U.N. people believe the negotiations at one stage or another should become, in fact or in appearance, U.N. deliberations. They should take place, it is argued, under a U.N. roof.

This is why there is private urging that the summit conference be held at U.N. headquarters—or if this is not considered feasible, then elsewhere, but still as a meeting of the U.N. with heads of state acting as U.N. delegates. The agreement then would partake the moral aura of a U.N. decision.

A U.N. presence is not an automatic cure-all. UNEF is generally credited with being a success; the TSO is helpful, but by no means wholly effective. Spinelli has practically nothing to do, which perhaps means he is a success. UNOGIL was very nearly a flop, because it was put into an impossible position without adequate tools to do the job.

In Berlin, given a reasonable chance, U.N. people believe a presence could be the smoothest way out of a very deep hole.

A Truman Commission Sorely Needed To Curtail Waste and Extravagance

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. GEORGE. Mr. Speaker, for several years the Hoover Commission served this Nation well and made many important and valuable contributions to our Federal Government. The Commission was disbanded when its services were most needed.

With the tremendous expenditures being made in the name of foreign aid and by the Armed Forces and with the accompanying waste and extravagance, a new Commisison is sorely needed to safeguard the rights of the American taxpayer.

A Commission chairmaned by the Honorable Harry S. Truman, former President and former U.S. Senator, could do an outstanding job for this country and would be a great help in arriving at a balanced budget.

His piercing and penetrating investigations during the existence of the Senate Truman committee and the huge amount of tax money saved by that committee constitute an ironclad warranty that, if a Truman Commission could take up the traces where the Hoover Commission dropped them, a great saving would result and our Government would be more open, more efficient, more honest, and less susceptible to the lure of greedy and powerful influences.

The Kansas City Star, which has never been criticized for its failure to support Republican candidates for high office, has taken notice of the waste in our armed services in its editorial columns on March 18, 1959.

Mr. Speaker, under leave to extend my remarks, I wish to include that editorial, published in the Kansas City Times, the morning edition of the Star:

MUCH CAN BE DONE TO REDUCE THE WASTE IN DEFENSE

Waste in the Armed Forces is an old story that never fails to dismay the American public. Neither Congress nor the Pentagon has ever been able to explain satisfactorily why military equipment originally valued at billions of dollars is declared either surplus or obsolete. A new survey by the Associated Press shows that the Defense Department wrote the equivalent of at least $7½ billion off its books last year.

This is a prodigious amount of money to be kicking away. The services won't admit it, but what they need is centralized buying as recommended by the Hoover Commission. They now have it on a limited single-manager basis. For example, the Navy buys oil for the other services. But there is duplication and triplification in many fields. Sometimes one service discards usable equipment of a type that another service is buying. The trouble here lies in inadequate methods of keeping inventory.

Another apparent fault is too much reliance on negotiated contracts. In many cases this method is necessary because of the time factor and production problems. Where competitive bidding is possible, it is likely to bring a big saving.

Each of the services is constantly at work to improve its weapons and equipment. Vast sums are invested in research. Money spent on subsequently abandoned projects isn't necessarily wasted. The findings are often applied to future requirements.

Huge investments in weapons and equipment become antiquated. A new missile may be far more efficient than the artillery shell or manned plane it replaces. You can't charge obsolescence to waste.

But it does seem at times that the services are too quick to declare a relatively unimportant item obsolete simply because something a little better has been found. Perhaps it's human nature for a general or admiral dedicated to his profession to place its needs ahead of every other consideration.

Overall, it's a vast problem. Some say that the job of the Secretary of Defense is too big for any man. He now has increased authority under changes in the so-called unification law. But to a large extent the individual services are still run separately. That's the way a majority of Congressmen and professional military officers want it. Congressmen fear any loss of control over the spending of defense funds. They are particularly concerned with money that might be spent in their home States or districts.

More than half of the Federal revenue is allotted to defense. Probably some waste is inevitable in our political system. But the people do not need to be so tolerant. Greater unification could bring greater efficiency and economy. That should remain the ultimate objective. The national security demands it.

Billions that go down the drain could be well spent on missiles and other vital military hardware. Americans will be reconciled to their heavy burden of defense only when they are convinced that they're getting something like their full money's worth.

World Law Resolution

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, world peace can only be accomplished through world law. How do we attain world law? We strengthen the United Nations. This means revising the charter in accordance with studies which can start later this year.

It means enacting the resolution set out below.

The Committee on Arrangements for a United Nations Charter Review Conference meets this June. The United States should at that time urge the committee to recommend to the United Nations General Assembly that governments establish national commissions, or instruct appropriate national bodies, to undertake studies to determine their position on charter review.

Here are some facts about United Nations Charter revision:

In order to provide for revision and amendment, the United Nations Charter provides two mechanisms. Article 108 provides for the General Assembly to recommend amendments. Article 109 specifies procedures for calling a Charter Review Conference to draft revisions.

In either case, amendments are then to be referred to member states for ratification. They become effective on approval by two-thirds of the member states, including all five permanent members of the Security Council.

Pursuant to article 109, charter review was placed on the agenda of the General Assembly in 1955, which then decided—43 in favor, 6 opposed, 9 abstentions, and approved by the Security Council, 9 in favor, 1 against, 1 abstention—that a Charter Review Conference shall be held at an appropriate time and expressed the belief that review of the charter should be conducted under auspices international circumstances. At a meeting in June 1957 the committee established by the General Assembly to consider the time and place for a review conference concluded that the appropriate time and auspicious international circumstances referred to in the 12th General Assembly, the committee recommended that it be continued in being to report again with recommendations not later than the 14th General Assembly—1959. This recommendation was adopted by the General Assembly with no negative votes—54 in favor, 9 abstentions.

Factors which seem to have led to postponement of a Charter Review Conference, as indicated by committee debate, are not only political tensions and Soviet opposition, but fears that irresponsible and divisive charter amendments would be proposed. This fear is no doubt enhanced by the fact that no formal or official proposals for significant amendments have been made by our own or other governments.

As regards Soviet opposition, the following facts are significant:

First. No further Security Council action is required with respect to a Review Conference, or proposals adopted by it.

Second. The Soviet Union cannot veto the holding of a Review Conference.

Third. The U.S.S.R. cannot veto proposals made at that conference, or prevent the conference from officially approving and submitting for ratification amendments endorsed by a two-thirds majority.

Fourth. Of course, the Soviet Union, under the charter's present provisions, must ratify amendments before they can go into effect.

Fifth. Failure to ratify, unlike a veto, is not a final act and leaves open possible future consent to the amendments.

Sixth. The U.N. Charter does not put a time limit on the ratification period for charter amendments, so Soviet approval can be sought as long as may be required.

Should careful United States study of charter amendment lead to conclusions that important changes should be proposed and would have widespread international support, then approval for these amendments could be sought through a two-thirds vote in the General Assembly rather than by a Charter Review Conference. Here, also, there would not be veto on procedure, but the same considerations on ratification as outlined above would hold.

The text of the resolution which will be introduced within the next 10 days is as follows:

Whereas the basic purpose of the foreign policy of the United States of America is to protect the freedom of its citizens; and

Whereas the United States seeks freedom, peace, and prosperity for the peoples of all nations; and

Whereas the United States has joined with other nations to pursue these goals through the United Nations; and

Whereas enforceable law has proven to be indispensable to the attainment of these goals and to the peaceful and just settlement of disputes within all civilized communities: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that it should be U.S. policy to seek, through the United Nations, the development of world law to protect the freedom, peace, and just aspirations of all peoples, to provide for the peaceful settlement of international disputes and to permit the elimination of national armaments; and be it further

Resolved, That a copy of this resolution will be sent to the President of the United States, who is hereby requested to initiate studies of the changes which should be made in the Charter of the United Nations or in the charters of other international organizations to further the development of world law for the purposes enumerated in this resolution; and, pursuant to this goal; be it further

Resolved, That the U.S. Government should urge the United Nations Committee on Arrangements for a United Nations Charter Review Conference, when it meets in June 1959, to recommend to the United Nations General Assembly that governments establish national commissions, or instruct appropriate national bodies, to undertake studies to determine their positions on charter review or revision in order to facilitate fruitful consideration of suitable measures to strengthen the United Nations Charter as an effective legislative, executive, and judicial instrument of world law when a Charter Review Conference is held.

The Program for Education of the United Steelworkers of America

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. GEORGE. Mr. Speaker, seldom do the good things that labor organizations do appear in the public press. More often it is those acts of labor that may be subject to criticism by some that are given publicity in newspapers and magazines.

Recently, the lead editorial in the Kansas City Star, a great midwestern newspaper which throughout the years has made a valiant attempt to be fair with all segments of our society, told of the seventh annual union leadership training institute of the United States Steelworkers of America and the University of Kansas Extension. It is such efforts as this to diffuse knowledge of world affairs that may bring about a better understanding between management and labor. The more knowledge one possesses, the more he understands the problems of other segments of our society.

The labor education program, Mr. Speaker, does, I believe, and will continue to contribute to a better America. Under leave to extend my remarks, the editorial which appeared in the Kansas City Evening Star on April 10 is included herein:

IN THE CLASSROOMS OF THE LABOR UNIONS

Once a week a little group of men has been gathering in the old Maccochaque School in Kansas City, Kans. The trappings of the evening are the trappings of any classroom session: Notebooks and pencils, a blackboard, lecturers and the sharp questions of students seeking information. The men are members of the United Steelworkers of America, AFL–CIO. They are attending the seventh annual Union Leadership Training Institute of their union and the University of Kansas Extension.

The institute, spread over a period of several weeks each spring, is symptomatic of the thirst of everyone for more knowledge. Among unions, the steelworkers have spearheaded the search for education. In this area the first 1-week Steelworkers Institute was held at Lawrence in 1947. That has become an annual period of compressed classroom work attended by both union and management representatives. The spring institute is an outgrowth. Both are aimed primarily at giving the students more knowledge of the world that immediately affects them.

Now the labor education program of the steelworkers is carried out at more than 50 colleges and universities. Some other unions have adopted similar programs. In New York recently the International Brotherhood of Electrical Workers began a mandatory, once-a-week course in international affairs for all paid union officers. The purpose, in

the words of one official, is "to get the feel of the world." In this complex civilization that is essential not only in union-management relationships but in all dealings between men.

Nor are the unions alone in this field. Management long has recognized the value of off-the-job training. An example is provided by several Los Angeles corporations that finance summer college courses in the liberal arts for their executives. Last year Congress authorized similar training for some Government workers in specialized fields.

The pattern is encouraging for the future of the Nation. We hold no starry-eyed belief that adult education will solve all our problems. Collective bargaining will remain the tough, give-and-take institution that it is. As one union worker commented at an institute session this week, "When you go into the bargaining room, you leave your religion at the door." Personalities and interests will continue to collide.

But such sessions, for labor, management, or anyone else, stimulate thought and create a recognition of the problems of others. And that is a vital first step in bridging the gap of misunderstanding that sometimes separates people.

Custard's Last Stand

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. QUIGLEY. Mr. Speaker, may I call to the attention of the Congress an excellent editorial which appeared in last Sundays' Washington Post and Times Herald.

It does seem to me that the Battle of Gettysburg is too important to lose the ground upon which it was fought, to have the gallantry of Pickett's charge immortalized in flashing neon, to have the words of Lincoln alternating with rock 'n roll from a souvenir stand jukebox and to have such honored dead buried alongside a flowering of motels.

The editorial follows:

CUSTARD'S LAST STAND?

Why do Americans insist on blighting even a historic site like the Gettysburg battlefield with blinding neon signs, garyish souvenir shops, and junky frozen custard stands? Only complete public ownership of historic areas, or private control by an organization such as Colonial Williamsburg can keep these tourist attractions from being surrounded and even invaded by a Coney Island atmosphere.

Further encroachment by commercial interests at Gettysburg can be prevented if the Senate restores $750,000 to the National Park Service budget. This sum, which was taken out of the budget by the House, is needed to purchase 350 acreas adjacent to the present 2,762-acre Gettysburg National Military Park. Unless the land, which has been farmed, is bought soon by the Government it will probably be sold to commercial interests, including a real estate subdivider. Part of the area in question was the site of the first day's battle at Gettysburg.

So much of the Gettysburg battlefield has been preserved by the National Park Service that it would be shortsighted now to allow commercialization to invade the unreserved area. Gettysburg means too much to the United States to be turned into an unseemly jungle of tourist traps or even a suburban housing development.

Where Federal Aid to Schools Would Have No Strings

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PELLY. Mr. Speaker, I am joining certain other Members of the House of Representatives and have introduced legislation to provide that expenditures in connection with the submission to an electorate of issues affecting the business of a taxpayer shall be allowed as a deduction under the Internal Revenue Code of 1954.

This bill would read in part as follows:

No expenditure which otherwise qualifies as an ordinary and necessary business expense * * * shall be disallowed as a deduction because incurred in opposing or advocating measures duly submitted to an electorate upon any issue affecting the business of the taxpayer.

My thought is, Mr. Speaker, that in many local matters, such as school bond issues, the cost of informing the public is a business and civic, not a political, expense and has an important effect on the taxpayer and his business.

I have in mind that other desirable or necessary elections for local improvements not alone for schools but for municipal and State facilities of all kinds would be affected. Public support could be enlisted, with the incentive in my bill, for parks, playgrounds, civic centers, urban renewal projects, and all manner of worthy and meritorious issues requiring a vote of the people. However, I am thinking in particular of educational bond authorizations or school levies where under election laws many times the referendum fails for want of information or adequate public interest. The outcome of these elections is certainly one of community welfare and affects the customers and employees of business firms themselves in the area. In my congressional district often bond issues voted on to provide funds received majority approval, but the measures fail due to an insufficient number of voters going to the polls and a required legal percentage of total votes not being cast. Defeat is due to lack of publicity and promotion.

I would hope, Mr. Speaker, that with passage of this legislation contributions to groups such as parent-teacher organizations and chambers of commerce, by public spirited citizens or organizations would become tax deductible as a normal and proper business expense. I want to make it clear my purpose is not to allow deductions of gifts to personal political campaigns, although frankly I would not be against limited deductions of that nature, but this legislation would cover public issues only and not personalities or people.

Also, let me explain, as one who fears Federal controls, that the purpose of my bill is to make it easier for local communities to do things for themselves rather than to be forced to come to the Federal Government for help.

Take education as the case in point. If State and local financing is insufficient, the pressure increases on the national level. The only answer, I can see, is to assist communities and encourage them to accept their responsibility. In the case of schools, classroom shortages must be filled and teachers must be paid decent salaries. To turn to the Federal Treasury in order to provide these needs may be the easier way but it is the wrong way in my opinion.

For example, the National Defense Act was passed last year. I voted against it because I just could not, in all conscience, support a program putting the Federal Government further in the education business. Most educators in my district did not seem to worry on this score, but I am sure they have recognized that my opposition to Federal aid is genuine and they respected my objections. Educators do not favor Federal controls, but they favor adequate funds, and I do too. So we agree to a great extent. Our State Superintendent of Public Instruction, Lloyd J. Andrews, has agreed with me about the danger of Federal school aid and on the basis of actual experience he has found that Federal programs always include Federal requirements and standards, which a State must accept or else it forfeits the funds. I support his stand as to the threat of Federal aid.

However, I agree if local communities shirk their responsibilities then there is no alternative—the school boards must look to other sources of income.

Out in my State recently in order to increase voter activity and obtain needed percentage of votes in a school election, voter registration campaigns have been conducted. Teams of members of eight parent-teacher association units covered shopping districts of Bothel, Woodinville and Kenmore, which is mostly in my congressional district. With registration books scheduled to close shortly, prospective voters in Northshore School District 417 were canvassed. Through the courtesy of the Aero Mechanics Union a mobile registration bus was stationed in the population centers, and PTA workers in various stores enlisted new registration. A special deputy registrar was appointed so it was not necessary for eligible voters who were not registered to go to the county official's office.

If business contributions toward advertising this drive had been deductible, the drive could have been much more effective, and of course this is only one example of where donations in behalf of community or State campaigns submitted to the electorate could increase voter response and make democracy more effective.

Here is a means of assisting local groups to inform the voters on issues. It deserves consideration.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 11, 1959, to constituents:

WASHINGTON REPORT
(By Congressman BRUCE ALGER)
APRIL 11, 1959.

The clash of traditional constitutional government of Federal-State prerogatives against ever-increasing Federal centralization was never better demonstrated than in the Unemployment Compensation Act of 1959, during public hearings which are now before the Ways and Means Committee. The proponents of the bill are attempting to prove the bill's stated findings that: (1) States are failing to carry out the purposes and objectives of employment stabilization and security against unemployment; (2) the benefit amounts paid aren't enough; (3) State programs vary, are not uniform in eligibility, amount, and duration of benefits. Therefore, to strengthen the economy and provide for the general welfare of the Nation, it is necessary to impose Federal standards on the States. Witnesses testifying included economists, employment experts, business representatives (mostly opposed), and AFL–CIO spokesmen, culminating this week with Mr. George Meany, AFL–CIO president.

Present law continues the original intent of leaving jurisdiction in the States. State legislatures, therefore, have each developed their programs to solve their own unemployment. Employers of four or more pay a tax generally of 3 percent on each employee's first $3,000 of income. Federal Government requires States to pay in three-tenths of 1 percent of this for Federal administrative costs. States are permitted to charge whatever tax they choose to meet their needs, although all States must extend each employer a reduced tax rate commensurate with the stability of employment in his company. This is called experience rating. In 1958, the estimated average State tax was 1.4 percent; 5 States were paying 2.7 percent, while 12 States were paying less than 1 percent. Each State maintains its own reserve fund and can borrow without interest from the Federal Government. The States have $7 billion on hand for unemployment contingencies. The legislatures are representative of the people's wishes and the present law is the result of agreement of labor and management at the State level. The very flexibility of State law matches the varying economic patterns and needs of the Nation.

So it is a matter of grave concern to me that labor leaders now attempt to brand the States as failures in this field. Should they succeed in changing the law without proving their allegations with facts, this Nation will have sustained another body blow threatening the very freedom and solvency of every citizen. Consider these facts, in relation to imposing Federal standards: (1) The employer pays all the tax, the employee nothing; (2) we are told we must force the States to broaden eligibility, to increase benefits and duration, regardless of State experience; (3) increased taxes to business means higher costs, thus higher prices to consumers. Labor leaders, therefore, would be cutting everyone's buying power in imposing arbitrary increases; (4) increased taxes and costs to business could force more labor layoff and so more unemployment; (5) the unemployed drawing benefits are over 50 percent without dependents, including seasonal workers, and family members where others in the family work, too—so it isn't the family head primarily being helped; (6) actually, we have gone beyond the area of temporary unemployment compensation and are treating welfare and relief on the one hand or the need for more jobs on the other; (7) the increased benefit wages are getting close to the worker's take-home pay; we are placing a premium on idleness and evasion of working, drawing benefits instead; (8) we are asked to forget the judgment of 7,613 State legislators; (9) the most heavily unionized areas, represented by the Detroit mayor and AFL–CIO leaders, are the ones most desiring Federal control. Having the greatest failure in providing jobs, these men plead most for unemployment compensation.

It seems it's time we tried to create new job opportunities locally—not beg for Federal control and aid. Whether new jobs or relief are needed, it's certainly not a "guaranteed annual wage" for not working. Oddly enough, that seems to be the aim, intended or not. Labor leaders want Federal control—why? So they can straitjacket the Nation? To do what they've done to Michigan—a bankruptcy of economy and ideas? No matter how sincere their intentions, leaders of the 13.5 million AFL–CIO workers cannot be allowed to run roughshod over the 67 million labor force—nor should labor leaders get by unquestioned as representatives of 13.5 million workers.

I suggested to Mr. Meany that the U.C. Federal standards would defeat his stated purposes to relieve unemployment and increase purchasing power; rather it would do the opposite. The real trouble (beyond the political power of labor leaders over Congressmen) is the Full Employment Act of 1946 which Mr. Meany admittedly likes. This act, through broad language, makes the Federal Government responsible for everyone working—this exceeds the constitutional prerogatives of Federal Government. It should be repealed.

The U.C. debate proves again the failure of some to understand, even recognize, the blessings of the constitutional balance of power between State and Federal Government, and the dangers in destroying this balance.

Westover AFB Receives SAC Management Award

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. BOLAND. Mr. Speaker, the 814th Air Base Group at Westover Air Force Base in Chicopee Falls, Mass., commanded by Col. Edward D. Wooten, has won the Eighth Air Force's highest award for achievement under the Strategic Air Command's Management Control System.

I want to take this opportunity to congratulate Colonel Wooten and the personnel in his command who made this distinctive award possible. Last week, Maj. Gen. Hunter Harris, Jr., the Eighth Air Force deputy commander, with headquarters at Westover AFB, presented Colonel Wooten with a shield-shaped plaque during ceremonies witnessed by Brig. Gen. Perry M. Hoisington II, Commander of the Strategic Air Command's 57th Air Division.

Under leave to extend my remarks, I ask that the following news article printed in the Westover AFB Yankee Flyer concerning the award be included with my comments in the Appendix of the RECORD:

AIR BASE GROUP WINS EIGHTH AF AWARD FOR TOP MCS RATE

Eighth Air Force's highest award for achievement under the SAC Management Control System last week went to Westover's 814th Air Base Group.

The MCS shield-shaped plaque, bearing Eighth's famed eighth-in-the-circle opposite the command's own crest, was presented to Col. Edward D. Wooten, 814th Air Base Group commander, by Maj. Gen. Hunter Harris, Jr., Eighth's deputy commander.

Cited was the high performance achieved during the period ending December 31. The 814th finished the quarter with the highest MCS score in Eighth Air Force in SAC's Air Base Group Management Control System.

In addition to topping all Eighth Air Force Air Base Groups, the 814th was also first in the entire Strategic Air Command, competing against some 35 other SAC bases.

"Individual Diplomats From Main Street"—Address by Supreme President, Order of Ahepa

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BRADEMAS. Mr. Speaker, on April 10, 1959, over one thousand Americans, members of the Order of Ahepa, sailed from New York City on the 30th annual Ahepa Excursion to Greece.

Upon their arrival in Greece, these Americans will serve as individual diplomats from Main Street, U.S.A., bringing the good will and friendship of the people of the United States to the people of Greece.

Mr. Speaker, these annual Ahepa excursions are a splendid example of President Eisenhower's people-to-people program in operation.

I am pleased to include in the CONGRESSIONAL RECORD the address of Constantine P. Verinis, supreme president of the Order of Ahepa, to the Ahepa excursionists on the eve of their departure.

The address follows:

INDIVIDUAL DIPLOMATS FROM MAIN STREET
(By C. P. Verinis, supreme president, Order of Ahepa)

"Today the country needs more individual diplomats from Main Street traveling abroad as part-time ambassadors to help build understanding as a foundation for lasting peace."

These are the words of the President of the United States, as he spoke recently at the Third National Conference on Exchange of Persons. And this statement by President Eisenhower further emphasizes and underlines the importance of his international people-to-people program.

On April 10, 1959, the Ahepa excursion to Greece will depart from New York City on board the TSS *Olympia*, of the Greek Line, with some 1,100 excursionists. The annual Ahepa excursion to Greece is now in its 30th year of existence, and has been a distinct people-to people contribution of its own since 1928.

Ahepans have been outstanding examples of individual diplomats from Main Street in their many excursion activities.

President Eisenhower has stated of the 1959 excursion to Greece: "This is a fine example of the work your organization is doing in strengthening the historic bonds which unite the citizens of our country and Greece.

"To those who are taking part in this excursion, I send a hearty bon voyage and best wishes for a pleasant and meaningful visit. I know that each one of them will be an effective ambassador in carrying to the Greek people the good will and friendship of us all," the President concluded.

The people of Greece, by meeting and exchanging views and ideas with the Ahepa Main Street excursionists who travel throughout Greece as ambassadors without portfolio, have come to understand and appreciate the genuine desire of the American for world peace. At critical moments in recent history, the people of Greece have responded by proving to us their realization of the value of our friendship and our dedicated ideals of freedom.

Grassroots diplomacy has no protocol to follow, but that of a genuine meeting between people of all nations. The Ahepa has tried to take an important part in all aspects of the creation of better understanding between the peoples of America and Greece, in accordance with the President's expressed desires, as exemplified in his people-to-people program.

In these annual Ahepa excursions to Greece, the members of Ahepa, as American citizens, have traveled and visited every village and town of historic Greece, as friend, tourist, and benefactor. The Order of Ahepa has built hospitals, medical clinics, convalescent homes, schools, and contributed greatly to the welfare and well-being of the Greek people over the past 37 years of Ahepa's existence.

Many of our members travel again to Greece this year, and they will carry with them the good wishes of all Americans, for the continued progress and welfare of our good friends, the people of Greece.

National Milk Sanitation Legislation Favored by Land O' Lakes

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, delegates to the 1959 annual meeting of Land O' Lakes Creameries, Inc., Minneapolis, Minn., came out in favor of the national milk sanitation bill which I have introduced in the House. Under leave to extend my remarks, I want to include a copy of their resolution on the subject in the RECORD:

Whereas milk of superior quality is produced in many areas; and

Whereas the use of this milk for fluid consumption is sometimes limited either to regulated or unregulated markets, by the rulings of the public health officer; and

Whereas the bases for such rulings are sometimes arbitrary and open to dispute; but

Whereas in the marketing of milk, there is no procedure for the arbitration of disputes or the redress of unrealistic and arbitrary decisions: Now, therefore, be it

Resolved, That we are in favor of the passage of national milk sanitation legislation which will set up a public health standard for milk in interstate commerce applicable to all markets, and place the supervision and administration of this law in the hands of a qualified authority of the U.S. Public Health Service to be administered by existing qualified public health authorities.

It Could Be You

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. MADDEN. Mr. Speaker, the following editorial by Carl M. Davidson, editor of the Hammond, Ind., Times, reveals the economic condition of thousands of older folks in America today.

This retired businessman thought he had provided for his old age back in 1939.

The editorial follows:

[From the Hammond Times, Apr. 9, 1959]

IT COULD BE YOU

When Mr. J. J., a Lake County businessman, retired at age 65 back in 1939 he thought he had provided adequately for his old age.

Since he was self-employed, he was not eligible at that time for social security benefits, but he had saved $20,000 and thought that sum should be adequate to maintain him in comfort the rest of his life.

At the time he retired, the $1.25 restaurant breakfast of today cost 35 cents; when a large, new house could be bought for $8,000; when one of the "low priced three" cars could be purchased for around $800, and good gasoline to run it cost 18 cents a gallon.

Five years ago, Mr. J. J. found himself, as he expressed it, "sick, unwanted, and useless," and nearly flat broke. His $20,000 had dwindled down to $101.

He applied to the Lake County Department of Public Welfare for old age assistance. He is still living, 86 years old, in a nursing home, thanks to the old age assistance program. He is in good spirits, mentally alert, in better physical shape than he was 5 years ago, and able to get about fairly well.

His story, related in the 1960 budget presentation of the Lake County Department of Public Welfare, shows how even a person who has provided for his old age can be forced into a position where old age assistance is necessary.

In the first place, he had only himself to take care of, since his wife had died shortly before his retirement. On the other hand, he had no children to take care of him.

For 16 years, according to the Lake County Department of Public Welfare, he had lived on a yearly budget of about $1,250. In the 3 years before he applied for old age assistance, he had paid out more than $1,500 in hospital and medical bills.

When he noticed his savings were going, back in 1947, he took a part-time job covered by social security and as a result now receives $53 a month in old age assistance benefits.

"There are many more like Mr. J. J.," the Welfare Department's presentation points out. "The average life span after reaching age 65 is 13.6 years. In order to provide for one's retirement on the basis of this life span (it) requires at least $16,000."

This, explains the Welfare Department, is based on $100 a month income, and does not allow much for medical care "which is an inescapable item of the aged." If one lives beyond the average expectancy of 78, the $16,000 will be exhausted.

Not everyone who applies to the Welfare Department for old age assistance gets it, the department points out. It rejects about 2 out of every 5 applications, following careful investigation of each case.

This "Cure" Can Kill

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MINSHALL. Mr. Speaker, last week the AFL–CIO marched on Washington under open umbrellas, stubbornly refusing to admit that the employment skies are rapidly clearing. No one is oblivious to the plight of the remaining unemployed who are anxious to get back to work. No one should want to play politics with such human misery. By refusing to face facts squarely, by demanding massive, inflationary Federal programs which stifle full employment, labor leaders last week did no service to the cause of the jobless men and women. The Cleveland Press most effectively expressed this view in an editorial Saturday, April 11. The editorial follows:

THIS "CURE" CAN KILL

The unemployment rally just concluded in Washington has, in effect, condemned a system which has produced more than a million new jobs since March.

Speeches by both labor leaders and politicians were depression talks—overlooking the fact that there are nearly 64 million employed today, something near a record.

It's true that statistics show almost 4,500,600 unemployed, but this figure shrank by more than a third of a million in this same month.

By no means all of those listed statistically as jobless are unemployed in the sense they are hunting work and can't find it. Those temporarily incapacitated, seasonal workers, those shifting from job to job, make up a hard core of technically unemployed—some 2,500,000.

The rest—the actual jobless—are the remaining victims of last year's recession. At the present rate of recovery they have a good chance to get back to work this summer.

As long as there are substantial numbers unable to find jobs in this prosperous country, it is a matter for deep, national concern.

But frantic cures most vigorously demanded add up to just one thing—spend more Government money. Don't worry too much about what you are buying. Just spend it. This despite the fact that the Government already is spending at the rate of more than $80 billion annually and running a $13 billion deficit this year alone.

This irresponsible spending of printing press money waters down the dollar, raises living costs and was a main cause of last year's recession—a buyers' strike against exorbitant prices.

Tobacco and Our Nation's Economy

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I wish to commend to my colleagues an article appearing in the March issue of Tobacco News. The article to which I make reference was written by our distinguished former colleague, the Honorable James P. Richards, president of the Tobacco Institute, Inc.

I believe that all will find this article most informative and interesting. It was of particular interest to me inasmuch as the Fifth Congressional District of Maryland grows some of the finest tobacco grown in the world. Maryland's tobacco industry is over three centuries old and today brings to the farmers of the tobacco counties a sum in excess of $20 million a year.

The article follows:

INSTITUTE HEAD ASKS HALT BE CALLED ON HARASSMENT OF TRADE

(By James P. Richards)

Today the United States is doing its level best to preserve a healthy national economy as the only means, under our free system, of supporting the tremendous demands of national defense in this age of peril. It is democracy's answer to communism.

One of the foundation stones of that economy is tobacco. With its annual business of $6.1 billion, its tax yield of $2.5 billion and its total or partial support of some 17 million people (one out of ten of our population), tobacco is more important to the national welfare than at any other time in history.

We, in the tobacco growing and manufacturing States, are proud of the great contributions our product has made to the growth of America, to the support of our governments, and to the relaxation and pleasure of the people of America.

Tobacco helped to build this country. It is one of the pillars of our healthy national economy. As our oldest industry, tobacco gave our colonists their first needed cash through exports. And where there was no cash, it served as money. Throughout our history as a nation, tobacco has always been one of our most important industries.

Yet, for all of that, tobacco is not a luxury item, even though it is often a whipping boy of taxation and regulation. It is a pleasure for every man. It belongs to the worker as much as to the capitalist, to the plodder as much as to the dynamic thinker, to the housewife as much as to the breadwinner. And in this modern time when tensions are inclined to build to the breaking point, tobacco proves a mild tranquilizer that eases the strain. That is probably why more people are using tobacco today than ever before in history.

The average user probably never stops to think just why he smokes or chews tobacco. Yet, I venture to say that some of our greatest ideas were first envisioned through rings of tobacco smoke. From the long clay pipes and pinches of snuff of our Founding Fathers, to Grant's stogie, Roosevelt's cigarettes, MacArthur's corncob, Steinmetz's stubby cigar, and Churchill's panatella, tobacco symbols have been identified with greatness. Well-filled ashtrays dot every board of directors' table of industry. Many great writers spin their stories through wisps of smoke.

These are some of the reasons it distresses me to find tobacco harassed by new moves to burden its users with disproportionate taxes and a renewal of centuries-old "scare" attacks.

ONE-HALF GOES FOR TAXES

Today, the smoker pays an average of about one-half of the price of a package of cigarettes in taxes. And the trend of taxation is still upward in many States and municipalities. The rash of publicity given to statistical efforts to link tobacco use with health impairment is stirring up anti-tobacco zealots to push for legislation leading toward abolishing tobacco use. Not liking or using tobacco themselves, these crusaders have decided that others should not enjoy the solace of tobacco.

The antecedents of today's anti-tobacco crusaders have threaded through 300 years of our history. They used to rant that tobacco would "grow hair on women" and it would "make men bald." It would "pauperize the workingman" and it would cause people who used it to "fall in the scale of nations." It would "stunt our growth." As our country is proof, none of these dire predictions has come true. But now the attacks against tobacco have returned. And the charge now is that they are contributing to the early death rate of its users. And this comes at a time when the longevity of our people is higher than it has ever been—nearly 30 years longer today than it was in 1900, before cigarettes became popular.

The big difference between the earlier attacks and those of today is that our modern means of mass communication carry the charges instantly to all points of the compass. The questions and the doubts and the answers of scientists never quite catch up with the lurid charges. But the charges still lack any acceptable proof.

Isn't it about time that we put the brakes on these harassments? The American people need to be reminded of the facts about tobacco, about its place in our culture, our history, our economy, and about its good citizenship as an industry—from the 800,000 tobacco farm families to the friendly retailers everywhere who serve their customers?

After all, it is the people themselves who have raised tobacco to its high estate. The major proportion of our adult population enjoys tobacco products in one form or another—and would like to continue to do so.

I do not think anyone should be penalized for indulging in this pleasure. And I don't think all the millions of people who derive their livelihood by supplying tobacco should be penalized by discriminatory taxation or other restrictive measures.

Moreover, we should not forget that tobacco is supplying rich red corpuscles to the economic bloodstream of the Nation in a critical period of our history, and that enough taxes are paid on tobacco annually to cover more than the entire expenses of the State, Post Office, Commerce, Interior, and Justice Departments for a full year.

Hon. Walter S. Robertson

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. HARRISON. Mr. Speaker, "dedicated public servant" is an overworked phrase, but I believe there is a broad bipartisan agreement that it describes aptly the Hon. Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs.

It is a matter of sincere regret to his many friends that Mr. Robertson, for reasons of health, has been obliged to tender his resignation, and it is their prayer that relief from the tensions of his heavy diplomatic duties will restore him rapidly to full salubrity.

Mr. Robertson's relinquishment of his responsibilities in the Department of State will remove from the implementation of our foreign policy the services of a conscientious observer and negotiator of highest competence. The replacement of his skill and experience will be most difficult.

Under leave to extend my remarks in the Appendix, I include editorial comment:

[From the Staunton Leader, Apr. 9, 1959]

Assistant Secretary of State Walter S. Robertson, who has just resigned, will be remembered in Staunton for one of the most notable addresses during the Woodrow Wilson Centennial celebrations. Those who have followed our policies and actions in Far Eastern affairs know him for his firm, brilliant handling of our relations in that field, in which he was the State Department's specialist.

This distinguished Richmonder's resignation means a severe loss to the Nation, but he has served beyond the call of duty and needs to mend his health. The Richmond Times-Dispatch appropriately observes: "It is seldom that a public official goes out of office with as many tributes to his ability, his dedication and his integrity as those which are being heard" for Mr. Robertson. His hometown newspaper makes further comments, which reflect nationwide opinion. Too much cannot be said about this statesman's fine service and personal qualities. To quote the Times-Dispatch:

Walter Robertson's steadfast and unyielding determination to fight Red China with all the power he possesses, is now seen by practically everybody to have been the right policy. That country's brutal and cynical attack on Tibet has opened the eyes of those who for years were inclined to pooh-pooh Mr. Robertson's clear-sighted realism as "narrowness" or "fanaticism." Even Nehru of India has had his eyes opened * * *.

All these qualities were needed, as Walter Robertson battled for years against a clique in Washington and throughout the country which was trying to undermine his adamant opposition to Red China and his unyielding support of the Nationalist Chinese on Formosa. What made his struggle doubly exhausing were the recurring ulcers which have plagued him intermittently since he took his present post in 1953 * * *.

He says he wouldn't be resigning now, despite his health problem, were he not convinced that there will be no yielding in Washington to Communist China.

[From the Richmond Times-Dispatch, Apr. 8, 1959]

It is seldom that a public official goes out of office with as many tributes to his ability, his dedication and his integrity as those which is being heard for Walter S. Robertson, of Richmond.

Mr. Robertson's announcement last week of his retirement as Assistant Secretary of State for Far Eastern Affairs, effective July 1, would have been noted ere this in these columns, but for the urgent and pressing necessity for extended comment on the Perrow Commission's report and Governor Almond's message dealing therewith.

Walter Robertson's steadfast and unyielding determination to fight Red China with all the power he possesses, is now seen by practically everybody to have been the right policy. That country's brutal and cynical attack on Tibet has opened the eyes of those who for years were inclincd to pooh-pooh Mr. Robertson's clear-sighted realism as "narrowness" or "fanaticism." Even Nehru of India has had his eyes opened.

Columnist William S. White, one of the keenest observers in Washington, paid a glowing tribute to Mr. Robertson in this newspaper yesterday and David Lawrence called him in yesterday's News Leader "truly one of the great public servants of our time." Marquis Childs, who is as liberal a columnist as Lawrence is conservative, wrote last September that "the administration's policy on China is embodied in one man" (Mr. Robertson), and paid admiring tribute to his "skill, intense conviction and unflagging persistence."

All these qualities were needed, as Walter Robertson battled for years against a clique in Washington and throughout the country which was trying to undermine his adamant opposition to Red China and his unyielding support of the Nationalist Chinese on Formosa. What made his struggle doubly exhausting were the recurring ulcers which have plagued him intermittently since he took his present post in 1953.

A less dedicated man would have given up long ago and returned to Richmond, where he could work a normal eight-hour day, instead of remaining at his desk in Washington 12 or 14 hours a day, usually 6 and often 7 days a week.

He says he wouldn't be resigning now, despite his health problem, were he not convinced that there will be no yielding in Washington to Communist China. His confidence in this regard is reassuring, for with Secretary of State Dulles seriously ailing, and Acting Secretary Herter apparently scheduled to take over, many wondered if the policy toward Red China would be as strong as ever. Apparently it will.

This should make it possible for Mr. Robertson to return to Richmond and regain his health, sure in the knowledge that the policy for which he fought so ably—and despite such physical handicaps—has at last been vindicated before the world. The Red Chinese butcheries in Tibet have made that vindication certain.

[From the Lynchburg News, Apr. 8, 1959]

WALTER ROBERTSON STEPS DOWN

Elsewhere on today's page William S. White, our Washington correspondent, writes with some regret that Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs, has decided to return to private life. Mr. Robertson is a Richmonder, so every Virginian can join in expressing regret with Mr. White.

In the Far East Mr. Robertson's principal concern, of course, was Communist China and, to a large measure, Mr. Robertson was responsible for the U.S. firm policy of nonrecognition. He helped draft many of Secretary of State Dulles' speeches setting forth this Nation's Red China policy.

On June 28, 1957, Secretary Dulles delivered a major foreign policy address entitled "Our Policies Toward Communism in China." It was an excellent speech, clear, complete, unequivocal, and Walter Robertson, we understand, had a big hand in its preparation.

Then on August 11, 1958, as sentiment for recognizing Red China again swept the world, the State Department issued a memorandum to its missions abroad. One may safely assume that Walter Robertson was its principal author. Speaking of Chinese Communist leaders, this memorandum stated:

"Their primary purpose is to extend the Communist revolution beyond their borders to the rest of Asia and thence to the rest of the world."

Prophetically, now that the world has witnessed recent events in Tibet, this memorandum warned:

"Chinese Communist leaders have shown by their words and their acts that they are not primarily interested in promoting the welfare of their people while living at peace with their neighbors."

If it is with regret that Virginians must greet the news of Walter Robertson's stepping down from public office because of his health to a more tranquil civilian life, it is also with a warm sense of pride that we can commend him on a most difficult job done exceptionally well.

[From the Washington (D.C.) Evening Star, Apr. 13, 1959]

MR. ROBERTSON TO LEAVE

Few officials in postwar Government service have been as single-mindedly dedicated to fighting the spread of communism in Asia as has Walter S. Robertson. Since 1953, the Richmond banker has been Assistant Secretary of State for Far Eastern Affairs—a post he is relinquishing on July 1. It was a decade earlier, however, that Mr. Robertson first became acquainted with the Pacific area as lend-lease administrator in Australia and, in 1945, as Minister and Counselor for Economic Affairs in our Embassy in Chungking. It was in the latter assignment that he formulated his uncompromising position that American policy must be directed unequivocally toward resisting Communist power and influence in China.

As Assistant Secretary of State, Mr. Robertson has applied this policy most notably in his unwavering support for the Chinese Nationalist Government of Chiang Kai-shek, in opposing every move for admission of Communist China to the United Nations and in resisting any proposed relaxation of our position of nonrecognition of the Peiping government. He has, at the same time, employed his close personal friendship with Chiang and with President Syngman Rhee, Korea, to persuade them to modify policies which might have led to a military showdown with the Chinese Reds. And he has applied himself to the duties of a difficult position with a loyalty and depth of conviction that won the respect of his State Department colleagues.

Fair Trade—Legalized Price Fixing

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Sunday Herald which points out that fair trade will hurt 175 million people for the benefit of manufacturers—and allegedly the retailers, too, although they may perish by their own hand in giving the manufacturers such control of their merchandising:

[From the Boston Sunday Herald, Mar. 15, 1959]

LEGALIZED PRICE FIXING

Again Congress is being called upon to decide between all the people and some special interests. This time the issue is fair trade, the device by which manufacturers are given legal sanction to fix retail prices on trademarked goods.

This week the House Interstate and Foreign Commerce Committee will hold hearings on two bills which would, for the first time, establish fair trade as a Federal law, thus overriding even those States that have consistently rejected the system for themselves.

Fair trade is anti-consumer. It is promoted largely by certain retail groups which are interested in establishing the same fixed profit margins in as many lines as possible for all stores.

The fair trade backers insist that they have the interest of the consumer at heart; that they merely seek to prevent cut-throat competition and loss-leader practices which are said to be harmful to the consumer. But their insistence has a hollow ring.

Low prices do not hurt consumers very often, and it is pretty hard to prove otherwise.

Price fixing, however, in the particular interest of the retailer, can hurt.

Let's say a particular trademarked product can be sold by Retailer A for a dollar less than the price Retailer B must get. This doesn't mean cutthroat competition. It may mean that Retailer A has a cash-and-carry store on a back street with the simplest of furnishings and a minimum of service, while Retailer B supplies all sorts of services, with every sale in gracious and attractive surroundings.

Fair trade would deny the consumer the cash savings obtainable by trading with Retailer A. It would end price competition at the retail level.

But this is not the only drawback. The manufacturer is likely to believe that the larger the profit he gives to the retailers (within reason), the greater will be the effort made by these retailers to push his product. So the fair trade fixed price may prove to be even more than enough to assure Retailer B his extra dollar.

So the consumer suffers even more.

As a matter of fact, fair trade price fixing is likely to encourage bootlegging to favored customers at below the marked price. It will encourage more firms to enter retailing until the falling volumes of sales for all retailers will nullify the profits guaranteed by fair trade. Even the retailers themselves will find fair trade no help.

But the straight moral issue is whether Congress is to serve 175 million people or the misguided interests of a few groups of retailers. Unfortunately, the loudest noise in Washington next week will be made by the latter.

Statement of the U.S. Chamber of Commerce on Mutual Security

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the excellent and well considered statement of the U.S. Chamber of Commerce on mutual security presented to the House Foreign Affairs Committee by Attorney William C. Culbertson, former U.S. Ambassador to Chile, and Dr. J. Warren Nystrom, manager, international relations department, U.S. Chamber of Commerce on April 13, 1959. The Chamber of Commerce of the United States describes itself:

The national chamber is the voice of business. It is the organization through which business as a whole expresses itself—to let the public and the Government know where business stands on national issues, and the reasons, working creatively in the public interest and for the good of business, representing 3,450 business organizations with an underlying membership of 2,500,000 businessmen in 49 States.

The statement follows:

My name is William S. Culbertson. I am a member of the law firm of Culbertson & Pendleton, Washington, D.C. In the past I have served as a member and Vice Chairman of the U.S. Tariff Commission and have had the honor of representing the United States as its Ambassador to Chile.

Today, I appear on behalf of the Chamber of Commerce of the United States to present its views on the administration's proposed mutual security program for the fiscal year 1960. I am a member of the chamber's foreign policy committee and am chairman of that committee's subcommittee on mutual security.

The national chamber has endorsed the principle of mutual security repeatedly since inception of the program. Today the expanding capability of the Soviet bloc to apply military, political, and economic pressures against the free world gives renewed urgency to support of the program's broad purposes.

Our views are summarized in the following statement approved by our board of directors last January:

"Congress should support the mutual security program as an instrument of U.S. foreign policy dedicated to the purposes of (a) promoting the security and foreign policy objectives of the United States; (b) increasing the security of our allies; (c) assisting in the development of economic resources and higher living standards for the peoples of the free world; and (d) encouraging the growth of stable governments and political freedom in lesser developed countries."

This does not mean that the chamber endorses, without question, every phase of a particular mutual security program or proposed level of spending.

In the interest of improving the effectiveness of foreign aid as an instrument of American foreign policy, our board has said:

"Congress should enact whatever legislation is necessary to insure: that the returns are commensurate with the costs; that the capacities of free enterprise are utilized to the utmost; that military assistance to our allies is included in the annual appropriations of the Department of Defense."

The national chamber makes the following recommendations, which are based on our most recent studies:

1. The administration's appropriation request of $3,929,995,000 for the fiscal 1960 program should be reduced by $288,995,000 to $3,641,000,000.

This recommendation affects the following phases of the proposed program: Military assistance; defense support; contingency fund; and the broad category termed "Special Assistance and Other Programs."

Specifically, we recommend:

(a) That the appropriation request of $1,600,000,000 for military assistance be reduced by $85,000,000 to $1,515,000,000;

(b) That the request of $835,000,000 for defense support be reduced by $85,000,000 to $750,000,000;

(c) That the request for $200,000,000 for the contingency fund be reduced by $45,000,000 to $155,000,000; and

(d) That the request of $383,995,000 for "Special Assistance and Other Programs" be be reduced by $73,995,000 to $310,000,000.

Our recommended figures for military assistance, defense support, and the contingency fund are the same as the amounts appropriated for these categories last year. We are not convinced, on the basis of studies and available information, that the amounts should be increased this year.

Similarly, we do not believe that all of the requested increase in the broad category termed "Special Assistance and Other Programs" is necessary. Funds appropriated for this category last year totaled $306,592,500. Our recommendation of $310,000,000 would still give the administration $3,407,500 more for the purposes of this category than it received last year.

We believe that the amounts recommended above would be adequate to support the foreign policy of the United States. More money for mutual security might tend to encourage lavish spending and the kind of waste outlined in the recent interim report of your subcommitee. On the other hand, more drastic curtailments in the mutual security program, particularly in military assistance, would present the United States with highly undesirable alternatives. The most important of these would be the need for much larger and more costly U.S. standing forces than are now contemplated. That, in turn, would require a substantial increase in the number of involuntary inductions into the Armed Forces and overseas duty for much larger numbers of American troops.

2. Military assistance appropriations should be made to the Department of Defense, as a separately identified part of the Department of Defense budget.

The basic structure of the Nation's security program is no longer built upon U.S. forces alone. The defense resources of the free nations have been integrated in order to provide the greatest degree of economy and efficiency in achieving maximum security against aggression. The military assistance program is merely one part of the total preparedness effort of the United States. Therefore, when considering funds for these purposes, Congress should review all aspects of the Nation's defense program—including those for military assistance—as a whole.

The present appropriations system creates unnecessary administrative difficulties, particularly in budget and accounting processes. In addition, it results in questionable procedures within Congress when requests for defense funds are reviewed each year.

For example, our recommendation would make it easier for the House Appropriations Committee to evaluate the annual military assistance appropriation request. We can find no justification for having the House Appropriations Defense Subcommittee pass judgment on the President's request for billions in funds for major defense procurement, while another subcommittee independently considers a request for funds for the same purpose, to be programed and spent by the same people, the only different being that the equipment purchased will be sent abroad instead of used by our own troops.

3. Congress should support the Development Loan Fund on condition that it serves to (a) foster the eventual and meaningful shift from purely government-to-government dealings in the economic development of the less developed countries; (b) to provide a basis for long-range planning of projects essential to the efficient conduct of U.S. assistance to other countries; and (c) aid in the creation of basic economic development and economic stability within the less developed countries which will, in turn, promote greater private capital investment and enterprise.

In reviewing this matter last January, the chamber's board of directors stated:

"Before additional obligational authority is approved for the Development Loan Fund, however, assurance should be had that knowledgeable and competent personnel will continue to administer thhe Fund; that full and effective coordination with other governmental agencies and private lending organizations will be endorsed, and that the stated objective of fostering the role of private capital investment and enterprise be strictly adhered to; and in view of the unusual nature of these loans, that consideration in each instance will be given as to the effect of the proposed project on the American economy."

4. Programs of economic and technical assistance should be designed to provide realistic benefits to the United States as well as to the recipient countries.

We believe that these programs should assume neither the aspect of a welfare project nor that of an attempt to outbid the dubious offers of the Soviet Union. In order to add to the overall strength of the free world, their prime purpose should be to help the recipient nations in their efforts to attain stability.

Because the funds that the United States can dedicate to economic assistance are necessarily limited, the end objective of these programs should be to assist countries so that they themselves, by their own remedial actions, can reduce or eliminate the the causes which create the need for outside assistance.

The amount of capital that can be productively invested in a given time in the less-developed countries also is limited. Illadvised or precipitous forcing of industrialization of areas where conditions are not conducive to constructive and effective absorption of development capital should be avoided. To obtain optimum development in the less developed nations, encouragement should be given to private enterprise, rather than to Government projects.

5. When the appropriation request for mutual security is first submitted to the Congress in the Federal budget, a detailed breakdown of the request by specific activities should be provided.

We can see no reason why the administration's request for mutual security consists of little more than a lump-sum figure when the Federal budget is submitted to the Congress in January.

Public acceptance of the mutual security program is dependent on public under-

standing. Such understanding is not fostered when there is a delay of several months in providing the public and the Congress with complete information concerning the proposed program.

The committee may recall that in our testimony last year, we urged that more information concerning the mutual security program be furnished when the Federal budget is made public in January. We were heartened when Congressman HARDY submitted an amendment to the Mutual Security Act requiring the President to submit to the Congress on or before January 10 of each year a report detailing the assistance to be provided for the next fiscal year and containing a clear and detailed explanation of the method by which the proposed levels of aid for each country have been arrived at. It was disappointing to us when the Congress failed to adopt this amendment.

We urge the Congress to insist that the administration furnish the public complete information when a new mutual security program is first proposed. It is especially important during this period of international tension that there be no delay in keeping the Congress and the public as fully and accurately informed as possible.

6. The resources of free enterprise should be utilized to an increasing degree in carrying out the purposes of the mutual security program and in countering the Communist bloc's economic warfare.

Because free enterprise is the best way to achieve and sustain beneficial economic development, Congress should encourage expanded private investment and the buildup of foreign private economies. In this way private investment, coupled with a healthy and growing international commerce, may eventually replace tax-supported economic aid.

We recognize that there are many obstacles to increased private investment in the less-developed countries. These include the growth of ideologies favoring State ownership and control of industry, political instability, extreme nationalism, economic difficulties involving trade and exchange controls, and deep-rooted suspicion of private enterprise. All these facts are being exploited and aggravated by enemies of the United States.

To overcome such obstacles, the United States needs a clear, active and consistent national policy with respect to the protection of American citizens and business interests, including investments in productive and distributive facilities in foreign countries. Such a policy should be actively implemented through treaties and agreements with other countries. Congress could do much to further the objectives of the Mutual Security Act by insisting that these agreements include firm and clear-cut assurances of fair and nondiscriminatory treatment for existing and future investments.

Whatever other actions Congress may consider to stimulate the flow of private capital abroad and to improve the investment climate, it is of fundamental importance that such efforts be buttressed by an imaginative and dynamic information campaign in support of the principles of free enterprise.

We recognize that much is already being done in this field through the U.S. Information Agency. At the same time, a recent survey the National Chamber made of the Agency's operations overseas discloses an urgent need for more effective efforts to explain to foreign peoples the nature of free enterprise and its achievements. The results of that survey, along with a number of recommendations, were presented to the State, Justice and Judiciary Subcommittee of the House Appropriations Committee on March 18, 1959.

Free enterprise in the United States contributes directly, not only to the welfare and progress of our own country but, through sizable investment abroad, to that of other countries. Continual publicity, therefore, should be given to the true and important facts about the contributions which private investment makes to the improvement of many less-developed nations throughout the world.

In this way our various private economic activities abroad can be joined with the larger battle for the minds of men. By demonstrating that free enterprise can do an effective job in the field of economic development, we not only help to dispel distrust and misunderstanding of the free enterprise system abroad, but do much to win local support in foreign countries for the free as opposed to the totalitarian way of life.

The Communist-dominated countries seldom pass up an opportunity to promote the Communist ideology among the world's new and lesser developed nations. All Soviet so-called aid is extended on a government-to-government basis. State control and direction as contrasted to individual initiative is continually stressed and extolled.

We should not hesitate to demonstrate and explain the virtues of the free enterprise system among people who have recently achieved independence. Seeking out and extending loans to responsible, public-spirited businessmen may be a more difficult task than government-to-government loans, but the growth of a stable and responsible private business is a mortal blow to Communist ideology. We should plant the seeds of a free enterprise system in these countries.

In summary, the national chamber supports the principles of the mutual security program and recommends that it be continued. Adoption of the foregoing recommendations will not only save approximately $289 million but should, by encouraging the prudent administration of funds, result in a more efficient and effective program.

Minutes Don't Measure Events

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "Minutes Don't Measure Events," which appeared in the Phoenix Gazette, Phoenix, Ariz., March 18, 1959:

MINUTES DON'T MEASURE EVENTS

A declaration of war could be processed through Congress in 2 or 3 hours. A housewife might need 4 hours to get her laundry done. The Federal Communications Commission does not need to go much further than it has gone to conclude that the housewife deserves more time than the declaration of war on television news broadcasts.

The FCC ruled recently that newscasters in Chicago had to give equal attention to an inconsequential political candidate as to two major candidates. It wasn't a question of equal free or paid time for a political broadcast. It was a matter of telling the newscasters they had to train their cameras as much on someone who didn't count as on someone who did.

Lar Daly was the man who didn't count. He seems always to be running for something in Chicago. Most recently it was for mayor, on both Republican and Democratic tickets. Everyone knew he was just in there for the exercise, and very little of that. The fight was betwen Democratic Mayor Richard Daley and Republican ex-Congressman Timothy Sheehan. Public interest was on them. The outcome of the election depended on what these two did. Reporters and newscasters wrote and talked on that basis.

Then on February 19 the FCC ruled that the newscasters, specifically on WBBM–TV, had to give Lar Daly equal attention in their news broadcasts. It was the first ruling of its kind ever made, and we hope it is the last in America. It was as if some overreaching bureaucracy, claiming jurisdiction because telegraph lines run between States, had tried to tell American newspapers that they had to print as many inches of news in the 1956 campaign about a Mugwump candidate as about the Eisenhower-Stevenson contest.

The FCC relied for its ruling on section 315 of the Federal Communications Act. This is the section providing that if one candidate buys time or is given time on radio or television, his opponent may demand equal time. It was intended to govern campaigning, not to establish censorship of reporters who are not campaigning at all, but are merely reporting the news or picturing it. The ruling stretched commonsense outrageously. It misused the law dangerously.

Dr. Frank Stanton, president of Columbia Broadcasting Ssystem, Inc., spoke of the ruling in Chicago last week. He noted that the decision "addresses itself, with deadly effect, to the use of television as journalism." He noted that it "spawns a monstrous idea in a democratic society—the idea that quantitative mechanics are more important than the qualitative considerations".

Dr. Stanton said that in the last presidential campaign some time on virtually every newscast from Labor Day to election day was devoted to the campaign. Under the Lar Daly decision, television would have been required to give equivalent time to reporting the activities of 24 presidential and vice presidential candidates of 12 parties. How ridiculous can a Federal Commission get when it tries to control news with a clock?

A bill has been introduced in Congress by Representative GLENN CUNNINGHAM to protect news programs from abuse under "equal time" provisions of the Federal Communications Act. The bill is H.R. 5389. It should be passed immediately.

The question is not one of granting rights or privileges to television. It is one of denying bureaucracy the power to measure the news the public gets, even in small doses. Every attempt to seize such power must be resisted.

American Diplomacy in Sports

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. LINDSAY. Mr. Speaker, about 2 weeks ago a plane touched down at La Guardia Airport bringing back from Paris an important American diplomatic mission. The leading member of the mission did not wear striped pants or carry a briefcase. In fact, the leader of this good-will group was a lovely young lady. She had spent 10 days in the important European capitals involved in

the present tense situation, but she had not appeared at a conference table or in front of a lecture during her tour. In Berlin, in Paris, in Geneva, she had gone directly to the people with a simple message of human understanding and light and hope from the United States. Her name is Carol E. Heiss. She is the world ladies' figure skating champion.

I do not mean to treat the present difficult world situation lightly when I speak of Carol as an instrument of American diplomacy. This young lady, who represents the best of the spirit and skill of amateur sport, speaks to the people of the world in a common language of art and athletic skill that can help to bridge the gap built by misunderstanding between the citizens of different countries. Along with other amateur athletes who take part in trips and exhibition tours to other countries, she helps to prove that the interests that unite people throughout the world will prove, in the end, stronger than the interests that divide them. And at the same time, by developing habits of mind for peaceful competition and fair play, great athletes like Carol Heiss bring to life the famous words: "On the playing fields of our land are sown the seeds that, on other fields, on other days, will bear the fruits of victory."

There are a number of reasons that ice skating and Carol Heiss should be specially chosen as a model diplomatic courier for our Nation. One of them is that skating is a universal sport, not only because its techniques and rules spread uniformly to all countries, including those behind the Iron Curtain, but because it is a sport which can be participated in and enjoyed by persons of all ages and all classes. It is a sport where the premium is on the difficult virtues of patience, control, consistency, and sportsmanship. I speak from experience, because my own tentative attempts to figure skate have taught me both the perils and pleasures of the sport. I also have had the pleasure of knowing Carol Heiss and have admired her not only for her achievement but for her unassuming charm and warmth of character.

Ice skating offers the attraction of speaking in the same language in any country, and Carol Heiss holds unchallenged sway as its leading interpreter. Those who have seen her skate never forget the soaring mastery, the perfect precision of her performances. All this has come from patience and dogged determination, the two great requirements of any athlete. She has fought her way to this pinnacle of art and skill against great odds. Born the daughter of a baker in New York City, she and her family have known the sacrifices which are necessary to train the raw skill of a little girl into the grace of a champion. For 12 years, 5:30 in the morning has meant rising time for Carol; and even as champion, she spends 4 or more hours a day on the ice, both to maintain her rank and to help improve the technique and art of the sport for future champions. After years of this regimen of work, when only 16, she captured the coveted world figure-skating title in 1956, at Garmisch-Partenkirchen in Austria, and she has successfully defended it three times since. In Colorado Springs, Colo., in February of this year, she outskated all the competition again to secure her fourth world crown.

Only one new laurel still remains open to Carol, and it is the symbol of world brotherhood through sport that she embodies so well. The five linked rings of the Olympic games will fly from a flag at Squaw Valley, Calif., just a year from now. At the Olympic Village, athletes of all nations, from East and West, from the farthest reaches of Scandinavia to the villages of Africa, white, black, brown, and yellow, will meet together to speak through strength, skill, and beauty universal language that always unites man. Among those athletes will be skaters from many lands, who will give Carol battle for the prize that every champion hopes for. This will be the great test of her diplomatic skill, and of her ability to carry this country's message, through herself, and her skates, from a humble home in America to all the world. We wish Carol good luck on this most difficult mission.

The Extreme Urgency of a Realistic Urban Renewal Program

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. MACDONALD. Mr. Speaker, we will soon be considering on the House floor the housing and urban renewal bill, which is designed to assist local governments to eliminate slums, eradicate blight, and to renew our Nation's cities.

No thinking person can deny that the United States has progressed from a rural to an urban Nation at a phenominal rate of speed. Even with our suburbias we are still essentially a nation of city dwellers. I do not intend to review all of the facets of urban expansion today, but I do want to emphasize the need for a vast and realistic program of urban renewal.

The two substantial factors in this expansion process have been, first, population growth; and second, the migration of population and industry. The problems created by this growth and resettlement are of a scope which could not be predicted by even the most expert of population analysts. New industries, urban sprawl, and highways have diminished available space. Substandard residential areas are becoming more and more prevalent in our suburbs, our larger cities, and our smaller townships. In this, the space age, we cannot afford to develop an age of less space, nor can we condone less than the highest attainable economic use of all available space.

A recent editorial appearing in a Washington newspaper warned against the apparent indifference to the gobbling up of our great open spaces in the face of a growing population which bids fair to reach 200 million in less than 10 years hence. The editorial noted:

> The simple fact is that the country cannot absorb 25 million additional inhabitants every 8 years without careful planning on the one hand or chaotic consequences on the other.

Recent history should make it clear to all concerned that efficient planning, rural and urban, is a must if we are to save our blighted cities, and preserve our rich farmlands and other natural resources and create desirable future cities. Time and again we have read and heard the warnings against the creation of rural slums and against haphazard growth of large cities. We must furnish our communities with every possible tool for orderly development and necessary redevelopment.

The Housing Act of 1959 which will soon be before us contains many of these needed tools. This act consists of provisions for several programs which are aimed at stimulating home construction—public and private—and the improvement of housing standards, chief among these are proposals for expanded and continued urban renewal aids. It is for these vital urban renewal tools that I am urging your support today. Through this program we have helped cities to help themselves, by clearing slums, by removing blight, and preventing further deterioration. Only through an adequate, continuing program of Federal aid can we help meet the needs of the cities and townships of the Nation in their efforts to halt blight; and only through planning can we hope to prevent a recurrence of the run-down conditions which currently necessitate such a program.

The House bill also provides for an effective housing program to meet the special housing needs of our senior citizens. Mr. Speaker, I would like to point out that the first housing project—Highland Gardens Apartments—for elderly persons in the United States under the Federal program was constructed last year in Somerville, Mass., which is a part of my Eighth Congressional District. The success of this project proves that we need more of this type of housing. I am, therefore, very pleased that the House bill provides for a new program designed to provide rental housing for elderly persons at rentals which they can afford.

There are those who argue that urban renewal is not a problem of the Federal Government, that it is a local problem, to be solved by local government and local private enterprise. I am in complete agreement with this. The Federal program under title I of the 1949 Housing Act is based upon this very premise. Urban renewal programs are initiated, planned and executed locally. The Federal Government shares the cost of the project—that is, the difference between the cost of the cleared land and the price offered by the developers. This sharing with the local government is on a two-thirds Federal, one-third local basis. Each step taken by the local government is subject to Federal approval based upon the proper and effi-

cient operation of the basic law. I am sure we are all agreed that in any instance in which Federal aid is granted, an accounting of the use of funds is not only necessary, but desirable. I do not agree, however, that the Federal Government should not render assistance.

It is obvious that the local units do, and should, bear the brunt of the responsibility for planning and execution of urban renewal projects. But, this does not mean that it is solely a local problem. Urban renewal and redevelopment, the clearance of slums, are undeniably and clearly a part of a national problem to provide a decent home and suitable living environment for each and every American family. Urban renewal will play a large part in stemming the rise of juvenile delinquency. Federal urban renewal aids are investments in better families, better citizens and better communities. These are investments which will return dividends in higher national income, and increased sources of revenue for local, State and Federal Governments. These are investments which, if neglected, can result in economic and social retrogression in place of progress.

Currently, the urban renewal program is moving along at a reasonably rapid pace. Testimony at hearings of the Committees on Banking and Currency, and other published data have revealed that one of the reasons for some of the lack of interest in this field was that many communities were reluctant to launch into the projects because they were afraid that Federal aid would not remain available. Cities were acutely aware of the need for renewal and the prevention of further deterioration, but they did not feel that such a financial venture was within their means. Since the program has taken on a air of permanency, more and more communities, large and small, have availed themselves of the various aids which are a part of the Federal urban renewal program. Should the Congress fail in providing a well-rounded, fully adequate program for the next several years to come we will be sorely remiss in our duty to maintain economic stability.

Albert M. Cole, former Housing Administrator, predicted in 1958 that "any city that does not set in motion by 1960 a comprehensive program to halt blight will be flirting with municipal ruin by 1965." Now is the time to guard against municipal ruin by 1965, 1975, or 25 years hence. Now is the time for the Federal Government, through the Congress, to provide our municipalities with the necessary financial and planning guidance which will assist them in their fight against decay and deterioration and help them in the provision of healthy, sound communities. We cannot afford a lapse in our support of this worthwhile program such as occurred in the failure to pass a Housing Act of 1958. The 85th Congress was the first Congress in several years not to rally to the support of our communities in their war against stagnation and retrogression. We cannot let this happen in the 86th Congress. I for one, shall do everything in my power to see that a meaningful urban renewal program is forthcoming.

What would constitute such a program? First, and foremost, the urban renewal authorization must be adequate to assure the continuation of the urban renewal program at a sufficiently high level to avoid any curtailment or postponement of urban renewal projects contemplated. In addition, it must not bar the applications of cities which for one reason or another, have not completely set in motion their urban renewal plans. It would seem to me that an adequate measure could be no less than the program provided by the house bill. This bill provides for a total authorization of approximately $2.1 billion. Under this bill $500 million would be available for urban renewal grants in each of the next 3 years. It would also increase relocation payments to relieve the hardship suffered by families and businesses displaced from urban renewal areas by government activity. An additional $10 million would also be provided for urban planning grants. Under this bill all communities would be provided with incentive to move forward with needed projects. Under this bill the Federal Government, the local government, and local private enterprise could work together, cooperatively, to assure all citizens a livable home in desirable surroundings. Under this bill, some of our unemployment problems will be erased through an increase in construction volume. Under this bill, we could assure healthy national, State, and local economies. Realistic Federal urban renewal will preserve tax values, stimulate private industry and thereby increase our tax returns.

Mr. Speaker, if a program of this magnitude is enacted into law it will provide hundreds of communities across the Nation, including my Eighth Congressional District of Massachusetts, with reasonable assurance of the availability of adequate funds so that the urban renewal program will continue to be carried out. This program, it seems to me, is one that we all should promote as having the highest priority of a forward looking program for the benefit of all the United States.

German Reunification and the Cold War—an Article by Prof. Georg Stadtmuller

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. REECE of Tennessee. Mr. Speaker, in these days when the eyes of the world are turned to Germany as the center of a push-pull cold war between the Western World and the Communist nations I believe it would be well to look into the problem from the viewpoint of the West German people.

Prof. Georg Stadtmuller, professor of Modern European History of the University of Munich, is an able writer on Germany and the history of southeastern Europe. He speaks with great authority. Writing in the January issue of Free World Forum he has brought into focus the many problems we face whenever German reunification is discussed.

I am pleased to ask that his article be printed in the RECORD in order that the Members of Congress and all America might have the benefit of this historical background and his experienced views on the future of this great and important part of Europe:

GERMAN REUNIFICATION AND THE COLD WAR
(By Prof. Georg Stadtmuller)

The foremost aim of West German foreign policy remains the restoration of German unity. Any discussion of German reunification must be based on a sober recognition of the circumstances created by the events of 1945. Only then will we be able to realize the difficulties which stand or seem to stand in the way of a German reunification policy. These difficulties are so numerous and tremendous that the realization of German unity seems almost impossible at the present. We know, however, that one way to achieve it does exist. We could be reunited tomorrow if we were willing to recognize the political rule of Moscow over Germany. Under such conditions, reunification would pose no further problems, but would be followed very soon by the unification of all of Western Europe under Moscow's suzerainty. We are, however, unwilling to pay this price.

Is there another way to achieve German reunification? Can we overcome by other means the unnatural partition of the German nation?

GERMANIA EST DIVISA IN TRES PARTES

Since 1945 Germany has been divided into three parts: (1) The main part of the country in the west which was consolidated into the state of the Federal Republic of Germany with a constitutional order that has applied the painful lessons of the failure of the Weimar Republic; (2) the Soviet Russian occupation zone which calls itself the German Democratic Republic (DDR) within which lies isolated the divided city of Berlin, a sorry reflection of the present German fate; and (3) the German areas east of the Oder and Neisse Rivers which, transferred to Polish administration by a unilateral action of Russion power politics, later sanctioned by the Potsdam agreement in August 1945, have become the stage for those barbaric expulsions resulting in the virtual disappearance of the German population from these provinces.

The events preceding the partition of Germany are well known. The administrative division of defeated and occupied Germany was based on the community of interests of the four, then allied powers who united themselves into a military coalition against Hitler Germany. History teaches that alliances of divergent partners, concluded for the purpose of destroying a common enemy, usually survive only until the day of common victory. This old maxim of history was also proved in 1945.

The conferences of Teheran (November 1943), Yalta (February 1945), and Potsdam (August 1945) resulted in certain agreements concluded among the Allied Powers. They foresaw first a division of Germany into three, later into four, zones and its administration through an interallied control council in Berlin. The tug-of-war between Moscow and the western allies began at the conference, ended neither in a formal treaty system nor in an informal understanding, but in a declaration consciously formulated

in rather general terms which, true to the character of such statements, only concealed or ignored the differences of opinion. They could not well publicize to the world that the coalition of victorious powers was breaking apart as early as a few months after the surrender of Germany and before that of Japan.

Reflection upon postwar political developments reveals that it was about 2 or 3 years before American foreign policymakers finally came to the conclusion that cooperation with Moscow on global issues is just not possible. Secretary of State James Byrnes' September 1946 speech at Stuttgart was the first undeniable sign of a gradual reorientation of American foreign policy. Still, massive breaches of existing treaties, resulting in the gleichschaltung of political life in the satellite states, and the attempt, accompanied by extreme pressures, to compel the concession of "common control of the Straits" by Turkey were needed before the United States awoke from the dream of a democratic transformation in the Soviet Union. The Truman doctrine and the guarantee to Turkey against Soviet attack were the obvious signs of the great turn in American foreign policy. Repeated offensive moves of Soviet Russian policy on a global level, like the coup at Prague in February 1948, the attempt to gleichschalt Tito after his defection from the Cominform, and the Communist invasion of South Korea in 1950 compelled America to continue on the path of the policy of the Truman doctrine. In the meantime, the new lines of global policy were permanently drawn. The United States which, in 1945, brought home its soldiers in too great a hurry and disarmed them in a spirit of almost irresponsible credulity, recognized the absolute necessity of rearmament. This rearmament took place in such a rapid, methodical, and global manner that Moscow soon began to talk of a planned American policy of encirclement.

THE ODER-NEISSE LINE AND GERMAN-POLISH RELATIONS

The Soviet Union encouraged the Polish administration in the Oder-Neisse provinces to expel the German population from their native homes, at first under quite barbaric circumstances which are known to us through the great documentation works of Theodor Scheider and his coeditors (Dokumentation der Vertreibung der Deutschen aus Ost-Mitteleuropa) and of Johannes Kaps (Tragedy of Silesia, 1945–46). Slowly the external circumstances of the expulsion became more regulated and now, in the case of the last repatriate transports, the measure is implemented in a civilized and humane fashion. The Communist Polish Government in Warsaw attempted thereby to create and strengthen a fait accompli and to confirm the new status by expelling, or refusing to readmit, 8 million Germans of East and West Prussia, Pomerainia, East Brandenburg, and Silesia who had resided there for long centuries. The statement that this expulsion constitutes a breach of international law and morality must precede any discussion of German-Polish relations. But the expulsions, too, must be looked upon in a broader context.

The frontiers established as a result of the Treaty of Versailles (1919) were for both neighbors equally unfavorable. Germany was separated from East Prussia by a Polish corridor, and Poland was surrounded on three sides by German provinces (Silesia, Pomerania and East Prussia). The strong German minorities in the territory of the Polish state represented areas of political friction, and the artificial frontiers at the mouth of the Vistula and in the industrial regions of Upper Silesia cut across organically united economic areas. That the city of Danzig, inhabited almost completely by Germans, was against its will turned into a free city with a commissioner from the League of Nations rendered the situation even more difficult.

Thus, German-Polish relations between the two World Wars were very bad, indeed. Some unfortunate moves of Polish statesmen and the pressure of Polish public opinion increased the determination of the National Socialist Government of the Reich to solve the outstanding differences by military aggression. The treaty of partitions, signed by Hitler and Stalin on August 23, 1939, first made war possible. Almost one-half of Poland, including her eastern provinces, was occupied by the Soviet Union at that time. This was the area east of the so-called Curzon line which was to remain in the possession of the U.S.S.R. even after World War II. In these eastern provinces, the higher classes and town population was mostly Polish, but the rural population was Ukrainian or Belorussian. As, at the end of the war, these areas had to remain with the Soviet Union, Poland, too, had to accept a large number of Polish repatriates, the expellees of Poland. These Poles who had to move from the ceded Polish areas to central and western Poland and to the Oder-Neisse areas must have numbered approximately 3 million persons. The government of Warsaw uses the argument that it was necessary to expel the native German population from these provinces in order to make room for the Polish repatriates.

Poland and Germany are definitely those two nations in Europe who had to make the most painful sacrifices as a result of forced changes of frontiers, followed by expulsions at the close of World War II. This statement must be made at the start of any German-Polish discussion, for the Poles were the victims of the same catastrophe which befell us and had to pay a heavy price.

We also know that the horrible way of the cross that the Polish nation went through in the Second World War will remain a heavy mortgage on German policy and a debit on the balance of future German-Polish negotiations. Still, we have to state clearly and distinctly that we cannot accept the present Oder-Neisse line. We have to fight as a nation for our right. Of course, our goal should not be a clumsy demand for restitution. The argument of international law is important, but it is never alone decisive. The problems of German reunification and the Oder-Neisse frontier form neither an isolated German, nor an isolated German-Polish problem. The fate of the Oder-Neisse line will be decided only by a great modus vivendi of international politics. The Oder-Neisse line cannot be confirmed, recognized or revised by a German-Polish understanding alone. It involves problems of global politics which represent a cross-section of the tug-of-war between the United States and the Soviet Union.

If the situation is considered without illusions, it becomes clear that there is no sense in commencing discussions with the so-called People's Republic of Poland, for the government at Warsaw is not permitted today to follow an independent line of policy. At first, Washington and Moscow would have to make the attempt to solve the global questions in a broad negotiating framework. Only then will it be possible for Poles and Germans to sit down and search for a solution that must be neither recognition of the existing situation nor a clumsy restoration of the old frontiers. Neither solution would be desirable, either from a Polish or a German standpoint.

A permanent solution of Polish-German questions must include a total settlement of all conflicting claims and problems and must result in good neighborly relations for the German-Polish problem includes so many historical mortgages that a correct "neutral" relationship cannot be imagined. We German will either live with Poland on the best neighborly terms or as enemies. A longstanding, calcified hostility can only be overcome by total revision. This, in my opinion, should be obtainable as Polish history, in contrast to Russian history, is not one of imperialist conquests.

THE NEW GLOBAL BALANCE OF POWER

The international system of great powers of the 19th century has in our times become simplified in an almost crude manner. Between the Congress of Vienna and the First World War, we had in Europe a nearly balanced system of five and, after the entrance of Italy, of six great powers. Their status, the requirement for Bismarck's foreign policy of alliances, no longer exists. Today, we have two blocs which, because of the failure of Moscow to disarm and because of America's rearmament, are facing each other, suspicious and alert. Negated by all the historical experience of mankind, this situation cannot long endure.

What opportunities do we Germans have, under such a distribution of global power, to realize the reunification of Germany?

First, let me sketch the extraordinary difficulties which face us from abroad. Of course, those profiting from the existing division of Germany will oppose us. First and foremost among these is the U.S.S.R., which has pushed its sphere of influence deep into Central Europe, through Eisenach to the gates of Fulda. Consequently, the Soviet Union will not voluntarily or without exacting a high price evacuate this area which represents both a pawn and a glacis. Others profiting from the division of Germany include Poland and Czechoslovakia.

How can we cause Moscow to abandon this region politically and militarily? Not by German-Russian talks at Moscow, for the Federal Republic is no longer an equal partner with the Soviet Union. The shift of power that occurred after World War II basically changed the global balance of power existing in Bismarck's time. Bismarck's policy was based on the assumption that there are in Europe half a dozen great powers which, in regard to their area, population and industrial and general economic potential, are divided in such a manner as to place the German Reich in a genuine central position, enabling it to exercise a certain option between East and West. If the German Reich supported the Russian side wholeheartedly, this Eastern coalition would enjoy complete superiority in Europe. If, however, the German Reich joined the Western side, i.e., France and England, then the West would possess superior power.

The possibility of such an option, the basis for Bismarck's foreign policy, exists no longer. Should the Federal Republic join the side of the Soviet Union today, the West German state would simply disappear in the gigantic Russian-Chinese bloc. But even then, the Communist bloc would not have acquired clear superiority over the Western Powers. Only one thing would be sure: the political independence of the Federal Republic would be lost and the remainder of Western Europe mortally menaced.

Therefore, German foreign policy has to find another way. Such a path can, however, be recognized only after the exclusion of certain other paths and the evaluation of the difficulties which prevent German reunification at the present. They are: (1) Moscow would like to retain its German occupation zone as a springboard for the Communist subversion of Western Europe; (2) Poland and Czechoslovakia would like to keep the areas under their control, in part

because of a natural need for security, in part because of their genuine fear of Germany in view of past events.

COOPERATION WITH THE WEST AS PREREQUISITE

As the difficulties facing German unity are due to global conflicts, the Federal Republic of Germany cannot overcome them alone. They can be removed only within the framework of the controversy between the United States and the Soviet Union.

We must recognize that America is not immediately interested in this vital German problem. U.S. policy will only be ready to defend German interests when they are identical with their own. American foreign policy will not intervene out of an estoteric idealism for the sake of German interests. Of course, the American people and American public opinion have a very highly developed sense of justice and affinity for legal norms, their Anglo-Saxon heritage. But in regard to the major problems of world politics, American national interest is and should be decisive. Consequently, the axis of our reunification policy and our efforts to restore German unity must be confidence between Washington and Bonn. Arguments which would carry sufficient weight in Moscow could not be submitted by us alone, but only together with the United States, for only the United States can discuss such arguments with the necessary forcefulness and fight for their acceptance. American policy, however, will assume the risks inherent in supporting German unity only if it can expect cooperation on other political questions from the Federal Government. The basis of German foreign policy must thus be the unreserved confidence of our allies, especially that of the United States.

If we intend to change the present policy of the Soviet Union, we have to make it clear to Moscow that its campaign to subvert the West is doomed to failure for the foreseeable future. It seems that Moscow, too, wants to avoid a big war as the risks would be too great for the Soviet Union.

MOSCOW'S POLICY OF COEXISTENCE AS A BREATHING SPELL

Moscow is well aware of the technical and economic overall superiority of the West and, therefore, it is almost impossible to believe that Moscow would start a general war as long as the West remains even only partially united. Soviet foreign policy aims rather at the infiltration and takeover of Western bastions by subversive methods that have been developed into a science since Lenin's "The State and the Revolution" was first published in 1917. This science involves conflict creation and conflict management between officers and enlisted men, employers and employees, masters and apprentices, police and teenagers. In Moscow there are several schools where functionaries learn to become political agents by studying courses on the various kinds of explosives and bombings, strike techniques, the subversion of armed forces in both peace and war, and the exertion of extreme pressure on people through the application of secret police methods.

The education of agents in Moscow is perfected by the decades-old experience of the teachers, of which the procoexistence contemporaries in the West do not have the slightest inkling since a middle-class fantasy is insufficient to paint the entire picture. On the basis of the former practice of underground activity (podpolnaja rabota) in the Russian revolutionary movement, Lenin developed the social revolutionary cold-hot, hot-cold "Kneippcure," changing from open breaches of treaty obligations to coexistence relaxation of tensions. We do not live for the first time in an era of peaceful coexistence. The Soviet Russians know the concept of "peredyschka," a breathing-spell, a limited interval, which has to be applied if one cannot achieve the goal by using certain predictable methods, usually because the enemy has armed successfully for defense. In such cases, it is necessary to interpose a coexistencelike relaxation period in order to divert the enemy's attention and lull him with tactics of almost scientific precision into a feeling of false security. Then can the enemy be hit with a balled fist and wiped out.

Political events since 1955 give us an excellent first-hand course in this method of the breathing spell. It is obvious that this interval was made necessary for Moscow by the immunity of the Federal Republic toward Communist infiltration and subversion.

Without a shadow of a doubt, the ability to resist Communist subversion and ideology is greater in the Federal Republic than in many other European countries. The Federal Republic of Germany has practically no Communists, and the question of banning them as a political party was a legal one only. France and Italy, however, have strong Communist parties. Should the Federal Republic that forms a defense barrier before these states fall, all of Western Europe would be subverted from the inside without any military casualties for the Red Army.

This spectacular immunity of the Federal Republic of Germany to Communist subversion is based mainly on two factors: (1) Millions of German soldiers have seen the reality of the Soviet paradise in the East with their own eyes. They cannot be expected to fall for Communist propaganda. (2) Twelve million German expellees and refugees rightfully consider themselves victims of Soviet Russian policy. As long as these two pillars of West German immunity remain decisive in the formulation of West German public opinion, we may assume that the Federal Republic of Germany will continue to be immune to Communist infiltration.

After the accession of the Federal Republic of Germany to the NATO and WEU treaties in 1955, exactly the opposite of that predicted by the speakers of the West German opposition occurred. Moscow's position failed to stiffen; the doors were not closed. Instead, Chancellor Adenauer was invited for talks to Moscow, and the Kremlin was at least ready to continue negotiating. Even after the new recent crisis, the Soviet Union will not be ready to break off relations with the Federal Republic.

Moscow will not abandon its aim to conquer Western Europe. The Soviet Union bases its hope upon a weaker and more illusionist successor to Adenauer. Perhaps it would again send the specialist in gleichschaltung, Sorin, to Bonn. But Moscow will probably wait until the resignation or death of the Chancellor. Should the picture even then remain the same in Germany, should Italy in the meantime become more immune to communism, should West European politics experience a stronger internal coordination—there is already such a cooperation in major questions of foreign policy among the Schuman plan countries—and should the Federal Republic succeed in expanding such coordination in Europe, then it is possible that Moscow, perhaps pressured by domestic difficulties, would realize that the subversion of Western Europe is a hopeless task. Therefore, the immunization of the Federal Republic and Western Europe against Communist infiltration remains the foremost requirement of German reunification and of German foreign policy in general.

CONCLUSIONS

Some signs affirm the speculation that the new problem of China's growing power and the oppressed but still dynamic forces of freedom in the Soviet Union and the satellites, as demonstrated by Poland and Hungary, might in the foreseeable future bring the Soviet Union into a situation where the evacuation of the advanced Western glacis might offer a possible solution. Of course, such an unfavorable solution would only be an ultima ratio to be considered only after the complete failure of the Communist campaign of infiltration and subversion of Europe. And should such a retreat ever become necessary, flexible Soviet Russian policy would still attempt to derive a politico-economic advantage from it.

The consequences for West German foreign policy are, therefore, first, to preserve our immunity against Communist infiltration, especially in view of the new young generation which does not have the same experiences with Communist reality as we do. The Federal Republic has to continue to form a barrier to the Communist subversion of Western Europe, especially of France and Italy. Particularly, the Federal Republic has to follow the line of American foreign policy and cooperate with the United States, for we cannot expect the Americans to fight our battles unless they are absolutely certain of our loyalty. They would not be interested in a Federal Republic which was conducting a fluctuating domestic policy and which fails to follow American policy in some decisive phases of global politics. This would by necessity arouse doubts about our loyalty while any hope for reunification in freedom and peace rests for us in an unreserved alliance with the United States.

Address by Representative William B. Widnall, of New Jersey, to National Committee of Section 608 Owners, Sherman Hotel, Chicago, March 18, 1959

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. REECE of Tennessee. Mr. Speaker, Members of Congress and the public generally have an important interest in the continuing success of the various housing programs carried on under the National Housing Act. One of the most important of these was the veterans emergency housing program carried out under section 608 of the act. By the time the program was completed in 1953, 7,045 apartment houses containing 465,683 rental units were built, with mortgages insured by the FHA in the sum of $3,439,678,928. The program was a great success and now that nearly a decade has passed, it is increasingly important that we continue to review its progress.

Recently, Congressman WILLIAM B. WIDNALL, a member of the House Banking and Currency Committee, Subcommittee on Housing, made a speech to the national committee of section 608 owners at Chicago. His report and recommendations on this particular program should be of interest to all of us, and I am including it in the RECORD for that purpose. Carl L. Shipley, counsel for the section 608 owners, is well known to me and I am sure that with his help the national committee of section 608 owners can perform a real public service by cooperating with the FHA in promoting

the economic stability of these apartment house projects.

The address follows:

As I left Washington, the omnibus housing bill was going through the same procedure that always seems to delay and confuse housing legislation. There is substantial agreement in the Congress on many programs. Typical is FHA, where an open-end authorization is fully warranted and would be supported wholeheartedly by members of both political parties. However, administration efforts in this direction and toward meeting the critical needs of the college dormitory and urban renewal program have been sidetracked because of the early effort to force public housing through the Congress.

Last session there was no housing bill because of these tactics and because of the unwillingness of the majority leadership to sever the noncontroversial items from those that were highly controversial. Senator LYNDON JOHNSON issued a forceful statement at the beginning of this session, saying that the Democratic leadership would have a housing bill on the President's desk by the first part of February. There is almost a 2 to 1 Democratic majority in both the House and the Senate and yet the first day of hearing before the House Rules Committee has just been scheduled for April 8. This situation occurs purely and simply because of the attempt to stuff down congressional throats new vast spending programs and 190,000 units of public housing.

A sound, progressive, well-rounded housing program can be enacted tomorrow with just a few changes well known to the Democratic leadership that would bring the presently proposed House bill within the borders of the budget.

Why does one undertake a quick round trip from Washington to Chicago in the middle of a congressional session? My answer would be because I feel the subject matter to be discussed before the national committee of section 608 owners, under the National Housing Act, is one demanding full recognition and far more attention than it has been given until very recently. When I say "attention," I am sure you understand what I mean, and not the type of attention accorded the 608 program by Congress several years ago. Although I was not in Congress at the time that your program came into being, I am fully aware of the intent of Congress through reading the RECORD and discussions with Congressmen who were present at the time. There was urgent need for housing and it appears to me the bill as originally conceived was loosely drawn with the intent of encouraging the prompt building of critically needed units. Out of that looseness came the windfalls and the practices that caused so much public clamor and placed the whole program in public disfavor. It seems to me this is the time to take a second look at the history and present status of the 608 program.

One of the very considerable accomplishments achieved under the National Housing Act was the FHA rental housing program in the period during and after World War II. At that time rental housing was badly needed, and private builders and investors like yourself cooperated with the FHA in filling that need. Section 608 was added to the National Housing Act on May 26, 1942. It authorized the FHA Administrator to insure mortgages on property: "Designed for rent, for residential use by war workers." The principal amount of any such mortgage was limited to $5 million; and there was a further limitation of $1,350 per room. The act also provided that mortgages could not exceed 90 percent of the Administrator's estimate of the "reasonable replacement cost" of the completed project "including the land; the proposed physical improvements; utilities within the boundaries of the property or project; architects' fees; taxes and interest accruing during construction; and other miscellaneous expenses incidental to construction and approved by the Administrator." A further limitation was that the mortgage could not exceed the "amount which the Administrator estimates will be the cost of the completed physical improvements on the property or project exclusive of off-site public utilities and stores, and organization and legal expenses."

In addition, the FHA Administrator was authorized to require the mortgagor to be regulated or restricted as to "rents, or sales, charges, capital structure, rate of return, and method of operation." In order to enforce these restrictions effectively, the Administrator was authorized to acquired $100 of stock in any such mortgage corporation. In 1946 Congress amended section 608 of the National Housing Act to give priority of occupancy to veterans of World War II and their immediate families. The basis for the Administrator's estimate of cost was changed from "reasonable current cost" to "necessary current cost." In 1948 a maximum limitation of $8,100 per family unit was substituted for the previous maximum limitation of $1,800 per room which had been in effect since 1946. This turned out to be a very significant change in the law, and thereafter many projects were authorized in which 70 to 90 percent of the apartments were 1-room efficiencies. The 1948 amendment also provided that the principal obligation of the mortgage could not exceed 90 percent of the Administrator's estimate of the replacement cost of the property or project on the basis of costs prevailing on December 31, 1947, for properties of comparable quality in the locality. Also, a new requirement was added that the mortgagor must certify that in selecting tenants for the property covered by the mortgage, he would not discriminate against any family by reason of the fact that there were children in the family. During the years 1942–53, a total of 7,045 projects containing 465,683 rental units were built under section 608, with mortgages insured in the sum of $3,439,678,928. The great bulk of these projects were located in the East. For example, 18 percent of all the dwelling units were located in New York, 11 percent in New Jersey, 7 percent in Maryland, 6¼ percent in Virginia, approximately 4 percent in California, Pennsylvania, Texas, the District of Columbia, Georgia, Illinois, and Ohio. Florida, Alabama, Missouri, North Carolina and Michigan each had about 2 percent and the balance of the States had less than 2 percent, with 28 States having less than 1 percent. All in all, the 608 program was a remarkable feat, and while arguments have been made in some quarters as to the economic soundness of these projects, experience has shown that they are basically sound, and if well managed, will continue to be. This presupposes that the FHA will manage this program intelligently.

A Senate investigation in 1954 indicated that 6 or 7 percent of these projects had mortgages in excess of costs. There was some feeling at the time that mortgaging out, plus the fact that rent schedules generally were based on the FHA estimates of cost rather than on actual cost, resulted in higher rentals in some projects than might otherwise be the case. However, the impact of the approximate 500,000 rental units built under the section 608 program must have had considerable competitive effect upon rent levels generally. In all likelihood the mass effect of the units developed under the 608 program reduced rents far more than rents were increased as a result of mortgaging out.

I know that some of you have been much concerned about rent ceilings which continue to be imposed by the FHA Commissioner on these projects. The charter of each section 608 corporation permits the FHA to establish maximum rentals. These rentals were determined in advance of construction by the FHA project analysis which was the basis of the FHA commitment to insure the mortgage. Rentals were based upon the lower of market rental being paid for comparable accommodations or rentals which would provide a return of all operating expenses (excluding interest and amortization) and a 6½ percent net return on the estimated cost of construction, after an allowance of 7 percent for vacancies and for other loss of rental income. I believe it is fair to say that in actual practice the yardstick for measuring such rents was the 6½ percent net return on the estimated cost of the project. It is my understanding that the present FHA policy is to permit an increase in rents if operating expenses, taxes, or other recurring items of expense increased to a level beyond those used in the original FHA estimate. I heartily concur in this policy, because I believe it was the firm intention of Congress when section 608 was written into the National Housing Act, that investors in such rental housing should make a fair return on their investment. Indeed, I cannot imagine how such a program could have succeeded then or can succeed now unless these properties continue to be an attractive investment. I am aware that some mortgagor-owners of these projects feel that rent ceilings should be removed or should be revised to bring the rents into line with true market conditions.

In this connection, we must bear in mind that the apartment houses built under section 608 were originally intended for warworkers and later intended for the occupancy of veterans and their immediate families. As a Member of Congress, I firmly believe we must hew to this statutory purpose. However, as a member of the Banking and Currency Committee, Subcommittee on Housing, I have come to realize that veterans and warworkers are no longer in desperate need of housing. Quite the contrary, many in these groups of persons have found accommodations in single family dwellings, many of them built under FHA programs. I believe the FHA must conform its present policies to the facts of economic life. Section 608 projects must be kept sound and healthy in order to protect the Government's contingent liability in the $3 billion of mortgages it has insured. The rental housing market in the areas where 608 projects predominate has changed from a sellers' market to a buyers' market. Competition has increased, newer projects which do not operate under FHA restrictions have swimming pools, tennis courts, offstreet parking, garage facilities, air conditioning, drugstores, and restaurants, and other facilities which make them competitively far more desirable. The FHA must help 608 projects meet this competition.

Most 608 projects have very substantial accumulations in their replacement reserves. I believe that the FHA, consistent with keeping enough money on hand to replace refrigerators, stoves, and similar items, should discontinue adding to this reserve after the 10th year of the life of a project. By that time, the 608 corporation has reduced the mortgage, and has a substantial equity in the property and an increased interest in replacing capital equipment as it wears out.

There may be occasions when it is necessary for the FHA to permit use of funds in the replacement reserve for capital improvements, such as swimming pools, air conditioning, awnings, landscaping, and other features, in order for a 608 project to maintain its occupancy and meet competition from newer rental housing. The rule of reason ought to be the test in every case, and not some outdated or inflexible regulation which was perfectly valid in 1944, but has no application today.

As I read the FHA annual reports, I am much concerned at the rate of defaults in

608 projects. If my memory serves me, nearly 700 of these apartment houses have been acquired by the FHA through assignment of the mortgage without foreclosure, or foreclosure and transfer of title to the FHA. This is a very serious matter both from the standpoint of the 608 program and the standpoint of the mortgagor-owner of the 608 corporation. I believe the FHA Commissioner has enough authority under section 223 and other provisions of the act, more particularly section 608 itself, to provide for indefinite deferral of amortization, or perhaps an administrative set-aside of a portion of the mortgage, to keep a project from going into default and ultimate foreclosure because of loss of occupancy, where this condition is due to causes beyond the control of the owner. Sometimes an important factory moves out of a community, or there is a localized recession and a 608 project loses more occupancy than can be absorbed and still meet monthly payments. In other cases, loss of occupancy may be due to the FHA single family dwelling program where, in some cases, the total downpayment and closing costs amount to less than the initial month rental and additional month security deposit required to get a new tenant into a 608. In these circumstances, it seems to me both the National Housing Act and the public interest require the FHA Commissioner to exercise all the authority he has to cooperate with the mortgagor-owner in saving the project from foreclosure.

Of course, I want to emphasize, I would not favor any help for 608 owners who give poor management or drain off all the earnings of a project so that it is in poor financial condition, or fail to cooperate fully with the FHA in maintaining the project.

In closing, let me say that section 608 of the National Housing Act places great authority in the hands of the FHA Commissioner. However, we Members of Congress on the Banking and Currency Committee have a responsibility to see that the law is administered fairly and intelligently and in keeping with its basic purpose. To that end we try to keep the various FHA programs under continuing review. There is at the present time pending in Congress a bill (S. 57) which gives former mortgagor-owners of 608 projects a priority of opportunity to reacquire a project in the event of foreclosure and ultimate resale by the FHA. Our committee reported out the Housing Act of 1959 with this amendment, and I hope it will stay in the bill when it becomes law.

In my opinion, 608 properties are basically sound, and given good management and a sympathetic and cooperative application of the law by the FHA Commissioner, will prove to be excellent real estate investments for their owners, and will continue to furnish excellent housing for the rental housing market.

It has been a pleasure for me to be here with you today and I congratulate you and the other members of the national committee of section 608 owners on the good job you are doing in cooperation with the Government.

The Problem of Nepotism

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of April 9, 1959:

THE PROBLEM OF NEPOTISM

A great deal has been written lately about the employment of relatives by Members of the Congress in positions on their staffs.

A few rather nasty disclosures, indicating overpayment for the performance of meagre chores, have been made and there has been a general inclination on the part of the country to condemn Members of Congress disclosed to have employed relatives.

The padding of payrolls by the placing on them of the names of wives or children is a dishonest practice and, judging from some of the revelations, some Congressmen have been grossly guilty.

There is another side to the question, however. A Congressman's staff is highly important to him and it is necessary that he have people on it in whom he can place the most implicit trust. A man usually knows his relatives better than he knows anyone else and is likely to have more confidence and trust in them than in strangers.

Should a Congressman be barred from employing a relative if that relative performs his work efficiently and actually earns the salary which he receives?

The proper test of whether or not an employee is properly on the payroll is not whether or not he is a relative but how well he does the work for which he is paid out of Government funds.

In many cases relatives are improperly on the payroll but there are instances where a wife or son or daughter is the best aide a Congressman could possibly employ. In those instances, a case can be made out for the employment of relatives.

Federal Checks Returned to Treasury

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recognition to Mr. Peter W. Gifford, of Dallas, who has returned $67.20 to the U.S. Treasury, a GI check, after learning of the earlier check sent in by James C. McCormick, Dallas. Mr. Gifford, like Mr. McCormick, is deeply concerned over our insolvent Federal Government because of a Congress that continues to spend money without relating the outgo to the income. Both of these men, typical patriotic citizens who served their country in war, are just as concerned in peace in preserving a Nation and a way of life from financial collapse.

They hoped their contributions might start a trend. Well, one check has begotten the second. Who knows, maybe citizens, disgusted at Congress' lack of discipline in spending, may now try to tell us this way, and take pride in positively trying to do something. Millions now get Government checks. Is it foolish to refuse taking easy money? There is still self-respect and conscience in individuals if not in big Federal Government. Maybe the people then can lead the way. Congress might follow. Here is a newspaper account of other return of money to the Federal Treasury:

SINCE 1862 PUBLIC GIVES $35 MILLION TO TREASURY

WASHINGTON.—The Treasury Department discloses that Americans have donated $35,420,209.72 to their Government from 1862 through 1958.

The figures were furnished after two Dallas men sent back their Government insurance dividend checks which were deposited into the Treasury.

During 1958, the Treasury reported donations of $140,842.69. The smallest amount received in any year was 10 cents in 1892.

The $35,420,209.72 did not include conscience donations which came to $2,273,204.84 from 1811 through 1958. $88,014.76 was received from these conscience stricken citizens who wanted to right their wrong of cheating the Government.

The donation total covers some amounts not properly donations. They include in 1937 a deposit of $250,000 by the Interior Department which the Comptroller General overruled for transfer to the National Park Service Trust Fund. There also was included $18,123,741.57 from profits in operating Army post exchanges donated to the Government.

Equal Time Nonsense

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal-Star of April 9, 1959:

EQUAL TIME NONSENSE

Who would have thought that Chicago's Lar Daly would stir up Frank Stanton, president of CBS, and Dwight Eisenhower, President of the United States, in that order, no matter what he did?

Well, he did. And Lar Daly may have, at long last, accomplished something of significance in the political field where he has been running and running for years.

His demand for "equal time" on a TV newscast was only topped in ridiculousness by the fact that the FCC supported it (as required by law).

Such a provision completely subverts TV journalism, and the Lar Daly case only serves to dramatize that fact.

It may well be that the laws will be changed as a result. They certainly ought to be. "Equal time" is another beautiful theory, which in actual fact turns out to be such a penalty on TV journalism that it doesn't dare be anything but sterile.

It does no good, and it isn't fair to abuse and to criticize TV for its failures in public service and particularly in the area of news and editorial, when the law ties the industry's hands behind its back to start with.

Any time a TV show dares to be in any way controversial, it exposes itself to a gift of fabulously valuable time to a variety of crackpots—and worse still is thus forced to surrender its audience to its competitors.

Ed Murrow would have been closer to the mark, fairer, and more realistic if he had attacked this limitation instead of going around piously protesting that TV doesn't do enough powerful news and editorial.

Maybe this miserable situation will get fixed, or at least partially fixed, now, and we can eventually get a little zip into TV journalism.

If so, Lar Daly will have made a great contribution to the American scene—in spite of himself.

Maryland General Assembly Urges Passage of Retired Officers Pay Equalization Bill

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. FOLEY. Mr. Speaker, 42 Members of this House have introduced bills to provide for the equalization of the pay of retired officers of the Armed Forces. This legislation would rectify the inequitable provisions of the military pay law enacted by the 85th Congress, which law departed radically from the traditional method of computing retired officer pay. I am one of hte cosponsors of this legislation. I introduced the bill—H.R. 3164—on January 22, 1959.

In their recent session, the Maryland General Assembly adopted a joint resolution memorializing the U.S. Congress to enact this much-needed revision of the retired pay provisions of the military pay law. I should like to have their resolution, Joint Resolution 6, reprinted in the RECORD for the information of my colleagues.

Mr. Speaker, I wholeheartedly agree with the memorial resolved by the Maryland General Assembly. I sincerely urge the members of the Armed Services Committee to give this legislation favorable consideration, and I call upon my colleagues in the Congress to press for early action on this important return to principle in the computation of retired pay for our retired officers who sacrificed so much for their country.

The resolution follows:

JOINT RESOLUTION 6

Joint resolution urging the enactment of appropriate legislation by the Congress of the United States to amend the Military Pay Act of 1958 to equalize the retirement pay of members of the Armed Forces of the United States

Whereas there is now pending before the 86th Congress of the U.S. legislation, including S. 269, S. 541, and H.R. 703, to equalize the pay of retired members of the uniformed services who receive their retired pay under the provisions of the Career Compensation Act of 1949; and

Whereas the Military Pay Act of 1958, Public Law 85-422, failed to provide for the computation of the retired pay of such members of the uniformed services, retired prior to June 1, 1958, on the basis of the newly established pay rates provided in said law, at the same time providing that the retired pay of those retired after that date be computed at the newly established higher rates; and

Whereas there appears to be no basis for this gross discrimination against such retired personnel who, by reason of past meritorious services, should be equally entitled to benefits granted to retired personnel retired after the effective date of the Military Pay Act of 1958, Public Law 85-422; and

Whereas a failure to maintain the same standard for the computation of retired pay of all members of the uniformed services of the United States, regardless of the date of their retirement, will cause defections from active service of career officers and thus prove detrimental to the national defense and security of the United States; and

Whereas retired members of the uniformed services of the United States reside in every portion of our country, however, the State of Maryland is privileged to have great numbers of such retired personnel who have served their country faithfully and with distinction: Now, therefore, be it

Resolved by the General Assembly of Maryland, That the General Assembly of Maryland respectfully memorializes the Congress of the United States to enact appropriate legislation, similar to that proposed in S. 269, S. 541, and H.R. 703 of the 86th Congress, to provide that the retired pay of those retired before June 1, 1958, be computed on the same basis as the computation of the retired pay of such members retired after June 1, 1958; and be it further

Resolved, That the secretary of state is hereby directed to transmit copies of this resolution to the President and the Vice President of the United States, to the Speaker of the House of Representatives and to each Senator and Representative from the State of Maryland in the Congress of the United States.

Texas Democrats Offer Debt Reduction Plan

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, an editorial published in the Tampa Times, Tampa, Fla., on Friday, March 20, 1959:

TEXAS DEMOCRATS OFFER DEBT REDUCTION PLAN

The situation on Federal taxes and our huge national debt is getting so topsy-turvy that you can't tell the politicians without a program.

For example, many Republicans, from President Eisenhower on down, keep saying that the Democrats are spenders and wasters.

It must be admitted that the Democratic-controlled Congress has been more generous than the Republican administration in requests for funds in measures like the housing and airport bills. Yet, when Democratic Senators and Representatives talk about trimming the Eisenhower foreign-aid bill, administration officials insist it can't be cut even a little bit without doing damage to our national security.

On the other hand, the Republicans have talked a good fight about the necessity of reducing the Federal debt. But it has remained for two Democratic Representatives from Texas to propose a definite debt reduction plan to this Congress.

Representatives JIM WRIGHT and FRANK IKARD have pointed out that the American people are ready for the self-discipline necessary to carry out such a program. They have called for passage of a bill that would require an annual reduction of 1 percent in the debt. If it were on the books now, for instance, the $283 billion debt would have to be reduced by $2.8 billion this year.

"In 100 years," Representative WRIGHT said, "we could completely retire the debt by paying $496 billion in interest and $283 billion of principal, a total of $778 billion. But if we pay nothing on the debt itself, the interest alone for 100 years would be $980 billion, and we will still owe the debt of $283 billion, or a total of $1,263 trillion."

The Texas legislators admit that their program would require some sacrifices. But they are so right in emphasizing the fact that the United States cannot continue indefinitely piling more and more on an already burdensome debt.

There may be some ground for criticism that the plan is too rigid in that it would require a fixed annual cut. We feel more leeway should be provided in case of emergency.

But the overall idea is sensible and sound. We commend the Texas Democrats and the thinking behind their program. It is a plan that deserves to be supported strongly by all Members of Congress regardless of party affiliation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Voters Support Eisenhower Policies

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. HALLECK. Mr. Speaker, following the recent Easter recess, the chairman of the Republican policy committee, Mr. BYRNES, joined with me in inviting Republican House Members to report informally on current sentiment in their home congressional districts on these four topics: First, the fight for a balanced budget; second, the adequacy of our defense program; third, the Berlin crisis and the international situation; and fourth, resistance to spendthrift Federal programs.

The response from our membership was gratifying and enlightening. The replies were carefully examined by Mr. BYRNES and myself and were the subject of a detailed report made to the President this morning at the White House leadership conference.

Under leave to extend my remarks in the RECORD, I include the following joint release reporting on our findings by topic and by geographical area:

JOINT RELEASE BY HON. CHARLES A. HALLECK, OF INDIANA, HOUSE REPUBLICAN LEADER, AND HON. JOHN W. BYRNES OF WISCONSIN, CHAIRMAN OF THE HOUSE REPUBLICAN POLICY COMMITTEE

WASHINGTON, April 14.—Reports from Republican House Members, back in Washington after spending the Easter recess in their own districts, indicate overwhelming support for administration policies on several fronts, according to House Republican Leader CHARLES A. HALLECK and JOHN W. BYRNES, chairman of the Republican Policy Committee.

HALLECK and BYRNES earlier had asked their Republican colleagues to pass along reactions of the folks back home to four current issues.

A survey of replies indicated widespread voter support of efforts by the President and Republicans in Congress to achieve a balanced Federal budget.

By the same token, an overwhelming majority of people back home trust President Eisenhower's judgment on the Nation's defense needs, the returning Congressmen told HALLECK and BYRNES.

The President's firm stand on the Berlin situation is receiving widespread approval, most citizens being convinced that appeasement of the Russians would be a grave mistake, in the opinion of Congressmen answering the Halleck-Byrnes inquiry.

Spendthrift programs got a thumbs-down reaction almost everywhere, the GOP members reported.

Following are some of the typical replies received by HALLECK and BYRNES from their colleagues:

ON A BALANCED FEDERAL BUDGET

Middle West

"The President's fight has taken solid root to a point where Democrats are visibly stunned by the 'spender' label" (Ohio).

"I found overwhelming support for a balanced budget and resistance to Federal spending programs" (Ohio).

"My constituents are definitely for a balanced budget and express a keen interest in reducing expenditures to the fullest extent possible" (Illinois).

"Republicans, particularly, are encouraged over the President's apparent decision to stand firm and hold expenses in line" (Illinois).

"The people of my district overwhelmingly support the President in his drive for a balanced budget" (Michigan).

"The President's position in favor of a balanced budget is extremely popular" (Indiana).

"The people of my district are insisting on a balanced budget. They fear the inflation tendencies now all too prevalent" (Iowa).

"The people of my district want Congress to match any unbalancing of the Eisenhower budget with tax increases, and a large percentage have told me to vote against any spending bills which would unbalance the budget unless taxes are provided to cover them" (South Dakota).

Atlantic States

"The residents of my district strongly favor our efforts to curtail spending and balance the budget" (Pennsylvania).

"The people * * * continue to insist on a balanced budget" (Pennsylvania).

"The people are generally for a balanced budget" (New York).

"The fight for a balanced budget is generally supported" (New York).

"Basically, the people are concerned with prices, which is an indirect way of saying they want a balanced budget and stable economy" (New York).

"The President must continue to show that the Republican Party stands for a balanced budget, a budget providing for progress and economy in Government at the same time" (Massachusetts).

"I found repeated expressions in support of keeping Federal expenditures under control" (Maine).

"Moderation in Government spending makes sense to the grassroot voters" (New Jersey).

Pacific States

"I have more than 27,000 signatures of citizens of my area on petitions urging that the Government live within its means" (Washington).

"People are saying more and more that inflation must be stopped" (Washington).

"I have been in receipt of over 7,000 letters asking me to back the administration's stand for a balanced budget with no new general taxes" (Washington).

"The general public is demanding retrenchment in spending which will lead to a reduction in taxes" (California).

"The people of my district are quite vehement that I do everything I can to fight for a balanced budget. They feel very strongly that the President should veto any excessive spending bills" (California).

ON THE ADEQUACY OF OUR DEFENSE PROGRAM

Middle West

"Most people are inclined to rely on the judgment of the President rather than the rantings and wails of some of the self-appointed political experts on the other side of the aisle" (Ohio).

"Republicans and Democrats alike believe that the decision of the President can be trusted" (Ohio).

"They believe our defense program to be wholly adequate" (Illinois).

"My people feel that the President is the best authority in determining our defense program" (Illinois).

"The people have confidence in his (the President's) judgment on defense requirements" (Michigan).

"People are pretty much ready to trust the President's position with respect to our preparations for defense" (Indiana).

"They have confidence in President Eisenhower * * * and have no time for the so-called defense experts in the Congress who seem to have all the answers" (Iowa).

Atlantic States

"I received no complaints in regard to our defense program" (Massachusetts).

"They are satisfied that our defense program is satisfactory because they have confidence in the President" (New Jersey).

"My constituents have faith in the President as a military leader" (Pennsylvania).

"My people do not seem inclined to follow the armchair generals who would ignore his (the President's) military exeprience" (Pennsylvania).

"They believe that our defense program is adequate" (New York).

"The administration's defense program is generally supported" (New York).

Pacific States

"Most citizens realize the President is better qualified by training, education, and access to all facts than anyone else to say what the Nation's defense needs are and that they stand ready to support his judgment" (Washington).

"The people in general believe our defense program is adequate" (California).

ON BERLIN AND THE INTERNATIONAL SITUATION

Middle West

"The firm stand on Berlin received almost unanimous approval" (Ohio).

"They are solidly behind him on the Berlin crisis" (Michigan).

"There is renewed appreciation of Secretary Dulles' policy of firmness toward the Communists and concern lest a possible successor be less firm" (Indiana).

"There was almost unanimous support of the present stand in the Berlin crisis, and constant statements that we should be firm, and under absolutely no circumstances attempt to appease the Communists" (Illinois).

"They like our firm position relative to Berlin" (Illinois).

"The people of my district are not too optimistic about a summit conference unless it is first determined that some progress can be made at a meeting of foreign ministers" (Iowa).

"My people want us to stand up to Russia on all issues" (Kansas).

Atlantic States

"The people appreciate that we must keep a stiff upper lip and meet our responsibilities in the Berlin crisis" (New York).

"Many people seemed to feel that the illness of Mr. Dulles has returned the President to more vigorous leadership and that its effect on the country was excellent" (New York).

"I found great enthusiasm among the voters for the President's recent television speeches. Folks agree with his firm stand on the Berlin crisis and are rallying behind him" (Massachusetts).

"Most people have just become immune to crises" (Massachusetts).

"I found strong support of the President's position and a feeling that this is no time for compromise" (Maine).

"They believe he is doing what is best for the country in relation to Berlin" (New Jersey).

"The confidence of our people in the ability of the Republican Party to meet the Soviet challenge is one of our major assets" (Pennsylvania).

"A recent poll showed 99 percent of the people favoring a strong stand on Berlin. Where criticism exists it is almost always that Ike is not rough enough" (Pennsylvania).

Pacific States

"My people expressed confidence in Secretary Dulles and hope that he will be able to return to his position" (California).

"Since the President's speech concerning our firm stand on Berlin, there has been a feeling of general relaxation in tension and worry and confusion" (Washington).

ON SPENDTHRIFT FEDERAL PROGRAMS

Middle West

"For the most part, the people that I talked with are opposed to spendthrift programs. A departure from this is noted only in the top echelon of labor organization" (Ohio).

"Iowa people are definitely opposed to spendthrift Federal programs. They hope the President will exercise his veto power in an attempt to hold things within a proper balance" (Iowa).

"The President should continue to emphasize the point that deficit spending feeds the fire of inflation, which imposes a cruel, unfair tax on low-income groups which can least afford to pay it" (Michigan).

"In my opinion we have failed to make a definite impression on the minds of the people of the vital need for a balanced budget and a sound economy. The spenders still have glamour and get headlines" (Illinois).

"My constituents are against all welfare spending programs" (Kansas).

Atlantic States

"There is strong resistance to spendthrift Federal programs" (New York).

"The people are tax conscious and understand that if they are going to spend, they can expect to be taxed. It isn't politically helpful to be labeled as a spender" (New York).

"I found repeated expressions in support of keeping Federal expenditures under control" (Maine).

"The people are deeply concerned about excessive Federal spending. They are restive about the heavy tax burden and would like some hope of eventual tax relief" (Pennsylvania).

"The Pennsylvania Dutch, whom I represent, have always opposed Federal welfare programs. In my recent chats with them I did not discover that they have changed their viewpoint in any particular" (Pennsylvania).

Pacific States

"The general public is demanding retrenchment in spending which will lead to a reduction in taxes" (California).

"I feel we need to dramatize more of our issues because factual talk about balanced budgets, and inflation, and fiscal responsibility doesn't have the emotional appeal of the 'doing something for somebody' programs" (Washington).

"My mail indicates the public generally is for curtailing new and costly programs" (Washington).

President Eisenhower's Mandatory Oil Import Control Program Will Prevent Further Destruction of the Nation's Coal Industry and Stop the Decline in Employment in the Mining and Railroad Industries

---

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. VAN ZANDT. Mr. Speaker, the White House decision to restrict residual oil imports through mandatory controls has been received with grateful enthusiasm in areas whose economic distress is directly attributable to the unfair competition that emanates in alien refineries. The news is particularly appreciated in coal-producing communities and railroad centers, where the erosion of job opportunities has been more and more noticeable since international shippers began their insidious invasion of east coast fuel markets more than a decade ago.

Although Congress included in its extension of the Reciprocal Trade Agreements Act a provision honoring the import-regulation recommendations of the Presidential Advisory Committee on Energy Supplies and Resources, the fuel profiteers who peddle their wares over the sealanes chose to make their own rules in a campaign to monopolize coastwise markets. The voluntary program, which the U.S. Government very generously adopted on the assumption that importers would comply with findings of the executive department and the intent of Congress, was no more effective than a wire fence would be in stemming the tide of residual oil imports.

Let me give you just one example of the arrogance exhibited by those oil runners operating between Venezuela and the Dutch West Indies and our own Atlantic seaboard. From January 1 to March 27 of this year an average of 807,500 barrels per day of foreign residual oil was poured into this country. These shipments, which are in sharp contrast to the 603,400 barrels averaged during the corresponding period of the preceding year, set a new alltime record of abuse and disrespect for the national economy and security by international oil.

You are aware of what unreasonable import policies are doing to the working people of this country. You need only to look at the Department of Labor's statistical tables on surplus labor to recognize the hardship which excessive residual oil imports have brought to central and western Pennsylvania. Many of our miners and railroaders have been unemployed for several years, the number mounting as torrents of imported residual oil swamped industrial fuel markets in continued intensity. It is unlikely that we are going to get many miners back to work as a consequence of the White House order imposing mandatory controls, but you may be sure that the decision will have an important psychological effect. The miners whose working time has been cut down to 2 or 3 days a week have understandably looked with fear to a continuance of policies permitting oil from abroad to threaten their very economic existence. With the new cutback, these workers are greatly relieved and have come to hope that the fuel they produce will once again be accepted in its traditional and legitimate industrial markets.

And what about the thousands of other members of our labor force who long ago were deprived of their means of livelihood because the market for coal had been usurped by traders in a foreign product? They are not so optimistic as to assume that the Presidential action will stimulate a sudden upward spiral in demand for bituminous coal. They are, however, highly encouraged at the recognition which has finally been accorded the coal industry. They are optimistic enough to feel that the decline in coal production will now be reversed and before too long output will reach a point where greater manpower will be required.

Yes, Mr. Speaker, we hail President Eisenhower's action. It was based upon coal's importance to the national security, but without question it will also have a favorable economic effect.

The Nation as a whole should join us in welcoming the action of the executive department. No one can be blind to the fact that an explosive situation centers around Berlin. The ruthless aggression by Communist China in Tibet is further evidence that America's military structure must be sustained at full strength until the Soviet propensity for world domination is neutralized.

President Eisenhower recognizes that excessive residual imports are destructive of important components of the mobilization base. He is aware that a vigorous domestic fuel industry is essential to the national safety. The decision to enforce mandatory controls on residual oil imports was based on the fact that our coal industry could not be expected to meet the accelerated demand of an emergency period unless reasonable output and development are possible in the interim period.

Collaterally, the Nation's railroads must not be neglected if we are to maintain the defense capability essential in this crucial period. The cutoff of railroad coal traffic because of inequitable residual oil import competition has posed a serious logistics problem. Unless sufficient gondolas and hoppers are activated now, coal could not be moved with expediency to points of consumption when the chips are down.

Mr. Speaker, it is my intention to continue to seek legislation restrictions that will further reduce the amount of residual oil permitted to enter this country. Meanwhile, the President is to be congratulated for his forthright stand on this all-important issue.

The Foreign Aid Hassel

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. LEVERING. Mr. Speaker, we are soon to consider the subject of foreign aid in this Chamber and, because I want my colleagues and the people generally to think about this important subject, I am asking unanimous consent to insert in the CONGRESSIONAL RECORD a recent editorial and a news dispatch.

The editorial is from the Coshocton Tribune for March 26, 1959, and is a very pertinent contribution to the debate on foreign aid, in my judgment. This is a newspaper in one of the principal cities of my 17th Ohio District whose editors are extremely able and alert and, in my judgment, have every desire to see that the people who read their newspaper are informed fully about the salient questions of the day.

The news dispatch is a United Press International dispatch from Washington, sent on April 8, 1959, and relates to the administration of the foreign aid program in just one country, Pakistan. If the attempts of our international planners to make friends for our side, as reported in this dispatch, are typical of their attempts in other countries, then it may well be that the time has come to cut foreign aid appropriations to the bone. I find it difficult to believe that otherwise sensible men could be so callous of the American taxpayer and so careless in the use of our funds as the administrators of the Economic Cooperation Administration apparently have been in Pakistan. It is well for those who read this UPI dispatch to bear in mind that Joseph Campbell, the Comptroller General, was appointed to his post by President Dwight D. Eisenhower.

The editorial and the news release are as follows:

[From the Coshocton (Ohio) Tribune, Mar. 26, 1959]

THE FOREIGN AID HASSEL

No sign exists that Congress in 1959 will be any friendlier to foreign aid than it has been for the last several years. So we can expect the lawmakers to bite fairly hard into President Eisenhower's $3.9 billion request.

Conservatives in both parties have a cummulative feeling that the aid program inescapably involves waste. They hope to minimize it by reducing the available total.

Others see cuts in foreign assistance as an easy way to win the "economy" tag without hurting themselves in the eyes of their constituents.

Some congressional liberals this time are said to feel that if foreign aid is slashed there will be more "budget room" for new programs they believe the voters want.

And there are those who have taken to objecting not because they dislike foreign aid or see it as an easy mark but because they feel the recent emphasis on military rather than economic help is a mistake.

The truth, of course, is that Congress as a whole grew so hostile to economic aid that it was slashed sharply, and the administration tries to work some of it back in each year by liberal interpretations of the phrase "defense support."

With assaults coming from so many quarters for such divergent reasons, only a miracle or an imminent threat of disaster somewhere among our foreign friends would be likely to salvage the President's program whole.

The program's prospects are not helped by the fact that its proponents seem to have lost most of whatever knack they had for presenting the case for foreign aid forcefully and persuasively.

We hear again and again that the Soviet economic challenge in the world is great, that there is a crucial testing between Red China and free India.

But the words the foreign aid advocates speak lack fire. They don't stir the blood of the citizen who wonders why he should care. The cause is made to sound tired.

The results of the voting in Congress will be tired, too, unless the supporters of the aid program find strong new drums to beat.

WASHINGTON, April 8.—Congress' watchdog on Government spending said today the United States was sending too much foreign aid to Pakistan, so much so that neither country could handle it.

Comptroller General Joseph Campbell said his auditors found "serious deficiencies" in the U.S. economic and technical aid program to the southeast Asian nation.

He charged in a report to Congress that "foreign policy considerations" and such things as poor planning and too many aid projects actually had hampered assistance efforts.

American aid to Pakistan has totaled almost $407 million since 1955. In addition, the United States has sent more than $250 million worth of surplus farm goods.

"The annual level of aid has been beyond the technical and financial capacity of Pakistan and the administrative ability of the United States," Campbell said.

He said the International Cooperation Administration (ICA) "and its predecessors have dispersed their efforts over such a wide range of projects that effective administration has been difficult, if not impossible."

Campbell also took a crack at operations of the ICA mission itself which has its main headquarters in Karachi, Pakistan's capital city.

He said his investigation showed an excessive number of household furnishings and automobiles. Although there were only 271 Americans working there, auditors found they were equipped with 229 autos, 529 refrigerators, 650 stoves, and 666 air conditioners—all paid for by the Government.

ICA cut the number later and explained that the items were ordered for the mission when it was thought 475 Americans would be employed.

The auditors also discovered an unusually high number of native clerical workers, guards, gardeners, and drivers working for the U.S. aid mission—1,021 of them. ICA got rid of 300 after the Government investigators became critical.

Campbell also charged that the sending of $47.7 million worth of surplus farm products to Pakistan for flood victims "did not receive the expected favorable publicity for the United States."

Auditors said Pakistan did not do a good job of getting the idea across that the food came from America. An agreement provided that some of the food could be sold rather than given away to cover internal relief costs.

The report said resentment was reportedly created among local people who had to buy rice furnished in bags marked, "Gift of the people of the United States."

Campbell said even food distribution programs conducted by American voluntary relief agencies showed "improper procedures and black market sales," involving up to 15 percent of the goods shipped.

"Two private relief agencies backed out of the program rather than continue working under those conditions," he said.

Other conditions turned up by the Government investigators showed:

ICA-financed imports, including industrial machinery, sat unclaimed in the port of Karachi's warehouses and later were put up for auction by port authorities to satisfy customs and port charges.

Three pumps costing $650,000 for the Ganges-Kobadak irrigation project in East Pakistan have sat unused since November 1957. Earthmoving and transport equipment for the project also have remained idle, the report said. The pumps, manufactured in Japan, once were loaded on board ship and then unloaded when ICA officials changed their minds about sending them to Pakistan. The cost of this was $22,000. Later they were loaded again and shipped. Engineering studies now raise serious doubts as to the soundness of the project, the report said.

Malpractices on the part of some local business men and public officials who resold import licenses for ICA-financed import commodities. Auditors also found that political influence had been used in obtaining licenses. Pakistan adopted strict and punitive regulations after U.S. protests, the report said.

One aid project, a new water supply and sewage system for Karachi, is still uncompleted because of considerable delays. The U.S. investment was $5.5 million. The project was to be finished in 1957 but now won't be ready until 1960.

Campbell said such factors as political instability, inexperience in government and the shortage of technical and administrative skills in Pakistan have made effective conduct of the U.S. aid program difficult.

The geographic division of the country and fundamental differences between East and West Pakistan also have had a negative effect, he said.

"We believe that the program has been more costly and less beneficial for the economic development of Pakistan than would be expected by reasonable standards of competent management," the report said.

The investigators pointed to the Ganges-Kobadak irrigation project as one example. The original cost was estimated at $15 million. Now it has jumped to $56.7 million.

The Pakistan Government must now decide whether it wants to go ahead with the project. Then the United States will have to decided how much it will help, if any.

"ICA has made it clear that this determination will be governed not only by recent technical studies," the auditors said, "but also to a large extent by foreign policy considerations."

"The project," they said, "was calculated to have a significant impact upon the economy of East Pakistan, and through its accomplishment, strengthen the position of the central government in East Pakistan. Failure to accomplish these objectives may have unfavorable repercussions in Pakistan."

All Senior Citizens on Fixed Federal Pensions and Annuities Should Be Permitted To Have Adequate Outside Earnings and Should Be Given Proper Exemption From Taxation in Keeping With the Present Day Cost of Living

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. CRAMER. Mr. Speaker, I am introducing today a series of bills to relieve some of the hardships now facing the senior citizens on fixed incomes in the United States.

Most of our senior citizens live on fixed incomes and a considerable portion is from pensions and annuities. These pensions and annuities were much larger in terms of purchasing power a decade or more ago. Today the same pensions and annuities have shrunk to a fraction of their worth. Pensions and annuities and fixed incomes are caught between the devalued dollar and the higher cost for purchases of processed goods, food, and other necessities of life.

Our senior citizens for the most part derive little benefit from the substantial increase in wages which came about since World War II. Few people beyond the age of 65 are able to be gainfully employed in more than part-time pursuits. However, since they cannot live on the depreciated fixed incomes, more and more of our senior citizens are turning to odd jobs for help and many are feeling the pinch of taxes.

I have been greatly concerned about these two problems, that is, the limitation on outside earnings contained in many of the annuities and pensions of the Federal Government as well as the areas in which those pensions and annuities are taxable. I have had an exhaustive study made of this problem during this session of Congress and I am introducing today a series of bills to rectify some of the inequities that exist, to provide for addition of $600 in outside earnings in all funds that have such a limitation, and further providing for nontaxability on all such pensions and annuities where such are taxable in the types of funds where contributions have been made to the fund or disabilities have been incurred by the employee.

The social security system was inaugurated in 1937 as a supplement to other savings and other income for persons over 65, and yet Congress has limited outside earnings to $1,200.

Let us examine some of the changes that have come about since 1938, the first year of monthly payments under the social security plan, and let us contrast that with the situation as we see it today.

In 1938, the Department of Labor cost of living index stood at 60.3. In February of 1959, the index stood at 123.7. In other words, the cost of living has doubled in the past 21 years.

In this period of time, from 1938 to today, our population has risen from 130 million to 172 million. Yet, in spite of this increase in numbers of people, the per capita national debt has gone from $286 to $1,650 per person. How high it would or could conceivably go if complete retirement were paid to all senior citizens is purely a matter of conjecture because we are already finding difficulty in raising funds to meet the requirements of our current national budget.

Back in 1938, a single person with no dependents and an income of $3,000 per year paid a Federal income tax of $68. Today, a single person with no dependents and an income of $3,000 per year is paying a Federal income tax of $488.

Furthermore, the excise taxes, those "consumer" taxes that we pay on cosmetics, women's handbags, household equipment, radios, new automobiles, and many other items that we regard as essential, have increased from $13.50 per capita in 1938 to $58.38 per capita. In other words, the Federal Government takes proportionately a much bigger chunk out of the incomes of the retired people than it did back in 1938.

Yet, what the Federal Government takes in taxes is far from all. The increase in local taxation per capita has risen from $71.47 in 1938 to $253.32 last year.

In other words, in addition to the double cost of living, we have a greatly enhanced tax burden which bears down on the old and the young alike. The taking of a heavy tax burden out of fixed incomes of the elderly is truly a serious matter.

The Government recognizes this inequity and already the people over age 65 have been granted an extra exemption under the income tax. They may deduct all of their medical expenses except medicines. However, there are many more ways in which we can ease the burden on those who are retired on fixed incomes without materially adding to the cost of Government.

The best of these opportunities is to increase the allowable earnings of those who receive social security and other Federal benefits. In 1937, when the social security system was adopted, a beneficiary could only earn $14.99 per month without losing his social security payment. Incidentally, the payment at that time was $41.20 for a man plus $20.60 for his wife, or a total of $61.80 for a couple. This $14.99 limitation on earnings continued until 1950 when Congress increased the allowable earnings to $50 a month. In 1952, this was increased to $75 a month and in 1955 became the present $1,200 a year. Today the maximum social security payment is $116 for a man and $58 for his wife, or a total of $174 per couple. I have introduced a bill which would again increase the earned income limitation and make it $1,800 a year instead of $1,200 a year.

In this connection, I want to say that I feel that $1,800 is a realistic figure that has a real chance of becoming law, although I would personally favor a larger amount. There are many part-time jobs, particularly in the smaller communities of the United States, which can be filled by people who have retired from full employment and who have many unique qualifications. In too many cases, $1,200 a year is not adequate or sufficient pay for such part-time employments. It is much better to raise this figure to $1,800 and have more of our senior citizens gainfully employed, than to continue today's needless hardship.

If, however, we are going to make such an increase for those under social security, a similar $600 a year increase in the income limitation should apply to disabled annuitants under the Railroad Retirement Act. They now are limited to $100 a month and I am introducing a bill increasing this to $150. It is wholly incongruous anyway for nondisabled railroad retirees to have no limitation and disabled annuitants to be so limited.

A similar increase in the Veterans' Administration pensions as relates to outside earnings for World War I, World War II, and the Korean conflict is raised under my bills from $1,400 to $2,000 for a veteran with no wife or child and from $2,700 to $3,300 a year if he does. The same figures apply for a widow.

Earlier this year I introduced H.R. 2469, a bill to equalize the pay of retired members of the uniformed services. After further study and considerable correspondence with those involved, I am today submitting a further bill which I think will achieve the purpose of equalizing the rates of retired pay for all members of the uniformed services who have previously retired, including those who are now prejudiced by their election made to not come under the Career Compensation Act of 1949. It was unfortunately the case that the recent revision of the Career Compensation Act of 1949 and when applying the 1958 increase created some inequalities for those who elected to not come under the 1949 act. The bill I am introducing today irons out these differences.

At this point I would like to submit for the RECORD a letter received from the legislative counsel in regard to my bill to "restore the traditional relationship between active duty and retired pay for members of the uniformed services":

HOUSE OF REPRESENTATIVES,
OFFICE OF THE LEGISLATIVE COUNSEL,
March 24, 1959.

HON. WILLIAM C. CRAMER,
House of Representatives,
Washington, D.C.

DEAR MR. CRAMER: You have asked that I prepare for you a summary of the provisions of a bill I drafted for you entitled "A bill to restore the traditional relationship between active duty pay and retired pay for members of the uniformed services." The bill, in general, provides (with one exception) that where it is to the advantage of a member of a uniformed service retired before June 1, 1958, his retired pay will be computed on the basis of the rates of pay prescribed by the Career Compensation Act of 1949, as amended by Public Law 85–422.

The first section of the bill repeals section 3 of Public Law 85–422. That section today provides that, with exceptions specified therein, the changes in rates of pay under the Career Compensation Act of 1949 (ranging from no increase at all for some grades to over 40 percent for other grades) shall not operate to increase the retired pay of any person.

Section 2 of the bill revises section 4 of Public Law 85–422. Such section 4 today provides, with exceptions specified therein, for an increase of 6 percent in the retired pay of all persons entitled to retired pay as of May 31, 1958.

As revised by the bill, such section 4 would provide—

(1) in section 2(b) of the bill, that all persons whose retired pay is computed on the basis of the rates prescribed by the Career Compensation Act of 1949 would have that pay computed on the basis of the rates prescribed by that act, as amended by Public Law 85–422;

(2) in section 2(a) of the bill, that all persons entitled to retired pay (other than for disability) under laws in effect before the effective date of the Career Compensation Act of 1949 (October 1, 1949), would have that pay (A) computed on the basis of the rates otherwise applicable as of May 31, 1958, plus 6 percent thereof, or (B) computed, in accordance with the formulae prescribed in section 511(b) of the Career Compensation Act of 1949 (37 U.S.C. 811(b)), on the basis of the rates prescribed in the Career Compensation Act of 1949, as amended by Public Law 85–422; and

(3) in section 2(b) of the bill, that all persons entitled to retired pay for disability under laws in effect before October 1, 1949, would have a 5-year period in which to elect (A) to continue to receive retired pay at the rates otherwise applicable as of May 31, 1958, plus 6 percent thereof (B) to receive retired pay computed under the formulae prescribed by the Career Compensation Act of 1949 for disability retirement, with the rates of pay on which such retired pay would be based being the rates prescribed by the Career Compensation Act of 1949, as amended by Public Law 85–422, or (C) to receive retired pay computed, in accordance with the formulae prescribed in section 511(b) of the Career Compensation Act of 1949 (37 U.S.C. 311(b)), on the basis of the rates prescribed in the Career Compensation Act of 1949, as amended by Public Law 85–422. This method parallels the method prescribed by section 411 of the Career Compensation Act of 1949, as originally enacted, for the computation of disability retired pay for persons on the retired lists as of October 1, 1949.

Section 3 of the bill amends Public Law 85–422 by striking out language included therein which was necessary in view of the provisions of that act providing that retired pay of persons already on the rolls would not be affected by the changes in rates of pay made by that act.

Section 4 of the bill strikes out, as superseded by your bill, two subsections in section 7 of Public Law 85–422 which provided increases in retired pay for certain classes of retired officers. These officers will receive greater increases under the amendments made by your bill.

Section 5 of the bill is a savings provision. Because of the amendments made by Public Law 85–855, it is possible that there are individuals presently on the disability retired lists who are receiving larger amounts of retired pay than they would be receiving if their retired pay were computed on the basis of the rates of pay prescribed by the Career Compensation Act of 1949, as amended by Public Law 85–422. Section 5 of the bill provides that these individuals shall not have their retired pay reduced by reason of the enactment of the bill.

I hope that this analysis is of assistance to you. If I can be of any further assistance, please do not hesitate to call on me.

Respectfully submitted,

JAMES M. MENGER, Jr.,
Assistant Counsel.

Mr. Speaker, in connection with these problems raised by our senior citizens, I found that not all pensions were treated alike in terms of the payment of income tax. These are the ones that are not taxable: Social security pensions, Veterans' Administration pensions, railroad retirement pensions and annuities, Panama Canal employees pensions, civil service pensions by reason of death or injury, military pensions based on percentage of disability, firemen and policemen disability pensions, and widows pensions.

The Government still has under study the question concerning the taxation of pensions to widows of Supreme Court Justices and to wives of former Presidents of the United States. Income taxes are collected on civil service annuities, State pensions and annuities for teachers, firemen, policemen, and so forth, military pensions, industrial pensions, insurance annuities, and endowments, and on pensions of retired ministers and widows of ministers. In these taxable pensions, excepting one, the custom is for the beneficiary to make no contribution whatever. The one exception is the Federal civil service annuity. The retired Federal employee may recover against income in the first 3 years the sum of money that he personally paid in but he cannot collect on the interest which his savings provided. The military, by contrast, pay nothing toward their pensions and their pensions are fully taxable unless said pension is based on disability or partial disability.

I am also introducing today a new bill as a substitute for H.R. 489, one I previously introduced, which would exempt the U.S. civil service pensions from the Federal income tax, thus giving these recipients equal treatment with other similar pension and annuity groups.

A moment ago I listed the types of pensions and annuities that are nontaxable. I append herewith the reasons given by the Treasury Department for these exemptions. Mostly the exemption were set up by statute which is precedent enough for my bill in regard to civil service pensions:

NONTAXABLE PENSIONS

1. Social security: The Supreme Court has held that insurance benefit payments made to individuals under title II of the Social Security Act, as amended, are made pursuant to the authority of Congress to appropriate money in aid of the general welfare. (*Helvering* v. *Davis*, 301 U.S. 619, 640 (1957)). In view of that characterization of the payments by the Supreme Court, which characterization was urged before the Court by the United States, the Internal Revenue Service has concluded that the payments do not constitute taxable income in the hands of the recipients. (I.T. 3447, C.B. 1941–1, 191.)

2. Veterans' Administration pensions: Section 1001 of the Veterans' Benefits Act of 1957 (71 Stat. 83), replacing section 3 of the act of August 12, 1935 (49 Stat. 607), provides in part as follows: "(a) Payments of benefits due or to become due under any law administered by the Veterans' Administration * * * and such payments made to or on account of, a beneficiary shall be exempt from taxation."

Based on the foregoing the Service has concluded that pensions and other payments made by the Veterans' Administration to veterans and their beneficiaries under the acts and laws referred to in the act of 1957, are not subject to Federal income tax.

3. Railroad retirement pensions and annuities: Section 12 of the Railroad Retirement Act of 1935, as amended by Public Law No. 162, 75th Congress (50 Stat. 307), approved June 24, 1937, provides that no annuity or pension payment shall be assignable or subject to any tax or to garnishment. Accordingly, the Service holds that annuities or pensions paid under the provisions of this act are not subject to Federal income tax. (I.T. 3115, C.B. 1937–2, 62.)

4. Panama Canal employee pensions: Amounts received by former employees of the Isthmian Canal Commission or the Panama Railroad Company under the provisions of Public Law 319, 78th Congress (58 Stat. 257), approved May 29, 1944, constitute gifts under section 22(b)(3) of the 1939 Code and are not includible in gross income. (I.T. 4098, C.B. 1952–2, 74.) This ruling follows the decision in the case of *Andrew W. Dewling* v. *United States* (101 Fed. Supp. 892).

5. Civil service (death or injury incurred in line of duty): Amounts received under the Federal Employees' Compensation Act (39 Stat. 742), as amended, are exempt from Federal income tax under the provisions of section 104(a)(1) of the 1954 code. This act, which is similar to the so-called workmen's compensation acts in the various States, provides that the United States shall pay compensation on account of death or disability of an employee of the Federal Government resulting from a personal injury sustained while in the performance of his duty (I.T. 3281, C.B. 1939–1 (pt. 1), 97).

6. Military pensions (exempt to the extent of the percentage of disability): Section 104(a)(4) of the 1954 code excludes from gross income "amounts received as a pension, annuity, or similar allowance for personal injuries or sickness resulting from active service in the Armed Forces of any country. The Internal Revenue Service has held that under the aforecited provision of law the retired pay of a member of the Armed Forces who retired for physical disability is excluded from gross income (I.T. 3641 and I.T. 3691, C.B. 1944, 70 and 73). By section 402(h) of the Career Compensation Act of 1949, 63 Stat. 802, 37 U.S.C. 272, now 10 U.S.C. 1405, however, Congress limited the amount equal to the retiree's basic pay multiplied by his percentage of disability at the time of his retirement.

7. Firemen and policemen disability pensions: Section 104(a)(1) of the 1954 code continues without change the exclusion provided in section 22(b)(5) of the 1939 code with respect to amounts received under workmen's compensation acts as compensation for personal injuries or sickness. Section 1.104–1(b) of the regulations provides that the exclusion applies not only to amounts received under workmen's compensation acts but also to amounts received under a statute in the nature of workmen's compensation act which provides compensation to employees for personal injuries or sickness incurred in their employment. The principle stated has been established in numerous court decisions and Internal Revenue Service rulings (*Frye* v. *United States* (D.C. 1947), 72 F. Supp. 405; *William L. Neill* (1951), 17 T.C. 1015; I.T. 3281, C.B. 1939–1 (pt. 1), 97; I.T. 3877, C.B. 1947–2, 15; and I.T. 3917, C.B. 1948–2, 10).

8. Widows' pensions: Pensions received by soldiers' widows from the U.S. Government held not taxable income (O.D. 957, C.B., June 1921, 84).

In conclusion, Mr. Speaker, I want to repeat that the greatest hardship in our domestic economy is the privation faced by our senior citizens on fixed income. To be unemployed and in want is certainly not pleasant, but the average American can look forward to new employment and another job as long as

health and youth are enjoyed. I have every sympathy for the unemployed, particularly for those with families, but they have hope, while the future of many of our senior citizens seems hopeless under present laws. Oldsters cannot look forward to earned incomes, to youthfulness, or the bloom of health. Consequently, I consider that the series of bills I am introducing today covers a problem area of utmost importance to the present Congress. I plead with my associates for action and for help for millions of senior citizens on fixed incomes who have done their part to make this great land.

They now are in need of our due recognition of their problem.

The Report on California Communists

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Outlook, Santa Monica, Calif., Saturday, April 4, 1959:

THE REPORT ON CALIFORNIA COMMUNISTS

The House Un-American Activities Committee has just released a revealing report about the present state of the Communist Party in southern California. It shows the party to have grown in strength, though losing in card-carrying members. Its strength is due to the ability of its leadership and the centralization of its control. The weeding out of dissenters, such as the resignation of 26 highly placed members in 1958, makes it easier for surviving heads to dominate without resistance.

At the top is a women of considerable brains, Dorothy Healey, wife of Slim Connelly, editor of the Communist People's World. Miss Healey is a veteran party leader of indefatigable energy. She is revealed in the report as having been quite active in the Los Angeles school board elections of 1957, influencing the votes of many on behalf of Mrs. Mary Tingloff and helping to unseat the incumbent Mrs. Stafford. Healey today is active in the support of the reelection of Mrs. Georgiana Hardy, chairman of the board. If Communists here do not get out and work in the school campaign, they are berated by Miss Healey. "Our job is not to invent issues," she says, "but to participate in the existing issues which put people in motion." She is not bad at inventing issues, either.

The report shows that the party leaders of 1952 who were then convicted of subversive conspiracy under the Smith Act are still leaders today. Ben Dobbs, Frank Spector, Rose Chernin Kuznitz, Slim Connelly, are names familiar to all followers of the insidious workings of the party, and they are all crafty and deceptive people. They would not be here as leaders today had they not been set free from the prison sentence imposed on them in 1952. The top elite of communism's hard core here, they have no business to be at large. Their experience should not now be available, but it is, in persuasion, in recruiting among the youth of the community and among racial minorities, and in doctrinal education and planning and scheming. But the U.S. Supreme Court let them go, and their time has not been wasted, as this very comprehensive report of Congressman DONALD JACKSON'S committee reveals. It is a tragic commentary on constitutional interpretation they are at large today.

Division of Civil and Military Air Authority

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. BRAY. Mr. Speaker, with reference to the controversy between civil and military aviation, the following excerpt from an article in the April 1959, issue of Air Facts magazine is of interest:

THE FACTS

Today's widespread despair about the allegedly forthcoming domination of the military over civil aviation is not based on facts. It is true that the new Federal Aviation Act mixes up military and civil aviation as never before, but that grew out of the increasing critical necessity of having a single agency in charge of air traffic control, provision of and research and development of air navigation facilities, and allocation of airspace. It was specified that this new agency must be under civil control, for the lawmakers were as circumspect about turning these functions over to the military as the average civilian pilot would be.

Naturally, in carrying out and carrying on the integration of military and civil air traffic, the FAA Administrator has to deal with the military, and the act provides how this shall be done. The Administrator can request the services of military personnel which he needs because of their recent experience, technical, and operational knowledge, and for liaison purposes. Such personnel become FAA employees for a 3-year period, with a maximum possible extension of 1 year, and are not subject to direction or control by the military department from which they are detailed, directly or indirectly, with respect to their responsibilities within FAA. The FAA will prepare each military officer's effectiveness report in accordance with the regulations of the officer's service. Every 6 months the Administrator is required to report to the Congress on agreements entered into with the military services for the detail of military personnel to FAA, including number, rank, and position in FAA and give an evaluation of the effectiveness of such agreements and assignments of such personnel.

In the first semiannual report on participation of military personnel in the FAA, published on February 20, appendix C, shows a total of 138 planned military officer personnel, and appendix D from this report shows that the bulk of them will go into the Office of Plans and Requirements, Bureau of Research and Development, Bureau of Flight Standards, and the Bureau of Air Traffic Management. Appendix F shows the extent to which they will serve in deputy positions. In all, 138 employees of FAA being military personnel on loan out of a total of 30,000 FAA employees does not suggest saturation.

An as yet unsolved problem which is quite a cranky one and whom may give rise to an additional lot of bogey merchandising is in connection with air traffic controllers. At present there are some 15,000 military personnel engaged in the control of military air traffic, domestically and abroad. As soon as it can be worked out, the functions of these people are to be taken over by civilian employees of FAA, and this creates a hatful of problems. As an example, 78 civilian employees of an independent contractor, being unable to give a rank and serial number, were executed as spies when the Japanese captured Wake Island. What would be the status of tower personnel at a foreign military field in case of hostilities, and air traffic controllers and FAA personnel maintaining navigational aids in combat areas? Their being given a reserve status in some military organization would prove beyond doubt that FAA had become militarized, wouldn't it?

Finally, there's the question of airspace allocation of which there is much calamity talk these days. The military, of course, has some serious problems in this area. They are flying airplanes which cruise 1,500 miles per hour that they talk about, and must have some which fly even faster. But put it down for sure that in recent months the military has been knocked down on airspace requests as never before. In the past, CAA Administrators had no control at all in this. Requests were made by the military direct to the White House for Executive orders. Now the FAA Administrator is in complete charge. It is far better to have the man responsible for the entire pie doing the slicing. He also has authority to see whether the slicing done in the past was reasonable and whether the need is still valid.

Republican Presidential Candidates

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, one of the most effective techniques the Democrats have used in the past—as documented in Jack Redding's book "Inside the Democratic Party"—is to pretend they believe a man easy to beat when in fact they consider him their most difficult opponent. Mr. Redding, a former public relations director for the Democratic National Committee, has clearly outlined this strategy.

Apparently former President Truman strongly favors this technique. Last week he said in Los Angeles—Los Angeles Examiner, April 8, 1959—that Vice President NIXON would be the easiest Republican for the Democrats to run against in 1960. It looks as if this is the line which the Democrats, for their own special reasons, have decided to peddle.

However, as is often true with Mr. Truman, he gives too little attention to the facts. Let us take a look at some of the public opinion polls recently published:

Gallup poll

	Choice of candidates (Republicans only)	
	Today	January 1959
	Percent	*Percent*
Nixon	56	56
Rockefeller	23	27
Lodge	8	6
Stassen	7	3
Others	2	3
None; no opinion	4	5

Now let us take a look at NIXON'S strength among the independent voters:

Gallup poll

	Choice of candidates (Independents only)	
	Today	January 1959
	Percent	*Percent*
Nixon	41	32
Rockefeller	23	31
Lodge	18	13
Stassen	9	11
Others	2	1
None; no opinion	7	12

At this point, Mr. Speaker, I should like also to include the Gallup poll published Sunday, April 12:

	November 1958	January 1959	April 1959
Republicans	*Percent*	*Percent*	*Percent*
Nixon	57	61	69
Rockefeller	36	32	27
Undecided	7	7	4
Independents:			
Nixon	38	40	53
Rockefeller	40	48	36
Undecided	22	12	11

Frank Lloyd Wright

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford (Conn.) Courant relating to Frank Lloyd Wright:

FRANK LLOYD WRIGHT

To his untold number of admirers, Frank Lloyd Wright was America's master builder. To uncounted critics, he was "the Mahatma of architecture." And critics meant that phrase to deride alike his theories and accomplishments, his self-proclaimed "honest arrogance," and the capelike wrap and broad-brimmed preacher's hat he often wore.

Yet the cloak and the hat were not inappropriate. For Frank Lloyd Wright preached the gospel of a new, organic architecture for 60 turbulent years. All his life he fought for functional, individualistic buildings that blended precision machine-age lines with nature's own living forms in stone and steel, wood and glass. He called for natural housing. If you build a house upon the desert, let the house know the desert and the desert know the house. That was the word, and he pronounced it from unassailable faith in his vision, and embodied it in nearly 800 structures from here to Tokyo.

But as with the Ishmaelite, it often seemed as if every man's hand was against him. Alexander Woollcott said, "If I were suffered to apply the word genius to only one living American, I would have to save it up for Frank Lloyd Wright." But regarding a proposed memorial in Venice, Ernest Hemingway commented, "Better a fire in Venice than a building by Frank Lloyd Wright." Awards, citations, and honorary degrees came to him from all over the world, but before he received the medal of the American Institute of Architects, opponents said, "The qualifications of Mr. Wright always have been, and still are, open to serious question." Said honest, arrogant Mr. Wright, "Gentlemen you are withering on the vine."

Hartford had met Mr. Wright momentarily. In 1950, a group was formed to build a theater he had designed in West Hartford. Naturally, it was a different kind of theater, and the architect came here to discuss it. It was never built. Unromantically the project foundered not because of architectural novelty, but in a prosaic fight over zoning.

With the passage of time, Mr. Wright won his artistic argument. Like everything else, the victory only galled him. His genius, his pronouncements have come to be widely accepted and admired, and the ranch-type house is everywhere. He said shortly before his death, "I am nervous for fear I may now be with the current. It has turned and I am afraid of going downstream when, all my life, I have been going upstream."

That was Fate's mean trick on the great heretic—acceptance. For Frank Lloyd Wright it was more stimulating to be in the thick of the battle. He doubtless departed this life with new plans for the Pearly Gates under his arm.

Communists' New Look

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Examiner of Saturday, April 4, 1959:

COMMUNISTS' NEW LOOK

By exposing an intense drive of militant communism to make southern California the headquarters of the worldwide conspiracy against democracy directed from Moscow, the House Committee on Un-American Activities has rendered the Nation a great service.

In its latest report made public this week, the committee meticulously pinpointed the Communist personalities and organizations which are operating here under a refurbished strategy.

Representative DONALD L. JACKSON, who with Represenatative CLYDE DOYLE represents the southland on the committee, said that of the 20,000 professional hardcore Communists in the United States, 5,000 are active in this area.

Our tremendous increase of major industry, with emphasis on defense science; our strong labor organizations, the spreading influence of our entertainment, cultural and social entities, have made this concentration of Communists a logical maneuver, says Representative JACKSON.

Masquerading as liberals, the local phalanx of Marxist-Leninism now aspires to infiltrate community and fraternal organizations, churches and nationality groups, the committee reports.

This subtle new strategy of revolution is all the more dangerous because it has completely beguiled into complacence many people who should know better, and whose own loyalty is not in question.

Thus we have proposals in Congress to do away entirely with the Un-American Activities Committee, among whose backers is Representative JAMES ROOSEVELT of Los Angeles; there are measures before the Legislature, supported by naive churchmen and educators, to outlaw the loyalty oath.

And there is growing attitude that some regrettable decisions by the U.S. Supreme Court in favor of accused subversives and Communists, have by some magic dissipated the machinations of professional traitors.

This last report of the committee, with its detailed disclosure of the entire conspiracy, completely dispels this atmosphere of artless confidence and reveals the real menance beyond.

Loyal Americans are greatly indebted to the committee.

They should regard the report as a warning siren calling all to be on keen alert.

More McClellans Needed

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. GATHINGS. Mr. Speaker, the Paragould Daily Press, of Paragould, Greene County, Ark., published, on April 7 of this year, a most thoughtful editorial based on a survey of local sentiment regarding aims of certain labor union officials to defeat Arkansas' senior Senator, the Honorable JOHN L. MCCLELLAN, because of his work as chairman of the Select Committee To Investigate Improper Activities in Labor-Management Relations.

Paragould has a well-balanced economy, based on agriculture and industry. Thus, the sentiment expressed in this editorial reflects both the views of our agricultural citizenship and our working men and women in the factories of the State of Arkansas.

It is evident that the intent expressed by certain labor leaders under fire by the Senate committee to extract a multi-million-dollar war chest to defeat Senator MCCLELLAN does not meet with the favor nor the wishes of the Arkansas men and women who belong to union organizations. Indeed, the editorial correctly finds.

"It is our guess that this newest threat from the labor front will only tend to weld these people more solidly behind him."

Members will find the entire editorial interesting:

MORE MCCLELLANS NEEDED

Newspaper columns carried a rather interesting story the other day about a so-called, multi-million-dollar "war chest" being raised by certain labor racketeering elements for the purpose of going all out in a fight to defeat Arkansas' Senator JOHN MCCLELLAN in the event he seeks reelection next year. Senator MCCLELLAN said that he had heard of the campaign and wasn't surprised.

Senator MCCLELLAN has been in the news for a couple of years now as chairman of the committee investigating various phases of the labor front and it was greatly through his personal efforts that the public's eyes were opened to the corruption in labor caused by such characters as Jimmy Hoffa and Dave Beck of the Teamsters Union.

While we are not always in agreement with the Senator from Arkansas, we think that his work as chairman of the Senate rackets committee has been nothing less than a

masterpiece and we, for one feel that our Congress could use a few more like him.

JOHN MCCLELLAN has proved not only through his conduct during the rackets hearings but through his attitude toward this "war chest," that he is not the least bit afraid of the labor hoodlums. The good, solid-thinking people of Arkansas are well familiar with his record in the Senate and it is our guess that this newest threat from the labor front will only tend to weld these people more solidly behind him.

We say "bravo" for JOHN MCCLELLAN and repeat, Uncle Sam could use a few more like him, a few more men in Congress who won't tuck tail and run every time the labor hoods crack their whip.

Radiation Hazard Act of 1959

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROBERTS. Mr. Speaker, on April 10, 1959, I introduced a bill, H.R. 6265, to provide for the vesting of primary responsibility for the protection of the public health and safety from radiation hazards in the Public Health Service of the Department of Health, Education, and Welfare, and for other purposes.

I believe that this bill deals with a most important and crucial public health hazard, the danger of ionizing radiation. The principal sources of ionizing radiation which have been created or developed by man include X-ray machines, nuclear reactors and their radioisotopic byproducts, high-energy particle accelerators, a number of concentrated forms of naturally occurring radioactive materials, and the fallout constituents of nuclear weapons. Among these sources, only nuclear reactors, their fuels, their radioisotopic byproducts, and their radioactive wastes have been placed under substantial regulation from the standpoint of their influence on health and safety.

In the absence of a comprehensive program through which the health hazards of all sources of ionizing radiation may be brought under supervision, there is an important weakness in the Nation's efforts to control radiation safely.

X-ray machines are now used extensively in industry as well as in the health professions. Radioisotopes are finding application in a rapidly increasing number of industrial plants, university laboratories, hospitals, and agricultural research centers. And nuclear reactors are being planned and constructed at an accelerating pace. Few areas of human activity remain where sources of ionizing radiation do not find some practical application.

A comprehensive program for the control of radiation hazards includes many elements; two are particularly worthy of attention: (a) The formulation of sound radiation protection standards and (b) the enforcement of public health regulations based upon these standards.

One of the important problems with which the Congress must deal is the extent to which the regulatory and enforcement functions of a radiation control program must be discharged by the Federal Government and to what extent they may be discharged effectively by State and governmental agencies.

Briefly stated, the bill H.R. 6265 would do the following. It declares it to be the policy of this Government that primary responsibility for the protection of the public health from radiation hazards shall be vested in the Public Health Service and in State and local health authorities. It instructs the Surgeon General to develop, in consultation with Federal, State, and local agencies exercising responsibilities in connection with the control of radiation hazards, uniform standards of radiation protection. It authorizes the Surgeon General to conduct research, studies, investigations, and training programs with respect to the control of radiation hazards both directly and through grants-in-aid. It establishes a National Advisory Council on Radiation Hazard Control, to be appointed by the President and to consist of 15 members, including the Surgeon General of the U.S. Public Health Service, the Secretary of Defense, the Chairman of the Atomic Energy Commission, and the Director of the National Science Foundation. And finally, it requires the Surgeon General to submit to the Congress not later than February 28, 1960, a comprehensive program for the control of radiation hazards emanating from all manmade sources. This program will be developed by the Surgeon General after consultation with Federal, State, and local agencies exercising responsibilities in connection with the control of radiation hazards.

Mr. Speaker, the bill H.R. 6265 was referred to the Committee on Interstate and Foreign Commerce and it is my hope as chairman of its Subcommittee on Health and Safety that action on this important legislation can still be taken during the first session of this Congress.

All Created Equal

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial which recently appeared in the Waltham-Newton (Mass.) Tribune:

ALL CREATED EQUAL

It shouldn't be necessary, but if there is no other way then Congress ought to give attention to a bill by Representative GLENN CUNNINGHAM, Nebraska Republican, dealing with the now controversial issue of equal time on the air for political candidates.

The Federal Communications Commission threw a wrench into the matter when it ruled candidates are even entitled to equal time on news programs.

This means that if a news commentator on TV flashes a 20-second shot of a candidate for mayor, every other candidate can demand similar exposure.

This doesn't leave a program editor much room for judgment as to who and what constitute news. And if there should happen to be 10 or more candidates for a job, what happens to other news?

CUNNINGHAM's bill simply would exempt regular news programs, not initiated by candidates, from the equal time provision of the law.

"Running Wild"

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. THORNBERRY. Mr. Speaker, on April 4 the citizens of the city of Austin, my home, elected as a member of its city council a young and distinguished businessman of Austin, Mr. Edgar Perry III.

Mr. Perry is a member of one of the finest families of Austin. He is the grandson of Commodore Edgar Perry, who is one of the outstanding citizens of our State and Nation and one who has contributed so much to the growth and progress of Austin.

On April 1 this splendid young man delivered to the Civitan Club of Austin a speech on the problems of juvenile delinquency, which in itself justifies the confidence which the people of Austin have shown in him. He is a dedicated young man and all of us who are citizens of Austin are fortunate to have his services.

The speech is as follows:

SPEECH DELIVERED BY EDGAR PERRY III, AUSTIN, TO CIVITAN CLUB ON WEDNESDAY, APRIL 1, 1959

A dear friend of mine—and one of the many who keeps reminding me that I am no professional politician—tells me every day to "Run scared! Run scared!"

The topic of my remarks today is "Running Wild." But let me assure you, this is not a report to you on how well Edgar Perry is running for the city council. It's about the children in our city who have serious problems.

One of the most critical issues of our times has become: What to do about our children to protect them from bad influences? Austin is a dream city to me and I would not want to trade hometowns with anybody else on earth. I wish, therefore, that some of the things I am going to say to you today were not true. But as a candidate for your city council, I feel that I must talk frankly to you about all the problems that concern us, as citizens of Austin.

The professional people who work with boys and girls will tell you about case after case of Austin children whose only activity seems to be wandering aimlessly about. Many of these children are neglected, unsupervised, unloved, and unwanted.

The ministers, teachers, social workers, juvenile judges and others who have had to come face to face with some of these children, will tell you that it is no surprise to them that such conditions lead eventually to sadness and tragedy.

In recent years, while serving as a trustee for the Baptist Children's Home at Round Rock, I have learned through personal experience that there is no greater joy or challenge for any adult than to be able to dedicate oneself to working in some capacity with children. For every child who has been fortunate enough to benefit from an institution such as we have at Round Rock, there are literally hundreds of children in Austin who are deprived of the necessities of life. They are spiritually and emotionally insecure. If they are deprived for too long a time, they are likely to become depraved to the point of delinquency.

Austin has always been generous and humanitarian toward its young people. Let me assure you that the right things are already being done for some of these children. But I want to emphasize that more could and should be done for the neglected and dependent children who live among us. They are our neighbors.

Col. Homer Garrison tells us that juvenile delinquents—many of whom have records of family and community neglect during their early childhood—now commit half of all the major crimes in Texas. Most of these crimes occur in the cities.

If a farm boy is committed to the Gatesville State Training School today, this usually happens after he has moved to the city and has found the conditions and temptations for getting into trouble.

Our Austin newspaper reported this week that the Gatesville School, with a normal capacity for 810 delinquent boys, now has more than 1,200 boys, with the population rising every day.

Last year, Travis County sent 75 boys and girls to the State training schools for delinquents, representing 3.9 percent of the total number committed by juvenile courts throughout the State. Our juvenile courts committed 3.9 percent while our county's share of the total scholastic-age population of the State last year was only 1.9 percent.

Austin children are no worse than are the boys and girls in the other large Texas cities. Almost any magazine or newspaper will tell you that the juvenile problem is citywide, statewide, and nationwide.

I would like to have the honor of representing all the children of our city on the city council, regardless of the child's color or race or family background. The first plank in my platform compels me to ask of you and of every other citizen: What can your city council do to free Austin from the excessive waste of lives and of property which results from our wayward children and youth?

I do not imply that the city council should tell parents how to rear their children. May God bless any parent who does the job right and spends some time at it. What I am saying is that juvenile crime and child neglect—to the extent that it occurs today in our city—is one of the most serious responsibilities which must be faced by your city council. The city council can take the leadership in solving this problem, with the cooperation of all of the civic-minded citizens of Austin.

Let us build on to what we already have and put greater emphasis on all the fine things now being done in behalf of Austin children and youth.

A few months ago, 1,700 Austin men organized into a splendid new organization known as the Austin Youth Council. We have already learned from this group of volunteers that individual citizens of Austin are still willing to give their time and money to help the boy or girl who needs a friend, or who just needs a second chance.

Let us hope that the resources to do the job are, in the main, already available—we need citywide organization. To effectively stamp out child neglect and juvenile delinquency in our city, we will need more like 170,000 volunteers working at the job in much the same way that 1,700 business and professional men have begun working through the Austin Youth Council.

Robert Kneebone, of the Texas Youth Council, said in a recent speech in our city that we must try to bring our entire society back into the habit of neighborliness.

How many of you have heard of a family who has moved completely out of a neighborhood in order to get their kids away from somebody else's kids? This has happened in Austin.

How many of you have heard of a family whose children must walk several blocks out of their way each day in order to go around a place where idlers and gangs of young hoodlums congregate for the purpose of waylaying children who are desperately trying to go straight? This is happening today in Austin.

How many of you have heard of the hundreds of school-age children, living all around us here in Austin, who are not in our schools? Some of these, after having rebelled and finally being expelled, now hang around in places where they can harrass, tempt, or make pickups on children who are still in school.

Now you may ask, what does all this have to do with the city council? I can answer the question better after you have given me the opportunity of serving you on the council, but let's mention a few obvious things:

When a child quits school and begins to run wild, without parental control, the city streets and the city playgrounds have the responsibility for the child, whether we wish it that way or not. Eventually the juvenile courts take over if the child gets into trouble with the police.

Bill Anderson, county probation officer, has said delinquency in Austin falls considerably every summer when the playgrounds and swimming pools open—and the children have something they can do that they want to do. It is up to the city to provide year-round activities for all Austin children.

The city police and the city crime prevention bureau must spend a great deal of their time watching and questioning and corraling the children who loiter along the streets. Lives and property must be protected, especially during the night when most crimes are committed.

It is the city recreation department which tries to keep the attention of the idle boy or girl in order to keep kids off the streets and out of trouble.

It is the city hospital which must patch the wounds from the juvenile gang fights and feuds. Just desperate kids they are—old before their lives have ever really begun, lost in a morass of ignorance, poverty, disease, and spiritual need. With nothing to do, they molest and corrupt other children, who in turn need protection lest they become victims of delinquency.

It is the city maintenance crews which must replace the street lights which are damaged by BB pellets. It is the city fire department which must be constantly on guard against arson.

I am merely trying to stress the fact that the city government does have a very large stake in juvenile crime prevention.

My goal and obligation is to do everything a city council member can do to make Austin the example for the entire State and Nation. We can do it only if we make a citywide attack on juvenile delinquency, with an emphasis on removing its causes. I propose that the city council give intensive study and support toward the goal of making our city neighborly toward all children and vitally interested in all children. Austin must be a city in which all parents will want to live, without feeling the terror of what might happen to their child.

I am not talking about a big police crackdown, nor am I talking now about a 10 o'clock curfew, after which the kids will be swept indoors and off the streets. I am saying only that the parents in Austin—all of us—need to begin by studying this problem more intensively than it has ever been studied in the past. We must rely on the experts now working in the field. Let us not be checkmated, however, and suffer paralysis through analysis. Immediate action is needed. If elected to your city council, I would welcome the opportunity to discuss the juvenile problem at length with people like Police Chief Bob Miles and Joe Perry, of the crime prevention bureau.

I plan to ask them: "Bob and Joe, Austin appreciates and likes what you men are doing for the youth of our city, but surely there is something you need that would enable you to do this job better. What is it?" The same inquiry could be directed toward the recreation department and other city departments. Then, on a cooperative basis, the entire city could be mobilized. Austin has been widely known as the Friendly City—now let's make it the friendliest city. With your help, I would like to see Austin gain the top rank among cities who believe in caring for their own. Anything we do for our children will pay rich dividends in the form of a better city tomorrow.

In closing, may I say that this has been a discussion of only one part of my platform. Since the effects of juvenile delinquency and crime can inflict damage upon every family, directly or indirectly, I believe you will agree that this problem is your problem, too.

Mr. Louis Smith, of Wilkes-Barre, Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Saturday, April 4, 1959:

LOUIS SMITH TESTIMONIAL

The decision to honor Louis Smith, executive director of the Jewish Community Center, at the annual United Jewish Appeal dinner tomorrow evening will add immeasurably to the occasion, for Mr. Smith aptly has been described as "Mr. UJA" because of the role he has played in the annual campaign, to say nothing of his service to the Jewish Center and its predecessor, the YM, and YWHA, for 34 years.

A former resident of Pittston and an outstanding basketball player in younger days, Mr. Smith has filled his post at the Jewish Center with distinction. His interest in young people has been reflected in the success of the extensive program which has included social and cultural as well as physical activities.

The adult program at the Jewish Community Center has enhanced Mr. Smith's reputation for service and resourcefulness, thus winning for him the plaudits of young and old.

His interest in the United Jewish Appeal, cognizance of which is being taken at Sunday's gathering, is a chapter in itself. He has given unsparingly of his time and talents to this worthy cause, contributing substantially to the success of the undertaking through his example as well as directly by his actual labors.

A grateful community, in saluting him on this occasion, publicly acknowledges a debt for service beyond that call of duty.

Statement Upon Introduction of Legislation Proposing Constitutional Amendment To Assure the States Exclusive Control Over the Public Schools

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROBERTS. Mr. Speaker, in a bill which I am introducing today, I am proposing an amendment to the Constitution which shall be valid upon ratification by the legislatures of three-fourths of the States. This amendment reads:

Administrative control of any public school, public educational institution, or public educational system operated by any State or by any political or other subdivision thereof, shall be vested exclusively in such State and subdivision and nothing contained in this Constitution shall be construed to deny to the residents thereof the right to determine for themselves the manner in which any such school, institution, or system is administered by such State and subdivision.

The distinguished Senator from Georgia [Mr. TALMADGE] previously has introduced similar legislation.

Mr. Speaker, when the Supreme Court in its 1954 desegregation decision decreed that the separate but equal principle in providing public education was unconstitutional, there was set in motion pressure which has caused turmoil in the South and in other sections of this country.

Since this unprecedented decision was handed down, we have seen radical elements flourish, schools destroyed by explosive, Federal troops with bayonets invading a campus, and public school buildings shut down. Today, nearly 5 years later, the issue is more irreconcilable than ever. The problem remains, and it is time a solution is found.

In my estimation, the solution can be approached only when a sound constitutional foundation is laid. This is what the amendment which I propose seeks to provide.

For some time, I have insisted that education is and ought to be under exclusive control of State and local authorities. There should be no room under our Constitution for the Federal Government to usurp this authority, and that is what happened in the 1954 integration decree.

History warns us of the usurpation of powers by the judiciary. George Washington in his Farewell Address stated:

Let there be no change by usurpation; for though this, in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed.

In 1956, a special committee of outstanding jurists appointed by the Governor of Florida made a thorough study of public-school education in the light of the Supreme Court decisions. The committee pointed out that the assumption of power to change the meaning of the Constitution such as evidenced by the Supreme Court's integration decrees is an abuse of public trust and a tyrannical usurpation of power. The committee pointed out:

The Constitution of the United States may be amended only in the manner provided in that Constitution. In the course of history since the adoption of the Constitution the people have 21 times found it expedient to amend the Constitution, and when that unanimity of public opinion which justifies a change in the Constitution has developed among the people they have found no difficulty in effecting the changes they found desirable.

In my estimation, Mr. Speaker, the time has come and the people are ready for a constitutional amendment to assure each State the right to determine how it will conduct its public-school system.

David Lawrence, noted and respected syndicated columnist and publisher, recently in his column pointed to what seems to me to be the growing unworkability of integration in the schools. He indicates that the issue may reach the status of prohibition and its repeal, where the collateral effects of the controversy made it clear that each State should have the right to control its own liquor traffic. Mr. Lawrence concludes:

So with respect to school integration—as already revealed in the big cities of the North, including voteless Washington—the emergence of emotional issues having little to do with the merits of education or equality of status of individuals may finally decide the controversy in the next decade. It could bring a wave of feeling that local option—the right of each State to handle its own educational problems—is again the answer to a question of sociology as raised by the Supreme Court.

These emotional side-effects, which are already splitting this Nation, should not be allowed to grow. Let us take the problem out of the hands of a judicial oligarchy and place it back in the hands of the people concerned. The people can and will solve this problem to their own satisfaction if given the opportunity. An amendment to the Constitution, such as I propose, would, I sincerely believe, give them that opportunity.

A Welcome Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. DAVID M. HALL
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. HALL. Mr. Speaker, with the volume of mail received by each of the Members of this body it is unusual that an item be included therein from a constituent which is neither critical nor contains a request. After having received a letter that contains neither criticism nor petition, I beg leave to extend my remarks and include extraneous matter in the Appendix of the RECORD.

The letter follows:

ASHEVILLE, N.C.,
February 18, 1959.

Hon. DAVID HALL.

DEAR CONGRESSMAN: I need no pamphlets, I wish to ask no favors, seek no intercessions, nor have I any complaints, neither do I ask your support of any particular legislation.

I voted for you in the confidence that you were a good Democrat, a western Carolina mountaineer, a gentleman, and an able legislator. I just wanted you to know I am still secure in this confidence and wish you every success. We've never met, Congressman, but didn't think you'd mind a word of encouragement from home.

Warmly,

JOE BLY.

Association of the U.S. Army Asks Congress To Place "Floor" of 900,000 on Army Strength During Next 2 Years

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Maj. Gen. A. J. Drexel Biddle, president of the council of trustees of the Association of the U.S. Army, dated March 23, 1959, and a press release that the association issued on March 20, 1959:

ASSOCIATION OF THE U.S. ARMY,
Washington, D.C., March 23, 1959.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR DAN: I want you to know of the action taken by the Association of the U.S. Army at its last meeting and am accordingly sending you the accompanying memorandum.

Warmest good wishes.

Sincerely,

A. J. DREXEL BIDDLE,
President.

AUSA ASKS CONGRESS TO PLACE "FLOOR" OF 900,000 ON ARMY STRENGTH DURING NEXT 2 YEARS

The council of trustees of the Association of the U.S. Army today called on Congress to enact legislation placing a floor of not less than 900,000 on the strength of the active Army during the next 2 fiscal years.

Maj. Gen. A. J. Drexel Biddle, president of the association, stated that it was the considered opinion of the council that the prospects of peaceful settlement of the Berlin situation and other points of friction with the Soviet Union would be enhanced "if the world was put on notice that the United States did not intend further to reduce its capability to deter nonnuclear aggression by Communist forces anywhere."

Pointing out that the strength of the Active Army has been reduced by more than 600,000 in the past 6 years, General Biddle said that the association believes that Congress should say in effect "this far and no further" by placing a floor of 900,000 on Army strength.

Present Army strength is below 900,000 and is expected to be 870,000 on June 30, the end of the present fiscal year. The administration's budget for the next fiscal year calls for maintenance of the Army at the 870,000 figure.

"Such legislation as we have called for will not only hearten our allies and serve to inform the Communists that we are determined to resist all types of aggression; it will also bring stability to the Army and make it possible for it to perform with greater effi-

ciency and much more economy," General Biddle said.

Constant changes in Army strength is most wasteful of taxpayers' money, he said. "The opening and closing of Army posts, the constant changes in programs involved in rotating troops overseas and back, and fluctuating calls on draft boards for manpower—all make for inefficiency and waste. If the Army could be assured that its strength would not go below 900,000 during the next 2 years it could make commitments and plans that would be in the public interest and serve the national security."

General Biddle noted that the Army's Chief of Staff had testified before congressional committees that he was gravely concerned about the reduction of Active Army strength and had proposed a strength of 925,000 to the administration during the preparation of the 1960 budget.

"The seriousness of the reduction is made manifest by the elimination of one division from the Army's four-division Strategic Army Corps, a force which is as vital to the deterrence of limited Communist aggression as the Strategic Air Command is to the deterrence of nuclear war," General Biddle said.

At its last annual meeting the Association of the U.S. Army adopted a resolution calling for an Active Army strength of 1 million officers and men. "We still believe that 1 million is a desirable and necessary strength," General Biddle said today. "The action of the council of trustees in asking Congress to enact legislation placing a floor of 900,000 on Active Army strength is designed to stop the continual downward trend in Army strength. We'll continue to advocate and work for the million-man figure," he said.

General Biddle said that "floors" on military strength were not unprecedented. Congress, he said, had by legislation placed a floor on the strength of the Marine Corps, and only last year placed a floor on the strength of the National Guard and Army Reserve.

Capt. John M. Davis—A Splendid Kentuckian

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. SILER. Mr. Speaker, on the 4th of March 1959, there occurred in the Canal Zone the death of Capt. John M. Davis, a native son of Whitley County, Ky., who was born in my home city of Williamsburg.

Captain Davis served in the Spanish-American War, and later, in 1907, went to the Isthmus of Panama and became a police officer in the Canal Zone. That service he continued for nearly 40 years, having retired in 1945 when he was district commander at Balboa. Following his retirement, he and his wife continued to make their residence in the zone. He is survived by his wife, three daughters, and a son.

This splendid Kentuckian served his country during a long period, with unabated patriotism and constancy, and rendered highly effective service. During construction days of the Panama Canal, more than 80 percent of arrests for criminal offenses in the Canal Zone were sustained by convictions in the courts. Men like Captain Davis were responsible for policing the zone effectively and thereby were maintained conditions of safety for the accomplishment of the great task of building the canal. Throughout the history of the canal enterprise, the Canal Zone police department has functioned with marked efficiency.

Touching the death of Captain Davis and his career, I include as a part of these remarks, under leave granted, the following recent news story and editorial concerning Captain Davis, which appeared in the Star and Herald of the city of Panama, on March 6 and March 7, respectively:

[From the Panama Star and Herald, Mar. 6, 1959]

CAPT. J. M. DAVIS DIES; SERVICES NEXT MONDAY

Members of the Canal Zone police will act as pallbearers at the funeral services to be held Monday morning at 10 o'clock at Corozal Cemetery for Capt. John M. Davis, former Commander of the Balboa Police District, who died at Gorgas Hospital Wednesday night at the age of 76.

The graveside services will be conducted by the Rev. W. M. Alderton, of the Gamboa Union Church. Military honors will be accorded by members of U.S. Armed Forces stationed in the Canal Zone.

Captain Davis was born in Williamsburg, Ky., and served with the U.S. Army during the Spanish-American War. He came to the Isthmus during the construction days and joined the Canal Zone police in 1907.

During his many years with the police force, Captain Davis served in Pedro Miguel, Gatun, Cristobal, and Balboa with the major part of his service spent on the Atlantic side. At the time of his retirement in 1945, he was district commander of Balboa.

Since his retirement, he and his wife have been making their home in Gamboa.

Captain Davis was active in civic and fraternal affairs in the Canal Zone both before and after his retirement. He was a member of the Spanish-American War Veterans and served on the Goethals Memorial Committee.

In addition to his wife, he is survived by his son Ralph, who lives in Diablo Heights; and three daughters, Mrs. Myra Walson, of Diablo Heights; Mrs. Norma Short, of Quarry Heights, and Mrs. Margaret Dubois, of Philadelphia.

[From the Panama Star and Herald, Mar. 7, 1959]

WE ALSO MOURN CAPTAIN DAVIS

Perhaps only oldtimes on this Isthmus can look back over the lifework of Captain John M. Davis, former Commander of the Balboa Police Department, who died at Gorgas Hospital Wednesday at the age of 76.

The fact that this veteran police officer is to be buried with military honors points up his service with the U.S. Armed Forces and lends added luster to his service for his country.

And what a service. Captain Davis, a Kentuckian by birth, served with the U.S. Army during the Spanish-American War.

Like many another CZP officer he joined the Canal Zone police in the early construction days of the Panama Canal—his service dated from 1907. He served, as we recall, as station commander in Gatun, later was promoted to the strategic Atlantic port of Cristobal. On his retirement in 1945, he had reached the exalted post of district commander at Balboa.

The foregoing is assuredly an epic of police history in the Canal Zone:

Personally, Captain Davis scored high with the Isthmian press. That was before the news game in the Canal Zone became largely a matter of official "handouts" as it is today.

This system simplifies news gathering to a certain extent. But this oldtimer who covered the "Gold Coast" for many years for the Star & Herald, maintains that half of the nerve of news gathering is "getting the story" from a reliable source with all the ramifications of a good story.

Covering the scene of the accident, crime or unusual event helps a lot. That was the way we oldtimers of the press got our news.

It is worthy of comment that we were never called up on the carpet for writing exaggerated stories. There's nothing like it, boys and girls, especially when your blood has a tincture of printer's ink.

Those were indeed the good old days and many the fine stories we reporters gleaned from Captain Davis.

Our condolence to the Canal Zone Police and family survivors of Captain Davis. He was a great soldier and a great "cop." He was also kind and understanding in his handling of police cases. His memory must always stay green at this so-strategic point in the Western Hemisphere.

Next Mining Rush May Be in Oceans

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, the never-ending search for mineral resources has led to the opening of a fascinating new frontier. Drilling for off-shore oil is only the beginning of a vast new mining bonanza that is waiting to be developed on the ocean floor. It has been scientifically established that not only petroleum but also gold, uranium, and manganese can be found in our oceans and under the ocean floor.

Recent evidence that Iraq is apparently under Communist domination has caused much consternation that Western Europe's supply of Middle East oil might be permanently destroyed. In that event, new sources of petroleum must be developed. Oceanographers can help provide an answer to this dilemma if enough funds are invested to insure the development of a comprehensive program of basic oceanic research.

The following article, taken from the New Bedford, Mass., Standard-Times, outlines the possibilities for future exploration of oceanic mineral resources:

SEA BATTLE 1958: KEY TO SURVIVAL, XI—NEXT MINING RUSH MAY BE IN OCEANS

(Whether it be for war or peace, the oceans of the world probably hold the secret of humanity's future. The nation that unlocks those mysteries first will direct the future course of mankind. One of the world's outstanding ocean-study centers is the Woods Hole Oceanographic Institution. There and at other marine-science research centers in the East, the Standard-Times conducted a 2-month study to determine who is ahead. These stories tell the results of that research.)

(By Everett S. Allen)

When land sources of oil and important minerals and metals peter out, undersea

mines and oil wells may preserve western civilization's highly touted standard of living by providing new supplies of these 20th century necessities. How long before this may happen? Referring to petroleum supplies ashore, a physicist in New York, aged 40, predicted: "I may see the exhaustion of land oil supplies myself. My granddaughter certainly will have to face the problem of cutting down on automotive horsepower, finding an oil substitute, or even changing her mode of living entirely."

Most of the world's nations are acutely conscious of this rapidly approaching problem. Marine geologists on both sides of the Iron Curtain are trying to find out what the ocean, or the sea bottom, might be able to contribute by way of a solution.

SWIFT UNDERSEA RIVERS

Under the oceans lie mountain ranges as high as the Rockies, valleys thousands of feet deep, vast plains hundreds of miles wide, and ocean-bed rivers, some of them 200 miles wide and flowing at speeds occasionally up to 75 miles an hour.

In war or peace, these rivers in the sea, known as turbidity currents—moving multiton avalanches of silt and debris down the sea bottom's slopes—may be of critical importance to humanity.

In peace, they may reveal to submarine geologists the course taken by erosion from the continents since the beginning of time, and thus aid in locating seabed deposits of oil or valuable minerals, manganese, and uranium among them.

In war, it is possible that an offshore atomic blast might trigger a turbidity current—roughly likened to a snowslide down the face of a mountain—that would spread radioactive debris throughout an entire ocean basin.

CABLES SNAPPED

Here's an example of how these currents function:

Dr. Bruce C. Heezen, of Columbia University recalled, "on November 18, 1929, a severe earthquake shook the Grand Banks in the Atlantic area south of Newfoundland, an area which has a greater concentration of submarine cables than any other in the world. The cables broke on a wholesale scale, and the breaks naturally were attributed at the time to the quake, itself.

"But a study of the timetable of the breaks disclosed a remarkable fact * * * for more than 13 hours after the earthquake, cables farther and farther to the south of the epicenter went on breaking, one by one, in regular succession. Each break was downslope from the one before, and the last took place in the deep ocean basin 800 miles from the epicenter.

"It seems quite clear this series of events must indicate a submarine flow; the quake set in motion a gigantic avalanche of sediment on the steep continental slope which broke the cables, one after another, as it rushed downslope and flowed onto the abyssal plain."

BOTTOM EXAMINED

The Woods Hole Oceanographic Institution ketch *Atlantis* took two cores from the bottom of the Puerto Rican Trench, the deepest place in the Atlantic Ocean. The deposit here included limey shell of shallow-water organisms and fragments of limey marine plants that require sunlight for life. This material, transported from the shore to the deepest part of the ocean, was striking proof that currents must flow over the sea floor.

Starting between Iceland and Greenland and running to a point south of Newfoundland is a mid-ocean canyon, 2 to 4 miles wide and 25 to 100 fathoms deep, very possibly cut by periodic turbidity currents. Dr. Heezen believes all such submarine canyons were cut by these sea-bed rivers.

The turbidity curents offer clues to several major questions in which oceanographers are interested. For one thing, they indicate a means by which organic material is transported from the continental coast to feed fish and other organisms in the deep sea.

For another, these curents suggest how organic sediments may accumulate in sea basins and eventually become petroleum. Much of the petroleum of the world is found in ancient sands that once were part of the sea floor. Turbidity currents, therefore, may indicate where to look for undersea oil deposits; this concept has, in fact, been applied successfully in exploration of the coastal oil fields of southern California.

GOLD IN SEA WATER

The study of the sea floor, like most oceanography, is carried on in the interest of pure science, but as with many other basic studies, is not without its commercial, economic, military, and political implications.

Traces of many elements, including gold, can be found in sea water, and a lot of persons have had dreams of getting rich therefrom; to date, all of them have been, in the words of an oceanographer, "at least one decimal point wrong." Most of these elements are very much diluted in water and would require huge amounts of power to extract them.

As an example of what can be done, however, one major American chemical company has several plants extracting magnesium from sea water on a practical basis.

Mining the sea bottom for materials concentrated in the sediment is another possibility. The Blake Plateau, 400 fathoms deep and 80 miles off the North Carolina coast, is coated with manganese, valuable in the production of steel.

It is not as high in quality as that found ashore, laid down in ancient ocean basins of another age, but most manganese deposits are not located in the United States and it could get scarce in wartime. If so, it might stimulate submarine manganese mining; the material on Blake Plateau is in chunks, like coal, ranging from baseball size to flat discs, 6 inches in diameter. Scientists think it might be recovered with some sort of potato-picker arrangement dragged along through the mud, or perhaps it could be pumped up.

URANIUM FOUND, TOO

Scientifically, the big puzzle is: How did the manganese get there, and is it coming out of the water or the mud?

Many materials are concentrated in the ocean mud, mostly calcium in some form. Matter constantly is falling down through the ocean to the bottom like a weak snowstorm.

Uranium, highly valuable in this atomic age, is one of many substances found in much higher percentage in the ocean bottom than in the water, itself. Again, the ocean mud is not as good a source of uranium as the mines ashore, but many of these shore mines are petering out, and if this material gets scare enough, it will be practical to try submarine mining.

Among many other authorities, Prof. H. Schumacher, mineralogist of West Germany's Bonn University, believes the day of poorer minerals in all parts of the world is approaching. He has pointed out that as soon as the pitchblende deposits are exhausted, new sources of uranium, and many other essentials, will be sought eagerly.

NEW INTEREST SPURRED

The sea obviously is the basic source of petroleum, although the steps from mud to crude oil deposits are essentially unknown. Ocean petroleum sources already are assuming new interest with the Russian domination of Syria, in which are located most of the Middle Eastern oil pipelines.

Oceanographers do not yet know the maximum depth of water in which an oil well can be drilled; 100 feet is about the present maximum (the actual hole can be 18,000 feet or more) and that hasn't greatly increased the area that can be tapped, although Texas' oil-producing region is about half on land, half under water. But if men can drill oil wells beyond the 100-fathom curve, the sky's the limit. The Persian Gulf looks like the next important location of underwater wells, but until land supplies are all tapped—or pinched off by Iron Curtain politics—marine wells are not economical, but only experiments.

One cannot be sure, either, whether the deep ocean contains petroleum, but Dr. Robert Menzies of Columbia University, said, "We have discovered astonishing facts with regard to conservation of carbon in great depths of sea. In the Columbian Abyssal Plain, 200 miles from land, we recovered bottom cores showing layers of tree leaves and twigs well below typical deep-sea deposits 2,000 fathoms down, and extending over hundreds of miles. A staggering amount of carbon is entombed in this area, much of this material, once on the ocean bottom, was covered up in a day or less—thousands of years ago—by bottom sediment. The oxygen was thus excluded and the material preserved as a layer of sediment.

"IDEAL SOURCE FOR OIL"

"We consider such material is ideal source material for petroleum. Many of us are of the opinion much of our petroleum was formed from material like this in the past—in deep water, not necessarily in shallow water."

Also in New York, a physicist concerned with oceanography suggested drilling techniques would be perfected in the next 10 to 30 years so that it would be practical to do oil work 100 miles offshore, if desirable.

If Russia intends to control the supply of Middle Eastern oil on which Western Europe depends in either peace or war—and evidently she does—the time may be close at hand when America's principal allies will go to sea looking for petroleum.

Where the Farm Subsidies Go

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily Tribune of Saturday, April 11, 1959:

WHERE THE FARM SUBSIDIES GO

The Government's already troublesome farm surplus problem has taken a new twist with the discovery of a million dollar grain shortage in a Florence, Ill., elevator where the Commodity Credit Corporation stores grain. One of the two brothers who own the warehouse has been charged with converting part of the missing grain to his own use.

This episode only reemphasizes the absurdity of the farm subsidy lobby's claim that subsidies are essential to protect the small farmer. It is not the small farmer who winds up with the benefits. Department of Agriculture figures have shown repeatedly that the bulk of payments go to big corporate or private farms, and in amounts often exceeding $100,000. These big farmers make a business of producing grain for

sale to the Government at its support price, and the Government has piled up surplus stocks worth nearly $9 billion.

According to Senator WILLIAMS, of Delaware, an astute spotter of phony spending programs, "the high rigid support program is little more than a Government guarantee on the operations of corporate type farming, and actually encourages and underwrites absentee ownership to the detriment of the small farmer."

Since the Government is unable to dispose of its surplus, it must store it at an annual cost of $1 billion, and the people who benefit from this unintentional windfall are the owners of gigantic wheat bins.

It is worth noting that the two brothers in Florence, seeking a temporary trusteeship under bankruptcy laws, listed assets of $4 million and liabilities, including the missing grain, of $2.5 million.

Any small farmer who thinks he is benefiting from subsidies might well contemplate these juicy figures and ask himself, "How am I doing"?

Pouring Oil on the Fire

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. LANE. Mr. Speaker, New England was one of the first areas to suffer from the modern problem of chronic unemployment.

A number of its communities, in spite of persistent appeals for Federal assistance, are still in the economic doldrums.

We have a great human resource in the skills and the character of our people. These qualities were developed to compensate for our lack of natural resources. New England industries have been placed under a competitive disadvantage because they have had to pay higher prices for the fuels, and particularly oil, that has had to be brought in from distant States.

To survive, it has been necessary for us to import heavy residual oil from Venezuela and Canada.

The lobbying interests in other regions of the country, completely ignoring our predicament, are proceeding to cut off our lifeline, and force New England to subsidize the domestic coal, rail, and oil industries, as the final straw that could break our backs.

We in New England are slow to anger, but we will not tolerate this economic compulsion that threatens the very basis of our livelihood.

Speaking for our rising wrath and our determination not to be imposed upon to our loss is the following cogent editorial titled "Ganging Up on New England," which appeared in the March 31 edition of the Boston Herald. Under unanimous consent, I insert it in the CONGRESSIONAL RECORD:

GANGING UP ON NEW ENGLAND

They had a field day on New England in the Senate the other day. The Senators from the soft coal States joined the Senators from the oil States and the Senators from the shale States to hail the move to cut New England's residual oil imports.

It seems that in using this cheap imported oil, New England hurts the coal industry, the rail industry, the domestic oil industry and the development of shale oil deposits. So the coal States, the oil States, and the shale States (Colorado, Utah, and Wyoming) are lined up against us for one reason or another.

To be sure, the coal States want us to use coal, and the oil States want us to use domestic oil, and the shale States want us to be forced to pay enough for fuel to make the development of shale economically possible.

The concern of these States for New England was minimal. We are, it seems, expected to exist mainly as a compulsory customer.

It is hard to see this sort of thing going on in Congress without a sense of outrage. We have imported the heavy residual oil for power and large scale heating (nondomestic) because it is cheap and can be transported here cheaply by sea. In spite of constant attempts by oil and coal States to cut us off, our economy here has become heavily dependent on residual. Recently announced compulsory quotas will cut down our supply just enough to force up the cost of our fuel. In fact this is exactly the intent of the quotas, to compel New England (and other import areas) to subsidize the domestic oil industry. The reason given is national security, but the quotas apply also to Canadian oil, which would be just as available in wartime as domestic oil. In fact, Venezuelan oil is within the hemispheric defense line.

Now Senator BYRD of West Virginia (not to be confused with the veteran Virginian BYRD) would not only have us in New England give up our cheap fuel, but would force us into a large-scale conversion of our oil burners at a large cost. This so as to revive the lagging West Virginia soft coal industry and the coal-carrying railroads.

Both the West Virginian Senator and Senator LONG, of Louisiana, speaking for oil, admitted that their concern was with unemployment, though the security excuse got a nod now and then. It was clear that New England was expected to be a kind of involuntary employment provider for West Virginias and Louisianians.

The Senate speeches revealed the oil import quotas for what they are—a selfish regionalism to serve some States at the expense of others.

New England's congressional delegation will have to make common cause with other import States to fight for a free economy.

Private Investment

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New Orleans States-Item:

PRIVATE INVESTMENT

Support being accorded Representative HALE BOGGS' bill to encourage private investment overseas should draw smiles of approval from two sources:

1. Those people abroad who are sensitive over receiving outright aid from the U.S. Government.

2. Americans at home who would like to see a more modest price tag placed on our foreign assistance program.

The bill, presented by Boggs on the opening day of Congress, offers various tax incentives to stimulate investment of private U.S. capital abroad.

Resounding approval of the proposal comes from the international section of the New York Board of Trade.

In supporting the measure, the New York group also criticized recent Supreme Court decisions which permit the States to impose tax burdens on interstate and foreign commerce.

From the State Department recently came a recommendation that U.S. income tax reforms be effected to give companies greater freedom in their foreign finance operations.

The legislation and the support in principle it seems to be receiving are welcome on more than one score.

Our ranging foreign aid program, though effective in improving the lot of less prosperous peoples, is obviously not the best way of getting that job done.

Private U.S. capital working abroad would be the more respectable and efficient means of extending a helping hand overseas.

And it would be a means whereby a minimum burden would be borne by either end of the exchange.

Unions Made Whipping Boys for Sins of Modern Society

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROOSEVELT. Mr. Speaker, I wish to insert in the RECORD excerpts from a very fine article written by Father William J. Smith, S.J., director of St. Peter's Institute of Industrial Relations.

The article, "Labor's Wrongs and Rights," appeared in the Commonweal magazine, and while Father Smith's view need no elaboration, I do want to bring to the attention of my colleagues that Father Smith concludes that "no one has the right to assume the only place you will find corruption in American life is in the labor movement. The unions should not be made the whipping boy for all the sins and weaknesses that run all through modern society."

It is my hope that my colleagues will find the views expressed by Father Smith as thought provoking as I did upon reading them.

The following is excerpted from the Commonweal article:

LABOR'S WRONGS AND RIGHTS

(By Father William J. Smith, S.J., director, St. Peter's Institute of Industrial Relations)

That corruption has wormed its slimy way into some sections of the labor movement is a fact. Yet the parade of unsavory witnesses before the Kilieg lights, with snatches of testimony widely publicized, has highlighted this phase of the subjest out of all proportion to the whole.

The sordid features of the picture should neither be minimized nor concealed. They exist. But to present this caricature as the image of organized labor is a distortion of the fact.

Unions and corruption are not synonymous terms, and to attempt to identify the misdeeds of the minority with the good deeds of the majority is to do violence to justice.

No one class of our citizens has a monopoly on evil, a copyright on corruption, or the exclusive rights to the ill effects which have fallen upon the human race because of original sin. And to draw the conclusion from the findings of the McCellan committee investigation that the entire labor movement is tainted is simply a distortion of the law of logic. To infer further that the labor unions, and they alone, symbolize sin in American life is simply a surrender of reason.

Obviously, the public today has a right to scrutinize and evaluate the activities of the organized labor movement in America. There should not be, however, one standard of judgment for labor and another for individuals and groups who represent the various segments which comprise the whole of American society. The trade-union movement is not something isolated, unrelated to the rest of American life, standing alone in solitary segregation. It is part of an organic cultural whole.

A second fact about the labor movement which seems to cause concern to the public revolves around what antiunion critics call the monopoly power of labor. "The unions have become too strong, too powerful," is a common complaint. "They are a threat to the common good. They should be cut down to size."

The trade unions did not originate the capitalistic economic system. They have been compelled to fit into and to follow the pattern of bargaining which they found in the marketplace. The giant union is, consequently, the direct and natural reaction to the giant corporation.

At the present time we have 68 such commercial and financial institutions, each of whose corporate assets run from $1 billion at the lowest rung of the ladder to $20 billion at the top. The economic, social and political power of these, and other lesser giants, is all too evident. It seems just naive to talk about "cutting the unions down to size" while saying not a word about the accumulated power of the big unions' counterparts in industry.

In a democracy such as we have in this country and within the framework of an economic system that has happily but haphazardly evolved from an original false premise to something resembling an ordered industrial life, trade union organizations are entitled to exercise economic, political and social power. The measuring rod is not what management may think is "good for labor," but the common good as it is reflected in the integrity and ability of labor's leaders and the legitimate strength derived from the social activities of its organized membership.

When and if the power possessed by labor unions is used to the detriment of the public welfare, whether it be in a large scale operation or in a thousand small ways or circumstances on the local level, it is clearly both the right and the duty of public authority to enforce corrective legislation.

It would be a grave injustice, however, to attempt to restrict the political action of labor unions simply because labor's critics entertain an opposite political philosophy. It would be an equal injustice to attempt to restrict the economic power of labor unions simply to protect and expand a preusurped power held by the affiliates of organized management.

Nor need one (to qualify as pro-American) accept the National Association of Manufacturers' philosophy of individualism or the doctrinaire, antiquated economic theories of an "automatic economic system" still nurtured by some economists associated with the National Chamber of Commerce.

Labor unions must have power—economic, social and political power—if they are to carry out the social responsibilities that the very form of modern society places upon them. If the critics of the trade unions were to say "the craven, the immoral, the corrupt individual official must be rooted out of the American labor movement," no one could reasonably disagree with them. Power, any degree of power, in the hands of irresponsible and unscrupulous possessors of it, is certainly a danger and a threat.

Nor can it be questioned that some union officials have at times indulged in an arbitrary use of possessed power. No excuse or defense should be made for the labor tyrant whether he carries a union card or cracks the whip over unorganized workers in a sweat shop. That is one thing. But to talk in terms of denying to organized workers their rightful exercise of economic, social and political power is something else.

And no one has the right to assume the only place you will find corruption in American life is in the labor movement. The unions should not be made the whipping boy for all the sins and weaknesses that run all through modern society.

Brother, Can You Spare a Billion?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of April 11, 1959:

BROTHER, CAN YOU SPARE A BILLION?

Mr. Walter Reuther and Mr. George Meany, of the AFL–CIO, staged their much touted indignation meeting in Washington Wednesday over unemployment. It was no ragged horde that they led into town. A substantial cross-section of the union brass was on hand to orate about the iniquity of Mr. Eisenhower's playing golf. The rank and file came by special train or chartered bus, the ladies in new flowered hats and the gentlemen in pressed business suits. Before getting indignant, most of the visitors took a sightseeing tour.

About 100 of the contingent on the special train from Toledo got sick. The turkey they ate is suspected, a dish which, even in deteriorated condition, does not seem consistent with the pangs of hunger. Empty stomachs rarely are afflicted with food poisoning.

The complaints largely centered on whether the Government's statistics were correct. The unioneers chose to believe that somebody was padding the figures showing that unemployment was tapering off. Secretary of Labor Mitchell, a glutton for punishment, frequently pushed around at union conventions, turned up and promised to eat his hat if unemployment were not down by October to about 3 million.

This demonstration was originally billed by Reuther as a "march" on Washington. The description evokes memories of Coxey's Army walking on cardboard innersoles to the capital in 1894 to push the cause of fiat money, and of the West Coast "industrial armies" that headed east to protest unemployment that same spring. Fry's "army" from Los Angeles and Kelly's from San Francisco didn't come by chartered train, eating turkey dinners. They stole trains and tried to run them themselves.

This lawless activity at least suggested an element of desperation, but there was none of that in Reuther's political show, which picked up such coattail riders as Senator PAUL DOUGLAS, haranguing about Mr. Eisenhower being the captive of hard-faced men. Mr. Reuther got in the stock observation that national policy is still being dictated by former Secretary of the Treasury George Humphrey, a Bourbon, according to Mr. Reuther, who shoots quail, a bird rather smaller than a turkey.

While there were some tales of hardship, they were mitigated by the Federal extension of unemployment compensation to 39 weeks, and, if there were real suffering, it might be imagined that Mr. Reuther and Mr. Meany might have done more to alleviate it by making hardship allotments from the union treasury rather than chartering special trains.

But it must be suspected that that was not their purpose. What they were trying to do was cause political embarrassment to the Republican administration, remind numerous Democratic Congressmen of their debts to union politicking, and advance the course of the welfare state by urging unlimited Federal spending for anything and everything in sight. Indeed, Mr. Meany put this dogma into so many words, with lavish outlays in his prospectus for schools, hospitals, homes, airports, and roads.

The old depression touch of a dime for a cup of coffee has yielded to the organized demand for billions from the taxpayers for all sorts of boondoggles, with none of the union statesmen caring a whit for the consequences of inflationary spending brought on by a long siege of just this sort of thing.

These gentlemen have not the slightest capacity to relate cause and effect. Their own wage demands have contributed as much as anything to loss of jobs, and the Federal spending policies they invariably recommend are not incidental causes in producing economic malaise.

Their idea that the Government can cure anything is realizable only if we all want to embrace bankruptcy and socialism. Evidently that is what these men have in mind.

Greater Wilkes-Barre Chamber of Commerce Supports Flood-Douglas Area Redevelopment Bill

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted on March 20, 1959, by the Greater Wilkes-Barre Chamber of Commerce:

Whereas the Chamber of Commerce of the United States through its official publication entitled, "Congressional Action," volume 3, No. 11, dated March 6, 1959, and in a special report dated February 9, 1959, has taken the position in opposition to the enaction of S. 268, S. 722, and S. 1064 and H.R. 3505 providing for special financial assistance (loan and/or grants) from the Federal Government to areas of persistent and substantial unemployment in an effort to attract industries to these areas so as to reduce unemployment, which bills are now pending in the Congress of the United States; and

Whereas the Greater Wilkes-Barre area has been classified as one of the areas of persistent and substantial unemployment which these bills are designed to aid; and

Whereas the Greater Wilkes-Barre Chamber of Commerce in an effort to help the people of this area to help themselves has consistently fostered industrial develop-

ment in the area of Greater Wilkes-Barre, Luzerne County, Pa., both through its own efforts and by assistance of the Greater Wilkes-Barre Industrial Fund, Inc., and Committee of 100, Inc., both of which corporations are chartered for the purpose of encouraging industrial development in the aforesaid area and which have been active in this field and have spent time, effort, and moneys in the effort to attract industry in order to reduce the persistent and substantial unemployment in this area; and

Whereas it is the policy of the Commonwealth of Pennsylvania as expressed through the General Assembly of the Commonwealth in the passage of the Pennsylvania Industrial Development Assistance Act (act of May 31, 1956, act No. 635) to give assistance in developing and fostering new industry in depressed areas of the Commonwealth; and

Whereas the Greater Wilkes-Barre Chamber of Commerce and the Greater Wilkes-Barre Industrial Fund, Inc., and Committee of One Hundred, Inc., have cooperated with the Pennsylvania Industrial Development Authority and are continuing to cooperate with the aforesaid authority in bringing new industries to this area; and

Whereas it is the considered judgment of the Greater Wilkes-Barre Chamber of Commerce that the position of the Chamber of Commerce of the United States in its opposition to S. 268, S. 722, and S. 1064, and H.R. 3505, is not well taken or in the best interests of the people of the Greater Wilkes-Barre area and other areas of the United States which suffer from the same problem; and

Whereas it is the considered judgment of the Greater Wilkes-Barre Chamber of Commerce that whenever any area of this Nation suffers economically, the well-being of the entire Nation is seriously affected: Now, therefore, be it

Resolved by the Greater Wilkes-Barre Chamber of Commerce as follows:

1. That the position of the U.S. Chamber of Commerce is inconsistent with the position of the Greater Wilkes-Barre Chamber of Commerce in regard to the above-mentioned bills viz, S. 268, S. 722, and S. 1064, and H.R. 3505.

2. The Greater Wilkes-Barre Chamber of Commerce in reaffirmation to the position which it has consistently taken with regard to industrial development supports the sponsors of the aforesaid proposed legislation and requests the Congress of the United States to enact said bills into law.

The above resolution was unanimously approved at a regularly stated meeting of the board of directors of the Greater Wilkes-Barre Chamber of Commerce on Friday, March 20, 1959.

_____, *President.*

_____, *Secretary.*

Dated March 20, 1959.

Keep Newscasts for News

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. DERWINSKI. Mr. Speaker, due to abuses surrounding the equal time requirements now in effect through the Federal Communications Commission ruling, I believe we should take note of H.R. 5389 introduced by Representative GLENN CUNNINGHAM, of Nebraska, to alleviate this situation. Radio and television stations are now required to offer equal time to all candidates for the same office whenever one of the candidates makes news. This, to me, would seem to hamper the effectiveness of swift and accurate news reporting, and for this reason I believe the bill introduced by Representative CUNNINGHAM merits our support.

Under leave to extend my remarks, I ask that an editorial which appeared in a recent issue of the Chicago American be included at this point in the RECORD. The text of the editorial follows:

KEEP NEWSCASTS FOR NEWS

Television executives must be looking fondly on Nebraska's Republican Representative CUNNINGHAM. He introduced a bill this week that would get them off an embarrassing hook by amending the Federal Communications Act.

CUNNINGHAM'S measure would exempt regular news broadcasts from the equal time requirement for political candidates. The bill recognizes an elementary fact of life: A man in an important public office almost automatically makes more news than one who isn't in office.

The bill does not leave it up to station executives to decide which candidates are or are not worthy of appearing on TV, for the equal time provision would stay in effect for political broadcasts.

The measure would, however, relieve the distress suffered by TV executives here last month, when they discovered that under the law they had to grant equal time on newscasts to Lar Daly.

Since the primaries, in which he trailed Mayor Daley by roughly 11 to 1, Daly has been very sportsmanlike about equal time. He assured city officials this week that they could go ahead and have a St. Patrick's Day parade televised, even if it does show the mayor marching.

Anyway, we hope CUNNINGHAM'S bill is passed. TV devotes enough time to situation comedy now, without having to include it in news broadcasts.

Chamber of Commerce Week

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. DOOLEY. Mr. Speaker, the current week is known as Chamber of Commerce Week. Evidence that there's nothing new under the sun keeps turning up in the most unlikely places. From far off Mesopotamia comes proof that the local chamber of commerce—that symbol of jet-age enterprise—actually had its counterpart in the ancient city of Mari some 6,000 years ago.

If archeologists who plied their trade amid those ruins have read their cuneiform tablets correctly, the administrative palace of the Kingdom of Mari boasted both a foreign office and a board of trade, and from all accounts, business was really booming. In his book, "The Bible as History," Warner Keller tells us, "More than 100 officials were involved in dealing with the incoming and outgoing messages, which amounted to thousands of tablets."

Babylon had its chambers of commerce, too, apparently within the shadow of the Tower of Babel and the fabulous Hanging Gardens. During the Middle Ages, fairs and merchant guilds were the predominent businessmen's organizations. The predecessor of the modern chamber of commerce was started during the reign of the French King, Henry, with the establishment of the Superior Chambers of Commerce of France. About that time, too, the merchants of Marseilles formed an independent voluntary group to represent the commercial interests of their port. This early local was closely akin to that country's present day chambers of commerce, voluntary organizations having quasi-public functions. Today these groups have charge of stock and produce exchanges, issue export certificates, and even help manage the port cities. They also differ from their American counterparts in that their membership is smaller, ranging from 9 to 21.

Switzerland has two distinct types—those that follow the French concept and function under state auspices, and independent groups similar to our own. The German chambers, like those in France, are pretty much official institutions. On the other hand, in Britain they are, like our own, entirely voluntary organizations.

And speaking of differences, our own chambers of commerce really evolved from three somewhat different types of business groups, each fulfilling a particular need created by a particular time and place. There were the trading organizations, whose members met for the sole purpose of trading with one another, These were sometimes known as boards of trade, a name that still survives in some areas, particularly small towns. Then there were the protective organizations—businessmen who banded together against high taxes and discriminatory regulations. And finally, in the newer sections of the country, town boosters organized to seek new industries and good roads that would draw tourist travel and help the community grow.

Regardless of these differences, the common goal of all three types of business groups was progress. But in a country marked by rapid growth and change as ours has been, what today may pass as progress can become, almost overnight, somewhat of a mixed blessing. For example, as the horse-and-buggy days slipped further into history, the big move to the new population centers brought new problems. But the oldtimers saw no personal profit from becoming bigger cities, and they often voted down needed public improvement programs. Nevertheless the growth of America's cities was as inevitable as the industrial revolution, and so chambers of commerce became the vehicles by which civic-minded people could be mobilized "to build bigger communities by making them better."

The stock market crash brought a somewhat different problem, though. As land values went down, so did the municipality's ability to service their

overextended bond capacity. Faced with high municipal taxes, the businessmen took a new look at their organization, and belatedly they became tax conscious. Today the role of guardian of the taxpayer's pocketbook is an established function of the chamber of commerce.

Until 1912, the chamber of commerce movement had little or no cohesiveness. Then President Taft urged a group of businessmen to form what later became the Chamber of Commerce of the United States. Now there are 32 State and regional chambers, but the backbone of the movement still remains the local unit. And these days its business is not all business, either. The local chamber of commerce provides the leadership for all kinds of community activities—a project for the handicaped, the building of a playground, a fund drive to send city kids to camp.

As a matter of fact, projects aimed at helping youngsters, rate high among chamber of commerce-sponsored activities. But then this preoccupation with the problems of America's children is nothing new in chamber of commerce history. The records show that the Ohio Chamber of Commerce—the oldest in the country—was responsible for the enactment of the first child labor law in the Nation.

Three Hundred and Fiftieth Anniversary of Dutch Landing

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROOSEVELT. Mr. Speaker, on March 14, 1959, the second annual banquet of the Holland Society of New York, Potomac branch, was held at the Mayflower Hotel in Washington, D.C. This banquet marked the opening of the festivities commemorating the 350th anniversary of the landing of the Dutch at New Amsterdam.

I am particularly pleased to bring this significant occasion to the attention of my colleagues, as I am a life-long member of the Holland Society as was my father before me.

Messages were received at the banquet by numerous prominent persons, including His Excellency J. H. van Roijen, Netherlands Ambassador to the United States, whose greeting read as follows:

Congratulations to the Potomac Branch of the Holland Society on initiating the 350th anniversary of the landing of our people on your shores and the commemoration of this year of history.

President Eisenhower wired greetings, as follows:

It is a pleasure to send greetings to the members and guests of the Potomac Branch of the Holland Society of New York gathered on the occasion of the 350th anniversary of the Dutch explorations by Henry Hudson. From the earliest days, the growth and spirit of our country have been strengthened by citizens of Dutch descent. The Holland Society helps to preserve an important quality of American culture. I am delighted to add my best wishes for a fine evening.

DWIGHT D. EISENHOWER.

I should like to touch briefly on some of the historical highlights in connection with the settling of the Dutch on what is now known as Manhattan. For instance, Netherlands' Prince Bernhard said, on May 19, 1958:

The Netherlands and the United States can pride themselves on very old cultural relations. In 1638 Holland provided your country with its first schoolmaster, Adam Roelants. An early President of the United States, John Quincy Adams, opened a long line of American students seeking knowledge at Dutch universities, when at the age of 13 he registered as a student at the University of Leyden.

You who are friends of my country and whose ancestors in many cases came from there, have set yourselves the task of advancing the friendship and cultural relations between our two countries.

There was a tablet in the court of the recently demolished Produce Exchange near the Customs House in downtown New York that marked the location of the first school in New Amsterdam, taught by Adam Roelandsen. It was also the first school of which there is any record in America.

Another first: In 1648, when the northernmost limits of the town extended no further than Wall Street, Gov. Pieter Stuyvesant laid the basic foundations of New York's and the Nation's volunteer fire-fighting system when he appointed four fire wardens.

A medical first in America: When the 17th century began, doctors cured much more by personality than by their remedies and practices. As a consequence, this era witnessed the discoveries of Antony van Leeuwenhoek, who built the microscope and was the first to describe the corpuscular formation of the blood, and those arising from Christian Huyghens' epochal studies in the field of optics. Dutch colonial America was the scene of several probable "firsts," notably the first coroner's inquest—1658—and establishment of the first hospital—1659.

The three Presidents: Three Presidents of the United States have been of direct descent in the male line from settlers of New Netherland well in advance of 1675. At least as many more occupants of the White House have been in part of such ancient stock through marriage. These three Presidents were also Governors of the State of New York. The first of the trio was Martin Van Buren, the second was Theodore Roosevelt—a very active member of the Holland Society—and the third was Franklin Delano Roosevelt, my father.

Our flag: The *Andria Doria*, bearing a copy of the Declaration of Independence of July 4, 1776, and her commission from the Continental Congress, signed by John Hancock, with copies in blank, signed by the same, for the equipment of privateers, and with a 13-striped flag flying at her masthead, sailed into the roadstead of St. Eustatius on the 16th of November 1776. She dropped anchor before Orangetown and in front of Fort Orange. The commander of the fort, Abraham Ravenle, on seeing the character of the vessel, and recognizing the flag of the American Congress, was in a quandary.

What should he do? Should he salute it with the full number of "honor shots" which were usually accorded to men-of-war of a recognized nation and thus officially recognize sovereignty of the United States of America? He was ordered by Governor De Graeff to return the salute with two guns less, as if the *Andria Doria* were a merchantman. Upon the commander's return to the fort, the Dutch garrison belched forth a salute of 11 guns. Following this event were serious repercussions. Governor De Graeff was subsequently recalled to Holland. The English protested in no uncertain terms to the Netherlands Government and accused it of violating its neutrality in recognizing an enemy.

EVACUATION DAY, NOVEMBER 25, 1783

Their discovery is a feat even more difficult than that performed by Symon's great-great-grandson, Sgt. John van Arsdale, who, after fighting against the British in the War of the American Revolution and being captured, imprisoned, and nearly starved to death by them, on evacuation day at New York, November 25, 1783, climbed the tall greased flagpole at the battery, tore down the British flag, and fastened the American flag there. The British had evacuated the city at noon, leaving their flag flying, after secretly greasing the pole. American military orders for the day were that the American flag should be raised upon the pole when General Washington appeared at the battery. At the vital moment the order could not be executed; the humiliation was intense; no one was able to climb the pole—until a young man in the crowd of spectators volunteered. He was John van Arsdale, who, having been a sailor in his father's ship, climbed the pole, tore down the flag, and substituted Old Glory. Upon descending, he received an ovation and a gift of money, to which General Washington contributed. (Hoppin, "The Washington Ancestry," vol. III, p. 164.)

Many fortunes have been made in New York City real estate since the Indians traded Manhattan to Peter Minuit for trinkets worth $24.

Today's value of all land and buildings, less tax-exempt holdings, on Manhattan Island is far in excess of $10 billion. The Dutch certainly got a bargain for their beads.

Founding Father of Vero Beach: Waldo Sexton

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROGERS of Florida. Mr. Speaker, on November 5, 1958, the citizens of Vero Beach, Fla., celebrated Waldo Sexton Day, honoring one of its outstanding citizens with a special day of observance, proclaiming to all their pride and devotion and thanks to Waldo Sexton for his many contributions to Indian River County and Vero Beach.

Miss Elena K. Mead, who writes for the Vero Beach Press-Journal, tells the story of Waldo Sexton in an article entitled "Vero Beach's Mr. Section" from the Orlando Sentinel-Florida magazine of November 2, 1958, which I would like to have printed in the CONGRESSIONAL RECORD. Her article vividly expresses why Vero Beach loves Waldo Sexton and why they call him one of the founding fathers. His contributions to the area are many and it has been my pleasure to know the Sexton family and, in particular, his fine sons, Ralph and Randy, their wives, and his daughter Barbara, and her husband John Tripson.

Miss Mead's excellent article on Waldo Sexton—the man who made Vero Beach and Indian River County a more interesting place to live—follows:

MAN OF THE WEEK: VERO BEACH'S MR. SECTION

(By Elena K. Mead)

The plow salesman is coming into his own. Next Wednesday, Indian River County is paying tribute to a man who came to Florida 44 years ago to sell farm implements and stayed to become one of her most enthusiastic developers.

He's Indiana-born Waldo E. Sexton who was sent to Florida in 1914 by the Spaulding Tilling Machine Co., Cleveland, Ohio, to demonstrate a heavy plow that Sexton says was "away ahead of its time." It failed to sell in Florida because nothing could move it in this sandy soil. Horses, mules, even oxen proved inadequate.

But the plow served its purpose. It brought Waldo Sexton to Florida, and next Wednesday bankers, citrus men, society women, and ranchers will rub elbows at a celebration, beginning at 2 p.m. and lasting until midnight, honoring the man who has helped to gild this section of the upper gold coast.

Best known for his famous Driftwood Inn on the beach here, resplendent with hand-carved furniture, wrought iron grill work and objects d'art from all parts of the world (as well as one of the world's largest collection of bells—Sexton long has had an enviable record in the fields of citrus and cattle raising as well as land development.

He aided in the organization of the Indian River Citrus League and served as its first president: Organized and underwrote the Indian River Fair Association. For 5 consecutive years he took first prize with his Marsh seedless grapefruit at the Tampa State Fair.

He had the first Florida orange analyzed. "I wanted to find out why Indian River citrus fruit was better than any other." California data was being used in Florida.

A Dr. Stuckey at the University of Kentucky gave him the answer with an analysis that is still used in the agricultural department at the University of Florida in Gainesville.

In the horticultural line, he developed three new avocados which were named Sexton, Indian River, and Vero Beach by the U.S. Department of Agriculture.

He is credited locally for having started the first dairy. His son-in-law, John Tripson, now operates it, with daily delivery covering all of Indian River and most of St. Lucie Counties.

His interest in beef cattle led him to try to breed and protect the native Florida guinea cow, a tiny animal producing a great deal of milk on a minimum of feed and said to have been brought to this country by the adventuresome Spaniards.

In recalling his coming to Florida, Sexton likes to tell the story of his discovery of the Sunshine State.

"I fell in love with Florida the first day. And I think I set some kind of a record. I had $500 in my pocket, and with it I made a downpayment on 120 acres of land, 100 feet of oceanfront, and a business lot. As the years went on, I never thought of putting money any place else. Some of the boys bought stocks and bonds, but I couldn't think of anything I'd rather have than more of Florida."

As a result, today, he owns some of the country's best citrus and pastureland as well as valuable downtown and beach property.

After the failure of the plow, Sexton went to work for the Indian River Farms Co., developers of the Vero Beach area, traveling all over the East and mid-East, giving lectures to groups of landseekers, marshaling them into excursions, bringing them to Florida where they were turned over to the late Senator A. W. (Tony) Young for the full treatment, Sexton taking the next train back north to look for more prospects.

"Sometimes it would be 3 weeks that I would never sleep in a bed," he says.

When he started farming on his own 3 years later he showed his organizational ability by setting up the Indian River Fruit & Vegetable Co., selling citrus trees for the Oklawaha Nurseries.

Of the 10,000 trees he set the first year he had only 1 percent loss.

Graduated from the school of agriculture, Purdue University, Sexton lays claim to a green thumb and today says "One of my greatest accomplishments has been tickling nature and making it respond."

His second organizational job was setting up the Indian River Products Co., a grove maintenance outfit, in January 1920, which he still serves as president.

He was great on organizational work in his new-found land. Just couldn't help it grow fast enough. At one time he was president of 17 corporations dealing with dairy, citrus, and vegetables.

Of the 17, 12 are still in operation and he is president of 9 of them. They include (besides the Indian River Products Co.) the Oslo Citrus Growers Association, a co-op packinghouse; Oslo Hammock Corp., owning 200 acres of the world's best Indian River citrus and 300 acres of undeveloped land; Oslo Packing Co., a holding company that owns property in the beach area; Sexton Groves, which controls 80 acres of excellent citrus and 80 acres of improved pastureland; Vero Beach Realty Co., Inc. (He's the oldest living realtor in the country from years of operation, having opened his office in 1914.)

Also, the Royal Park Service Co., owned jointly by Sexton, his cousin, Walter S. Buckingham, and a college classmate, John W. E. Wheeler; the Vero Beach Dairy, Inc., a family corporation owning historic Tiger Hammock and the land on which his ocean grill restaurant is located; Kenmore Groves, Inc., owners of 40 acres of producing groves.

Still in operation but not headed by Sexton are the McKee Sexton Land Co. and the Royal Park Co. During the depression years, Sexton was one of 75 men who formed the Florida Production Credit Association to make crop loans to farmers.

Sexton was nearly 50 years old before he started dabbling in the extraordinary. Luck shoved him into a new field—the attraction business.

Charles McKee, the man who had headed the Spaulding Tilling Machine Co., had a cousin named Arthur McKee, an orchid fancier, who chose to spend his honeymoon in Florida.

He was advised to look Sexton up and did. While on a little sightseeing trip in a Model A Ford, over roads that scarcely deserved the name, Sexton managed to upset the car, spilling bride and bridegroom.

They decided to stay a few days to get their nerves settled, with the result that McKee became interested in the area and established the Jungle Gardens, a dream of Sexton's and now one of Florida's major tourist attractions.

That was in 1932.

A couple of years ago, Sexton built a "mountain," a pile of shell topped by a shaft on which he printed the five flags that have flown over Florida.

PIRATE GOLD

Luck touched him again. A Fort Lauderdale developer saw the needle, became interested in the property adjacent to it, and leased the land for 99 years for a residential apartment development.

Many people do not take time to get acquainted with this mountain of a man, who is sometimes referred to as the Hemingway of architecture. Underneath what seems a brusque nature is a deep sense of humor, combined with a little boy's curiosity and a love of the romantic.

Asked why the lightning had struck the Ocean Grill Restaurant some six times, he confided, "there is really pirate gold buried beneath the building."

His wide-eyed grandchildren listen intently to his tales of fairies and leprechauns which he can discuss as convincingly as he can talk about the price of citrus with a fellow grove owner.

Now, supposedly retired, he has turned his cattle interests over to his older son, Ralph, and the groves to the youngest of his four children, Randy.

His daughter, Barbara (Mrs. John Tripson) and her husband operate the dairy and another daughter, Jacquelin (Mrs. Jack Daley) is married to an Episcopal rector and lives in California.

He is proud of his 13 grandchildren; and of "Elsabeth, the only wife I've ever had."

In his retirement, he is building a Ponce de Leon garden with the central figure being chiseled out by an itinerant wood carver named Al Quintana. He is also finishing up what he calls his Turf Club, west of the city, which he expects to operate as a "pizza pie palace for poor people."

As can be imagined, his friends are legion—among the colored as well as white. To the Negro people he is known as Mr. Secton and any of them seem to deem it an honor to work for him.

And so next Wednesday the folk of Indian River County are going all out to give a colorful celebration, a parade, a free barbecue, and a street dance for a colorful man who has made Vero Beach and Indian River County a more interesting place in which to live.

A Point of View

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in Social Action in Review, February-March 1959 issue. This publication is printed under the auspices of the Commission on Social Action of Reform Judaism:

A POINT OF VIEW: POAU DEFLECTS FROM STATED GOALS TO ANTI-CATHOLIC POLICIES, PRACTICES

The time has come for some candid words to be said about the Protestant and Other Americans United for Separation of Church and State (POAU). The very title of the organization is unfortunate. While it is true that Protestants are intensely opposed to

public funds for parochial schools, or to the appointment of an Ambassador to the Vatican, the truth is that this passion for church-state separation does not usually extend to public education. By and large, Protestants are no less involved than Catholics in pressing religious practices upon the public schools.

But, beyond the question of the name of the organization is a much more serious problem: that POAU seems to have been deflected from its intended purposes into a position of obsessive anti-Catholicism. The only issues which seem to evoke vigorous action from the POAU are those which are directed against so-called Catholic power.

Disturbing evidence of this tendency, which frequently edges across the borders of good taste and tolerance, has been the questionnaire which POAU has designed to elicit the views of Catholic (and only Catholic) candidates for high public office. If such a questionnaire is needed, it should be directed to all candidates. If such religious discrimination were directed against Jews, every Jewish organization would have filled the air with angry protests. They and all other groups dedicated to fair play should repudiate the unconscionable suggestion that a religious test should be established for American public officials.

Despite the obvious progress which the American people have made since the dark anti-Catholicism of the Al Smith campaign, it would be foolish to pretend that anti-Catholic bigotry is a thing of the past. Anti-Catholicism, it has been said, is the antiSemitism of the intellectual. One must confess, in all honesty, that anti-Catholic remarks and fears are not unknown in Jewish circles, even in circles which denounce bigotry and discrimination. There is significance in the fact that the problem of anti-Catholic prejudice does not appear to challenge the interest of Jewish groups as actively as does prejudice against Jews, Negroes, Puerto Ricians, Mexicans.

There are many positions which Catholic groups take with which Jewish groups are in sharp disagreements. When this is the case, we disagree vigorously and fight for what we believe in the market-place of ideas. But this does not give us the license—nor does it give one to the POAU—to inject into public controversy the evils of baiting and religious rabble rousing. The time has come for the POAU to pause and consider where it is and where it is going.

A. V.

Five Out of Six Medical Societies Favor Social-Security Coverage for Doctors

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. ROOSEVELT. Mr. Speaker, recently my attention was drawn to an article appearing in Medical Economics which shows that in statewide polls that have been conducted to date, doctors in five medical societies have come out in support of including physicians in the Federal social-security program. And in a sixth, inclusion was opposed by a narrow margin.

Becauce this is a matter which, I believe, has been given serious thought by my colleagues, I am therefore offering it for their perusal:

WHAT THE STATEWIDE SOCIAL SECURITY POLLS ARE SHOWING

(By Robert L. Brenner)

"Do you favor including physicians in the Federal social-security program?"

That's the question six major medical societies have asked their members in recent months. And the scoreboard so far is the best indicator yet of whether you and your colleagues will eventually get social security coverage. Here's why:

Leaders in Congress have hinted they won't extent social security coverage to self-employed medical men unless the A.M.A. asks them to. And the A.M.A. has indicated it won't take this step unless a majority of delegates from its constituent societies say they want social security.

At last June's meeting, the association voted down two State delegations' request for a nationwide poll of doctors. Said the A.M.A. House of Delegates: "Any such poll should be taken on a State-by-State basis and the results transmitted to the delegates."

So to keep abreast of developments, you've got to watch what happens next in the constituent societies. And make no mistake about it. Things are happening.

So far, Ohio, Maine, the District of Columbia, Connecticut, New York, and Georgia have completed polls that are expected to influence the A.M.A.'s final decision. The results: A big majority of doctors in 5 of the 6 societies seem to want coverage; it has been narrowly voted down in the sixth.

You can't base a solid prediction on just six polls, of course. But they do give the most up-to-date indication of how the wind is blowing. Here's more detail on the results of each:

Ohio: In favor of social security coverage by about 3 to 2.

Ohio's poll, taken last October, was preceded by heavy publicity in the State and local medical journals. As a result, the vote was heavy; 6,832 of the society's 8,900-odd members responded. The outcome: 4,095 in favor, 2,737 opposed.

Maine: In favor of social security coverage by nearly 2 to 1.

Maine's doctors voted heavily, too. Of the society's 840 members, 607 sent in ballots. The tally: 389 in favor, 212 against, 6 no opinion.

District of Columbia: In favor of social security coverage by about 3 to 1.

The vote in this society was 550 in favor, 192 against. In addition, many of the doctors wrote explanations of why they voted as they did. Typical reason for a "yes" vote: "I have always bitterly opposed 'something for nothing.' But since we have to help pay for social security, we should receive its benefits."

Typical reason for a "no" vote: "I'm holding out for Congress to pass legislation that lets me put aside some of my income in a tax-free pension fund. In other words, I want to buy my own social security."

Connecticut: In favor of social security coverage by more than 2½ to 1.

Connecticut's delegation was one of the two that asked the A.M.A. last June to take a nationwide poll. By then, the State society's members had already voted for social security, 1,391 to 504.

New York: A majority in favor of social security coverage.

New York's was the other delegation that asked the A.M.A. for a poll of all the country's doctors. The exact results of its own statewide poll have never been released. But the State's delegates have standing instructions to vote for social security if it comes to an A.M.A. vote.

Georgia: Opposed to social security coverage by a slim margin.

Fewer than half the society's members responded to its recent poll, and one society official calls the results entirely insignificant. Nevertheless, Georgia's A.M.A. delegates have nothing to go on but that vote: 539 against, 496 for.

Statewide polls are now under way or planned in Pennsylvania, Maryland, Michigan, and Delaware. Other States are expected to follow in coming months.

The Big Depletion Argument

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. STEED. Mr. Speaker, the percentage depletion provision of the income-tax law is a subject of frequent discussion. But many are not familiar in detail with the reasons for this provision and with its history and operation. Mr. E. C. Seymour, senior vice president of the Magnolia Petroleum Co., gave a succinct summary of his experience and viewpoint in this field in the January-February 1959 issue of Magnolia News. His article, "The Big Depletion Argument," emphasizes the relation between the depletion provision and future oil resource development in the United States ample for the national security:

THE BIG DEPLETION ARGUMENT

(By E. C. Seymour, senior vice president, Magnolia Petroleum Co.)

Tucked into the maze of the United States' income-tax law are 73 words that most likely will trigger a hot congressional fight in 1959.

The expected attempt to erase or change those words carries not only vital significance for Magnolia and the rest of the oil industry but for every citizen.

Taken together the 73 words are called by most people the "depletion allowance." The oil industry prefers "percentage depletion" or "depletion deduction." A scattering of political figures from outside oil-producing States have termed it a "tax loophole."

What is this 33-year-old provision and why, at this late date, is it about to step into the national spotlight for cheers or boos?

Avoiding the technical language used in the law, the provision permits taxpayers—in figuring their gross income—to deduct 27½ percent of the revenue they get from producing oil and gas. The amount of the deduction cannot, however, be more than 50 percent of the net income from the property.

Note that the deduction does not apply to pipelining, refining, or marketing income—only to oil and gas wells. Note also that it applies to any taxpayer, whether company or individual.

Suppose a company owned three oil wells on one lease, and the total income from the oil amounted to $20,000 a year. It could claim a deduction from its income of 27½ percent, or $5,500.

But before claiming it, the company must also figure what 50 percent of the net operating profit would be. It spent $6,000 to get the oil out of the ground, so its net operating profit was only $14,000; 50 percent of that would be $7,000. The company can then take its depletion deduction since the amount in dollars is less than 50 percent of its net operating profit on the property. (However, contrary to general belief, no depletion deduction could be claimed if the lease had an operating loss.)

In practice, this limit pares the depletion deduction substantially below 27½ per-

cent and complications of following the law make this simplified example rare. But basically that is how the allowance works.

UNDER ATTACK

In 1959 Congress is expected to hear proposals for changing or doing away with the depletion deduction; various Members have expressed opposition, and the Director of the Budget has spoken of it as a possible way of raising money to help meet the big deficit in the Federal budget.

Also, there has been criticism from individuals and some newspapers. They say, for example, the allowance is a special privilege, that the oil industry makes too much money anyhow, that maybe such provision is needed but 27½ percent is too high.

Answers to these criticisms come from not only people in the industry but many outside it.

In 1951 President Truman appointed a Presidential Commission to investigate the state of the Nation's natural resources, and to recommend national policies that would strengthen the country's economy and military security.

PALEY COMMISSION

A year later the Commission—informally named after its Chairman, William S. Paley—returned its report to the President. Among other things, it dealt with the depletion rate.

"The present structure of minerals taxes includes strong and desirable incentives to explore for, develop and produce minerals of importance to the Nation's growth and security * * * the device of percentage depletion is a powerful inducement to capital to enter the relatively risky business of searching for mineral deposits of uncertain location, quality and extent."

The Paley Commission thus underlined the basic principle upon which the provision was built: that it would help keep the Nation supplied with oil. The Nation must have oil for peacetime commerce, and it must have it for national defense.

And to get it people must drill for it.

From the beginning, Congress recognized that getting people to drill for oil or invest in such drilling involves an almost foolhardy willingness to take enormous risks—unparalleled in such degree by any other enterprise.

A good deal has been said about these risks, but a thoughtful review gives more than surface significance to them.

Currently, one wildcat well—a well drilled in unproven territory—produces oil and gas out of every nine drilled. But only 1 out of 49 finds a pool of a million barrels or more; by most estimates it takes this size discovery to earn a profit.

The odds against locating a field of 50 million barrels or more are about 1,149 to 1.

Suppose that the income tax law did not take this into account. The oilman drills nine wildcat wells and eight are dry. The ninth is a producer (the odds are against it being profitable, but let's assume that it is). Every barrel of oil or gas he takes from his ninth well depletes his capital, which is simply the oil or gas he has discovered but not produced. He is transforming his capital into income.

The law isn't greatly bothered about this, except to the extent of wanting the oilman to have enough incentive to start out looking for more oil in spite of his eight failures.

There are plenty of places where capital can be invested that will yield a surer return than in drilling. Congress knew this. It made tentative attempts to provide producers more incentives to find oil during the period from 1918 to 1926, a time when there was real worry that the Nation would not have enough oil to keep up with its growth.

MORE DRILLING, MORE OIL

Passage of the depletion provision in its final form, in 1926, was followed by a succession of discoveries that today has brought the Nation's domestic oil and gas reserves to the highest level in history.

Thus, the basic idea has been to keep capital flowing into the hunt for oil in spite of the enormous risks involved. The strongest critics of the provision do not dispute its success in doing this.

But what about 1959? Aren't conditions different now?

President Albert L. Nickerson, of Socony Mobil Oil Co., said recently that Mobil economists predict a 40 percent increase in demand for petroleum in the next 10 years. American Petroleum Institute figures indicate that, at today's demand levels, the big reserves we have will still last only about 11 years. A great deal more oil is going to have to come from somewhere.

And oil is getting harder to find in the United States with wells more expensive and deeper. This is a hard fact, even with the depletion deduction. What is needed, according to supporters of the provision, is less talk about cuts in the deduction and more thought now about a future increase. Foreign crude may be plentiful, but the Nation cannot afford to let domestic supplies wither as odds against finding oil and gas get higher and higher. The risks of such a policy are even more than those of drilling itself.

OIL AND SECURITY

Magnolia, the oil industry in general, and non-industry supporters of the present depletion rate insist that the Nation's security depends heavily on ample oil supplies which the provision helps provide, and are willing to do battle against specific criticisms.

Is the deduction a tax loophole?

The pro-depletion forces say the provision is no more a loophole than the provision for special treatment of long-term capital gains, or giving married men more deductions than bachelors. Both recognize special reasons for adapting the tax law to realities if fairness and the national interest require it.

The argument that oil companies' profits are too high already is met with the statement that their profits are not as high as in other industries.

Statistics gathered by the First National City Bank of New York show that oil companies' earnings, after taxes, averaged 9.5 percent of invested capital versus 10.6 percent for all other manufacturing companies. This was from 1926 to 1956 inclusive, the first 30 years of the depletion provision. The Chase National Bank studied earnings of the 30 largest oil companies from 1938 to 1953, inclusive, and found their average rate of return was 10.9 percent. Average for all manufacturing in that period was 12.6 percent.

Critics say that U.S. companies should not be permitted to use the depletion deduction on income derived from foreign production.

Those companies who have foreign production point out they pay income tax on such production as with their U.S. wells, that if the purpose of the provision is to keep the Nation supplied with oil then the country should not ignore the fact that foreign crude is likely to be even more important as bigger demand develops. It's needed there as in the United States if oil for the future is to be located.

Some opponents accept the idea of the depletion deduction but argue that 27½ percent is too much. Reduce it, they urge.

But history shows that the original Senate and House that adopted the provision came up with recommendations of 25 percent and 30 percent—fairly close figuring. The 27½ percent figure was a compromise between the two.

Those for the provision point out that (1) the 27½ percent figure has worked well in providing incentive for investment, (2) it is not too high in view of the industry's profit record.

There isn't any doubt that the U.S. Treasury could use any money received by either cutting or abolishing the deduction. How much it would be is subject to argument.

HIGHER PRICES POSSIBLE

If depletion goes, some other incentive for attracting capital to drilling must be found or shortage of supplies will develop. Higher prices for petroleum products offer the only other alternative in sight. This is not a threat but recognition of the economic facts of life. If more oil is to be found for Magnolia and its customers, the hunt must be paid for, and if capital is permitted to shrink as oil is depleted, more capital must be found.

That capital must come from users of oil. How much would the increase be? If applied to gasoline alone, need for revenue would force up the cost from 2 to 5 cents a gallon according to the best estimates, with 4 cents being most often mentioned. Spread the cost over other products, and it would be less—but consumers would pay for it.

ISSUE VITAL

This, then, is the substance of the big depletion argument, scheduled for congressional review once again as it has been off and on for 30 years. The attack is going to be stronger this year, and more will be riding on the outcome.

Says E. C. Seymour, Magnolia's senior vice president, who has surveyed the operations of the depletion provision for many years:

"A reduction or abolition of the depletion provision would have the most serious consequences for Magnolia. We are engaged in pulling out from under a serious recession. We are fighting high costs, and have had to shrink our payrolls in certain lines in order to get more competitive, and to meet those high costs. In addition, we are looking for oil under increasingly adverse conditions.

"Some people in and out of the U.S. Government seem to think the oil industry is overly prosperous, and that the depletion provision, therefore, is not needed. We dispute both the belief and the conclusion they draw from it. Neither is factual or reasonable. The real point at issue is this: Will there be enough oil here and overseas to take care of the Nation's needs? The opponents of percentage depletion seem willing to gamble on the matter. But Magnolians and most other Americans are not."

Miss Patsy Riley

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. TRIMBLE. Mr. Speaker, each year the American Legion, Department of Arkansas, holds an oratorical contest for students of high school age and awards prizes to those who win. One of the requirements is that the oration must be upon a patriotic subject; another requirement is that it must be original with the young student.

Miss Patsy Riley, a junior in the Springdale High School in the district which I am honored to represent, won the prize for the first district of the American Legion. Patsy is a lovely young lady who is a credit not only to her family, her school, her community, and her State, but to the Nation. She put a lot of work and spirit into the

oration which I insert as a part of my remarks:

THE CONSTITUTION: TEMPLE OF LIBERTY

Ladies and gentlemen, I wish to discuss the Constitution of the United States of America. As a legal document it establishes a successful system of government. Its precision and brevity are admirable. As a frame of government, it has stood the test of time, war, and depression.

The portion of the Constitution which I wish to discuss is the very heart of it. This is the liberty on which it was founded; the liberty on which it now and always will stand.

Why was the Constitution formed? Who were its framers?

In a nutshell, the purpose for which the Constitution was formed was for the perpetuation of American liberty by uniting the States in one, strong union.

The Constitution was formed by the Framing Fathers, these men were of wide knowledge and public experience, men of wealth and prestige. These men varied in age from the oldest member attending, Benjamin Franklin, who was 81, to Dayton, the youngest who was 26. Never before nor since had such a group of remarkable men met under one roof. Age was of no importance, these men were there for the purpose of uniting the Nation they loved. They had seen the light of liberty slowly dimming as the States quarreled and threatened to disband. They saw that to keep it from completely dying, some action must be taken to make a strong government. A government that could offer unity and security to all.

There were many problems facing this group of men. They were involved in their own State politics. The larger States wanted the most power, while the smaller States refused to be pawns of the larger ones. They disagreed on almost every proposal, but they all yearned for freedom. It seemed that everything was lost.

At this crisis, Benjamin Franklin suggested that they look to the Almighty Father for guidance. What their hearts had yearned for, their minds now discovered. They now had a way to make American liberty secure forever.

Next to the Bible, the Constitution is the greatest document ever to be written. Just as the Bible offers solace and security to the soul, the Constitution offers security and liberty to the American people.

The Founding Fathers had faith in God. This faith is proclaimed by the inscription on each coin made in the United States. The inscription, "In God We Trust."

The basic foundation for the Constitution was framed when the United States of America was formed with these bold lines:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

With these words, the War for Independence was begun.

I'm sure that most of us know the story of how these patriots fought and died for liberty. Many writers have tried to explain this desire for freedom that has caused men to give their lives for it. This feeling can't be put on paper, it must come from within.

Many people did die in the War for Independence, but their love for freedom was undying. This desire was kept alive. It was ignited until it became a flame burning in the very hearts and souls of every freedom-loving man, woman, and child. This is why the War for Independence was won. How could the mother country continue to fight against something that refused to die?

The Constitution was drafted to guarantee the people that this liberty that they fought for would never die. Every word of the Constitution institutes this liberty.

Let us examine the Preamble:

"We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution of the United States of America."

Let's take this step by step:

"We the people of the United States in order to form a more perfect union." Why? To make our liberties secure. For how long? As long as humanity wanders through the wilderness of time. For whom? For every man, woman, and child under the American flag.

"Establish justice." What is justice but the guardian of our liberty? Justice comes from the Almighty God himself, for he said, "I, the Lord thy God, am a just God."

"Insure domestic tranquillity." The great Charter insured equality of the States; domestic order and peace, both of the States, and of the people.

"Provide for the common defense." The States were now united. They were now capable of defending themselves.

"Promote the general welfare." This promotion is shown in innumerable ways, such as the establishment of a postal system, a uniform coinage, defense forces, a uniform currency, and of course by the unification of the States which is shown in nearly every paragraph of the Constitution.

And finally, the Preamble declares that the Constitution is established to "secure the blessings of liberty to ourselves and our posterity." We are the posterity of the men who fought and died for our liberty. We too can be worthy of this posterity if we pledge our lives, our fortunes, and our sacred honor to the perpetuation of our American liberty.

In summation of the Preamble, it declares that our forefathers fought for unity, justice, tranquillity, safety, welfare, and liberty. Our forefathers ordained this Constitution for freemen; we shall also sustain it for freemen.

People all over the world have felt this same instinct to be free. They have escaped a Stalin, a Mussolini, a Hitler. They have come to America seeking a refuge from the tyrannies of a dictatorship, of a communistic form of government.

As they enter New York Harbor they see our Great Lady stretching forth her hand, offering to them her home. The inscription by Emma Lazarus says to them: "Give me your tired, your poor, your huddled masses yearning to breathe free; the wretched refuse of your teeming shore; send these, the homeless, tempest-tossed, to me: I lift my lamp beside the golden door."

Freedom and liberty are the lights shining in the souls and hearts of everyone.

Man can suspend his mighty bridges, erect his impressive skyscrapers, fuse the hydrogen atoms, and send his puny satellites into space, but he can never dim this light burning in the souls of the American citizen.

Every American can study the framework of the Constitution and say with pride, "This was made for me. When danger threatens my life or liberty I can take safe refuge in the Constitution. Into that fortress neither President nor Congress nor armies nor mobs can enter and take away my life or liberty."

Since the birth of Christ, 14 powerful nations have risen and fallen, democratic nations among them. We in America believe that democracy is the world's dream for government. If so, why did these nations fall? As the original ones who fought for democracy died, the principles on which it was founded also died. The generations following had no written guarantee of their democracy or of their basic freedoms to posterity.

The eyes of the world are upon the United States. We have that written pledge of personal liberty, equality, felicity. That aged document lies in the Library of Congress, sealed in an airtight glass case that all may see. Though its pages are yellowed with age, and the ink is slowly fading away, the words once written there remain embedded in our hearts. They gave us our liberty, our Nation, our flag, and our way of life.

Yes, the eyes of the world are upon us, but have we ourselves forgotten to look at our own heritage? If we are neglectful of our heritage and our Government, we, too, might join the ranks of fallen nations.

We must remember that "the price of liberty is eternal vigilance."

We hold the key to civilization's future.

Ladies and gentlemen, are we being neglectful of our heritage? Are we putting an end to our "Temple of Liberty"? If our Constitution dies, so dies the hope of the world.

I close with the words of President Cleveland:

"This Constitution comes to us sealed with the test of almost two centuries. It has been found sufficient in the past, and it will be found sufficient in all the years to come, if American people are true to their sacred trust. Years will pass and millions yet unborn will inquire concerning our stewardship and the safety of the Constitution. God grant they may find it unimpaired."

Fact Sheet Compiled by Textile Workers Union of America on Textile Unemployment, April 1959

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the most current figures on textile unemployment just issued by the research department of the Textile Workers Union of America:

TEXTILE WORKERS UNION OF AMERICA FACT SHEET ON TEXTILE UNEMPLOYMENT, APRIL 1959

Unemployment in the textile industry is about the highest for all manufacturing industries except apparel. In January 1959 the U.S. Census Bureau reported 10.3 percent of the textile labor force as unemployed as compared with 7.3 percent for the entire nonfarm wage and salary worker population.

While the unemployment rate for all manufacturing industries declined from January 1958 to January 1959 by 1 percentage point, from 8.9 to 7.9 percent, the unemployment rate for the textile industry dropped only one-half of 1 percentage point, from 10.8 to 10.3 percent. Most of this drop was caused by people leaving the industry as the number of production workers employed in the industry actually declined from 861,000 to 855,000 during this period.

There has been a net decline of 403,000 production jobs from February 1951 to February 1959, as employment fell from 1,263,000 to 860,000.

Increases in production are not translated into higher employment as productivity is increasing at a phenomenally high rate. Yards produced per man-hour in 1947 were 7.8; in 1951, 9; in 1956, 10.6; in 1957, 11.6; and in the first 9 months of 1958, 12.2. As output has not kept pace with the annual rate of increase in productivity of 4 to 5 percent, employment has continued to shrink.

The decline in jobs has been felt in all sections of the country in which substantial numbers of textile workers are employed. While New England and the Middle Atlantic States have suffered the greatest declines, the South has also had a considerable drop in employment (table I).

Large groups of unemployed textile workers have been stranded in communities all along the eastern seaboard. These communities have made abortive efforts to improve their lot by attracting new industry. But in no case has the new employment significantly improved conditions within these areas. Textile workers have been scrapped by the thousands. Men and women with years of service have remained unemployed, with many of them involuntarily being retired or supported by families.

The chronic state of unemployment has meant economic distress for many areas (table II).

An Appraisal of the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. BROOMFIELD. Mr. Speaker, in a few short weeks, the St. Lawrence Seaway will be formally dedicated. Heads of state of a great many nations will be on hand for this historic event, and many of the nations of the world will join in wishing us success in this greatest of all engineering ventures.

Before we get too deeply embroiled in the ceremonies, the glitter, and the glamour, it is well for us to take a good look at the seaway under the cold, hard light of facts. In the April 1959, issue of the Michigan State University magazine, an article by Dr. John L. Hazard, entitled "The Seaway: An Appraisal," gives us just such a look.

I would very much recommend this article to my colleagues in the House, since it is an excellent analysis of the problems to be faced and the decisions to be made in the months and years ahead in relation to the seaway:

THE SEAWAY: AN APPRAISAL

(By Dr. John L. Hazard)

Much of the glitter of the Great Lakes-St. Lawrence Seaway has been scratched away in recent months by waterway experts who have gathered at Michigan State.

Recognizing the seaway as perhaps one of the most crucial—if not controversial—subjects of the decade, Michigan State University has sponsored wide-ranging programs aimed at assessing the water route's possible contribution to the heartland of America.

As soon as the ice clears on the Great Lakes this month the seaway will actually open. The formal dedication will be made in late June by Queen Elizabeth and, possibly, President Eisenhower.

The fact that the British monarch is coming to dedicate the waterway, which runs 2,216 miles from salt water to Duluth, is taken by some as an indication of an inferior U.S. position.

MOST OF HEARTLAND IN UNITED STATES

But while the seaway is primarily a Canadian project through the St. Lawrence River, most of the mid-continent, Great Lakes portion is under U.S. development.

"This heartland region," says Frank W. Suggitt, head of the Michigan State University resource development department, "comprises the five East North Central States (Ohio, Indiana, Illinois, Wisconsin, and Michigan) and the Province of Ontario.

"It constitutes the only intercontinental land mass in the world which is served by two major waterways which link it to the sea and to the commerce of the world. The

St. Lawrence and Great Lakes Waterway and the Ohio and Mississippi River system serve this vast heartland."

Professor Suggitt explains that the region contains only 8 percent of the combined land area of the United States and Canada, but has 25 percent of the water area in the two countries—without counting the surface area of the Great Lakes.

The main portion of the traffic to come on the seaway, says Bradley D. Nash, Deputy Under Secretary of Commerce, will be bulk commodities such as iron ore, coal, chemicals, limestone, grain, forest products, and petroleum.

"Within the next few years," Nash said at a transportation meeting in Kellogg Center, "all the work in the connecting channels of the Great Lakes will be completed. This will bring about greater shipping capacity in the vessels using the seaway. Large ocean vessels can, after the completion of the channel work, reach the lakes with full cargoes."

SHALLOW WATERS RESTRICT VESSELS

While oceangoing shipping has been able to get through to the lakes for many years it has, until this year, been restricted by shallow waters, 14 feet being the maximum draft. The ultimate aim is to have a seaway with a minimum depth of 27 feet.

With larger locks and channels throughout the system the future of the mid-America area—in which Michigan State University is practically at the center—can be influenced by the waterway. But the question brought out in campus discussions is whether the seaway actually will contribute directly to the economic and political strength of the heartland, and at least indirectly to Michigan State and its alumni.

Part of the answer came out during a vital Canadian-American seminar held at State in February. It was at this meeting that a Wisconsin booster of the seaway project claimed the Great Lakes will become a new Mediterranean.

The booster from Wisconsin is Harry C. Brockel, Milwaukee's port director. Brockel says international trade over the waterway will bring 40 of the world's great shipping companies to the lakes, plus badly needed raw materials.

But he claims that the decision of the United States to join Canada in the development came partly by the belated realization of our steel industry that the Mesabi Range iron ores had a determinable end and that new raw materials are available in Canada.

As a mainspring in the project, Canada began pushing the seaway in earnest in 1951, although that country had turned down the earlier chances for a joint venture with the United States. It is suggested that Canada's dependence on world trade forces it to begin hustling.

CANADA DEPENDS ON EXPORTS

"A full 20 percent of Canada's gross national product comes from export, compared to only 4 percent in the United States," explains Gerald A. Newman, Canadian consul general at Chicago.

The consul also attended the Canadian-United States meeting on campus. Prof. John L. Hazard, Michigan State University department of marketing and transportation administration, was chairman of the joint seminar.

Dr. Hazard, who has been an economic consultant for the St. Lawrence Seaway Corporation, asserts that the water route strikes into an advanced industrial economy and poses a new series of material options, a new spectrum of market opportunities, and equally a whole new set of political issues to the midcontinent.

One problem is competition with well-developed eastern ports. Although a map will show that by water Detroit is closer to London than New York is, the East has the know-how and contacts in foreign shipping that takes most of the business to the coast.

"Seaports have invested several times more money in port development than has been invested in the Great Lakes area," Professor Hazard says. "Market restrictions have come into being."

"The seaway will benefits most those who prepare for it," he warns. The best way for the lakes region to do this, he adds, is to collect its divided political and social efforts.

"One of the biggest faults is that many are waiting to see what bonanzas the seaway will offer them," Dr. Hazard says. "The general apathy that might throttle the realization of seaway commerce might also hinder the successful deevlopment of the seaway, not only through weakness of mid-America as a unit but as a result of failure to withstand pressure from other sections of the country."

"The seaway itself does nothing," he continues. "It is something to be used as a tool. It is a capital investment to be bought and paid for by this heartland region."

BUSINESS KNOW-HOW LACKING

To the lack of development and failure to acquaint the world with the Great Lakes, add the failure to train men well versed in the import-export business. The last was often mentioned when port and shipping authorities met at Kellogg Center to discuss the impact of the seaway during the Michigan State University Farmer's Week.

One participant claimed that too many ill-founded projections had been made on the effect of the seaway. He is Ralph McCrea, vice president of a Muskegon dock and market firm.

"We're going to have a wonderful tool to work with," McCrea says, "but those who look for a flow of gold coming upstream are in for a surprise. On the basis of general cargo and merchandise freight we have a long way to go before we can utilize the waterway."

Port terminals and facilities are as vital as shipping, he explains, but these facilities are still lacking in most places.

That fact, coupled with failure so far to develop foreign trade independently of the east coast, will hamper the heartland, McCrea says.

"Somebody is going to have to be vigorous," he asserts. "We're always letting someone in New York or Philadelphia do the work."

Past experience gives some indication of who has been vigorous. In the American section of the seaway opened last July here is what happened:

Canadian-registry ships dominated the traffic with a total of 3,911 passages. U.S. ships numbered only 593. West Germany sent through 306 vessels; Norway, 151, Britain, 111; Sweden, 74; Denmark, 36; France, 16.

Another point developed in discussions at Michigan State University is the key position the State of Michigan holds if its facilities are developed sufficiently.

Of Michigan's 83 counties, 62 are within 40 miles of the waterway. The State has a coastline of 3,125 miles.

"We have to let businessmen around the world know that Michigan has a longer coastline than any other State," declares Paul Herbert, director of research for the Michigan Department of Economic Development.

Herbert explained at a Michigan State University-sponsored seaway meeting that a great need exists to develop manufacturers for export, especially because of the new European Common Market which probably will lure American businesses to build branch plants abroad. This could mean less production at home for exports.

GREAT VALUE SEEN IN COOPERATION

One heartening aspect of the seaway venture is the cooperation that has come about between Canada and the United States. It extends from high administrative levels to the physical carrying out of the project.

A representative area of cooperation is in charting of the waterway. Gilbert E. Ropes, 1934, of the Corps of Engineers, is one of the men engaged in this work.

The alumnus says the mutual labor of Canada and the United States in charting and other projects is saving money for both countries.

Concurrent efforts have been developed to such a degree that charts based on new soundings of the extensive waterway will probably be available for the 1960 navigation system.

International cooperation may prove to be the ultimate great value of the seaway, Professor Hazard says.

"We have a tenuous union with the seaway", he asserts. "We had to be pulled into it. But one hope is that we now will become politically and socially united.

"The first step is making joint use of larger resources of the Great Lakes-St. Lawrence system. This includes the first step toward political recognition of growing economic integration between Canada and the United States."

It is lack of unity which Dr. Hazard believes to be the most serious shortcoming of the Heartland, for without a strong sense of regionalism the larger potentials of the seaway might slip from mid-America's grasp.

Doctoring the Dollar

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. MULTER. Mr. Speaker, the following letter to the editor of the New York Herald Tribune, written by Eugene Bashore of Scarsdale, N.Y., will be of interest to our colleagues. It appeared in the Herald Tribune of March 29, 1959:

DOCTORING THE DOLLAR

To the New York Herald Tribune:

In your March 20 editorial "Shares in America," you say, "By buying savings bonds, he (the citizen) is making sure that the dollar will remain sound to support the growth of the United States." That, in terms of financial literacy, is a mistruth.

Whatever reasons there may be for buying savings bonds, assuring the soundness of the dollar is not one of them. Citizens who have owned at one time as much as $49 billion of savings bonds know they have not been a good investment for the very reason that the soundness of the dollar has not been and is not being maintained. And the willingness of citizens to buy savings bonds hasn't had anything to do with it.

From 1789 to 1930, a period of 142 years, the Government lived within its income in 96 years and overspent in 46 years. Deficits resulting from the War of 1812, the depression of 1840–43, the Civil War, the panic of 1893, the panic of 1907 and World War I were followed by periods of surplus which largely restored fiscal order. Deficit financing was not a way of life.

From 1930 to 1946 we had a string of 16 deficits and in the 13 years since World War II we have had 8 more deficit years—24 deficit years out of 29.

It is true that deficit spending was not made possible by the willingness of citizens to buy savings bonds, or other Treasury obligations, except to an extent during

actual war under compulsion of patriotism. It has been possible in recent years because the Treasury has avoided the test of the market place, by selling since 1947 $32 billion of Treasury obligations to Federal, State and local Government accounts. But those accounts are now dry, or nearly so. Woe is willing on woe, and Government finances are in a mess.

EUGENE BASHORE.

Architect Wright—As Much a National Monument as the Structures He Built

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, Wisconsin lost one of its most famous, colorful, and controversial native sons—and the world lost a renowned architect—when Frank Lloyd Wright died at Phoenix, Ariz., April 9. As an individualist living in an age of conformity, he did more than any one man to change the face of American architecture with his revolt against traditional designs. Many of his architectural designs, condemned at the time as impractical or worse, have since become an accepted part of the American scene. His famed "prairie houses," which drew heavy criticism when he designed them prior to World War I, were the forerunners of today's tremendously popular ranch-style homes.

Wisconsin has produced many individualists like, for instance, Senator Robert M. LaFollette, Sr., and Architect Wright's close friend, William T. Evjue, crusading editor of the Madison, Wis., Capital Times. Their contributions to progress cannot be measured.

The world is poorer with the passing of Architect Wright, but richer because of what he did and what he stood for during his lifetime. His buildings are a monument to the spirit of the man.

Under leave to extend my remarks, I would like to include in the RECORD an editorial from the April 9 Capital Times. It summarizes, as well as words can, the achievements of Frank Lloyd Wright, an extraordinarily gifted individual and architect:

FRANK LLOYD WRIGHT: THE IDEAS HE LEAVES IN HISTORY

Wisconsin's most famous son and the towering genius of modern architecture is gone. The sad news has come from the West that Frank Lloyd Wright, almost on the eve of his return to his beloved hills of Wisconsin and with but a few weeks before his 90th birthday, failed to survive surgery for an ailment that seized him suddenly.

For 70 years the ideas of Frank Lloyd Wright have been battering down the accepted principles of architecture. Through the storms of the years he has refused to yield from those principles.

When he died last night he was recognized around the world as the greatest of all figures in his field.

The world accepted his genius in architecture before his death. There is no longer any question that he and he alone set the direction of modern architecture. His work is known and admired in every country of the world. Dozens of honors have been conferred upon him by foreign governments and by the arts and science groups at home.

To understand his preeminence in the work he followed one had to know the power of the personality from which the genius flowed.

Mr. Wright, like Bob LaFollette, Wisconsin's other famed son, was a powerful personality that stood by itself without reliance on others. Like LaFollette, he preferred to think his own thoughts rather than accept them from others.

He dared to push out ahead, to question, to challenge, and to come to new and radical conclusions, not only in his work but in his philosophical concepts of the world and the life about him.

Inevitably, also like LaFollette, he was the storm center of thundering controversy, the object of bitter vilification.

Men like this are not concerned only with their own lives. They are philosophically concerned with the lives of those around them. They believe passionately in the right of the individual to full expression and full development.

To Mr. Wright nothing was more precious than freedom; nothing more hateful than the government or the social customs that bound the freedom of expression and movement which he considered necessary to the development of human dignity.

Nothing could be more ridiculous than the spectacle of his detractors who would call this great individualist a Communist. He could no more be bound by the discipline and dogma of communism than he could be bound by the social mores of the country clubs.

He lived and fought his momentous battles in the world of ideas. Here is where he was the militant. He never ducked a battle and never gave quarter. But he despised the stupidity of war and physical violence.

His memory will be enshrined, of course, for centuries in the monuments of steel and stone his genius has created in this and in other countries. But time's hand will ultimately destroy these.

It is in the world of ideas where his enduring monument will be found. His thought is part of the stream of human life and nothing but complete annihilation can remove it. Men will move to its majestic cadence always, as it has to the ideas of other great thinkers and doers.

There is nothing that can destroy an idea that has the power of truth and beauty. Frank Lloyd Wright gave the world some of those ideas and he lived his own life in the faith that only in leaving endurable ideas can man give the world a lasting heritage.

Poison in Your Water—No. 56

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Observer Dispatch of Utica, N.Y., on October 31, 1958, entitled "Two Firms Pay Large Sums for Pollution":

TWO FIRMS PAY LARGE SUMS FOR POLLUTION

Settlements totaling $882 were paid during August for conservation law violations in central New York, according to report of Commissioner Sharon J. Mauhs.

The two largest penalties for the month were for pollution of streams causing fish kills.

A Madison County firm, the Cooperative GLF Exchange Inc., of Canastota, paid $500 for allowing ammonia to be discharged in Canastota Creek.

The New York State Electric and Gas Corp., Liberty, paid $1,000 for pollution of Mongaup River.

Other settlements listed were:

Floyd H. Miller, Salisbury Center, paid $12.50 for fishing without license.

Jack C. Weaver, Harrisville, RD, paid $27.50 for hunting without license.

Claude C. Jones, Nelson, paid $100 for possessing deer illegally.

Andrew J. Bruno, Earlville, RD 1, and Harold D. Kingsbury, Earlville, RD 1, $15 each for trespassing.

John D. Cavallo, Canastota, RD, $17.50 for taking fish with aid of explosives.

Paul J. Sugar, Munnsville, and Kenneth J. Morgan, Lebanon, $12.50 each, hunting, no license.

Douglas H. Jones, West Branch, $17.50 for taking pheasant during closed season.

Lawrence Christianson, Harts Hill, Whitesboro, and Joseph S. Rogowski, Aiken Avenue, Whitesboro, $17.50 each for having loaded gun in car.

Ronald Jones, Williamstown, $100, for possessing deer illegally.

James Konstanty, Worcester, $17.50 for fishing without license.

Mr. Summerfield's Space Age Philosophy

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. MAGNUSON. Mr. Speaker, time was when it took 4 days for regular mail to reach me here from the State of Washington. For 6 years, as a matter of fact, I learned that I could count on this as an immutable rule of thumb.

It was kind of comforting, even, to know I could depend on this, one of the few unchanging constants in an age of bewildering flux.

Alas, no more. Mr. Summerfield, caught up with the spirit of the times, could not leave well enough alone. He persuaded the President and a somewhat reluctant Congress to give him more money through increased postal rates to finance a wholesale modernization program of the postal service. He promised us a new, efficient postal system, in keeping with the moods and needs of the mid-twentieth century.

The new look has arrived, quietly, unheralded.

It now takes 7 days for the mail to reach my office.

I long hesitated to admit, even to myself, that my old familiar 4-day rule had been replaced by a brand spanking new 7-day model. But indisputable proof confronted me last Friday, April 10, when the postman delivered a letter to the office at 1 p.m.

I looked at the postmark. The letter had been posted exactly 7 days earlier,

at 1 p.m. April 3, from a small town in the State of Washington.

I felt sad, Mr. Speaker, when the truth was forced upon me. Even this had changed and was no more.

But in the midst of my sorrow, there came the gleam of a comforting thought. Maybe, I said to myself, Mr. Summerfield is wiser than us all. Maybe he alone realizes that in the midst of the noise, and complexity and speed of the space age, we need to be reminded that time is eternal, that life will go on, and that we must preserve some of the old values of cumbersomeness, inefficiency and delay.

The Discredited Philosophy of Fair Trade

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial that pointedly and accurately portrays this legislation as allegedly protection for the few at the cost of the many, the "jerrybuilt" Federal fair trade law:

[From the Wall Street Journal, Mar. 18, 1959]

THE DISCREDITED PHILOSOPHY

Despite the lessons of recent history, price fixers are busy again trying to shore up the jerrybuilt Federal fair trade law. Not least among the lessons they have failed to learn is the fact that a large measure of the growth and popularity of the discount houses can be attributed to the fair trade laws.

Another fact they have failed to learn in their long battles in Congress, the State legislatures and the courts, is that people are realizing more and more that price fixing—no matter what it is named—is not in the public interest. Some 17 State supreme courts have declared State fair trade laws unconstitutional.

Perhaps it is not strange, then, that some of the present measures under consideration by the House Commerce Committee have an air of desperation about them. The McGuire Act—now on the books—permits a manufacturer to set retail prices in a State or Territory by the mere act of signing up one retailer to agree to the set price. But even this false nod in the direction of honoring contracts goes by the board in one of the present bills before the committee. All that would be necessary under that bill would be for the manufacturer to set retail prices without agreement of any retailer whatsoever.

Yet, if State courts objected to the fair trade laws even when they permitted price fixing under the guise of contract, what will the State courts think of a law—if Congress enacts it—that is an out-and-out grant to manufacturers to fix retail prices at will all over the country?

It is no wonder that the Federal Trade Commission and the Justice Department are opposed to fair trade laws. Indeed, FTC Chairman John Gwynne had this to say to the committee:

"The fixing of retail prices is inconsistent with the American system of free competitive enterprise and is contrary to public policy expressed by Congress in the antitrust laws since 1890."

There isn't much question that fair trade goes in the opposite direction from the principles of the antitrust laws. Fair trade, as a principle, prevents the customer from shopping around for the best price he can get—and the customers' right to shop around is basic to our free competitive enterprise system. And fair trade permits the manufacturer to assert a dead hand control over the sales of goods that are no longer his.

Granted that a man who makes a thing has a right to charge for it what the marketplace will give and thus set his own price. But if the Government told him that he had to charge a specific price, and sell his goods for no more and for no less, the manufacturer would be the first to object. Yet, in seeking to control the price the retailer can ask for his goods, manufacturers are asking the same power to fix prices.

No man, we think, ought to have control over goods he has sold to someone else. The retailer who has paid out his money for the goods ought to have the right to sell them for any price the market will support—or even to give them away.

Instead of trying to find ways to strengthen fair trade laws that would protect a few to the cost of a great many, it strikes us that Congress ought to look to repeal of the McGuire Act and thus free competition altogether from the dismal and discredited philosophy of fair trade.

Jobs Past 60

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article from a recent issue of the National Tribune, the Stars and Stripes:

JOBS PAST 60

The Labor Department reports that the jobless market for idle workers is bad, worse than last year. The report cites statistics and expresses the hope of employers that employment may improve in the next few months.

We hope that their prediction comes true because there are too many unemployed right now in this great industrial country of ours.

But in joining in this hope for increased employment throughout the Nation we think of one thing. If employment does increase who will benefit by such an increase? Naturally the younger group of the presently unemployed. That seems reasonable and we cannot blame the industrialists for employing those from whom they may expect a good many years of work.

What becomes, however, of the older group? We might as well face the fact that once past 60 years of age and jobless, the chances of finding work are practically nil.

Just one more reason why the administration and Congress should give serious thought to the passage of H.R. 1181 which would give these unemployables who have served their country in time of war something to live on in their declining days.

The passage of H.R. 1181 would give some of the older veterans who are still struggling to hold on to jobs a chance to settle back and give the younger folk a chance to fill jobs for which we must admit, as a rule, they are more capable, physically, at least, to fill.

In our race for profits in industry more and more there has developed the thought that the oldsters must be cast off and their places taken by younger and stronger men and women—not necessarily more capable—but in the eyes of industry better risks than the older folks who have built up these industries.

It is a sad state of affairs but one which we face in these days of competition. What better way could be found than to take care of the men who have passed the age of employability as gaged by our industrial system—the men who protected that system when it was threatened by strong enemies—than to grant them the benefits provided by H.R. 1181.

Such action would care for two necessities—the need of our older group and the opportunity for our younger men and women to replace them and continue to advance the progress of our country.

Poison in Your Water—No. 58

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Record-Searchlight, of Redding, Calif., on January 9, 1959, entitled "A Serious Kill: Pollution Threatens Salmon":

A SERIOUS KILL: POLLUTION THREATENS SALMON

Heavy rains have kicked loose a pollution flow into the Sacramento River that threatens the king salmon population.

U.S. Fish and Wildlife officials from Coleman fish hatchery first spotted dead fish yesterday when they removed their fish traps at Keswick. All fish in the traps—411 king salmon and 11 steelhead—were dead. These were adult fish.

State department of fish and game officials then checked the river from Keswick to the Highway 99 bridge and found young king salmon (fry) dead and dying along the river edge.

Yesterday afternoon fish and game men planted three cans of fry salmon obtained from Coleman hatchery at three separate points along the river from 1 mile below Keswick to 4 miles below. Fourteen hours later, the fish in the can 1 mile below Keswick were all dead, 90 percent of those in a can 3 miles below Keswick were dead, and all were alive in the can 4 miles below.

Water samples were obtained from various points along the river and are being sent to the Central Valley water pollution board for analysis.

The State Department of Health is also working with fish and game taking samples of the water.

"This is a serious fish kill," said James Stokes, regional manager for the State Fish and Game Department, "and a blow to salmon fishing and reproduction in the Sacramento."

This morning, Stokes said, no fish were in the fish traps at Keswick, although prior to yesterday they were entering the traps in constant flow.

Stokes said the pollution was caused by a combination of a heavy flow from the Spring Creek drainage and a low stage of flow in the Sacramento.

Swollen Spring and Slick Rock Creeks and heavy rains along the delta have washed deposits of copper and zinc into the Sacramento, poisoning the fish, Stokes said.

The Mountain Copper Co. put into operation last month a purifying system which flows out of its underground workings and filters the copper from the water before releasing it into the river.

But, Stokes said, the buildup of copper deposits along the drainage and delta system before the new facility went into operation is probably now washing into the river.

Stokes said that his department has recommended that an increase in water releases from Shasta Lake into the river be made. He said that studies have been made which show that a heavier flow in the river will ease the pollution problem.

Adam Smith Updated

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 17, 1959

Mr. MULTER. Mr. Speaker, an excellent and most timely editorial appeared in the New Republic magazine of March 16, 1959, and I commend it to the attention of our colleagues. It follows:

ADAM SMITH UPDATED

Certainly the President's muddled exhortations and his advisers' platitudes on the sound dollar do no credit to the honorable tradition of conservative economic thought. There must be more to Adam Smith, circa 1959, than obsessive longing for balanced budgets. In a February editorial, Fortune presents a much more intelligent statement—one susceptible to close liberal evaluation. Its editorial opens with an attack on J. K. Galbraith for missing the "* * * basic libertarian point that while the market in general enlarges the field of human choice, Government action, however necessary, is by definition coercive." Fortune temperately does not propose to eject Government from society's affairs. But, "* * * granted that Government today will play an important part in our lives through monetary and fiscal policy, as well as because of the overriding needs of defense, still there are many places where the functions of Government could be cut down, given some hard thought and half the ingenuity that modern liberals now give to enlarging the prerogatives of the State."

Just where can the reductions be made? "The privately financed toll road is a better bet than the Washington financed superhighway. Private power can do all that is promised by new TVA's." It is a harmful fiction that "* * * as a society grows richer it generates," or can generate, its own built-in social security."

Does government action necessarily coerce? Do private markets necessarily liberate? In some of its necessary functions, every government employs compulsion. Tax payments partially, and compulsory military service nearly completely, limit the freedom of the law abiding, and police and prisons impede the lawless. But this is scarcely the end of the matter. A case-by-case consideration of what modern democratic governments do tells a more complex story. A category in themselves are the varied measures designed to shelter the unfortunate. Widows, dependent children, handicapped veterans, and the aged, none of them participants in the economic fray, depend for decent existence on government support. Of course, no retired citizen, widow, or veteran is compelled to accept his government's bounty. But would he or she be freer without it?

A second category of government activity enlarges economic choice by diminishing economic insecurity: unemployment compensation does not coddle its recipients; it enables them to move more readily from one job to another and to risk more easily geographic and occupational change. As the case of the migratory farm laborer suggests, workers who must depend unaided upon their own resources enjoy precious little freedom. It is unnecessary to endorse the wisdom of our present agricultural policies to place the parity price program in the same general class. The point of these policies is the opportunity they offer farmers to choose less desperately between farming and other occupations. To stigmatize these programs as coercive is to ignore the opportunities to contract out of them and the essentially coercive face which unprotected competition presented to American agriculture before 1933 and the first AAA.

Put briefly, real freedom of choice implies the existence of genuine alternative. Properly conceived, the range of government policies which promote economic stability (a third category to be considered), simultaneously encourage individual security and individual choice. The fiscal and monetary policies to which Fortune is little more than resigned imperatively demand strengthening and resolute use. Tax cuts and public works could and should have limited the recession which still harasses an economy that has 4.8 million unemployed.

An increasingly important fourth type of government intervention attempts to fill the gaps left by private enterprise. For does not experience demonstrate that private enterprisers have little interest in building the schools, hospitals, inexpensive housing, parks and concert halls which go far in defining the quality of a society? Yet such minimum urban amenities are precisely those which promote intelligent choice. Education widens individual comprehension of alternatives and encourages accurate discrimination among them. In what sense, then can it be said that State action which enlightens its citizens, prepares them for wide choice, and infrequently competes with private authority, is coercive?

These categories and examples far from exhaust the topic of Government's proper role and impact. But they are enough to imply that only when modern democratic Government acts uncreatively is its primary role coercive. Much more frequently, it measurably serves the object of Fortune's desire, the widening of individual choice.

Fortune's claim that "the market in general enhances the field of human choice" exposes a characteristic conservative nostalgia. No doubt, in the 19th century there was much truth in the view that competition was for the most part free. Enterprise was relatively small and opportunities comparatively unlimited. Although the success stories fail to compute the human costs of the failures, a hundred years ago the bold, the imaginative, and the ruthless could build their lives in expectations of riches. Many a man's strong hands molded his own fate. Or so, in retrospect, it now appears. Fortunately, talent and industry still enjoy rewards in our society. But the conditions under which these rewards may be grasped are drastically different. In particular, the character of the private market has changed so radically that in many parts of the economy private governments, of varying benevolence, control the lives of employees, subordinates, suppliers and customers. This is one of the effects of the existence of great industrial empires like General Motors, General Electric, Du Pont, United States Steel, and their peers. If the markets which they control widen the field of human choice it is equally accurate to maintain that employment in a Government bureaucracy does as much. Increasingly, the structure of business enterprise puts the small business unit under the domination of the large one. In Government work, small subcontractors exist at the discretion of large prime contractors. In ordinary production, small suppliers survive so long as their large customers decide against continued integration of their productive facilities. Real choice thus becomes largely a prerogative of large enterprise. Insofar as the tendency has been checked and the small man permitted to thrive in the interstices of national markets, it is because of "coercive" Government which, at its most alert, prevents the big from growing bigger by merging with their own kind, discriminating in each other's favor, and eliminating the small. In the reality of the private markets which surround us, it is very hard indeed to see much substance in the vision of freedom which Fortune conjures up.

Only at their peril will liberals ignore the potential dangers of Government as coercive agent. But liberals separate themselves from conservatives by their perception that in an economy in which giant corporations jostle each other only Government can succor the trampled, create a breathing space for the economic pygmies, insure a decent supply of basic cultural amenities, keep the economy stable, and moderate the exercise of private coercion.

Red Envoy Expelled in Argentine Rioting

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Washington Evening Star of Tuesday, April 7, 1959:

RED ENVOY EXPELLED IN ARGENTINE RIOTING

BUENOS AIRES, April 7.—The Argentine Government today linked Soviet bloc diplomats with the bloody labor riot in Buenos Aires last week and said at least one envoy had been ordered expelled.

A Government statement said similar action is being considered against "other members of the diplomatic corps from countries behind the Iron Curtain." The expelled diplomat was not named.

Argentina is the second Latin American nation to act against Soviet bloc diplomats within a week. Mexico expelled two members of the Soviet Embassy last week, accusing them of giving money and support to an illegal railway strike.

The Argentine Government has blamed the Communists for last Friday's rioting, in which 57 workers and policemen were injured.

The newspaper Correo de La Tarde named three members of the Soviet bloc diplomatic colony and accused them of promoting labor unrest.

Those named were Soviet Ambassador Mikhail Alexevich Kastylev; Dr. Victor Dimitriu, Rumanian Chargé d'Affaires; and Mrs. Vera Lestova Zalka, wife of the Hungarian Ambassador.

Informants said the Government of neighboring Uruguay is considering taking stern measures against the Soviet Embassy, which has a larger staff than in any other South American country.

Friday's rioting erupted when workers gathered in the heart of the capital to protest the labor policies of the Frondizi government. They included workers from unions dominated by Communists or followers of former Dictator Juan D. Perón.

Rioters threw up barricades in the street, burned and overturned automobiles, and attacked streetcars and stores before police halted the disorders.

Eliminate Income Tax and Government Business Operation

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following testimony of Willis E. Stone before our Federal relations committee of the Texas House of Representatives, in relation to income tax and getting the Government out of the conduct of business. To anyone concerned with these two matters, this presentation will be most interesting and informative:

TESTIMONY OF WILLIS E. STONE BEFORE THE FEDERAL RELATIONS COMMITTEE, HOUSE OF REPRESENTATIVES, TEXAS LEGISLATURE, AUSTIN, TEX., FOR PRESENTATION, APRIL 6, 1959

Thank you, Mr. Chairman and the members of the house Federal relations committee of the Texas Legislature. I deeply appreciate the opportunity to appear before you for the purpose of discussing some well documented views on Federal taxing and spending, and the proposed solution to this problem which is pending before you as Texas House Concurrent Resolution 6.

To establish my identity, I am Willis E. Stone, chairman of the National Committee for Economic Freedom and president of the American Progress Foundation. My address is 6413 Franklin Avenue, Los Angeles, Calif. I am also identified with several other organizations which are attempting to bring better understanding of the American Constitution to the American people.

As an industrial engineer I have long been concerned, as every good citizen should be, with the apparent fact that taxes are too low. This is evident because taxes have but one valid function, that of paying the costs of government, but taxes have failed to achieve this purpose by an average $12 billion per year at the national level alone during these past 20 years, thus adding more than $240 billion to the national debt.

This national insolvency is rubbing off on the States, and more and more we hear of the deep financial troubles of the several States. Unfortunately Texas is not immune from this problem—no State is. The problem has affected our people to such a degree that open tax revolts are flaring with increasing frequency in various areas. The one most newsworthy at the moment is the so-called Ritzville tax revolt in the State of Washington.

These tax protests give fair warning to the administrators of public affairs that taxes are too high to be borne willingly by our people. This comes at a time when legislative bodies are looking more diligently than ever before for new tax sources to provide for the wants of the many agencies of Government which seem to sprout on all sides.

To the administrator, at least, taxes are too low. To the taxpayer, taxes are too high. The basic question uniting both sides of this puzzle involves the possibility that the cost of Government is too high. An investigation of this possibility reveals some startling facts.

In seeking areas where sizable reduction in the cost of the Federal Government can be achieved, I have been amazed at the quantity of Federal corporate activities which exist without any pretense of constitutional authority, and the enormous quantity of tax dollars they directly and indirectly absorb each year to pay their losses and hidden costs.

That the members of this committee may appreciate the quantity of Federal agencies involved in some corporate activity directly competitive with private taxpaying enterprises, a copy of fact sheet No. 1 has been attached to your copy of this transcript. It lists more than 700 Federal agencies so involved.

Since the publication of this list, a series of case histories, each dealing with one specific agency has been initiated. Thus far 27 releases have been issued. The cumulative losses identified from the budget records in the first 27 releases aggregate more than $24 billion. To your copy of this transcript a sample issue of these releases has been attached. This sample deals with the Virgin Islands Corporation.

With this information as the starting point an extended study of the manner and extent in which tax funds have been spent in recent years can provide an idea of the potential benefits available to all of us as such expenditures are abated.

Under the label of "foreign aid" the American taxpayers, who have never known military defeat, have been compelled to pay more treasure into the coffers of foreign powers than all the vanquished people in history have been required to pay to their conquerors.

On the domestic scene more than 700 Federal corporate activities have been established without constitutional authority. They absorb directly and indirectly more than half the total Federal revenue to pay their losses and hidden costs. They have taken over 40 percent of the land area and 20 percent of the industrial capacity of the Nation, riding the backs of the American people as interest free, dividend free, rent free, cost free, and tax free princes of privilege, competing with every American, be he producer or consumer.

To get some idea of the gigantic scale of the conquest of State and private lands, permit me to refer to page 221 of the U.S. Government Organization Manual, 1958–59, which asserts that the Interior Department alone has "custody of 750 million acres of land." This is an area equal to 32.3 percent of the total land and water area of the United States and all its territories and possessions.

Page 254 of the 1958–59 Organization Manual stipulates that the Forest Service "administers approximately 188 million acres." This is an area equal to 8.1 percent of the total land and water area of the United States and all its territories and possessions.

These two agencies alone have, according to these official statements, taken over an area greater than the combined area of 25 European countries (list on request).

To control this rapidly growing problem of Federal conquest of our States and our people, an amendment to the Constitution has been designed to repair the damage done and prevent its recurrence. It is a proposal which is pending before you as Texas House Concurrent Resolution 6. An identical resolution has been formally approved by the State of Wyoming. It is pending before the Congress as House Joint Resolution 23, and is widely known as the Proposed 23d amendment

The two major companion provisions in this proposal are:

"SECTION 1. The Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution.

"SEC. 4. The 16th article of amendments to the Constitution of the United States shall stand repealed and thereafter Congress shall not levy taxes on personal incomes, estates, and/or gifts."

This amendment would stop the political gift of our tax dollars to foreign socialistic and communistic governments, leaving individuals to do this on a voluntary basis if they wish. This business of foreign grants and credits annually amounts to about $5 billion.

This amendment would cause the Federal corporate activities to be sold back to the American people from whom they were taken. It is estimated the land, buildings, and facilities, even under forced sale, would bring better than $65 billion, all of which should be applied to the national debt, particularly as series E and F bonds would probably be employed to buy those properties.

This estimate of the recovery value of these properties is very low, as is evidenced by the history of the sale of the Inland Waterways Corp.'s barge lines and the federally owned synthetic rubber plants. May I illustrate by quoting from the Rubber Producing Facilities Disposal Commission. The Commission's report to Congress, dated January 1956, page 5, recited the fact that the total book value of the plants sold amounted to $127,617,000. They had produced an accumulated deficit during the period of Government operation of $134,693,000, for a total investment of $262,310,000.

The same report, same page, cites the fact that these facilities were sold back to taxpaying private enterprise at a total price of $284,848,000 which is $22,538,000 over the total cost of the Government excursion into rubber production. As private enterprises they have been paying substantial taxes, Federal, State, and local.

An extensive program of selling Federal corporate activities back to the American people on this scale would rapidly eliminate the national debt, particularly as we learn from the Federal Real and Personal Property Inventory Report of June 30, 1957, by the Committee on Government Operations (p. 13) that the grand total of the acquisition cost of such property held by Government exceeds $250 billion.

But let's assume that the properties and facilities affected by the amendment will not bring their book value plus more than 100 percent such as in the rubber plant disposal program. Let's assume that they will not even return their book value or acquisition value. Assuming that they will only yield $65 billion, the disposal would produce the following results in such a year as 1959, based upon the information contained in the 1960 budget.

First, we would not be required to provide taxes to pay interest on the $65 billion of national debt paid off. At a 3 percent interest rate this means a savings of $1,950 million per year.

To amortize this $65 billion over a 40-year period costs another $1,625 million per year which would not be required from the taxpayers.

A study of the Federal budget during the past 10 years indicates that the losses accumulated by the Federal corporate activities, even though they operate interest free, dividend free, rent free, cost free and tax free, have exceeded $10 billion each year, and in 1959 the welfare spending splurge shoved these losses well above the $19 billion mark.

It is estimated that more than 40 percent of the 2½ million Federal employees drawing pay from the general fund are exclusively employed in providing services to the Federal corporations without cost to those corporate activities. An average $4,300 per year for these employees means a cost to the taxpayers of $4,300 million per year.

Selling the Federal corporate activities back to the American people would cause those employees to become more profitably employed by the expanded private enterprise system, stopping this payroll as a cost of Government, and also eliminating the goods, services and facilities they now consume which is estimated at 3 times payroll, or $12,900 million per year based on the 1959 estimate.

These five items of potential savings add up thus:

	Millions of dollars
Goods, services and facilities that can be saved	$12,900
Payroll that can be saved	4,300
Losses which can be eliminated (1959 estimate)	19,000
Interest that can be saved	1,950
Amortization charges saved	1,625
Total	39,775
Plus savings from terminating foreign aid	5,000
Potential saving (1959 level)	44,775
Compared to individual income taxes collected 1959	36,900
Leaving a surplus of	7,875
Accommodating repeal of estate and gift taxes 1959	1,393
Making a net surplus of	6,482

By repealing individual income, estate and gift taxes at the same time the Federal corporate activities are sold back to the American people.

But this is by no means the end of the statistical facts relating to this question. When $37 billion are added to the take home pay of the American people simply because it is not deducted from the pay envelope, it will produce the greatest period of economic expansion in history. This money being spent for the things people want will enormously increase the revenue of the Federal Government from corporation taxes, excise taxes, imposts and the many miscellaneous taxes currently levied.

A 20 percent increase in the volume of business from the present taxpaying business community would increase the corporate and excise yield by $5,100 million at the 1959 level.

As 20 percent of the industrial capacity now owned by Government would be back on the tax rolls, this would mean an increase in tax receipts from these sources in such a year as 1959 of $3,825 milion.

Add these two items to the surplus cited above and the total of the new tax sources and the surplus amounts to $15,407 million.

This would absorb the deficit of the 1959 fiscal year of $12,900 million and leave a net surplus which can be applied to the national debt of $2,507 million.

Although this outlines the potential benefits to apply to both Government and people from applying the "Proposed 23d Amendment" in such a year as 1959, there is a decided uniformity in the results of tabulations from year to year regardless of the changes in the factors involved.

Nor are the elements described above all the benefits to be expected. There is the matter of collecting the income tax which would no longer be involved. This amounts to more than $200 million per year. It is estimated that the printing of the tax forms and all the auxiliary items related to the income tax collections costs more than $100 million per year, and the cost of the postage to handle the flood of parcels, booklets and letters connected to tax collections adds about $40 million per year to the deficit of the Post Office Department. In these items another $340 million can be saved, and help pay off the national debt or reduce taxes in other areas.

Strangely, by applying the terms of this amendment miraculous changes will be produced in the local and State taxing problems.

Your difficulties are great because the tax drain before you ever reach the citizens of Texas has become unbearable. Your difficulties arise because the taxes you must devise are an added burden upon already exhausted people. By putting an end to the Marxist income tax program, the take-home pay of the people of Texas and every other State will be about 20 percent greater than at present without adding a single penny to the rate of pay or to the costs of production. The people of Texas would no longer be exhausted before they faced the problem of local and State taxes.

Then, too, there will be a vast increase in the volume of taxable property. I am not certain about the percentage of Texas which has been taken over by the Federal agencies without constitutional authority for doing so, but I do know about my own State of California where the Federal Government owns about 48 percent of the State. Selling back the property held without constitutional authority will put about 40 percent more property on the tax rolls to share the burden with the present taxpayers, so that even if the cost of State government is increased, the share each taxpaying unit will be required to pay will be lessened. This will be spectacularly true in such a State as Nevada where the Federal Government owns and occupies 87 percent of the land area.

Come to think of it, how can a State be considered as a sovereign State when the jurisdiction of the State government extends to only 13 percent of the area of the State?

In each State, and in each city, and to each person, the situation differs, but in every instance, without exception, the transfer of these vast political empires back to the American people, to be restored to the constitutional protection which the Founding Fathers originally intended for our individual enterprise system, means an infinite variety of benefactions beyond the power of human imagination—just as the Constitution itself held advantages for us far beyond the dream of those who gave it life.

The proposed 23d amendment pending before you as Texas House Concurrent Resolution 6 can achieve these amazing things, not because it adds something new to the Constitution or takes anything from it, but only because it will give the Constitution as originally established new force and effect. Instead of grinding the people down under an inhuman load of individual income taxes, those taxes, and the need for them, would be abolished.

Instead of the Federal Government operating at an annual average deficit of $12 billion per year, as it has during the last 20 years, we can balance the budget, amply maintain all essential and constitutionally authorized functions of Government, and pay off the national debt at a rapid rate.

Instead of the violent conflict between Government and people regarding which shall own and operate the enterprises created by the people, we will have a Government devoted to protecting our lives and property.

Instead of the Federal Government being the greatest pauper in history, it will be returned to a solvent position and regain the affection of the American people—and the affection of the citizen is the greatest asset any government can possess.

This all adds up to the simple equation that when we stop political competition with the private enterprises of taxpayers the tax problem will very largely be solved.

At the same time, the sovereignty of the States will be restored, just as the Constitution intended.

It will restore international justice, confidence, and honor.

It will reestablish the American theme of "equal justice under law," with Government back at its rightful job of governing and regulating, protecting our lives and property.

It will constitute a great rebirth of liberty, making us free, in fact, when we are brave enough to face the issue and do the job.

Even the strife between management and labor will vanish when labor regains the full reward of toil by eliminating the withholding tax, putting a greater net increase in the pay envelope of the American people than any politician or any labor leader ever dared to think about.

These factors are sound in every way, heavily supported with evidence from official records. It staggers the imagination that so many benefactions to Government and people can arise from the restoration of economic justice and fiscal balance, yet our history and tradition verify these facts.

Reorganization of the 109th Field Artillery of the Pennsylvania National Guard

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Thursday, April 2, 1959:

REORGANIZATION OF GUARD

Today the Record is publishing a summary of the plan for a complete reorganization of the Pennsylvania Army National Guard. The far-reaching changes include a provision for two artillery battalions for Wilkes-Barre instead of one. For this and other reasons detailed in a news article, a significant new chapter is being written in what we know today as the 109th Field Artillery. As its new milestone is reached, we cite some of the historical background of an organization of which Wilkes-Barre and the surrounding area can be justly proud.

The 109th was first organized in 1775 and has 23 battle streamers in addition to the Presidential Citation and the Luxembourg Croix de Guerre.

The 9th Pennsylvania Infantry, as it was known from 1873 to 1916, included companies as follows: Six in Wilkes-Barre, A, B, D, E, F, and K; three in Pittston, C, H, and M; one in Hazleton, G; one in Plymouth, I; one in Nanticoke, L.

In 1916 it was reorganized as the 3d Pennsylvania FA Regiment for border service and became the 109th Field Artillery Regiment for World War I in 1917. After World War I it was organized with the Regiment Headquarters and 2d Battalion in Wilkes-Barre, and Batteries A, B, and C in Nanticoke, Pittston, and Plymouth. About 1930 the Pittston battery was disbanded and Battery B was established at Tunkhannock.

This organization remained until 1942 when, with the triangular reorganization, the 109th FA lost Regimental Headquarters Bat-

tery to the Tank Destroyer Battalion and the 1st Battalion to the 193d FA Regiment, both outside the division. In 1946 upon reorganization the 109th FA Battalion was kept in the Wilkes-Barre Armory as it is now, but there was also the 967th FA Battalion, with batteries as follows: Headquarters, Wilkes-Barre; A, Wilkes-Barre; B, Nanticoke; C, Plymouth; Service, Danville (reorganized in Nanticoke in 1950).

This battalion was, of course, outside the division. It was called to duty in 1951 and was not thereafter reorganized.

After the return of most of the personnel in 1952, the 109th FA Battalion was again reorganized in the Wilkes-Barre Armory. Tank Company of the 109th Infantry was organized in Nanticoke in 1954. Company D of the 109th Infantry was organized in Plymouth, also in 1954.

In 1946 or 1947 Cannon Company of the 109th Infantry was organized in Pittston and since 1953 has been the 109th Infantry Heavy Mortar Company.

Statement of Hon. Melvin Price, of Illinois, in Support of Federal Unemployment Compensation Standards Legislation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith my statement to the House Committee on Ways and Means in support of legislation to estabilsh Federal unemployment compensation standards:

STATEMENT OF HON. MELVIN PRICE, OF ILLINOIS, HOUSE OF REPRESENTATIVES, TO THE HOUSE COMMITTEE ON WAYS AND MEANS IN SUPPORT OF FEDERAL UNEMPLOYMENT COMPENSATION STANDARDS LEGISLATION

Mr. Chairman, I congratulate this committee for scheduling hearings on the critical issue of improved Federal standards for unemployment compensation and I am deeply grateful for the courtesy of the committee and of the chairman for allowing me to state the reasons I believe the committee should report a bill establishing such improved standards.

The bill I have introduced, H.R. 3580, like others before you, would strengthen the already existing Federal Standards Act under which the unemployment compensation laws of every State now operate. It would increase the number of workers eligible for unemployment insurance benefits, and in addition it would provide improved benefits for a maximum of 39 weeks in all of our States. These higher benefits would be payable so that a worker thrown out of a job by no fault of his own could draw weekly payments of at least two-thirds of his ordinary salary or wages, or one-half of the average of salaries and wages in his State, whichever is smaller.

Mr. Chairman, this expert committee is intimately familiar with the details of such legislative proposals and with the taxing programs that would be required to finance them. I believe that in the technical and tax fields my bill is sound, but I would like to discuss the general principles involved.

What is the origin of our unemployment compensation systems in our various States? Why, they came into existence by Federal action. A bill was passed by Congress, in the depths of the great depression nearly a quarter of a century ago, establishing a Federal tax upon employers to finance unemployment benefits. But the bill also contained a provision that if the States would set up their own systems, meeting certain standards laid down in the Federal law, most of the tax receipts would be remitted to the States for operating their systems.

And what has been the history of the systems? An enormous variety has come into existence, over and above the standards required by law, by which some States pay much more and some States much less than each other and than the average. There are differences in the eligibility rules, in the length of time for benefits, of the size of benefits, in the tax rates that employers now must pay to finance the systems that have been recognized as socially desirable.

This has had two very bad results. In the first place, there is a quite natural tendency in the State legislatures not to make swift and major improvements in their local systems that may lay a burden on business that does not exist in neighboring States. The members of this committee are practical, knowledgeable, well informed. You know the force of a witness' argument, before a State legislative committee, urging that taxes and social welfare programs be kept at a level that enables the State to remain competitive.

In the second place, this system has prevented the Federal law from working as it was supposed to work. What are the reasons for unemployment compensation? They are both humanitarian and economic. The theory is that benefits for a worker thrown out of his job will ease the shock and loss until he is able to find a new job; this is for the benefit of the worker and his family. But the further theory is that payment of benefits will maintain the worker's purchasing power, at a reduced minimum, so that the economy does not suffer a total loss in periods of severe recession. The economic reasons for jobless compensation benefits are as imperative as the humanitarian reasons.

I think it can be considered as proved that under the existing law, neither the humanitarian nor the economic objectives are being wholly met.

The statisticians report that during the recent recession, the loss in wages and salaries resulting from the unemployment of nearly 6 million was not compensated for in any adequate way. Perhaps 40 percent of the jobless never became eligible for any unemployment benefits at all, either because they were not covered under the general terms of the State laws or under the specific exemptions. And out of the total, not more than 30 percent of the wage loss was recovered through benefits.

I urge this committee to consider very seriously whether the time is not past for the breaking of new ground, for a giant stride forward that would cure the deficiencies which all of us can see have developed across the past quarter of a century.

Unemployment compensation, Mr. Chairman, seems to me one of the wisest programs of our modern age. Our economy is a marvelously efficient enterprise, but it is subject to the shifts and changes that are a part of the price of freedom. Jobless benefits, financed through an orderly system set forth by law, offer the most effective protection against individual suffering and the most effective cushion against shocks to our national health.

When we deal with the subject of improved Federal standards, let us recognize that we are doing nothing unprecedented. We got our system in the first place by the setting up of Federal standards, and I think it fair to say that without these standards we would not today have unemployment benefit programs in all of our States. What we are confronted with is the question of whether it is not necessary now to modernize the standards, to remove as between the States competition in low tax rates and low benefits, to cure weaknesses that the passage of time has revealed in the law as it was first written.

I am well aware that the President has thrown his weight, at least negatively, against the bill and the program for which I speak today. I can merely say that I consider this attitude extremely shortsighted—an example of a deplorable tendency in the White House to confuse the letter of States rights with the spirit that infuses our entire system of government. There is no genuine issue of States rights involved here, but merely a broader question of how we can wisely use information now available to us to strengthen a program that is very much in the interest of the country, a bulwark of our free enterprice system and a proper protection of our people.

This committee is well aware that common report has it that the Secretary of Labor was prepared to support a new Federal standards program until he was overruled by others in the White House. It is well aware that the first chairman of the President's Council of Economic Advisers, Dr. Arthur Burns, believes that a swift improvement and expansion of our jobless compensation law is the greatest contribution we could make to maintaining a sound economy.

I respectfully suggest that this session of the Congress should take account of the passage of time since the unemployment compensation laws were written, should face the realities of the need for an improved system, should recognize its own opportunity to initiate a tremendous forward step. On this subject, I believe that bold thinking and bold action would meet with an overwhelming favorable public response.

Prayer of Rabbi Joseph Rudavsky, Guest Chaplain of Massachusetts Senate, on March 24, 1959

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the prayer of Rabbi Joseph Rudavsky, of Lawrence, at the opening session of the Massachusetts Senate on March 24, 1959, who was the guest of Senator William X. Wall, of Lawrence, Mass.:

The following prayer was offered by Rabbi Joseph Rudavsky, of Lawrence:

Today is Purim, festival of joy, gladness dedicated to the proposition that the Hamans of all ages—men, merchants of prejudice, purveyors of hatred—may yet learn the truth "that to bigotry there can be no sanction." Purim, festival of religious equality, commemorating the right of worship. The privilege to stand stalwart, consistent with one's faith and belief.

On Purim we pray to thee, O God, creator of all, to implant in humanity the qualities of love and understanding, of courage and wisdom, of patience and humility. As we are grateful to Thee for people of prophetic stamp, so do we pray to Thee, for our leaders, who serve to inculcate these ideals in the people.

O God of our fathers, bless us and shield our leaders with wisdom and fortitude, that

they may lead the people in righteousness. Enable our legislators to make of our land, a land of justice and goodness for all. Help them to organize our life for a better day. Strengthen their hands and bless them with consecrated hearts to serve our people with devotion and dedication, that our land, the land of the brave, may ever be the home of the free, its beacon shining, a guiding light to those yet struggling in darkness and oppression, yearning for the light. May their inspiration ever be peace, and their lodestar ever be justice for all mankind. Amen.

Secretary Benson's Speech in Dallas

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Secretary Benson's speech in Dallas before the 50th annual convention of Texas Cotton Ginners' Association, April 7, 1959:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON AT 50TH ANNUAL CONVENTION OF TEXAS COTTON GINNERS' ASSOCIATION, DALLAS, TEX., APRIL 7, 1959

I am delighted to join you in this 50th annual convention of the Texas Cotton Ginners' Association. This, I understand, is the largest meeting of its kind anywhere in the United States. It is both a signal honor and a challenging responsibility to have the opportunity to meet with so many representatives of the entire cotton industry.

And, may I add, your Texas welcome leaves nothing to be desired. There is an old saying, "The glory of the house is hospitality." Hospitality is also one of the glories of the people of this great State.

But I did not come here simply to sing the praises of Texas. My mission is to talk frankly with you about agriculture in general and cotton in particular.

The facts indicate that 1958 was a year of substantial improvement for most U.S. farmers.

The per capita income of our farm people, from all sources, rose 10½ percent to $1,068. This was a new high. It was 9 percent above the previous record of $983 in 1951—a war year.

The fact is that the per capita income of our farm people had a more favorable relationship to the income of nonfarm people last year than it did in 1952—the year before this administration took office.

Farm operators' realized net income rose to $13.1 billion in 1958. This was the highest in 5 years. The gain over 1957 was $2.2 billion, or 20 percent.

Prices received for farm products averaged 6 percent above 1957 and were the highest since 1953.

The value of farm assets, the proportion of farms owned by their operators, and the standard of living of farm families were all higher in 1958 than ever before.

The total assets of U.S. agriculture at the beginning of this year reached $200 billion. Farmers' net equities, after all debts, were $177.4 billion. This was a gain in equities of about $11 billion over a year earlier, and a gain of $134 billion since 1940.

This is not to say, however, that agriculture's major difficulties have all been solved. Far from it. We still have surpluses of some crops. The cost-price squeeze is still pinching our farm people. We still have many underemployed, low-income farm families. A few crops are still under programs which are outmoded, too costly, discriminatory and harmful to agriculture as a whole. The President's message of January 29 clearly showed the need for prompt action in this regard.

Now, what about cotton? Here, too, the situation is not all that we would like—but assuredly it is better by far than it was a couple of years ago. You will recall that the cotton carryover in mid-1956 was at a tremendous record high of 14.5 million bales.

Since then, largely through the vast subsidized export program, supplemented by acreage reductions, the carryover has been reduced by 40 percent. It stood at about 8.7 million bales as of August 1958. It will be at about that same level next August. Although still burdensome, this is the smallest carryover since 1953–54.

Domestic consumption of cotton is picking up beyond previous estimates. Business conditions are generally good, and that favorable fact is being reflected in increased mill use of cotton. If the current rate of consumption is maintained, we will use about 8.5 million bales here at home this marketing year. That would be a substantial gain over last year and the year before.

I wish I could say the same for exports. At present, it looks as though about 3 million bales will be exported this year. Thus, total disappearance will be about the same as the 1958 production.

Now, I don't want to get into a second guessing contest with anyone. But I do object strongly to the mistaken notion that the Department of Agriculture has been, or is, dragging its feet on the cotton export program.

Let's look at the facts. Since the beginning of the 1956–57 marketing year, and through this marketing year, our cotton exports will total about 16.5 million bales. This is an average of over 5 million bales a year. I recall quite clearly that in testimony and debate at the time the export legislation was discussed, 4.5 to 5 million bales was then regarded as a "fair historical share of the world market" for U.S. cotton. Of course, this estimated share is not a static figure. It may vary up or down from one time to another.

I want to say with all the earnestness at my command that I will continue to seek a fair share for American cotton, whatever that share may be.

During the 1956–57 marketing year we exported 7.6 million bales of cotton, the highest since 1933.

In 1957–58 we exported 5.7 million bales. The total of more than 13 million bales in the 2 years was an outstanding record of successful, competitive exports—far above the expectations of many cotton men.

Cotton exports could not be expected to continue at these high levels. Foreign stocks, which had been low, were built up to high levels. This is one reason why our exports during the current marketing year have fallen off. But the record shows that our export programs have been effective. They have moved a lot of cotton in the interests of the American cotton grower and in line with the expressed wish of the Congress.

I do not believe, however, that the cotton export program is a permanent solution. We must seek markets on a sound competitive basis through normal market channels.

We must not lose sight of the fact that we have moved this cotton under the subsidy program at a substantial cost to U.S. taxpayers. It will continue to be expensive to do this.

The export subsidy rate which we have announced for the beginning of the next marketing year will be about $40 per bale exported. To this cost must be added that of the difference between the purchase price for choice A cotton and the resale price for unrestricted use. After taking into consideration the administrative expenses, this phase of our subsidy operations will result in a cost of about $20 per bale. This means that on the choice A cotton which is exported the subsidy will cost taxpayers $60 a bale.

No matter how you figure it, this adjustment to meet competitive world prices will be costly. Why? Because of the long continued use of unsound programs.

Textile activity both at home and abroad is picking up. This upsurge should reach substantial proportions in the coming marketing year.

The new cotton law, with which you are all familiar, should help producers and the entire cotton industry. It is designed to provide more freedom to plant, to market, to compete, and to make decisions.

A total of about 69,000 farm operators have elected the choice B upland cotton program for their farms for 1959. Allotments for these farms are thereby increased from a total of 2.5 million acres to 3.6 million acres.

I imagine one of the questions uppermost in your minds is how the Department is going to operate its purchase and sale of choice A cotton. Although we have not yet announced all of the details, we are currently planning to operate somewhat along the same lines as the loan program. Purchases and sales will be made through local people.

This would mean that qualified persons or firms—ginners, banks, cotton buyers, cotton merchants, cotton cooperatives, or warehousemen—would be permitted to enter into agreements with the Government and act as agencies for the purchase of choice A cotton from local producers. An approved purchasing agency could be approved as a sales agency to sell choice A cotton locally.

I must stress that this is not final. Many details still have to be settled. But I assure you that we adhere firmly to the principle of making maximum use of private trade channels. That has been our philosophy from the beginning. We hold to it strongly.

Another question you want answered is, When are we going to start? We expect to have the purchase program out in time to take care of your early crop areas. The sales program details may take a little longer, but they will be ready before the August 1 beginning of the new crop year. Sales of cotton under the provisions of the new program cannot begin until then.

It is my belief that the Agricultural Act of 1958 as it applies to cotton can help this great industry move toward expanded markets at home and abroad.

On the other hand, it is by no means a complete solution to our cotton problems. Over the past 20 or 25 years the cotton industry has become involved in a complex—almost bewildering—situation which is by no means easy to unscramble.

My complaint about the old cotton program is simply this: Over the years it was loaded down with so many conflicting gadgets that it became wholly unworkable.

The price-support mechanism was frozen at a production-incentive but market-destroying level. Markets were handed to synthetics on a silver platter. We have spent 6 years trying to thaw out the system, and the job isn't finished yet.

In addition, over the years special fringe benefits, such as the ⅞ Middling provision, were provided, which had the effect through 1954 of making the actual support level even higher than the unrealistic 90 percent of parity.

On the other hand, a number of special provisions, plus the technological revolution, made acreage controls almost ridiculously ineffective.

All this added up to a classic example of trying to have your cake and eat it too.

It just can't be done—not for cotton or any other commodity.

The effects of such contradictory policies are even more evident in the case of wheat. Despite the control programs, we now have by far the greatest wheat surplus in all history.

By July 1960 the carryover of wheat will be about 1½ billion bushels—enough to supply our normal domestic requirements 2½ years. We will have $3½ billion tied up in wheat alone.

We have spread the Wheat Belt all over America. Wheat acreage has increased in areas of high cost, while acres have been cut back in areas where production is most efficient. This doesn't make sense.

Not only have surpluses of a few crops piled up, the cost of the price-support program is staggering—indefensible.

Our total investment in price-supported commodities is now $9 billion. It will probably exceed $10 billion by the end of the next fiscal year.

It is estimated that during the next fiscal year we will spend more than $1 billion—$1 billion—just for storage, transportation, and interest on these Government-held surpluses.

It is apparently impossible for a Secretary of Agriculture to deal effectively with the present critical problems of agriculture always on the basis of just necessity or just economics—he must sometimes face up to the politics.

There is nothing disgraceful in the word politics or in the word "politician." Politics is the art of government and good politics makes for good government. The very foundation of this Government was a document divinely inspired that was drafted and adroitly handled by politically educated men to become an instrument for freedom. What we must strive for in the political factor of the formula is to have political action governed by the economic facts. And this is where the failures have occurred.

I think it must be admitted that in the past there has been an overemphasis on political approaches to farm problems which are basically economic.

Agriculture must not be sacrificed on the political auction block. Agriculture is neither Republican nor Democrat. It is American.

Let us be candid. Both major parties share responsibility for the situation in which we now find ourselves. But more important is the responsibility for getting to the solution. Congress has our recommendations. It is my sincere hope that the action so urgently needed will be taken without further delay.

No one has more concern than I about the cost of these farm programs. This Secretary of Agriculture has been administering, and is still required to administer, within the straitjacket of outmoded laws, the most costly, irrational, hodgepodge program ever patched together. It is the result of 25 years of political attempts to solve economic problems, seemingly with an assiduous determination to pretend that economics does not exist.

Do you think that as a farmer, the son of a farmer, yes, the grandson of a farmer, and as a former county agent, and now as a spokesman for farmers, I enjoy for 1 minute the distinction of administering the third largest item in the Federal budget? Of course not.

But be assured, I would not hesitate to defend this program if it were serving the best interests of our farm families and the people of the Nation. The truth of the matter is that these stupendous surpluses and heavy costs are not only sapping the vitals of free agriculture, they are also a threat to the solvency of this Nation.

The Secretary of Agriculture is subject to many pressures and crossfires. Opposition to change—to sound economic solutions to economic problems—has been almost unbelievable. My opponents can't agree on a constructive solution of the farm dilemma. Really, the only general agreement among my opponents is this:

"Let's saddle Benson with all of the ills of agriculture, and especially with the cost of the mess we helped cook up for him."

With smoke screens of distortions and half-truths, those who would dodge responsibility for obvious failures seek to obliterate the facts. But a rising crest of informed and aroused public opinion is beginning to penetrate the fog of confusion.

One of the largest national farm magazines recently invited farmers to tell Congress what to do about price-support programs.

In replying to that poll, 55 percent voted for "no supports, no controls, no floors, free market prices; get the Government clear out."

This is a significant increase over the 50 percent who in a similar poll a year ago favored getting the Government out of farming.

Another 15 percent favored emergency supports only "to prevent disaster from a huge crop or sudden loss of markets; floors set at, say 50 percent of parity, or 75 percent of the average 3-year market price and no production controls."

Another 8 percent wanted adjustment supports "such as 90 percent of the average 3-year market price, permitting gradual adjustment to normal markets and moderate production control when necessary to ease adjustments."

Only 22 percent wanted more Government price help. This breaks down into 14 percent who favor a return to supports at 90 percent of parity or more and 8 percent who asked for production payments.

This nationwide poll showed that 8 out of 10 of the farmers want greater freedom and less Government in farming. In the South the figures are 81 percent for more freedom in farming as against 19 percent for more Government in farming.

Yes; the voice of the American farmer calls in louder and louder tones for more freedom to act, and less Government interference.

If this is what farmers want what are we waiting for—what is Congress waiting for? I repeat, we've made our recommendations. Why don't they act?

In January, the President again asked the Congress to make forthright changes in our farm price supports. He urged that price supports no longer be related to a standard 45 years old, but to a percentage of the average market price during the immediately preceding years.

If the Congress still prefers to keep existing parity standards, the President urged that the Secretary be given discretion to establish the support level for all commodities in accordance with guidelines fixed by law. This is now permitted for all of the 250 commercially produced commodities except the 16 for which supports are mandatory.

Either of these changes would be constructive. Under either course, the surplus could be reduced, the cost cut, production controls relaxed, and markets developed. Our farm people could make more of their own decisions. The Government could resume its proper function of promoting farm research, expanding and developing markets, protecting soil and water resources, improving farm credit, and so on. We would help stabilize markets, not price ourselves out of them.

Congress recognized the need for farm program revision last year by passing the Agricultural Act of 1958. This act made some limited changes in the program for corn, cotton, and rice. Now we need prompt and effective action in behalf of producers of the other three basic crops, wheat, tobacco, and peanuts.

The American people want and deserve a program that makes sense. The poll I referred to is one further evidence that most of our farmers want it, too.

Our old costly farm programs are not only harmful to agriculture, they also contribute to unbalancing the budget—and this adds to the threat of inflation. That is of utmost concern to every citizen. No nation can go on indefinitely living beyond its income and cheapening the value of its currency.

I am intensely concerned about this. The course of inflation is subtle. Its ends are destructive. It mounts quietly, almost unseen in the short-term view, but it is utterly devastating over time.

The President has called for tight reins on Government spending, and for a balanced budget. He has called upon all of us, as citizens for self-discipline in our economic actions, both as individuals and as groups. Government alone cannot win the battle against inflation. To win it—and we must win it—will require the united efforts of the American people—business, labor, banking, agriculture, and all economic groups.

Our expanding Federal Government has boosted the average family's tax bill from $120 to $1,600 a year. How much further can we go in this direction?

Many pressures are now being exerted to add more billions to Federal spending in the coming fiscal year, and beyond—billions that can bring on further deficits and inflation.

Contrary to what some people would have us believe, the Federal Treasury is not a bottomless grab bag which never needs to be conserved or replenished. To act as though there is no limit to what the Treasury can spend is an open road to the destruction of private enterprise, and its replacement by a socialistic economy.

We must have a tax policy which is not confiscatory and a budget policy which prevents inflation. The Nation must have sound farm programs—just as it must have sound banking and finance—and sound wage and price policies.

In the interests of the whole Nation, we need less Government in farming. Quit trying to fix prices unrealistically from which flow the twin evils of production for Government warehouses and Government control of farmers. Emphasize markets, increased efficiency, and competitive selling. Eliminate Government's stranglehold on agriculture.

This is the solution to the farm dilemma.

We have made limited progress. We are on the right track. If we can push ahead soundly and keep the train from being derailed by those who put their faith in panaceas and quack remedies, agriculture in general and cotton in particular will regain lost markets, expand old markets, develop new markets.

Cotton is gaining in domestic use for clothing, about holding its own in household uses, falling far behind in outlets for industrial purposes. From 1947 to 1957 the domestic use of cotton for clothing increased 44 percent. But industrial use of cotton dropped 40 percent.

Always we come back to the essential point—markets depend on quality, price, and promotion.

Cotton ginners are a vital link in the chain of progress. I know that you have long had an important part in promoting quality improvement and in helping cotton on its way to the mills at minimum costs. Many of you have accepted the responsibility for taking cotton samples and shipping them to classing offices. Some of you are spokesmen for farmers, unhappy because grades are below expectations.

I urge you also to take an active interest in accurate price quotations. We must all strive to make further improvements in quality and market efficiency.

I hope ginners will be well represented at the universal standards conference to be held in Washington next month.

Some of you have seen the experimental "flight-bar" roller gin developed at our Mesilla Park Laboratory. In tests, it has turned out nearly 20 pounds of extra-long staple lint cotton per inch of roller per hour, an eightfold increase over the average commercial roller gin. Its capacity for relatively shorter staple upland cotton is 13 pounds, a sixfold increase over the average commercial roller gin.

Many mills are now using the machinery designed by our engineers to open, blend, and clean cotton. This year some 4 billion yards of new fabric will be given finishes that make cotton garments and household goods soil and crease resistant, with the wash-and-wear qualities demanded by today's homemaker. These finishes were developed with the aid of our chemists.

A year ago an industry-USDA study group recommended a pilot spinning facility be set up as part of the marketing research program for cotton. This plant is now being established at Clemson, S.C.

These many efforts are the starting point for knowledge on which a whole new technology can be based, a technology that will mean more efficient machinery in the gin as well as new cultural practices and processing techniques of benefit to the entire cotton industry.

All this is heartening, encouraging, stimulating.

I am not impressed with gloomy prophecies and defeatist talk about the future of cotton and agriculture as a whole. The future can be exciting, profitable, satisfying, progressive, a good time to live and work and raise a family.

What is called for is a joint undertaking to which our wholehearted cooperation is dedicated. I challenge you of the entire cotton industry to give us your cooperation and I pledge that you shall have ours.

I am dedicated to doing what is economically sound, fair, and right to help improve the position of farmers in our economy. I shall continue to pursue that goal of a more prosperous, expanding, and free agriculture.

With God's help, and the understanding and cooperation of groups such as this, whose futures are so closely allied with farmers', we shall reach that goal.

Remarks by Gov. G. Mennen Williams Before Cleveland Bar Association

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD, excerpts from remarks by the Honorable G. Mennen Williams, Governor of Michigan, before the Cleveland Bar Association, in Cleveland, Ohio, on April 7, 1959:

EXCERPTS FROM REMARKS BY HON. G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, CLEVELAND BAR ASSOCIATION, APRIL 7, 1959

Just a couple of weeks ago, I was talking on the phone to a neighboring Governor.

After we had exchanged the usual greetings, he remarked, in a tone of voice filled with warm and friendly solicitude, that he was sorry to hear that Michigan was in such tough shape.

Quite naturally, I thanked him for his generous concern, but it wasn't easy to restrain myself from making some observations about his State on the basis of figures which had come across my desk.

His State's deficit is considerably larger than mine, he's trying to raise almost half again more taxes this year than I am, his State had more than twice as many areas of serious unemployment at the turn of the year than my State had, and his State debt was almost $30 per capita higher than mine.

Yet he was sincerely extending his sympathy to me because the stories he had been reading made it seem like Michigan was a barren economic wasteland. Incidentally, it wasn't Mike DiSalle I was talking to—although I do enjoy talking to your great Governor.

My wife, who is touring the Orient as an observer for the World Health Organization, says that the American periodicals received over there have painted such a grim picture of Michigan that she half expects her tips to be returned.

So I've come to respect, even to marvel a little at the power of the printed word, even when its wrong, as it certainly is in the case of the exaggerated announcements about the imminent demise of Michigan's economy and government.

Michigan has problems—of course we have. So does every other State in the Union. But let me assure you that we're not cashing in our chips yet. I'm not a ghost. And the gleeful obituaries of Michigan written by some editorial writers around the country are considerably premature.

For example, so far this year there have been announcements totaling more than $600 million in new industrial installations or expansions in Michigan. Three-fifths of a billion dollars in private capital investments already scheduled this year hardly sounds like a State that's on its last legs. And last year, Michigan ranked fourth among the States in industrial construction, according to data published nationally last month in the Engineering News-Record publication.

Business Week reported last month that Michigan was one of only eight States that could boast of $1 billion in personal income per month in 1958, which hardly can be the death throes of a dying economy.

Incidentally, one of those eight States is your own great State of Ohio, and I'm glad that we're together right up there among the leaders.

And as for our being a welfare State—there are 33 States with higher per capita costs for welfare than Michigan's. And there are 30 States which have higher State and local taxes in relation to income than we have, according to a study released by the census bureau earlier this year.

This bit of chamber of commerce talk is just to correct any queasy feeling you might have that your neighbor Michigan is slowly sinking into the Great Lakes and is about to go under with a last gurgle.

And those of you who want to come to Michigan for a vacation will find that the accomodations are still the very best, the scenery is superb, and the fishing is the greatest—so do come over and visit us—anytime.

But in spite of our assets, we in Michigan, the same as you in Ohio, have some real economic problems. These economic problems are largely part and parcel of the economic problems of the Nation as a whole, and it is to this point that I shall address the remainder of my remarks.

It is obvious that there are grave dislocations in our National economy when we have critical unemployment at a time of rising production. It is equally apparent that we have immense public and private needs which are not being taken care of at the present level of economic activity.

Did you know, to take just one example, that 14 percent of American families had family incomes in 1957 of less than $2,000 a year, according to a report by the Department of Commerce.

We can take care of this economic need, and other needs, by creating a bigger economic pie. The way to discharge the economic responsibilities which lie upon our collective shoulders, is to make our economy grow consistently at a faster rate than it has over the past half-dozen years.

We need an economy which does more than just keep pace with the needs of our booming population. We need an economy big enough to wipe out the backlog of needs, raise our standard of living, and help the free world to greater security and prosperity—all at the same time.

Take education as one of many examples of why we need a bigger economy, and need it right now. Conservative estimates of today's classroom shortages place it at about 140,000 classrooms. Other estimates range up to 300,000 classrooms. At $30,000 a classroom, a low estimate for many parts of the country, these 140,000 classrooms would cost more than $4 billion. If we took the larger shortage estimate of 300,000 classrooms, the needed expenditure would be up to $9 billion.

And remember this is just the backlog. It doesn't even touch the new needs coming up, to say nothing of the necessity of more adequate teachers' salaries. Our needs in the field of higher education, of course, are enormous. Enrollments in higher education are expected to double in the next 10 to 15 years.

The critical shortage isn't going to go away by pretending it doesn't exist, nor will it be resolved out of an economy which over the last half-dozen years has not fulfilled its growth potential.

The reason I mention education first is because it is the seed of American growth and the root of American opportunities. As long ago as 1916, Prof. Alfred North Whitehead said:

"In the conditions of modern life the rule is absolute; the race which does not value trained intelligence is doomed. Not all your heroism, nor all your social charm, nor all your wit, nor all your victories on land or at sea, can move the finger of fate.

"Today we maintain ourselves. Tomorrow, science will have moved forward yet one more step, and there will be no appeal from the judgment which will be pronounced on the uneducated."

It would be grim irony indeed if history were to say that Russia took that advice but America did not—on the specious grounds that we were unable to build an economy big enough to afford it.

What is true in education is true in many other areas of our national life. Since 1950, our population has been showing an average net daily increase of 7,600 persons, or some 2,800,000 a year. By 1975, we are going to have a population of some 225 million in America.

In the book "The Exploding Metropolis," the editors of Fortune magazine say this about American urban housing today—and just think as I read this what the impact of that population growth is going to be in housing alone if we don't roll up our sleeves and lick our housing problems.

The editors of Fortune reported this: "Today some 17 million Americans live in dwellings that are beyond rehabilitation—decayed, dirty, rat-infested, without decent heat or light or plumbing."

Surely, we're not going to stand by and let that kind of thing continue in this great Nation.

Take the social security needs of our aged citizens. Today there are some 14 million

people over 65 years of age in the United States. There will be 21 million by 1975, and 27 million by the turn of the century.

Are we going to continue to make deprivation, loneliness, and uselessness the things our senior citizens look forward to? Or are we going to attack their social security needs realistically, and provide the economic sufficiency and the social environment to make the last years of their lives happy, enjoyable, and useful?

In national defense, the Rockefeller report says we should be spending $5 billion a year more on our Military Establishment. In foreign economic aid, particularly to help the people of the underdeveloped countries to live in dignity and increasing prosperity, we should be spending an additional $3 billion a year, according to experts in this field.

We need a higher level of consistent economic growth simply to do what needs to be done in education, in slum clearance and urban renewal, in programs for our aged, in military defense, in economic aid, and in a great number of other areas of our economic life, areas like power development, hospital building, support for basic research in physical sciences and in medicine, and so on.

Are we able to do this? Is the task so formidable that it is beyond our national capacity?

Well, if there is any one thing clear in our economic history, it's that we've proven time and time again that we really don't know what prodigious things the American economy is capable of until we try.

Many of you will remember as clearly as I do one of the dramatic examples of this. In 1942, President Roosevelt called for the production of 45,000 combat planes and 6 million tons of shipping. In 1941, by comparison, only 1 million tons of shipping had been produced. Some cynics scoffed, but the American people went to work. We turned out 48,000 planes that year and 8 million tons of shipping.

In the late 1930's our gross national product was about $90 billion. Some economists thought we might be able to increase this to $140 billion under the demands of war. But we actually achieved a gross national product of $211 billion by 1944.

And with that immense resurgence of the American economy, we rescued our Allies from defeat, smashed Hitler, forced Japan to surrender, and kept right on going, and growing, until by 1948, after absorbing 12 million members of our Armed Forces back into our civilian economy, we had a gross national product of $259 billion. And unemployment during that reconversion never exceeded 2.5 million workers.

In other words, when the need was clear and our national policy was to fill that need, we grew nearly three times over in a decade. It is my contention that the need for economic growth is equally clear today, and it is my contention that America is equally able to meet a peacetime challenge.

Can we afford the present investments needed to spur our growth without "spending ourselves into bankruptcy," as the accusation is sometimes phrased?

Well, in 1953, Federal expenditures were 20.7 percent of the gross national product, and now they are 17 percent. The proportion of the gross national product used for defense expenditures fell from 14 percent in 1953 to slightly over 10 percent last year.

And we certainly weren't on the brink of economic collapse in 1953 when we were doing proportionately more in Federal expenditures than we are today.

We have at hand three immense resources to achieve the growth we need. These are our unused industrial capacity, our idle manpower, and the undeveloped talents of those young people who are deprived of an education to the limit of their ability for economic reasons, or because of discrimination.

As proof of this latter point, the Secretary of Health, Education, and Welfare, Arthur S. Flemming, had scholarship requests totaling $62 million on hand in January when he began to put into effect the National Defense Education Act passed last year. He had expected scholarship requests to total $31 million.

The real economic waste in America is not in governmental spending. It's in the waste of manpower through enforced unemployment, and the waste of human talent through failure to provide the fullest possible educational opportunities for everyone.

Are there dangers in promoting rapid economic growth? Are there attendant problems? Of course there are. But I for one have every confidence in the world that our free enterprise system, and our democratic form of Government, can minimize the dangers, and surmount the problems, if we really apply ourselves to the challenge.

We are being told by some voices that inflation will run rampant if we do not restrict our public outlays. But the facts about our national experience with inflation make this proposition worth a much closer examination.

In a recent speech in Congress, the able and experienced Representative CHESTER BOWLES of Connecticut pointed out that since 1948 the average annual increase in wholesale prices has been 1.3 percent and for consumer prices 1.8 percent. Over the past 60 years, the average annual increase in both wholesale and consumer prices together has been 2.5 percent. Congressman BOWLES drily observes that such an increase is hardly of "panic size."

A very large proportion of the actual increases resulted from war. Moreover, the opinion is now growing that perhaps as much as 85 percent of the price increases in recent years lies in administered prices, which, the record shows, tend to rise more rapidly in periods of recession than in periods of growth.

In recent weeks, Dr. Woodlief Thomas, chief economist for the Federal Reserve Board; and Professor Saulnier, Chairman of the President's Council of Economic Advisers, and others, have conceded that administered prices have been a major element in postwar price increases.

Dr. Gardiner Means, one of the authorities on administered prices, estimated that as much as 85 percent of our price increases were in this administered price sector of the economy.

Not for a moment am I denying that we must be on guard against inflation. Not for a moment am I saying that we should ignore the danger of inflation in our calculations of how rapidly we can expand our economy.

But the fact is that we have less reason to fear inflation than we have to fear the losses due to unemployment, inadequate schools, a depressed agriculture, and the like.

Otherwise, America is in danger of presenting to the world the ridiculous spectacle of a nation afraid to expand because of a false scare that a roaring inflation is the penalty for rapid growth.

Inflation is only one of the problems. It gains us little if our economy grows in a fashion which merely makes the rich richer and the poor poorer. It gains us little if we have prodigious production simultaneously with critically high unemployment, or surplus food and fiber along with a depression on our farms.

The kind of free enterprise system I want is a free enterprise system which really works to give every able and willing citizen a decent job, decent housing, the best education for his children, recreational opportunities for himself and his family, that provides him the wherewithal to have the medical care he needs when he needs it, and which gives him an old age worth looking forward to. And does this without the ugly stain of discrimination for race, religion, color, or national origin.

That's the kind of example I want America to show the world. That's the kind of example we need to move the world away from the lures of communism.

So we not only need growth which does not founder on the shoals of inflation, we need growth which is so worked out that the stated national policy of this country—clearly expressed in the Full Employment Act of 1948—is fully realized.

What then is holding us back? What is preventing the sinew, and nerve, and courage of America from accepting the challenge, rolling up its collective sleeve and going to work? Why do we stand around, almost in a stupor of inaction, while millions of Americans are out of work at a time of rapidly rising production, while food surpluses pile up and farmers go broke, while our cities decay, our children are squeezed into inadequate schools, our teachers are underpaid? Why are we not increasing those services which only Government can provide—at least enough to keep up with our rising population.

Have the American people lost their will to act, or has our leadership not sounded the call to action, as it should to America in midcentury.

The answer, I think, is clear. We need to revive the can-do spirit of the American people. We need to rouse this Nation to the challenge to do great things in the spirit which created our Nation in the first place, and has carried us onward to our manifest destiny for greatness ever since.

When we have a national attitude that squarely faces the facts about our needs, and firmly resolves to meet them, we will have taken a big step toward achieving the economic growth which will make it possible for us to do what needs to be done.

Then we must use the tools of fiscal, budgetary, and monetary policies to increase investment opportunities in America, and at the same time to make sure that the new wealth created is fairly distributed through the economy in a manner to sustain and increase both buying power and savings for further investment.

We've got to have the cooperation of management, and labor, and educators, and leaders of all kinds, to set forth our goals and to work together to achieve them.

We've got to go all out in our support for research because much of the new growth we need will come from research laboratories in the form of new inventions and new products to create whole new business enterprises not now even dreamed of.

The call to action in midcentury America is the call to growth. The schools we need are needed now, not 20 years from now. The slums to be cleared need clearing now, not a generation hence. The aged who need help need it now. The jobless worker needs work tomorrow, not 5 or 10 years from now.

The need to help the emerging peoples of the world to stand upright in freedom, dignity, and economic opportunity is a need which faces us now; tomorrow will be too late.

Let's be done with voices of little faith who doubt America's capacity to do what we have to do. This I believe is the call midcentury America wants to hear.

The Imminent Fair Trade Bill

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial by

the New York Times (Monday, April 13, 1959) that calls a spade a spade. It is time now for consumers to be heard. Nor will this bill help the retailer as it alleges to do.

The editorial follows:

THE FAIR TRADE BILL

The Interstate and Foreign Commerce Committee of the House of Representatives is scheduled soon to vote on a radical piece of legislation whose enactment into law would do damage to the interests of every consumer as well as to basic principles of our society. This is the Harris bill, now being pushed by advocates of so-called "fair trade" legislation to repair the defeats they have suffered in the courts and legislatures of 19 States and Alaska. Put most simply, the bill would make it a Federal offense for any retailer to sell a product for a price below that set by its manufacturer, provided only that the product has for some time been part of a "shipment in commerce." Thus the sanction and threat of Federal Government power would be put behind uncontrolled private price decisions imposed upon all further sellers and buyers of such a product.

This effort to outlaw price competition is obviously subversive of the free competition which is basic to our way of life. The proponents of this measure would do well to ponder the likely future consequences of their success should they win. They should not be surprised if one such consequence were the demand for Federal control over manufacturers' prices. The recent chagrin of domestic oil interests which have seen their success in winning compulsory Federal control over oil imports open the door to Government control over prices of oil and oil products teaches an instructive lesson in this regard.

From the consumer's point of view passage of this bill holds a threat of higher prices and further intensifying inflationary trends. The magnitude of this threat is clearly indicated by a Department of Justice survey conducted in 1956. That survey found that in eight "non-fair-trade" cities consumers could save 27 percent in buying some 77 items at the lowest prices prevailing in those cities as against the prices for the same goods charged where they had to be sold at their "fair trade" prices.

From the point of view of public policy, the Harris bill is clearly obnoxious both in principle and in terms of its probable impact upon our economy. It is to be hoped that the House committee will decisively vote it down.

Poison in Your Water—No. 57

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Seattle, Wash., Times on January 6, 1959, entitled "Objective Is To Save Green Lake":

OBJECTIVE IS TO SAVE GREEN LAKE

Seattle citizens were shocked last month by the announcement that Green Lake might become permanently impaired for use by swimmers and for other recreational purposes.

It was foreseen that the diversion of storm water into the lake from the freeway might complete the contamination process which kept Green Lake bathing beaches closed during most of last summer.

Later, Mayor Clinton made the more reassuring statement that the lake need not be utilized as a reservoir for rainwater runoff from the freeway if there were danger of more contamination from that source.

Various proposals for swimming have been offered since. One was to develop beachside swimming pools on the lake shore.

Another was to restore the east end of the lake, at least, by a device for recirculating the lake water and purifying it by a system of chlorination.

Studies of this problem have been continued at city hall and by the park department. It will be the subject of discussion at one or more meetings of citizens' groups, one of which is scheduled to be held this evening.

As we see it, the public is not so much concerned with the kind of measures to be taken by the city to safeguard Green Lake from continued contamination, from whatever source.

What the public is concerned about—and deeply concerned—is that a satisfactory plan be evolved that will preserve Green Lake as a permanent, natural recreational asset.

U.S. Postwar Financial Aid

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. DORN of South Carolina. Mr. Speaker, the utter fallacy, fraud, and humbug of foreign aid is apparent to the taxpayers at the grassroots. Unless Congress curtails considerably this fallacious program, the American people might rise up and revolt at the ballot box against this unworkable, ridiculous program.

Mr. Speaker, I commend the following article by Prof. J. Fred Rippy of the University of South Carolina:

U.S. POSTWAR FINANCIAL AID—GLOBAL AND HEMISPHERIC

(By J. Fred Rippy)

Our national debt will soon reach $290 billion. The time has come to scrutinize most carefully the enormous sums which our Government has spent abroad since the triumph and tragedy of the 1940's.

The triumph alone cost our taxpayers $341 billion by the end of fiscal year 1945. The ultimate cost in veterans' pensions and other benefits cannot be predicted with accuracy; but most probably these will have amounted to double the $341 billion by the end of this century.

POSTWAR TRAGEDY

After the war new aggressors immediately took the place of the conquered aggressors. This is the tragedy that followed on the heels of triumph.

The precise foreign-aid figures for fiscal year 1959 are not yet known. The year still has some months to run and statisticians in the Office of Business Economics at the Department of Commerce will need several months more to assemble the data. However, with the exception of a few relatively minor sums aggregating no more than a billion or so (incuding our Government's portion of the loans made by the World Bank), the figures for the fiscal years 1946 through 1958 are available to all who will take the time and trouble to search for them.

WHERE TO FIND THE FACTS

The most complete statistics are published quarterly by the Office of Business Economics under the title "Foreign Grants and Credits by the U.S. Government." The latest issue covers the postwar period through June 30, 1958. Most of our national officials are probably familiar with this publication; the majority of the American people are unaware of its existence. The few comparatively alert citizens concentrate their attention on the annual appropriation acts entitled "Mutual Security Appropriations," and thus overlook many other appropriations made with the same objective. These latter amount to approximately half of the total in some instances.

FAULTY MOTIVES AND MEANS

With the aims of safeguarding the security of our Nation, of responding to presumed moral obligations, and of sustaining national prosperity by stimulating exports and developing foreign sources of raw-material supplies for our factories as we are presumed to exhaust our own—a hodgepodge of motives which, together with the means used to achieve them may prove to be self-defeating—the U.S. Government spent and lent during the period July 1, 1945–June 30, 1958, a grand total of $73,808,794,000, omitting the aforementioned billion or more.

The major part of this incomplete total consisted of grants amounting to $57,274,691,000; the remainder—$16,534,103,000—represents long-term loans at low interest. Some of these loans, for example those made in local currencies under authorization of the Agricultural Trade Development and Assistance Act amounting to $321,063,000, may turn out to be soft loans which never will be repaid or serviced in full. Others represent bargain sales of surplus property on long-term credit which involved large losses at the time the sales were made. Under this last category the total was no less than $1,497,557,000. The remainder of the loans may perhaps be serviced and ultimately repaid, provided both general war and global economic crises can be avoided.

FORCED AID

In studying the announced aims of our postwar financial aid, it is necessary to point out that Government determination and enforcement of our moral obligations to alien peoples violates a basic principle of our historic political system by curtailing our personal liberty. Since many of the main proponents of this morality are clergymen, there is also involved our fundamental national principle of the separation of church and state.

The economic assumption that our national prosperity is fostered by stimulating exports by means of gifts and cheap loans provided by taxpayers is false for two main reasons: (1) the dollars sent abroad may return, but they will return to only a minority of the people from whom they were taken, and (2) the profits will amount not to the whole of the gifts and loans, but to only 15 or 20 percent of the whole—unless it is also assumed that labor, raw materials, and management cost nothing. No more absurd propaganda was ever palmed off on the American people with so little popular protest.

CENSORED AID

It is a fact that an enormous portion of the grants were made to unidentified countries. For one reason or another, the allotment to individual countries is concealed from the general public. This portion of the gifts amounts to more than $23 billion (nearly $21 billion for military aid), and represents more than 40 percent of the total. Certainly, some of it may fail to achieve its purpose. A fairly complete list of the items

included in this tremendous sum is as follows:

Europe in general	$13,336,971,000
European Payments Union	238,084,000
Asia, the Pacific area, Africa	7,359,751,000
Latin America	479,009,000
United Nations and affiliates	718,191,000
Migration and refugees	307,755,000
Unspecified	541,288,000
Total	23,001,049,000

The figures for the United Nations and its affiliates include the postwar total expended through the UNRRA, but exclude the contribution of the United States to the loans made and administered by the World Bank. Owing to lack of details about the distribution of this huge sum among presumed beneficiaries, the statistics presented hereinafter are incomplete, in some instances most incomplete.

GARGANTUAN GRANTS

There has been much official talk in Washington, D.C., and elsewhere in our country about the desirability of reducing expenditures for foreign financial aid grants and increasing those for loans. But through fiscal year 1958, at least, Government action has contradicted words in most cases.

For the year 1958 itself, grants amounted to almost 77 percent of the total aid; the average for the preceding fiscal years was approximately 79 percent of the total.

"SOFT" LOANS

Although it seemed likely that expansion of loans would reduce the percentage of grants in future years (barring widespread military conflict or major economic crises), the total of "soft" loans probably will increase as loans from the new Development Fund are added to those made in local currencies derived from sales of surplus farm products. (It should be noted that part of these surplus farm products are the result of price rises which have put the products beyond the household family budgets of many of our people.) Such loans, and probably some others, might eventually become the equivalent of grants. They might also prove still more disappointing in good results achieved.

Do the American people remember the war and reconstruction debts of 1915–20, and the investments made during the following decade in the bonds of foreign countries? It seems this experience ought not be forgotten.

THE LION'S SHARE

The lion's share of our largesse during the 1945–58 period went to Western and Southern Europe. Certainly, it may have helped to give some of the peoples of this region the fortitude to defy the Communists. But the final result is still in doubt; even, it is in the lap of the gods.

Excluding concealed distributions made among the several countries, the following list reveals the largest recipients of our largesse:

Great Britain	$8,878,292,000
France	6,876,899,000
West Germany	5,206,039,000
Italy	3,240,427,000
Greece	1,906,943,000
Dutch Netherlands	1,352,772,000
Austria	1,139,414,000
Yugoslavia	860,173,000
Belgium-Luxembourg	822,491,000
Scandinavia	794,861,000
Spain	471,988,000
Portugal	90,593,000

Europe's portion, including sums expended in Iceland, Ireland, Poland, Czechoslovakia, and Hungary and also including concealed distributions, was in excess of 60 percent of the global total of $74 billion.

However, Europe's share was rapidly diminishing during fiscal years 1957–58, when it was only 30 percent of the aggregate spent and lent by the United States. Of this percentage, the major part was classified as military assistance, although technical and economic aid amounted to a bulky part in several cases, and, except in a few instances—notably England and Poland—all, or nearly all was in the category of grants. It is interesting to note the following list of countries and sums received in technical and economic aid during fiscal years 1957–58:

Great Britain	$300,309,000
Spain	243,903,000
Italy	172,498,000
Greece	89,380,000
France	74,257,000
Yugoslavia	68,060,000
Austria	45,701,000
Portugal	28,320,000
Poland	20,191,000
Hungary	10,573,000

These statistics for Europe include expenditures by the U.S. Government on such European dependencies as still existed at the end of the period under review. Funds provided for this purpose during fiscal years 1946–58 amounted to some $64.5 million; the major part of the total was devoted to European possessions in the Americas and Africa. The British West Indian Federation was especially favored. Of the European colonies in the Asiatic and Pacific areas, Hong Kong received priority treatment.

AID TO FAR EAST

Among independent nations outside of Europe, the stressed areas were Japan, Taiwan (Formosa), Korea, and the three countries of Indochina (Cambodia, Laos, and Vietnam):

Japan	$3,313,980,000
Taiwan	2,654,987,000
Korea	2,185,659,000
Indochina	1,216,285,000

Again, these huge sums are exclusive of military assistance. Japan, of course, cannot be classified as an economically retarded nation. It is a war-devastated country badly in need of emergency aid and presumably significant in the global defense strategy of the United States. The latter is largely true of Australia and New Zealand, which received a combined total of $46,486,000, consisting mainly of cheap loans.

Among the politically independent undeveloped nations of the world, those of the vast teeming continent of Asia were given huge sums of financial aid by our Government during 1946–58. The total for the Philippine Republic, a sector of the Pacific area which might also be described as a part of Eastern Asia, was $987,720,000. Sentimental attachments to the Philippines were of as much if not more weight than considerations of national security. The 12 nations of the Middle East were recipients of $1,608,018,000. But India, Pakistan, Indonesia and Thailand were the major Far Eastern recipients:

India	$618,791,000
Pakistan	423,607,000
Indonesia	314,344,000
Thailand	129,780,000

The eight nations of the Near East, including Egypt, were the recipients of a combined total of $1,119,319,000. Israel and Iran (Persia) were the most favored of this group. Israel's portion was $512,699,000 and Iran, where some of the expenditures were scandalous, received $365,957,000. Egypt (together with Syria, recently seized by Colonel Nasser) was the recipient of $96,612,000. The large sum expended by the United States in Turkey—$853,984,000—might be added to the total spent in the Near East.

It must be repeated and emphasized that none of these figures cited in relation to Asia takes into account the billions distributed among unidentified individual countries mainly for military materials and services, some of which are use wastefully and imprudently.

MORE AID TO AFRICA?

Assistance by the U.S. Government to the independent and autonomous nations of Africa during this post World War II period was comparatively small. But it seems likely to expand rapidly. Including the Union of South Africa (which can hardly be considered as an economically retarded country) the total was only $447,908,000, excluding military aid and which in a few cases is large. Recipients of the major shares were:

Union of South Africa	$150,316,000
Libya	61,880,000
Rhodesia-Nyassaland	60,697,000
Morocco	51,520,000
Liberia	41,074,000
Ethiopia	28,449,000

SOME PARTISAN ANGLES

Most of the financial aid given to the Union of South Africa and to Rhodesia-Nyassaland consisted of cheap loans. Liberia was favored largely by virtue of tradition1 attachments and politically partisan motives (winning the Negro vote here at home), and these same partisan motives may have had some influence in the case of Ethiopia and that of some others. (In Israel too, racial and partisan motives were an influence.)

Nowadays, new nations are rapidly being set up and recognized in Africa with little attention being paid to the realism of their economic viability. This is being done mainly by the votes of those member states of the United Nations whose representatives have no intention of paying the piper for their foolishness. It seems they are confident that American taxpayers will foot the bills for the new African nationalism.

LARGESSE TO LATINS

Latin America's share of our largesse during the years 1947–58 was $2,878,809,000, including $452,756,000—for military supplies and services. The source for these statistics is the Office of Business Statistics in the Department of Commerce. Grants to Latin American countries were much smaller than low-cost loans. The main presumptive beneficiaries were:

Brazil	$814,068,000
Mexico	414,424,000
Chile	197,648,000
Guatemala	70,497,000
Ecuador	51,004,000
Haiti	48,144,000
Colombia	161,092,000
Peru	155,198,000
Bolivia	147,504,000
Cuba	41,542,000
Costa Rica	38,411,000
Panama	25,291,000

These totals for Latin American nations exclude not only military assistance and indirect aid through our contributions to the United Nations and its affiliates, but also considerable sums contributed through the Organization of American States and its subsidiaries as well as several millions in contributions by the U.S. Government to the budgets of the Inter-American Institute of Agricultural Sciences (in Costa Rica), and to the Gorgas Memorial Laboratory in Panama.

These figures show that Latin America, with some 6.2 percent of the world's population, was the recipient of approximately 5 percent of the grand total of official expenditures by the United States in foreign countries during the period following World

War II. In fact, during fiscal years 1956–58, Latin America's share was almost 7 percent.

LATIN NOSTALGIA

Yet, it seems, Latin America has been growing more and more unfriendly to the United States during this period. The causes of this unfriendliness may be traced to false accusations made against us by Communists and their dupes and fellow travelers, to widespread dissatisfaction with our commercial and investment policies, to severe disagreements concerning the proper role of government in production and distribution, to homegrown and foreign inspired false allegations that the United States is favorable to dictatorships and despots, and to a feeling of neglect arising from the fact that our economic and military strategy seems to have shifted away from the Western Hemisphere.

Then, too, there is nostalgia in Latin America for the good old days of the New Deal good-neighbor policy, during which a favorable response was accorded to virtually every request made to us by Latin Americans, and the administration in Washington, D.C., uttered no complaints at all against the expansion of Latin American political governments into national economies.

SPENDERS UNLIMITED

It is safe to say that the vast foreign economic aid program of our country has proved again the truth of the old adage that friendship cannot be bought. Neither can prodigality produce thrift and savings.

We in the United States are a Nation of only 175 million people. Never was so much aid expected from so few and exacted from them by their own Government.

The question for Americans now is, "Have we lost the spunk and stamina of our tax-rebellious ancestors, or will we soon exhibit these good qualities and demand a strict accounting from our own governmental spenders unlimited?"

Our demand for strict accounting should not only concern foreign aid but also all other extravagant Government outlays. To talk of balancing our national budget by means of another rise in postal rates and an increase in taxes on petroleum products is both absurd and irritating. Our national budget cannot be balanced without cutting appropriations for foreign aid and for other outlays, and without exerting strictest economy in government bureaucratic administration. Petroleum taxes and postal rates are already too high, and postal services have been growing less and less efficient.

THE FATE OF OUR COUNTRY

There is only one sound way to try to pay off our debts. We must save money and cut expenses. If we do not banish spenders unlimited from the seats of Government, can we escape the fatality of the tragedy that has followed the triumph of the 1940's? There is no role which the historian adjures more than that of a prophet. Yet this historian cannot ignore his feeling that the fate of our Nation will be finally decided within the next few years. Either we shall triumph over tragedy or it will overtake us, largely as a result of our own financial folly.

Poison in Your Water—No. 59

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Gazette of Berkeley, Calif., on January 17, 1959, entitled "The Outdoors," by Jim McCormick:

[From Berkeley (Calif.) Gazette, Jan. 17, 1959]

THE OUTDOORS—ANOTHER POLLUTION KILL

(By Jim McCormick)

A little over a year ago, a pollution discharge in San Francisco Bay killed thousands upon thousands of striped bass and other fish.

It was a sickening sight with the sportsmen and conservationists in this area up in arms over the needless damage.

The kill of a year ago was mild compared to the savage blow dealt to our salmon and steelhead spawning fish on the Upper Sacramento River a week ago.

Seepage from copper mines in the Spring Creek area above Keswick Lake was carried by recent storms into the river drainage area above Keswick Dam, just below Shasta Dam.

The copper sulfate poisoning provided a lethal dose with 453 adult spawning salmon and steelhead counted alone in the Keswick Dam fish traps, which are used to collect fish for artificial spawning at the Coleman fish hatchery.

Investigation revealed a serious fish kill along an extensive stretch of the river which is reported to have killed thousands of adult salmon and steelhead and decimated millions of recently hatched fish.

The department in an attempt to determine the extent of the amount of pollutant placed three cans of small salmon from 1 to 4 miles below the Keswick Dam. The pollutant was so strong that several hours later the fish in the cans were killed.

According to the Shasta Cascade Wonderland Association, it is estimated that an excess of 15 million fish were lost in the tragedy, including adults, fry and eggs.

The tragedy of the situation is that California has been waging a losing battle to save the valuable salmon fishery.

This year Mother Nature lent a helping hand by placing a greater number of salmon on the limited spawning beds than in the last 4 or 5 years. Then a source of pollution that should have been corrected years ago breaks loose and does irreparable damage to a fishery that is already in serious jeopardy.

"Hablo Español—Un Poco"

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 16, 1959

Mr. PORTER. Mr. Speaker, in the course of my various visits to Latin America in the past 2 years, I have regretted very much that I could not speak Spanish. I intend to learn Spanish. I have the books, the records, and the motivation, but I have not found the time yet.

In Springfield, Oreg., sixth graders are learning Spanish, thanks to Principal Charles E. Smith, of the Mill Street Elementary School. Experimental classes are being watched with a great deal of interest by Superintendent Harold Beall. It is possible that from this experiment a second language will be added to the elementary school curriculum, something which many educators here and in other countries think makes a good deal of sense in terms of the language learning abilities of children at relatively tender ages.

Under a previous consent, I am inserting the article about this class which appeared in the Springfield News, February 12, 1959:

Drop in at Mill Street School almost any day and you will hear the soft, musical sounds of conversation in Spanish—and the speakers will be sixth graders.

Principal Charles Smith is teaching an experimental class in conversational Spanish to 16 sixth graders, the top reading group of the sixth grade, and from the eyes of a casual observer it appears that the youngsters (and leader) are having a lot of fun, as well as learning new skills.

Smith explains that on the basis of the experience thus far there appear to be a number of advantages:

1. The children supplement their social studies familiarization with customs of a foreign country.

2. Taking of the top readers from the sixth grade for the Spanish class gives the regular sixth grade teacher more time to work on specialized reading problems with the remainder of the class.

3. A challenge is provided superior students.

Supt. Harold Beall is watching the experimental class with a great deal of interest. He points out that this is actual research, a part of the overall program in District 19 curriculum studies aimed at improvement of the material provided in all the schools. He said the curriculum study is based on a desire to improve instead of accepting that which has been done for years. It is entirely possible that from the Mill Street School class will come the addition of a second language to the elementary school curriculum.

The first lessons in the Mill Street class were prepared by Smith on a fluid duplicator, because there just were no books on elementary Spanish available when the course was mapped out. Now the school has a set of books "just like first and second grade readers" which Smith says is the first set of books he has ever seen for elementary grade Spanish.

The first lesson told of the meeting of John (Juan) Dunbar with a Mexican friend, Pablo, while on a trip to Mexico. The lesson was based on their greetings, their inquiry about each other's health and their farewells.

An opaque projector forms an important part of the Spanish study, as words and pictures from the one set of elementary Spanish books plus other material are projected on a screen for class discussion.

When a News reporter visited the class, one of the pupils was inquiring about the Spanish custom of having an inverted question mark at the beginning of each written question. One child wanted to know "Do Spanish kids have trouble with those marks?" Smith explained that it is perfectly natural to the Spanish children to have an inverted question mark at the start of each sentence. He said the young Spaniards probably ask "How do American children know it is a question if there is no mark at the beginning?"

During the class period, a picture of a donkey was shown on the screen, and the children identified various parts—las orejas, ears; los ojos, eyes; la cola, the tail, etc. Smith then told a child "Cuente usted por diez hasta ciento," and the child arose and counted to 100 by tens. There were a number of other exercises, for instance "El globo es redono," the moon is round. And there were such admonitions as "remember, the adjective always follows the noun it modifies."

After an interesting hour, the News staffer was ready to say "Hablo Espanol—un poco," meaning "I speak Spanish—a little."

Members of the class include: Jimmy Fleck, Jeff Jenkins, Tom Sawyer, Joyce Remington, Denny Taylor, Beverly Elving, Carol Smith, Lucia Hart, Kathy Whala, Jimmy Corbett, Gary Auxier, Mark Swinehart, Dale Sebring, Jeff Wright, David Nelson, and Judy Hazel.

Prohibiting Payment of Annuities and Retired Pay to Officers and Employees of the United States in Cases Involving National Security

SPEECH
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4601) to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes.

Mr. REES of Kansas. Mr. Chairman, I think the distinguished chairman of our committee has clearly explained the purposes of this legislation. This bill comes before this Committee with the unanimous approval of the House Committee on Post Office and Civil Service. Let me say, too, that it comes to you after long consideration and deliberation.

Our chairman has well said that about all there is to this legislation is that we went a little further than we intended to in the original legislation. It deals primarily with the question of national security and loyalty, and not so much with other subject matters that have been brought into this discussion today.

Briefly stated, this legislation is desirable to eliminate injustices resulting from denial of retirement benefits, under present law, to many individuals—and widows of some—for relatively minor offenses which do not involve questions of loyalty or the national security. At the same time, enactment of this legislation will clarify and strengthen the very desirable bar, intended to be provided by existing law, against payment of Federal retirement benefits to individuals who have committed offenses—or who have failed or refused to act when in duty bound—in loyalty or security matters.

To accomplish this twofold purpose, the bill completely rewrites Public Law 769, 83d Congress. That law was enacted for the primary purpose of prohibiting Federal retirement benefits for individuals guilty of wrongful acts or omissions in matters affecting the national security. The law was enacted in response to strong and widespread public demand. This demand arose because of the then pending payment of a civil service retirement annuity to an individual about to be released from a Federal penitentiary after serving a penal term for perjury before a Federal grand jury in a proceeding directly involving the national security. The entire country was deeply disturbed and indignant at the prospect that a Federal annuity could be paid in any such case.

I should say that the individual in question has not yet applied for the retirement benefits; but if he should apply, there will surely be a question as to whether he can collect. He has left the country, and I do not believe that any Member of this body would want to pay retirement benefits to an individual who decides to reside in a foreign country.

Although this was the primary purpose of the law, during the consideration of the legislation a number of additional offenses were written into the provision barring annuities. Many of these additional offenses in no manner relate to the national security. It appears clear at this time that the denial of annuities in these additional cases was above and beyond the primary purpose of Public Law 769 and should be stricken from the law in equity and good conscience.

It cannot be too strongly emphasized that H.R. 4601 continues, clarifies, and strengthens the original purpose of Public Law 769, that is, to bar Federal annuities and retired pay in cases of offenses against the national security. The decision of the Court of Claims in Steinberg against the United States declared section 2 of Public Law 769 unconstitutional in a matter relating to the invoking of the fifth amendment before a grand jury investigating a nonsecurity matter. Unless the security provisions of the law are strengthened, similar judicial decisions well might be handed down in the future declaring the entire present law unconstitutional.

H.R. 4601 removes the inequitable provisions of Public Law 769 by restoring all annuity rights in nonsecurity cases. The restoration is retroactive and will take effect as though Public Law 769 never had been enacted. Anyone who has received a refund of contributions to an annuity or retirement system will have to redeposit the refund to obtain restoration of benefits. In this connection, it is to be noted that many of the annuities which will be restored were denied for comparatively minor offenses. In many cases, no penalty was applied due to mitigating circumstances such as restitution, good records, and so forth. In a number of instances, the offenders were reemployed and rendered long and faithful public service, only to be denied annuities when they reached retirement age.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. FULTON. Why, if pleading the fifth amendment is not an offense in itself, is one kind of pleading of the fifth amendment invoked to have your retirement benefits canceled? On the record I would like to say if one is unconstitutional or one method of pleading the fifth amendment provides an unconstitutional result as to retirement benefits under this act, I think the second, although we like it less, will likewise result in an unconstitutional decision if it is sustained.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. FOLEY. I would like to associate myself with the conclusion reached by the gentleman from Pennsylvania and say that if it is unconstitutional for one purpose, it is unconstitutional for all purposes and that there cannot be a line drawn, and whatever may be our personal feelings in the matter if the matter is a constitutional right, it is a constitutional right, in my humble judgment, for all purposes.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. JOHANSEN. I would like to observe first of all that the question of what is or what is not constitutional seems in these latter days to be whatever the decision of a majority of the nine men across the street happens to be. Now, Mr. Chairman, does not the question amount to this—not whether there is a right to invoke the fifth amendment, but whether there is a right, a constitutional right to hold a job under an oath of loyalty to the Constitution and in the Federal Government and then refuse to give an accouting of one's performance of that job with respect to matters that involve national security and that involve loyalty to this Government and to the very oath that was taken. Is not the real issue whether or not we are going to make a constitutional right out of a Federal job without reference to willingness to testify as to the most basic responsibility of all, namely, that of loyalty to the Government and to the very oath that is taken?

Mr. REES of Kansas. I think the gentleman has stated the proposition correctly.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. FULTON. Would you explain to me—because that does bring up a question—if a citizen of the United States exercises his constitutional right, by what right or authority then does this Congress put a penalty on it?

Mr. JOHANSEN. I would point out, Mr. Chairman, if the gentleman will yield further, that the loss of the job would certainly be a penalty and the loss of the perquisites and privileges of the job, of which this pension is one, is, let us concede for all practical purposes, a penalty; but the question is whether the right to that job and to these perquisites is a constitutional right that is completely inviolate whether or not a person violates national security or refuses to answer questions related to his own performance in that office.

Mr. DOYLE. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield to the gentleman from California.

Mr. DOYLE. I had not prepared to make any remarks in connection with this bill, for which I will gladly vote. But I think perhaps the subject of pleading the fifth amendment by a witness comes before the House Committee on

Un-American Activities more than any other committee of this House. Therefore, in view of the discussion about it, now in process, I might contribute a thought or so which might be helpful, and for the problem. In the first place, may I say, that the Supreme Court of the United States time and again has held that the pleading of the fifth amendment, by a witness before a congressional committee, does not even infer guilt or wrongdoing. It does not even infer guilt and is definitely not an admission of guilt; not of any kind or sort of guilt of criminal activity.

Mr. REES of Kansas. This legislation does not affect that.

Mr. DOYLE. But I wish to associate myself with the distinguished gentleman from Pennsylvania [Mr. FULTON] and the distinguished gentleman from Maryland [Mr. FOLEY] on the question they have raised, as to the constitutionality of the bill provisions in the fifth amendment. Of course, I am strongly in support of the bill. I hope this method of trying to strengthen our national security proves practical and legal. I compliment the committee upon its work on the problem. But, I think we ought to be dead sure that this bill, as it passes this House, is fully considered by the other body and possibly in conferences, as to this particular point being discussed. I doubt very much if by this congressional legislation we can overcome many, many decisions of our Supreme Court which has so many times defined that the plea of self incrimination, known as the fifth amendment, is a basic constitutional right.

May I say this, and I say it with all due respect to the members of the committee: that I am one Member of this Congress who recognizes, that even though I may not like some of the decisions of the Supreme Court of the United States, the Supreme Court of the United States is the Supreme Court of the United States, under the U.S. Constitution. It interprets the law as we pass the laws of the land. We may not like it. Some of their decisions may prove inconvenient, and personally inconsistent with our individual opinion, but, nevertheless, under our constitutional form of government, the judicial department of our Government is represented by the Supreme Court of the United States. As a member of the California bar for over 30 years, and of the bar of the Supreme Court for many years, I wish to affirm my position again. It is, that the Supreme Court, as our highest Court, deserves the dignified expression of faith and confidence of this Congress and of every citizen of the United States. If it does not have this, the Commies and their fellow travelers will proclaim with loud glee and hilarity and their unpatriotic propaganda and their subversive activity, that our form of representative constitutional government has not worked well. We can honestly criticize a decision, but I do not conceive of it being strengthening to the endurableness of our constitutional government to condemn the Court itself. To do so, makes for weakness of our fortress against Soviet communism.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield to the gentleman from Michigan.

Mr. JOHANSEN. I would like to associate myself with a view expressed relative to the U.S. Supreme Court—and as long as it remains the Supreme Court and a truly judicial body, I have the utmost respect for it—some 90 years ago by Abraham Lincoln in his first inaugural address, when he said that if the decision of the Supreme Court in a specific case must thereafter become the irrevocable law of the land, then we will have ceased to be our own rulers in this country.

Mr. CORBETT. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield to the gentleman from Pennsylvania.

Mr. CORBETT. I am not an attorney and certainly not a constitutional attorney, but I believe that those who feel this law may be unconstitutional because of the provisions which relate to the invoking of the fifth amendment are losing sight of the basic fact.

This is not a penalty provision in the true sense of the word. No one is, or will be, deprived of any of his own money. Under the terms of this bill he gets his money back, but because he has refused to testify when he has a duty to do so, by reason of his official position with the Government, the U.S. Government has a right to withhold from him any special benefits which accrue to him in this event. I submit, therefore, that what we are trying to do is to prevent an employee getting special benefits from the taxpayers when he has failed to keep his contract with the U.S. Government.

In this connection, I believe that these statements of public policy, set forth by the Post Office and Civil Service Committee, are significant:

Adverse and hostile policies, attitudes, and other actions of certain foreign nations in the world today imperil the existence of the United States of America as a sovereign Nation. Proof exists at every hand that one of the primary objectives of the Communist enemy is the infiltration of the Government of the United States with hostile influences in order to undermine and overthrow the Government. It is beyond the bounds of right and reason that an individual, whose acts or omissions are calculated to impede the national defense, safety, and security or to give aid and comfort or secure any advantage to foreign hostile forces and influences, should derive any Federal benefit in the form of annuity or retired pay based on his service as a Government officer or employee. This committee cannot emphasize too strongly that inaction and disregard on the part of the Congress of the United States or of any other organ of the Government with respect to any such situation constitutes dereliction of duty of the most serious nature.

It is apparent to this committee that a significant principle with respect to the nature of the benefits at issue has not been given the proper weight in the consideration of existing law. This principle is to the effect that an individual who assumes public office or employment accepts all of the obligations (explicit and implicit) of such office or employment as well as the emoluments thereof. When an individual enters the service of the United States, he imposes upon himself an extraordinary—even a unique—commitment of complete and unswerving loyalty to government and to country. This obligation of loyalty is preemptive of any and all rights and benefits accruing from public office or employment. Fulfillment of such obligation of loyalty at all times is an absolute condition precedent to the granting, vesting, and receipt of any right, benefit, or remedy arising out of the office or employment in the past, present, or future.

Breach of this obligation or high trust by an individual guilty of an act or omission which impairs the national security abrogates from the beginning any obligation of the United States to pay benefits based on the service of such individual. All claims for such benefits must stand or fall along with those of the individual whose conduct is at issue. In the case of such breach of trust, it is entirely fitting and proper to deny such benefits and at the same time make appropriate return of contributions made by the individual concerned. These benefits are, in part, in the nature of gratuities because of Government contributions toward such benefits. In effect, the payment of any such benefits to any such individual would be shocking to the public conscience and morals and repugnant to the high principles on which our Government is founded. This was made abundantly evident, during the consideration of the bill that became Public Law 769, 83d Congress.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. FULTON. That brings up a remarkable question. Does Alger Hiss have a right to get his money back, with interest, from the Government, and has he asked for it?

Mr. CORBETT. The answer is that he has not received his money and he has not asked for it, but he is entitled to it.

Mr. FULTON. And is he entitled to interest on his money?

Mr. CORBETT. Certainly, as provided by the Retirement Act.

Mr. FULTON. Why did not the Solicitor General of the United States in the Steinberg case develop this on all aspects of the constitutional question? Why did he not appeal from the Court of Claims decision to the U.S. Supreme Court to clarify this question before recommending this legislation? Why did he not do it? Will somebody answer me on that?

Mr. CORBETT. Mr. Speaker, will the gentleman yield?

Mr. REES of Kansas. I yield.

Mr. CORBETT. The answer is that everybody agreed that there should be a change in the law to clarify and strengthen it and that further appeal would be undesirable, particularly since he was going to recommend this particular change in the law.

Mr. FULTON. I believe it was an error on the part of the Solicitor General not to have settled this question in advance before recommending legislation. This question of constitutionality should be settled; and all the gentleman from Maryland, the gentleman from California, and I are doing is simply trying to check out on all phases of this matter of constitutionality. Under the rules of the Supreme Court if a matter is unconstitutional in one phase the entire act falls. If they hold it is unconstitutional to put a penalty on a person for exer-

cising his rights under a section of the Constitution of the United States we should not try to do what amounts to just that. I for one cannot see how a constitutional exercise of the right to plead the fifth amendment which the Supreme Court says is not even an inference of guilt gives Congress the right to assess a penalty against anyone exercising his constitutional rights.

Mr. CORBETT. It is not assessed on that ground, but because he has violated his obligation as an employee of the United States of America in refusing to give information which it is his duty to give because of accepting that employment.

Mr. FOLEY. In connection with the position taken by my distinguished colleague from Pennsylvania [Mr. FULTON] I would like to quote this language from the Supreme Court cited in the Steinberg case. The Supreme Court has held in the case of Slochower against the Board of Education:

> The privilege against self-incrimination would be reduced to a hollow mockery if its exercise could be taken as equivalent to a confession of guilt. The privilege serves to protect the innocent who otherwise might be ensnared by ambiguous circumstances.

My question, I may say to the gentleman from Kansas [Mr. REES], is this: As a member of the Post Office and Civil Service Committee and one who is in favor of the adoption of H.R. 4601, it is my understanding that the purpose is to eliminate this unfair provision referring to crimes not involving national security and not involving loyalty. It is also my understanding that it is the purpose of the amendment, H.R. 4601, to eliminate that provision pertaining to the exercise of the constitutional right, in other words, exercising the guarantee provided by the fifth amendment. My opinion is based upon the fact that the original act, section 2, specifically authorized the forfeiture of benefits where the refusal to answer was on the ground of self-incrimination. H.R. 4601 eliminates that provision.

It seems to me that it was the intent of the committee when they reported out H.R. 4601 to eliminate all reference to the exercise of constitutional rights as forming the basis for the imposition of any penalty or sanction.

My question arises because of the fact that in the report of the committee on page 7 of the statement is made:

> Section 2(a) of the amendment prohibits annuities or retired pay to persons refusing on ground of self-incrimination.

I concur in the opinion stated by the gentleman from Pennsylvania [Mr. FULTON] that the Court of Claims is correct in holding that for the exercise of a constitutional right, regardless of what that right may be, the Congress cannot impose any loss of any benefit, cannot impose any penalty or sanction. This is true not only in the case of crimes or misdemeanors, but in all other cases, and Congress cannot except from this fixed principle cases involving the serious charges of loyalty and security. Therefore I join with the gentleman from Pennsylvania in the conclusion that if this bill in any respect in loyalty or security matters seeks to impose sanctions or penalties upon the exercise of the constitutional guarantee under the fifth amendment that it will be struck down by the Supreme Court as unconstitutional.

Mr. REES of Kansas. As a member of the Committee on the Post Office and Civil Service, and one of the most diligent members of that committee, I believe the gentleman supports this legislation?

Mr. FOLEY. Yes; I am in favor of the bill; but my questions are prompted by the language in the report. The purpose of the amendment, as I understand it, is to eliminate the original provision which called for the forfeiture of benefits upon the exercise of the constitutional right. I have been somewhat at a loss to understand why that has not been categorically and positively set forth in the report, to prevent any conclusion from being drawn that the purpose of the bill is not to do away with the original provisions providing for a sanction or penalty upon the invocation of the fifth amendment protection.

Mr. REES of Kansas. The bill sets out the policy as carefully and clearly as can be done.

Mr. FOLEY. That is my understanding. It is the report that has misled me.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. REES of Kansas. Briefly. I think the gentleman supports this legislation?

Mr. FULTON. I am supporting it but it brings these questions up. We do not want to have the legislation declared unconstitutional merely because of the lack of congressional intent in the language we are setting out here. I believe our purpose is to make sure that we are not going beyond constitutional limits. This brings up a precedent, and I think the veterans' organizations of the country should take cognizance of this fact.

This brings up a precedent, as I say. Every action we take here is going to be cited as a precedent later. I am a former veteran and that brings to mind this: When somebody is convicted by a court-martial and discharged from the service, he loses his rank, his pay, his retirement, and his GI education rights, whether it is on the security of the country, loyalty or on a small little thing that sometimes would not even be a misdemeanor in a State. So, we are here in the U.S. Congress in one instance depriving a serviceman and his widow dependent, also his children, of support when it involves only a misdemeanor.

I hope that the veterans' organizations will look into this because there has been a lot of injustice done to many of our veterans in this country when they have been deprived of their retirement right, their disability right, their citizenship rights, yes, and their widow's and their children's support rights, and also they have lost their GI education rights that would simply make them better U.S. citizens. How can we say we are not doing that?

I strongly favor and recommend that the Congress and the Committee on Armed Services particularly take up the situation because there has been a tremendous injustice in many cases.

Mr. CORBETT. I do want to say to both the gentleman from Maryland and the gentleman from Pennsylvania that we appreciate the fact that their concern for the welfare of this legislation has prompted their remarks. But I do think this needs to be added: The full intent of the committee and those counseling on this bill was to bring here a measure that would provide, first, that no one who is guilty of subversion or disloyalty may secure additional gratuities or benefits from the people of the United States and, second, that employees, former employees, and their families not be deprived of their benefits because of comparatively minor offenses. That has been the intent, and I submit, as both the gentlemen pointed out, that this bill represents the best possible means to obtain these objectives. If a constitutional question exists, the ultimate decision will have to be with the courts of the United States. Further discussion on this matter here would seem to serve no purpose.

Mr. FOLEY. You have reference to a conviction for these offenses by a court of law rather than the exercise of a constitutional right, being the basis or the ground for forfeiture of the benefits, is that correct?

I repeat my question. Your views were premised on this basis, that the person involved has been convicted by a court of law of the charges against him and that the forfeiture of his benefit depends upon that act rather than upon the exercise of a constitutional right; is that correct, sir?

Mr. CORBETT. It is the failure to act on the part of the employee who is in duty bound to act in keeping with his contract made when he took office. It does not result in a penalty or punishment in the form of forfeiture of the benefit. It results in a justified refusal by the Government to give him a benefit because he has failed to act in accordance with the rules laid down which he accepted when he took office.

Mr. FOLEY. On the ground other than the protection of the fifth amendment invocation; is that correct, sir?

Mr. CORBETT. Any refusal or failure to act when it is his duty to act, whatever it might be, in violation of the contract between him and the Government of the United States seems to be due and adequate cause.

Mr. FOLEY. Which failure would include the invocation of the fifth amendment protection.

Mr. CORBETT. If the fifth amendment is being utilized as a shield for him to refuse to do his duty—and even possibly to aid and abet the weakening or destruction of the Constitution—certainly, then, the invocation of it itself is a violation of his contract of employment.

Mr. FOLEY. If it is on that basis, I disagree with you on the ground it would be unconstitutional.

Mr. FULTON. How can the invocation of a constitutional right guaranteed under the Constitution be a breach of his oath under the statutes that this Congress has passed for his protection? I do not understand that.

Mr. REES of Kansas. I gather from this discussion that we have had that

no one who has spoken is opposing this legislation as it is written. We are glad to have this discussion and to have these matters pointed out. But let us remember that this matter of denial of retirement benefits deals only with the question of national security. I do not believe that the questions raised should delay approval of this legislation.

Again, it should be noted that this legislation was reported unanimously by the Post Office and Civil Service Committee and will carry out what is believed to be the recognized public policy.

In my judgment, this legislation should be passed by the House and enacted into law.

Junkyards at Gettysburg

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. QUIGLEY. Mr. Speaker, much has been said about the desecration of Gettysburg battlefield by hotdog stands and beer parlors. And much more will be said until such time as the National Park Service is given not just the authorization but the money to purchase the despoiling "inholdings" in our national park at Gettysburg. The West Shore Times is an excellent weekly newspaper in my district and I would like to call the attention of the Members to the following editorial from its issue of April 2, 1959:

SECOND BATTLE OF GETTYSBURG

Those familiar with the nearby Gettysburg battlefield area cannot but help observe what an overwhelming victory commercialization and land abuse appears to be scoring in that section so historically important to our Nation's history and political development.

The subject is now timely because of the struggle that U.S. Representative JAMES M. QUIGLEY, Camp Hill, is waging toward saving the appropriation in Congress for the U.S. Park Service to acquire additional battlefields land there and elsewhere.

Terming the struggle "the second Battle of Gettysburg," the Camp Hill Congressman points out that now is the opportune time for the Park Service to expend the proposed $1.25 million for acquiring land that figured in the area battle and that at Manassas, Va.

Besides the Gettysburg Battle 100th anniversary in 1961 is rapidly approaching, there also is the important factor involved that some of the land proposed for Government acquisition soon will be sold at public auction by the Adams County commissioners.

QUIGLEY—and he has logic on his side—contends this is the time to act if this land area, particularly that owned by the county government, is not to pass to commercialization forever and never to become a part of the Gettysburg National Park.

Lost also would be the opportunity of future generations to view areas where their Nation's historic events occurred sans hotdogs, motel, and souvenir-promotional signs.

The Congressman pointed out to his colleagues how one area important to the North during the decisive area battle is now occupied by an auto graveyard. That's a rather kind word for an auto junkyard.

While we generally would view with alarm the idea of Government acquiring more land and thus removing it from production, commercially and taxwise, we do think that there is merit in the Park Service's case at issue.

Not only do we hope that Congressman QUIGLEY is successful in gaining his objective but we hope you will write him and tell him what your feelings are in the matter.

Historian author, Bruce Catton, Harrisburg's citizen-soldier, Edward J. Stackpole, and S. K. Stevens, State Historical and Museum Commission executive director, are among those who have voiced their support of QUIGLEY's stand.

Authorizing Appropriations to the National Aeronautics and Space Administration

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1096) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

Mr. FULTON. Mr. Chairman, I believe the Congress should know that the field of space and science is one place where partisanship so far has not had a very great effect. As a member of the previous House Select Committee on Space and Astronautics that worked last year—I see some of the members of that committee sitting here today—it was a pleasure to work under the leadership of my good friend the gentleman from Massachusetts, Mr. JOHN MCCORMACK, majority leader, and likewise under the leadership of my good friend the gentleman from Massachusetts, Mr. JOSEPH MARTIN, who at that time was minority leader.

We at all times had unanimous decisions and unanimous committee reports. We at all times, every Member of us, put the country and the interests of science and progress above everything else, and put partisan pride so far down the line that it played no part in our decisions. As a matter of fact, when the bills on space have passed this House, they have passed unanimously. The same has happened in the other body. Then when points of disagreement had been ironed out in the conference committee the reports again were unanimous, and the acceptance of those conference reports by both the House and the Senate was unanimous.

We on the new Science and Astronautics Committee of the House are coming to you today to ask for a further authorization of appropriations in the amount of $48,354,000. If you will look at it closely you will find that it is not new money we are asking, because it was all asked for last year. Last year it was felt that the agency personnel were not quite ready with the program and at that time could not use it efficiently. The only amount of really new money is that caused by the Federal Salary Increase Act of 1958. To meet the requirements of that act this National Astronautics and Space Agency requires $3,354,000 of this total sum requested.

As has been pointed out to you in the excellent statement of the chairman, Mr. BROOKS of Louisiana, in addition, for research and development, we are asking $20,750,000; for construction and equipment, $24,250,000, a total of $48,354,000.

This legislation was reported out of our committee unanimously; that is, both sides of the committee, consisting of 25 members—15 Democrats and 10 Republicans—have agreed that this is in the interest of the United States and is necessary for efficient and economical administration and progress. This particular amount has been included in the President's budget and has also been approved by the Director of the Budget, so that it has been carefully screened on the budgetary level as well.

I would like to speak about the gains there are to be from this space program. Those gains are not all theoretical ones; they are gains that are practical and within our own view at this time. For example, Dr. Reichelderfer, Director of the U.S. Weather Bureau, has stated that with an adequate system of weather prediction we would be able to predict far in advance storms, hurricanes, tornadoes, rainfall, floods, droughts, and so forth. This would be good for our cities, agriculture, and good at sea as well, also good for our communications that are now interfered with because of magnetic storms. Dr. Reichelderfer estimates the total savings there could be under such an adequate program of weather forecasting for the United States yearly in the sum of $4 billion. I emphasize that he estimates there would be that amount of savings to the United States alone. As a member of the Committee on Foreign Affairs it would likewise help us in our foreign aid programs because we would not always be having these disasters coming up abroad with emergency needs.

It has been pointed out, and I would like to emphasize, that we in America are ahead with our ICBM program. This is my considered judgment as a serious hardworking student of this subject, and is no casual opinion. We in the United States are going ahead on a broad basis, not only in the size of the vehicle but in the size of the engine, also in the guidance and control developments. Our programs in these fields are much more intricate and developed than the Russians, or any of our U.S. allies. Of course, the Russians had big artillery, they have always had mass forces. So it was very logical for them to end up with a tremendous kind of an instrument or space vehicles that would go off with a tremendous bang and a lot of push but not be very well controlled. That is just about what has happened.

The United States has developed a more sophisticated control. We are trying to get the right combination of weight, size, acceleration, and velocity, and combine them with good control. Our overall programs that have been worked out by the Department of Defense, under the supervision and direction of our competent Secretary of Defense, Neil McElroy, and particularly with the help of Roy Johnson of the Advanced Research Projects Agency, Dr. York and Admiral Hayward, have been well done. We people of the country should not throw up our hands when we find the Russians with bigger vehicles and a bigger bang than we have at this time. The question is, Do they have control? The answer is, they cannot control them as well as we in the United States do. As a matter of fact, on the Atlantic missile range between Canaveral and Ascension Island, we have been able to have shots that have a target capability circle of probable error that is surprisingly efficient. This means in a circle laid out of 2, 5, or 6 miles in diameter, 50 percent of the shots will land as a probability within that target area. Russia to this date on her long-range ICBM land missile range has had no such shot of the length and CEP, we in the United States have had from Cape Canaveral to Ascension Island. I say that without fear of contradiction.

Also, their missile range is not long enough to give them a landfall at the ranges we now have and are operating on efficiently between Cape Canaveral and Ascension Island. At that equivalent range they would have missile reentry off the Kamchatka Peninsula in the Pacific Ocean. We should not be too disturbed about what Russia currently is doing on her ICBM range, because we are quickly in the United States making our present generation of big vehicles obsolete. They are fast becoming as obsolete as our early airplanes. Our U.S. advances are developing at such a tremendous rate in many fields. We should, therefore, not project the current rate of production of the present generation of U.S. missiles, ICBM or IRBM, into the future of 1962, but we should emphasize research and development and construction of facilities for this research and development, which this bill now does.

So I urge every Member in the House to vote not only for the space program generally, on scientific research but, second, for our security, and third for weather benefits and the gain of $4 billion that might be possible through advanced weather predictions, and last, for this reason, that we in the United States are advancing tremendously on communications satellites. We already have been the only country in the world that has had a communications satellite where we have received voice from a satellite operation. It is a tremendous breakthrough to have done that. We can look ahead and see where they have already recommended that we go into a program of two space satellites that will carry further all the telegraph communications for our Western Hemisphere. The cost of these satellites will be from $100 million to $200 million, and they could be built within 18 months to 2 years. They would have 4 channels of radio and each one of those channels could send 500 digits or items a second. On these communication satellites it would mean the reception or sending of 2,000 digits, words, or signals per second from each of these two satellites. Now the remarkable thing about it is that those satellites would have the power to jam all sorts of radio and radiotelephone or TV communications and possibly radar communications in the area where they are operating. I would not be able to give you the specific area they would cover at the time, but with this jamming capacity, it really puts into further 1,000 percent operation our strategic air force that might be stopped by an enemy radar system. We would have the power to jam opposing radar, television, radio, not only on land where they might be operating tanks or communications, but in the upper atmosphere. In addition the United States would have the power by narrow bands or channeling communications, which would be by line of sight, to give its own message from the satellites wherever we want around the world, and that could not be jammed except within the little circumference or line of sight on the narrow band that was sending it out. You can see what a tremendous possibility that is for the defense of this country.

The General Electric Co., of Philadelphia, has already made a recommendation that we proceed immediately with the development of these two space satellites, and I recommend we should, too.

In conclusion, might I encourage the American people about space. Space is a new place, but it is not a strange place. The scientists and the astronomers have been working on space for generations. The field of space is the one place in the world where all the nations have been cooperating. Russia, the countries behind the Iron Curtain, except Communist China, all the free world countries, practically unanimously, have been working on the International Geophysical Year that ended on December 31, 1958. Likewise, on the scientific level, there is still cooperation, and many of our current U.S. programs in some respects are part of the International Geophysical Year.

Many of the scientists before our committee have stated that they could not say that Russia and her satellites had not cooperated with the United States and the free world scientists on exchanging information during the International Geophysical Year, and they could not say that there was complaint about Russian cooperation on the work that we had done together. Now, that could be a new light in the world, a new era, if such cooperation could be expanded and continued. It may be that the solvent of science and education will help settle many of the ideological differences that we have in the world today.

If we can find areas such as science and space where we can work together I believe there is hope for the future of the world and possibly the freedom we all hope for and progress will come not too long after.

I recommend the passage of the legislation.

Views of the Bureau of the Budget on Bills To Amend the Federal Trade Commission Act

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD a letter from the Bureau of the Budget to the Honorable OREN HARRIS, which reads as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C. April 13, 1959.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, House Office Building, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in reply to your letter of January 30, 1959, requesting the views of the Bureau of the Budget on H.R. 768, a bill to amend the Federal Trade Commission Act, as amended, so as to equalize rights in the distribution of identified merchandise; your letter of February 5, 1959, requesting views on H.R. 1253, a bill to amend the Federal Trade Commission Act, as amended, so as to equalize rights in the distribution of merchandise identified by a trademark, brand, or trade name; and your letter of February 9, 1959, reqesting views on H.R. 2463, a bill to define and restrain certain unfair methods of distribution and to confirm and define the rights of producers and resellers in the distribution of goods idenitfied by distinguishing brands, names, or trademarks, and for other purposes.

All interested Federal agencies, including the Council of Economic Advisers, the Departments of Justice, Commerce, Agriculture, and State, and the Federal Trade Commission, recommend against the legislation. Among the major reasons given by these agencies are that resale price maintenance is inconsistent with our free-enterprise economy; that the legislation would substitute Federal mandate for State or local discretion; that the bills would increase the cost of living for American consumers; that they would not benefit small businesses, but might, in fact, handicap them; and that there are grave doubts concerning the constitutionality of the legislation.

The Bureau of the Budget is in full agreement with the views of these agencies and strongly recommends against enactment of this legislation.

Sincerely yours,

PHILLIP S. HUGHES,
Assistant Director for Legislative Reference.

Prohibiting Payment of Annuities and Retired Pay to Officers and Employees of the United States in Cases Involving National Security

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4601) to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes.

Mr. FULTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, may I ask the Chairman and the ranking member of the Committee on the Post Office and Civil Service, whether this legislation is based in any respect on the legal premise that there are different ways of exercising rights under the fifth amendment of the Constitution? For example, are there any different ways of exercising the right of a citizen to plead the fifth amendment in a criminal proceeding?

Mr. REES of Kansas. The answer is "No."

Mr. FULTON. What does the Chairman of the Committee say about that?

Mr. MURRAY. The answer is "No."

Mr. FULTON. Mr. Chairman, then I believe that if the law is applied equally in the matter of exercise or invocation of the fifth amendment, if this act were unconstitutional in one situation of such invocation or plea, it would have to be of necessity unconstitutional as to this particular provision in the next instance when the fifth amendment is pleaded, regardless of what the reason is, or the degree of the offense whether security or loyalty charge, felony or misdemeanor. I believe that that particular section of the legislation will be unconstitutional and therefore we should give it further study by the proper committee on the conference. We in Congress have the obligation of making the intent of the Congress clear, and must neither transgress constitutional limitations nor make laws that require different exercise of the same rights under any section or amendment of the U.S. Constitution.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Business in the 83th Congress

EXTENSION OF REMARKS
OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. HAYDEN. Mr. President, the Senator from New Mexico [Mr. ANDERSON], a good neighbor of Arizona, delivered an address to the Western Highway Institute convention in Phoenix, Ariz., on April 6, which is recommended reading for anyone who wants information as to the march of population and industry in the great Southwest.

In it is an accurate summary of what the Congress has done to develop a highway system which has for its objective the movement of persons and things from where they are to where they are needed at less cost and in less time. He also has illustrated what needs to be done in furtherance of this purpose.

There is a nationwide demand for water, and there is no one better qualified than the Senator from New Mexico to state, as he did in his address, the progress which has been made toward meeting this imperative demand.

All the Senator from New Mexico said in Phoenix was informative, and to make his remarks available to a wider audience I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BUSINESS IN THE 86TH CONGRESS

Your program committee gave me an easy topic for this noontime talk: "Business in the 86th Congress"—easy because it admits of many different treatments. I might confine my talk solely to the way the 86th Congress is likely to conduct its own business, the interferences that may come from extraneous issues, and the delays in enacting legislation that may result. Or I might discuss what business can expect from the 86th Congress—what laws we will pass with reference to income taxes, life insurance, trucking, water development, atomic energy, and allied subjects. Finally, in view of the great number of investigations already underway or about to be authorized, my theme might well be "Who Gets the Business, Why, and Where."

Naturally I will have a little trouble restraining myself on my favorite theme. Rather steadily these past few months, I have been talking and writing about the atom, its place in the home, its role in industry, its effect upon our laws and our lawyers, and the general problem of fallout; and today I could try to tune you in on what I regard as one of the most fascinating subjects now before the people of the earth.

Perhaps I might better start with a few words about what the 86th Congress has been doing these first 3 months, particularly as its actions relate to business.

Of first importance is the passage of the Hawaiian statehood bill, the addition of a 50th star to the flag. Today we are in the State which gave the 48th star to the flag and for 47 years held the distinction of being the last State admitted to the Union. For nearly half a century, when a new Representative of Arizona came into the Congress, he took the bottom of each committee list because committee assignments go by seniority and if seniority is equal, then by the order in which the States were admitted to the Union. Many times I've heard your Arizona people remark how they went to the absolute foot of the totem pole. Now come Alaska and Hawaii to move Arizona and New Mexico up a couple of notches, and we join with you in pleasure at our new prominence.

The Senate has passed a housing bill which provides $2.7 billion; has extended the Draft Act for 4 years in the pattern that the President requested; has passed an airport bill providing $465 million over a 4-year period; has added $48 million to the funds available to the new Space Agency to advance Project Mercury—the man in space—and to develop and test a new rocket engine. And finally, because it relates directly to business, it has passed a depressed area bill involving $390 million. Democrats thought the sum a minimum. Most Republicans thought it too large. One party's meat is the other party's poison. We learned that again when we extended some special unemployment compensation benefits, which we did in the final closing hours before the Easter recess.

Here in Arizona, I surely should mention the fact that the Senate Committee on Finance has been busy with hearings on a new proposal to change the basis for the taxation of life insurance companies. That deserves mention in Arizona because in 1950 there were two life insurance companies domiciled in New Mexico and three in Arizona. Today there are still 2 in New Mexico and 81 in Arizona. This State chartered more new life insurance companies than any State in the Union except Texas and if you add the State of Texas, Arizona and Texas started about as many new life insurance companies as all the rest of the Nation put together. I don't know what makes life insurance suddenly so attractive for Arizona and Texas companies, but perhaps an examination of the tax-free income possibilities could supply you with an answer.

The Senate has authorized the Joint Economic Committee to make an economic inventory of the United States. There is a background for that. The Senate Finance Committee on which I serve has made a long study on the financial condition of the United States, has filled 1,606 pages of printed testimony with theories, explanations and comment on what has been going on in our financial world. You and I will not need 1,600 pages to understand it. We know that if we deposited $100 in a bank 2 years ago, never wrote a check against it, just allowed it to lie in the bank, subject to the erosion of the dollar now going on, that $100 is worth $93 today. Inflation did that. And when there is that much inflation in the United States, whether creeping or galloping, interest rates will go up, true values will go down, businessmen will be affected, and people will want to see what Congress can learn about inflation as it sweeps across the land.

So that's a part of what the 86th Congress has been doing so far this year that might be of direct interest to business.

But my mail would indicate that businessmen are not concerned alone with taxes, inflation and unemployment. Through all the rather dull pattern of these inquiries there is woven in like a red thread the question of Berlin.

"What's going on?" they want to know. "Is Khrushchev bluffing? What will happen in May? If my children go to Europe this summer, will they be caught in a nuclear disaster? If war starts, how long will it last?"

If you find someone with exact answers to all these questions, send him to the missing persons section of the State Department; we have needed him a long time. But exact answers may not be required. What the Russians do may be influenced by what the free world does. Maybe I can give you one man's opinion.

A united front by the United States and her allies is essential if we are to deal successfully with the recurring world crises.

More important is unity among U.S. leaders, and the stand taken by the country's leaders must be understood and supported by the people. Businessmen like you must make a serious effort to be and remain informed on the problems facing your Nation's Government.

The U.S. position on Berlin is united. Democrats and Republicans alike are in agreement with the sentiments expressed on the floor of the Senate last month by Senator FULBRIGHT, new chairman of the Senate Foreign Relations Committee.

Senator FULBRIGHT listed three points on which there is complete unity in this country:

The United States will make no separate deals with the Soviet Union.

It will not be driven or enticed from Berlin or West Germany.

It will not accept, even tacitly, any propositions designed to formalize the subjugation of the once-free satellite peoples.

Berlin is the world's most important symbol of freedom. Because of this, more than because of its value as a city, it must be protected. It is an island of freedom in a sea of communism, and it must remain free.

Once the Russians understand that, and respect it, then there may be points that can be negotiated.

This is one audience that may be interested more than most others in the Berlin crisis, because here we have a problem that revolves around the highway—the highway which connects the island of West Berlin to the Bonn Government which in turn is tied to the rest of Western Europe. Remember that the United States, France, and Britain have their own zones and spheres of influence in Western Germany, and they are attempting to keep open their lines to Berlin. Over the highway which connects West Berlin with Bonn, roll constant thousands of trucks supplying the city. It was the blocking of the highway which precipitated the first Berlin crisis in 1948. Now the East Germans are threatening once again to cut off the highway which is the lifeline of the new city.

We need to keep constantly in mind the fact that it is not distances but distinctions which cause a fair share of this trouble. The end of World War I saw the establishment of the Polish corridor through Germany. It was a narrow strip of land, but it had high significance. After World War I, I talked with a distinguished statesman of a European nation. I asked him why that little strip of land disturbed him so. His reply was that the Polish corridor was not wide, but it was wide enough to bar forever the guarantee of peace for Europe as long as it existed.

Now again another little strip of land, the little highway that leads into West Berlin from West Germany, may embrace scant acreage, but may be sufficient to promise that a Berlin crisis or something similar to it, can fret us constantly as long as you live and as long as our children may live. It is a tiny highway but it could be the path over which we could travel to world war III.

Maybe I am a pessimist, but I do not look for any quick and easy relief from the tensions that now grip the world. Today it is Berlin; yesterday it was Lebanon, and the day before that it was Quemoy. Last week it was Korea; tomorrow, God knows. Wherever the force of worldwide communism can reach, even into the sacred temples of Tibet, the drive will be on. You and I and our children must be prepared to adjust our lives to it, to stand firm against it, and as Senator FULBRIGHT has suggested, to "chip away relentlessly at the encrusted Communist mixture of dogma, braggadocio, and fear that contributes so much to keeping world peace in a recurring state of serious jeopardy."

World tension, then, is part of the task of the 86th Congress and part of the responsibility the Congress feels toward business. Our world, which was once so large that it defied man's imagination, is now so small that we live neighbor to all creation. Instead of going around the world in 80 days—an unbelievable feat in the time of Jules Verne—we can travel by jet around the world in 80 hours. A missile or spaceship with a man aboard will soon be making the circuit in 80 minutes. Photon propulsion may sail us from Venus to Mars, and nuclear retrorockets may guarantee safe landing on the farthest planet. I'm no pessimist on space travel.

But the world is being shrunk by means other than jets and missiles and communications. One of the biggest problems which we will have to face in the future will be the shrinking of the world's available living space by a population growth which has properly been termed an explosion.

For Old Mother Earth is in the midst of her greatest baby boom. The United Nations population commission now estimates that in 16 years the earth will contain a billion people more than it does today. It believes that the rate of population increase during the second half of the present century will be twice that of the first half. In numbers, the U.N. predicts by the year 1976 a world population of 3,830 million; by the year 2000, a population of 6,280 million. And there is reason to believe that the U.N. forecasts are conservative.

The population explosion creates new pressures and new problems.

It is creating an irrepressible demand for elbow room, for more space, for new land for overcrowded nations. It is creating the same types of pressures which have historically led to the world's great wars.

The problems are magnified by the fact that the greatest population increase is coming in the lesser developed countries—brought about by a spectacular decline in death rates coupled with little change in traditionally high birth rates. The population is growing so fast in countries like China and India that they are unable to develop their economies. They are hard-pressed to maintain even their present low standards of living. Naturally they are looking around at other countries, rich industrial countries with high standards of living. Their leaders are coveting their neighbor's riches.

China by 1975 will have a population of more than 900 million, according to U.N. estimates—more than a quarter of the total world population, nearly 4 times the population of the United States. China's population by 1975 will be more than twice the combined population of the United States and Russia. China is regarded as a satellite of Russia, but by 1975 the satellite, three times as big as its Communist brother, may become the star.

China today has too many people to realize her economic or military potential. But she is apparently bent on converting her weakness into strength by revolutionary economic methods. She is outcommunizing Russia. By the tightest of controls she is directing her masses into productive channels, trying to avoid the dissipation of scarce capital which would result if these masses were allowed to live on more than a bare subsistence level. She is transforming her excess people into economic betterment by vast schemes of public construction.

If China's population and economic growth continue at their present rates, she obviously will soon become the strongest contender for world leadership. Such a mass of humans, equipped with modern arms and disciplined by a dictatorship, would prove difficult to contain if it were bent on conquest at any cost.

John King Fairbank, professor of history at Harvard, in his book, "The United States and China," says: "As the earth shrinks and the peoples proliferate, we will soon be living on the same planet with a billion Chinese. We have something to think about."

So you can see to what crises the world's population explosion might lead. These are the types of world problems which must be reckoned with by every individual.

But the baby boom has meaning at home. The population of the United States today is 176 million, but by 1967—only a few years away—it is expected to reach 250 million.

Where will these new people be going? Where will they live? And how?

Every time God skims the milk of civilization, He pours the cream over the western side of the bowl. As a region the West, particularly the Far West and those southwestern areas that we refer to fondly as the Spanish borderlands, are growing faster than the rest of the country. Take a look at some figures:

The Bureau of the Census reports that between 1950 and 1958, population in the 11 Western States increased 27.6 percent, while growth for the United States as a whole was 15 percent. Nevada led the national parade with a growth of 66.7 percent. Florida had 60.3 percent, and Delaware and Maryland were in the first 10; but for the West, Arizona had 52.1 percent, California 35.4 percent, Colorado 29.1 percent, Utah 25.5 percent, and New Mexico 23.6 percent. Texas, I am happy to report, ran a little behind New Mexico. Washington and Oregon were just above the national average.

As with the States, so with the cities. Los Angeles has been adding population at the rate of 16,000 per month, adding every year about the equivalent of a city the size of Des Moines, Iowa, or Hartford, Conn., or—to stick with the West—of Spokane, Tucson, El Paso, or Albuquerque.

This stupendous growth is amazing arithmetically, but brings problems that seem to increase in geometric proportion. In Los Angeles alone enough dwelling units were built between 1946 and 1956 to house the combined populations of Philadelphia and Boston, or if you would rather keep your thoughts farther west, enough new houses to take care of the combined populations of Houston, Dallas, Denver, and St. Louis.

Naturally the 86th Congress has to keep looking at population growth and try to determine the problems posed to business and all segments of our economy by this growth. It needs to ask and answer what must be done to meet them.

First of all in your interests are roads. We live in an area of magnificent distances, and when we turn to the trail, it's a long, long trail that winds from Seattle to San Diego or from the Columbia River to the Rio Grande. Through the years we have been learning that if the road job is to be done, the Federal Government must be a partner to the State, the county and even to the city.

That is due not alone to our distances but to the share of land publicly owned within the borders of each of the 11 Western States.

Federal and Indian land ownership in Arizona account for 69 percent of its total land area. The Federal Government owns 44.6 percent, or 32,414,635 acres, of the State's total area of 72,688,200 acres. In addition there are 19,344,971 acres of Indian land. None of this acreage is on the tax roll. If Uncle Sam did not help to build roads in Arizona, the task with modern transportation standards would be impossible.

In Nevada, the total area is 70,264,960 acres. The Federal Government owns 61,644,005 acres, or approximately 87.7 percent of the total land area. In addition to this, there are 1,149,700 acres of Indian lands not on the tax roll.

In comparison to these Western States, New York has a total land area of 30,684,160 acres. The total Federal land area is 258,519 acres, or 0.8 percent. Iowa, for instance, has a total area of 35,868,800 with the total Federal holding of 122,244, or a 0.3 percent Federal acreage.

Fortunately, the problem was recognized long ago and a man who helped develop—if he did not invent—modern policy is still Arizona's senior U.S. Senator, CARL HAYDEN. This is to be no historical survey: suffice to say that the original Shackleford proposal recognized the need to apportion Federal aid to highways on the threefold basis of population, area, and mileage of post roads. Such a bill was enacted in 1916, providing a total of $75 million for the next 5 years. That sum, of course, was utterly inadequate and more money was pumped in.

The act itself was amended first to include a larger percentage for areas of unappropriated public lands in the public land States and then by Senator HAYDEN to consider as well untaxed Indian lands. That raised the Federal participation in Arizona from a 50–50 basis to a 72–28 basis, and it helped New Mexico and other States as well.

That was primary Federal aid. In the Hayden-Cartwright Act of 1934, aid to secondary roads was specifically earmarked. More recently we have moved into the more publicized Interstate Highway program where Senator GORE prepared a liberal bill and reported it from the Senate Public Works Committee of which the senior Senator from my State, DENNIS CHAVEZ, is chairman. So the West continues its interest in roads and its reliance on the Federal Government for a large share of funds to do the needed work.

I am sure that you have already heard—or will hear from succeeding speakers—all you want to know about roads, but it seems appropriate to suggest that the rising tide of population plus the factor of more rapid growth in the Western States may make all our present plans and standards inadequate.

We have learned that lesson in our American cities. In 1850 only 15 percent of our population lived in our metropolitan areas; but 65 percent lived there by 1950, and that

is where most of our future growth will take place. I have mentioned what it meant to housing in Los Angeles, but there isn't a city in the fast-growing West that will not feel the pinch in its transportation problems.

Who knows what road system you will need through and around your cities? Will you be forced to cut off from traffic the heart of your cities? Or can you plan now to make them usable?

Fort Worth has a plan. It now has a population of about half a million, but expects to double that by 1970. What to do? Someone had an idea.

The Fort Worth plan would set aside 15 city blocks for central shopping and install there stores, shops, banks, restaurants, and theaters. There wouldn't be a single car or truck on the surface of that area. Giant parking garages would be developed at lower levels and moving stairways would bring shoppers to the surface. The idea seems to be to keep cars and trucks out so that people may come in.

Have you an idea for your metropolis? Last week a Texas multimillionaire who had just made a big investment in the future of Albuquerque predicted that that city's present population of around 200,000 would reach 2 million by the year 1970.

Can you imagine a population of that order of magnitude in my home town? Can you dream up a plan to serve downtown Albuquerque in that day and generation? Can you foresee the strain on such narrow streets as Copper, Gold, Silver, and Lead, whose very names remind us of our almost-forgotten mining history? I say it will be a problem to convert the traffic lanes of the old cowtown to the freeways of a metropolitan are of even a half million people, and it can only be done with the help of the Federal Government. We simply cannot find money fast enough to match the growth that we know is ahead. The task of finding it is upon the 86th and succeeding Congresses.

And the school problem is like unto that, where the Government owns large tracts of land but moves in huge numbers of people whose families include children of school age, the problem is now greater than the community can bear. Hence the Congress responded to the situation by passing in 1951 Public Law 815 to provide assistance in construction of facilities in these areas and Public Law 874 to pay part of the operating expenses—laws which have been extended from time to time and are now effective until 1962.

Between 1951 and 1958 under Public Law 815, 24 school districts in New Mexico received $26,720,587. In all, 98 building projects were finished containing 986 classrooms for 27,608 children. During the same years, Arizona received $21,886,553. Nationwide for this fiscal year $50 million is to be spent for school construction and $150 million for maintenance and operation of schools in impacted areas under these laws—and there is still need for vast additional sums for Federal aid to education. Senators and Representatives must try to do this badly needed job in the 86th Congress. But that fight is always a tough one. What will we do when the tidal wave of population finally reaches us?

Schools, roads, and then houses. In Los Angeles County alone building permits issued have exceeded a billion dollars a year since 1950. But the new homes create a long list of necessities—shopping centers, office buildings, drive-in banks, doctors' offices, golf courses and other recreational facilities. The trucking business is bound to be good with all the materials that the new cities will require.

Congress keeps on responding: a highway act for roads, aid to education to provide and maintain schools, housing and home finance for new residences, airport assistance so we can travel and land at jet age speeds, and Hill-Burton money to build hospitals when we become ill. No field of expanded endeavor seems able to keep with the pace unless it has aid from the Central Government.

Most of the new projects require water—as do our new habits of living. Recently an eastern newspaper carried a picture of a southwestern residence development with a swimming pool behind every home. That's a new demand for water and it is growing fast. Air conditioning is another claimant. That is why the Interior and Insular Affairs Committees of Congress have before them so many bills which include domestic water supplies, such as the Arkansas-Fryingpan project of Colorado. Water may be the most difficult to supply of all the new needs of the growing West.

So you might be interested to know that about 10 days ago, the Senate Committee on Interior and Insular Affairs reported out Senate Resolution 48 which contemplates an exhaustive study of water conditions throughout the United States. We did not concern ourselves with any shortage of water that there might be in the Colorado River and thus bother with a problem that is tied into the lawsuit of *Arizona* v. *California* or in any way involves the claims of the lower basin States against the upper basin States in the Colorado River. We know that under present circumstances there is not enough water in the Colorado River to supply all the people who want to use it, but we also know the problem 20 years from now is to be even more formidable.

Does the 86th Congress merely fold its hands and express its regrets? Not at all. There are several rays of sunshine—and we intend to pursue them all.

First, there is the intriguing promise of atomic energy. We raise water to high temperatures when it is used as a coolant in creating electric current from uranium. We need to raise sea water to high temperatures if it is to be made free of salt. Somewhere, somehow we may learn to coordinate the two processes and obtain an abundant supply of both products.

Second, there is the general program of desalinization of salty and brackish waters, and I was happy to be the author of the bill under which the construction of five large plants can now move ahead. The first site is soon to be selected, and there a plant to remove salt from sea water will be built. It offers much to the West. It could remove from many cities the ceiling on population which limited water supplies now threaten to impose. It could in time assure expanding—almost exploding—Los Angeles an unlimited and eternal supply of good water from the Pacific Ocean. Such a realization might remove California from the more active candidates for water from the Colorado River, could then assure a pleasing outcome of the suit between Arizona and California, and as a final byproduct, let Arizona, California, and Nevada tell the upper Colorado River Basin States that the days of fighting over the water of that river might someday be at an end.

Third, there is the possibility of weather control through the seeding of clouds. Congressman CRAIG HOSMER has been a leader in the current program to establish a cloud-seeding project that might add a million acre-feet of water to the Colorado River, and thereby relieve the shortage in the flow of the river below the estimates upon which the Colorado River compact was based.

Considerable quantities of water are still available in the West to meet its needs for several years to come. However, there may be a rearrangement of priorities now assigned to water use.

Edward A. Ackerman, a scientist and water authority attached to the Carnegie Institution in Washington, in January delivered a paper to a symposium on cloud modification and water resources. In it, he wrote:

"Past western irrigation development usually was undertaken in the absence of other seriously competing demands for water * * * there are signs that this situation is changing."

Mr. Ackerman concludes that there are population and industrial demands upon the West's water supply which may reduce the priority of development of water for irrigation. Domestic and industrial uses may become first and second priorities, and irrigation may be third.

However, the 86th Congress again must move ahead with weather control, with money for the desalinization plants, including one for the arid region of the Southwest, with funds for the Atomic Energy Commission which has already had a "feeler" from California on a possible test plant to combine salinity control with electric power, with approval of projects like the San Luis Dam which ultimately might add substantially to the water supply of southern California cities. This is truly the subject of my talk, "Business and the 86th Congress," because business is dependent for its development and continued growth on the availability of funds and programs that mean new homes, schools, roads, hospitals, airports and an adequate supply of water.

As a closing word, may I suggest that the ability of Congress to meet and solve these problems may be somewhat dependent on business itself. Many groups associate themselves with political endeavor. Business, in my experience, has remained a little aloof. Do you think you should? Do you deeply care who goes to Washington? Do you get pleasure or pain when you see and visit with the man you have helped send to the Senate or the House?

Businessmen can worry less about the tasks of the 86th and succeeding Congress, when—if I may steal a business slogan from my greeting card friend Joyce Hall—"When you care enough to send the very best."

Two Hundredth Anniversay of the Death of George Frederick Handel

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BOLAND. Mr. Speaker, German contribution to modern civilization has been great, and innumerable Germans have added immensely to what is commonly called Western civilization. Germans have been particularly outstanding in the sciences, but no less distinguished have they been in the arts, especially in music. And Handel is one of the giants in the world of music.

George Frederick Handel, who died exactly 200 years ago at the ripe age of 74, was the son of a barber-surgeon in Halle, Lower Saxony, who by his unusual talents and through ceaseless industry gained immortal renown as a composer. At the age of 20 he produced his first opera, "Almira," one of a series of great operas culminating in the "Messiah" and "Israel in Egypt" which together have

long placed him among the foremost of great composers of his time. Even today he is considered one of the greatest composers of all time.

The celebration of the 200th anniversary of Handel's death evokes many memories, and recalls historic events in Germany history, but we can hardly forget the importance of current international events connected with Germany. Indeed, the Berlin situation, the even larger issue of German unification, and the matter of strengthening the Western democracies in their fight against Soviet totalitarianism, are issues that the West cannot hope to solve without the wholehearted cooperation of the German people. On this 200th anniversary of Handel's death let us preserve the freedom of West Berlin in a manner demonstrated by President Truman in 1948–49, let us work for a united, free, and democratic Germany, and let us work for closer cooperation among all freedom-loving peoples of Western democracies.

Steps Toward World Order

EXTENSION OF REMARKS
OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "Steps Toward World Order," delivered by the senior Senator from Minnesota [Mr. HUMPHREY] before the University of Virginia Law School, at Charlottesville, Va., on March 12, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STEPS TOWARD WORLD ORDER

(Speech by Senator HUBERT H. HUMPHREY before the University of Virginia Law School, Charlottesville, Va., March 12, 1959)

In these dark times when crisis is piled upon crisis, it is easy to lose heart, to give up hope. The Berlin crisis is bristling with complex and knotty problems. It is perhaps the most serious situation we have faced since V–J Day. The Formosan crisis has quieted down, but has not disappeared. And there is always a crisis of one kind or another in the turbulent Middle East.

With every crisis there are dangers and risks. But there are also opportunities and responsibilities. I have not lost hope for a more enduring peace, and I believe the American people have not lost hope. We must keep hope alive. Genuine hope. Not hope based upon wishful thinking, but tempered with a realistic understanding of the world we live in.

A few months ago I was in Moscow and Berlin. It was an unforgettable experience. I have a firsthand knowledge of some of the vexing problems we face. But I have not surrendered the gift of hope which gives men the courage to press on, the vision to see beyond the encircling gloom a better world.

Genuine hope does not permit us to escape the present into some utopian future of our dreams. Genuine hope helps us to come to grips with the present in the name of the future and out of respect for the values of the past. Evil triumphs when good men fail to act.

Tonight I want to talk about some steps we can take toward greater peace and order in the world. I say steps, plural, not one giant step. This may disappoint some of you, but I am convinced that new institutions and laws are not achieved in one giant step. Great preparation and even suffering precedes the birth of new forms, new ways of doing things. History teaches not to expect drastic changes overnight.

The pace of history does not discourage me. If the goal is clear and if we take genuine steps in the right direction, I am confident that our efforts will be rewarded.

The many-faceted challenge of communism today demands bold action to meet the economic, political, and military threat of the Soviet Union and Red China. Only bold steps will be equal to the challenge of the "revolution of rising expectations" in Asia and Africa. Timidity is the counsel of despair.

THE HUNDRED YEARS OF PEACE: 1815–1914

Before I suggest some specific steps toward greater world order, I would like to say a word about a remarkable period of modern history, a period which may hold some lessons for us today. I refer to the century spanned by the end of the War of 1812 to the outbreak of World War I, which some historians have referred to as "the hundred years of peace." More accurately, it was a century when there were no general wars and a considerable degree of world order prevailed. The balance of power among the European states made a measure of stability possible. No single European power could aspire to world domination. Great Britain, with its firm control of the seas, acted as a check on the ambitions of any of the European landpowers.

England was neither strong enough, nor did she aspire to dominate the European continent. She acted as a balance wheel. Through this delicate balance stability was maintained for an entire century.

On the economic side, this century of peace was a great period of industrial development in many parts of the world. International trade was stimulated by the acceptance of the gold standard. And the London capital market provided the funds through which large portions of the world, including these United States, were developed.

The principles of Anglo-Saxon law and political institutions, based upon the concept of public responsibility, spread to the far corners of the earth. Everywhere people were beginning to learn, at least theoretically, the meaning of the democratic principle of government by the consent of the governed.

During this remarkable century wars were limited both geographically and in their political objectives. In this country we had a tragic Civil War. But there was no general war. And no tyrant rose to conquer the world or even any large portion of it.

World War I shattered the hundred years of peace and economic development, and destroyed the fragile and elementary forms of world order created in the 19th century. This order was never really reestablished in the long weekend between Versailles and Pearl Harbor.

What can we learn from this century of peace? Is it too different from our present century to teach us anything? Our times are different, in some ways vastly different. Yet, I believe there are three very important things we can learn from the 100 years of peace:

1. Power must be exercised with responsibility.

2. Peace is possible.

3. Peace must be planned.

First, power must be exercised with responsibility. The key to the 100 years of stability was the responsible exercise of British power. Britain held the balance in Europe and through her navy throughout the world. She carried her power with restraint and with a sense of moral responsibility. She did not seek to enslave or to make the world over in her image. I am not suggesting that her Britannic Majesty was a paragon of virtue, but I am suggesting that Great Britain exercised her decisive power with wisdom and restraint.

The mantle of world leadership which Britain wore in the 19th century has in this century fallen upon our shoulders. The key to peace and order in our century, insofar as we have control over the situation, is the wise and responsible exercise of U.S. power. I am not suggesting for a moment a new imperialism, and American century, but rather a recognition that we should have a sense of responsibility commensurate with our wealth and power. This responsibility, in our interdependent world, must be widely shared, through instruments such as the United Nations, NATO, and other multilateral arrangements in the political, economic, and military spheres.

The destiny of Western civilization and the peace of the world may well depend upon Americas' ability to use her wealth and power not only to defend herself, but to create a world of greater peace and justice for all men.

Second, we must believe that peace is possible. If we believe that peace is not possible, we would be among the most miserable of men. Although we are today challenged by a powerful, committed, and relentless foe and the specter of nuclear destruction hangs menacingly over our heads, I still believe we can avoid war and that peace is possible. I have worked and I will continue to work on this belief.

Third, peace must be planned, worked for, sacrificed for. Peace is not an accident, a gift from the gods or a happenstance. Peace is a difficult goal, an elusive goal. Peace must be waged. We must work for peace even as we keep up our defensive shield. Waging peace is no substitute for an adequate defense posture. Nor is an adequate defense posture a substitute for waging peace. The world of 1959 does not confer upon us the luxury of choosing between waging peace and maintaining our defensive strength. We must do both, and we must do each task with as much imagination, creativity and wisdom as we can muster.

THREE STEPS WE CAN TAKE NOW

There is no magic key—no easy way—to world order, no master plan that will assure us of peace in our time. Perhaps I should amend this statement by saying there is no master plan which lies within the realm of the politically possible. Bismarck once said that "politics is the art of the possible." He was right, although there is room for disagreement on what is in fact possible. You will recall that in one of the Federalist Papers, the writer (I believe it was Madison) said that if all men were angels, then we would not need the checks and balances which the Founding Fathers regarded as essential to sound government. But since men are men and not angels, said Madison, we need the checks and balances which prevent one interest or one branch of government from taking over.

Given a world of imperfect men and nations, I maintain there is no master plan that will end conflicts of interest and erase all hostility. Nevertheless, there are steps, important steps we can take which will move us along on the path to a more secure and peaceful world. These steps will help to accomplish in this century the stability and order which was achieved in the 19th century.

Some of the greatest opportunities lie in the economic realm, especially in the areas of international trade and economic development. We need present-day counterparts to the gold standard which facilitated trade and the London capital market which provided development funds in many areas throughout the world. The International Monetary Fund and GATT (the General Agreement on Trade and Tariffs) are in a real sense the counterpart to the gold standard. The International Bank for Reconstruction (World Bank), the point 4 program, the Columbo plan, and other similar instruments are the counterpart to the London Capital Market.

In the military sphere NATO and other free world alliances are the counterpart to the balance achieved by British naval power.

I merely mention the economic and military aspects in passing.

I thought I would like to confine my remarks to the political sphere. In the political sphere we can take three positive steps:

1. Work for effective arms control with inspection.

2. Strengthen the United Nations and world law.

3. Make fuller use of the World Court.

1. Work for effective arms control with inspection: Peace and a more stable world order can scarcely be attained if nations are constantly developing postures of hostility toward each other. Demands by one great power that another great power surrender some valuable position, loud and repeated threats of annihilation if demands are not met, all backed up by a feverish race to concoct new weapons and amass them in ever growing stockpiles—these developments do not create an atmosphere conducive to a more just and peaceful international order.

This is why steps toward disarmament now are so important to mankind's hopes for peace. We must act, even if only a small step is possible. The failure to act is to act negatively.

For years the United States and its allies planned and worked for disarmament with grandiose plans which covered the whole range of military defense and that envisaged comprehensive machinery of administration and control. We learned gradually the futility of this approach. We lowered our sights to more realistic goals, and we have now arrived at a point where we are seeking to conclude a first-stage or a partial disarmament agreement. Complete disarmament all at one stroke need not and cannot be obtained. What we should have, and must have, is a limited agreement, that will help deflect the world from its present hazardous course. Once course has been changed, there will be ample time and opportunity to pursue the larger goals toward which we aspire.

The conclusion of an agreement to suspend nuclear weapons tests with inspection, or to install an inspection system to prevent surprise attack in some region of the world would be a small, first-step agreement of great value for initiating a new trend in world affairs. Either one of these agreements would slow down or perhaps even halt the forward momentum of the arms race. Once the fever of competition has been lowered, sanity and reason can then operate more freely in our quest for peace with justice.

Within the past year progress has been made toward conclusion of a first-stage agreement. Negotiations for a ban on nuclear weapons tests have advanced to an extent scarcely hoped for this time a year ago.

Last summer the Soviet Union suddenly accepted our Government's invitation to hold a technical conference on devising methods of inspection in order to guarantee fulfillment of any international agreement for suspending nuclear weapons tests. This conference of scientific experts from the Communist bloc and the prinicipal Western Powers was convened at Geneva. By the end of last August it issued conclusions concurred in by both sides. This was an unprecedented step in the history of postwar disarmament negotiations. For the first time Soviet and Western representatives had seen eye to eye, and had agreed on the technicial details of an international arms control and inspection system.

It is necessary to recognize what these Geneva conclusions were and were not. They were not in themselves an agreement to suspend nuclear weapons tests. They were, however, an aid, a spur, and a necessary basis for any such future agreement.

Last spring immediately after concluding a very intensive series of nuclear tests, which shot a large barrage of radioactive debris into the atmosphere encircling the globe, the U.S.S.R. announced to the world that she was unilaterally suspending nuclear weapons tests. She further announced that she would continue such a suspension provided the United States and Great Britain, the other two nuclear powers, would do the same. This was a clever maneuver, but it was not clever enough.

The primary aim of this unilateral and conditional suspension was to impress world opinion. To a degree it succeeded. But the more perceptive people around the world knew that the Soviet plan would have resulted in a suspension of tests without effective inspection. Such a suspension would have been worse than no suspension at all, because there would have been no guarantee that one side was not cheating. Under such conditions, fear, suspicion, and tension would have increased and not abated.

The United States wisely pressed ahead with its endeavor to obtain an internationally agreed termination of testing, backed up and safeguarded by an effective inspection system.

Immediately after the close of the Geneva Conference of experts, the United States invited the Soviet Union to a political conference. The purpose of the second conference was to work out a test ban which would utilize the technical and scientific foundation reached at Geneva. The United States said she would suspend her tests for 1 year provided the Soviet Union would do the same. This would allow time for the political conference to hammer out an agreement.

The conclusions of the Geneva Conference of experts confined themselves strictly to scientific matters of a politically nonsensitive nature. They indicated the number of inspection stations and the kinds of inspection instruments and procedures that should be adopted for an effective control system, but they did not go into such controversial matters as to where the inspection stations should be located, who should man them, or what powers the control administration should exercise. These were questions to be thrashed out at the political conference.

The Geneva political conference on suspending nuclear weapons tests has now been at work for about 4 months. When Mr. George Kennan testified before the Senate Subcommittee on Disarmament early this month, he stressed that one of the main obstacles in the way of an arms understanding with the U.S.S.R. is its philosophy and tradition of secrecy. This has been one of the main stumbling blocks on the road to any reliable arms control agreement in the post war period, and it is one of the main obstacles to success in the current Geneva negotiations.

To be reliable, arms control inspection must be genuinely international. National self-inspection is not genuine inspection, and self-inspection is essentially what the Soviet Union has been insisting upon at Geneva. Control stations under the Geneva experts plan would be located in each participating country to check on its activities. But the Soviet has been saying, "These control stations must be manned by nationals of the country wherein they are located." Communist Russians would be checking up on Communist Russians, according to this plan, and it is not difficult to see that Americans will not stake their security, or survival, on such paper promises.

The United States and Britain, in contrast, have taken the position that stations should be manned by outside nationalities, so that the resulting surveillance is truly international, mutual and reciprocal. These opposing views on inspection are responsible for the deadlock at the present moment. This is a point on which the Soviet Union must make a substantial concession if there is to be an effective and dependable inspection network.

Another crucial point of issue in the negotiations is the amount of authority that should be vested in the countries administering the control commission. The Soviet Union insists that there should be unanimity among the major powers on the control authority to make major decisions. In other words, the Soviet negotiators want a veto over the control authority. The American and British position, however, is that at least certain important decisions on the functioning of the control mechanism should not be subject to a one-nation veto, but should be reached by a majority vote.

If, for example, the inspection stations recorded an event that might be an underground nuclear test it would be necessary to send inspectors immediately to the location to investigate. "On the spot" inspection of this type is very vital to the effective functioning of the entire control system, otherwise the purpose of inspection could be frustrated and a violator of the agreement might readily escape the consequences of his violation.

The United States says, "This kind of decision cannot be blocked by a veto." The Soviet Union says, "This kind of decision must be subject to a veto, or it is a violation of sovereign rights."

Soviet intransigence is again responsible for the deadlock on this point. Unless the Moscow government modifies this position, it will be impossible to have an effective and dependable inspection system.

The issue of international inspection in the Geneva disarmament negotiations highlights one of the most significant potential contributions of disarmament to the cause of peace and harmony in the world today. If I had to single out any one factor as the main barrier to peace in the world today, I would point my finger at the Iron Curtain, or in other words the barrier of secrecy and isolation which the Soviet Union has erected between its own people and the outside world.

International inspection for suspension of nuclear weapons tests would pierce this barrier in an unprecedented way. The political effect of getting an international authority into the silent and secret land of the Soviets would be inestimable.

I am dedicated to national security. I believe our defenses should be strong in order to back up our international negotiations and commitments. We arm to parley, we develop strength in order to negotiate as well as to deter attack, limited or general.

We must arm and at the same time strive to turn back the tide of fear that is engendered by the mounting arms race. We must make a start somewhere in tearing down the veils of secrecy that breed mistrust and suspicion between the Communist and free worlds. An agreement to end nuclear weapons tests, backed up by an effectively functioning inspection system within the participating nations, would be a significant

step in the direction of world peace and order.

2. Strengthen the United Nations. The United Nations is a continuing conference of over 80 sovereign states. It is a limited instrument. But it is a valuable instrument. The United Nations can be used, abused, or ignored by its member states, and it would not be difficult to cite examples of these three attitudes toward it.

I believe the U.N. can be strengthened through a fuller use of its peacemaking and peacekeeping facilities. The member states can make a contribution to greater world order by participating in the long-range economic and humanitarian activities of the U.N. which help to weave the fabric of peace and understanding. I refer to the Children's Fund, the World Health Organization, UNESCO, the U.N. technical assistance program, FAO, and other essentially nonpolitical activities carried on under the aegis of the world organization.

I favor the fullest possible cooperation of our Government with other nations in the great problem of assisting economically the less developed areas of the world.

In the peace keeping or political sphere, I believe the present U.N. is capable of serving the cause of peace when the nations really want to use it. But there is no way we can force the nations to utilize the U.N. Mrs. Eleanor Roosevelt once said: "The United Nations is not a cure-all. It is only capable of effective action when its members have a will to make it work."

In spite of the Soviet bloc's frequent use of the veto in the Security Council and other obstructive tactics, the U.N. has a solid record of achievement even in the political sphere. Through the U.N., aggression was thrown back in Korea. Through the U.N., Soviet troops were forced to withdraw from Iran. Through the U.N., fighting was stopped in Greece, Indonesia, and the Middle East.

This suggests one possible immediate area where we can strengthen the United Nations. I refer to the U.N. emergency police force now deployed in the Gaza strip between the United Arab Republic and Israel. This force has limited functions and no one pretends it is powerful enough to hold back a full-scale attack by either side. But it is a beginning, perhaps a symbol of a greater international force which one day may be used to bring stability in trouble areas.

It is difficult to foresee the time when a U.N. force could deal with a situation such as the present Berlin crisis in which the two superpowers are so deeply involved. This could not take place short of a radical change in the nation-state system in which states would have already surrendered their military establishments, the ultimate symbol of their sovereignty.

But, even if a U.N. police force is not capable of dealing with the major security problems in the world today, it is quite possible that a mobile force dispatched to minor trouble spots would be capable of putting out "brush fires" before they blazed into a global conflagration. This would be eminently worth the relatively small investment.

I believe we should also explore the possibility of creating international rules and machinery for the regulation of outer space. In this area the U.N. can also make a contribution.

I have no illusions. I know the U.N. can work effectively on any major security question such as arms control, or regulating outer space only when the Soviet Union is willing to go along with the majority position. And we have no means of forcing the Communist bloc to give in to the majority. But we can try, and in trying we can lay bare the intention of any nation which obstructs the plans of those nations which are genuinely working for greater order and peace. Even if the U.N. serves primarily as a mirror of our divided world, it is performing a valuable function. For without a clear picture of the world situation, we cannot act with political insight or moral wisdom.

3. We should make full use of the International Court of Justice.

One of the most disappointing aspects of the work of the United Nations has been the International Court of Justice. This Court, established as a forum whereby international disputes would be resolved by law, has had all too little opportunity to fulfill this function. In the 13 years since it was established, the International Court of Justice has in fact decided only 10 cases. I repeat, 10 cases in 13 years.

By any standard, this is somewhat less than an impressive record of accomplishment. Here is a court made up of 15 judges who are each paid $20,000 a year, and yet it has decided less than one case a year.

To me this is indeed tragic. For in this day and age the rule of law in international affairs should be looked upon as one of the main ways of peacefully settling disputes between nations.

The sorry record of the Court is due in large measure to the U.S. refusal to give it full backing and support. The damage was done, I regret to say, by the U.S. Senate when in 1946 it added to the so-called Morse resolution, Senate Resolution 196, which declared our acceptance of the compulsory jurisdiction of the International Court of Justice, six words "as determined by the United States."

In 1945, the United Nations Charter was approved. Chapter XIV of the charter provided for establishment of the International Court of Justice to replace the Permanent Court of International Justice. Under article 93 all members of the United Nations are ipso facto parties to the statute of the International Court of Justice. However, no member nation is bound by compulsory jurisdiction of the Court without a specific declaration accepting such jurisdiction.

Less than half of the 81 member nations of the United Nations have by declaration accepted compulsory jurisdiction of the Court in specified areas of international law stated in the statute of the Court. It is of interest to note that none of the Communist nations in the United Nations—including the Soviet Union—have accepted compulsory jurisdiction of the Court.

Senate Resolution 196, which gave the consent of the Senate to the United States accepting compulsory jurisdiction of the Court, was introduced by the distinguished senior Senator from Oregon [Mr. MORSE], in November of 1945; it was cosponsored by 14 other Senators from both parties.

Hearings we held on Senate Resolution 196 in July of 1946 by a subcommittee of the Foreign Relations Committee. Not a single witness appeared before the subcommittee to oppose the resolution. Moreover, not a single letter or telegram was received in opposition to the resolution.

Against a backdrop of overwhelming public support, the subcommittee decided to report the resolution favorably to the full Foreign Relations Committee with only one minor amendment. On July 24, 1946, by a unanimous vote, the committee reported the resolution to the Senate for favorable action in exactly the form recommended by the subcommittee.

The resolution was considered by the Senate on August 1 and 2; it was approved August 2 by a vote of 62 to 2 and the Senate adjourned sine die some 2 hours later. During consideration of the resolution three amendments were adopted.

The most controversial amendment, offered by Senator Connally, added to paragraph (b) the words "as determined by the United States" to the language of the resolution which excluded from cases on which compulsory jurisdiction would be accepted "matters which are essentially within the domestic jurisdiction of the United States." This amendment was adopted by a vote of 51 to 12.

Many observers at the time felt that this amendment, by reserving to the United States the right to decide whether or not a matter is essentially domestic, rather than having the Court make such determination, demonstrated a lack of confidence on our part in the competence and integrity of the new Court.

Mr. Dean Acheson, who was then Under Secretary of State, in testifying on this resolution expressed the argument against any such reserve clause as follows:

"The rule of law becomes effective to the extent that states agree to submit themselves to the decision of the Court in all cases involving questions of law. It cannot become effective if States may reserve this decision to themselves, regardless of the degree of good faith by which they govern their actions."

The effect of such reserve clauses has been to seriously limit the role of the International Court of Justice in settling international disputes. As I have stated, the Court has decided only 10 cases in 13 years.

I hasten to add that this sorry record is not due to any fault of the Court itself. The 15 judges are competent and qualified men. The Court is ready and willing to aid in the settlement of international disputes. The reason for the ineffectiveness of the Court lies principally in the various reservation clauses contained in the declarations of nations which have accepted the jurisdiction of the Court.

The United States, and in particular the U.S. Senate, cannot escape responsibility for the Court's ineffectiveness.

The distinguished lawyer, Charles S. Rhyne, past president of the American Bar Association, and presently chairman of the Committee on World Peace Through Law of the American Bar Association, in an address delivered only this past Tuesday, March 10, assessed the blame quite candidly when he said:

"I am therefore firmly convinced that one of the major causes for the empty courtroom of the United Nations Court is the Connally reservation which was created by the U.S. Senate, is maintained by the U.S. Senate, and can be removed by the U.S. Senate. * * * Every report I have seen by the many experts who have studied this situation agrees that the Connally reservation has emasculated the usefulness of the Court and rendered it impotent as an instrument for world peace. The cancerous effect of the Senate's action has spread as other nations have copied it; it has an ever-widening scope. The tremendous responsibility of the U.S. Senate for continuing through this reservation to stifle use of the United Nations Court is a most serious one when one considers the value of and need for any mechanism which can aid in preventing war under present world circumstances. The Connally reservation is unsound in principle and effect and should be eliminated."

This is a strong statement indeed. A statment of a highly respected and learned lawyer—a man not given to making reckless or rash statements. Mr. Rhyne is a sound and realistic student of international affairs, and his views cannot be casually dismissed. Mr. Rhyne's forceful address indicates a realization of the peril we face in view of the lethal weapons of mass destruction, and the absolute necessity, in the name of self-preservation, that we bolster the available means of settling disputes by law rather than force.

I believe that the time is long overdue for the Senate to remove this reserve clause in the Morse resolution. It is my intention to

offer in the near future a resolution to amend the Morse resolution by deleting from paragraph (b) the words "as determined by the United States."

In the absence of action by the Senate, I fear that the International Court of Justice will remain an ineffective instrument of world peace without authority to dispose of disputes between nations by way of peaceful judicial determination.

It is time that we in the U.S. Senate acted to remove the shackes which restrict the United Nations Court. I hope most earnestly that prompt consideration will be given to the resolution I intend to offer.

CONCLUSION

In conclusion, I return to where I started. I said we must have hope, hope in certain specific small steps we can take in the direction of greater world order. I believe peace is possible, and I believe we must work for it in the small and undramatic ways—through painstaking arms control negotiations, in the day-by-day business of the United Nations, in all those daily acts of fidelity which help create a fabric of peace, justice, and understanding.

Foreign Languages and the National Interest

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. HUMPHREY. Mr. President, this past week Representative JOHN BRADEMAS of Indiana delivered an address at Valparaiso University entitled "Foreign Languages and the National Interest." The theme of this fine talk was that the lack in our country of adequate foreign language training is hindering our attempts to strengthen the free world and combat the tyrannical aspirations of Soviet communism.

I wish to commend Representative JOHN BRADEMAS for calling attention to what he aptly describes as our language gap. I concur completely with him in advocating greater emphasis on language training. This is a subject in which I have been very much interested.

As chairman of the Subcommittee on Reorganization and International Organizations of the Committee on Government Operations, I have had the opportunity to study foreign language training programs; in particular those conducted by our Federal Government. Only last week I submitted from the Committee on Government Operations a report, Senate Report No. 153, as prepared by my subcommittee, entitled "The Federal Government's Foreign Language Training Programs." In the foreword to this report I stated:

It is time we give full recognition to the indisputable fact that foreign language training is indispensable to our military effort, to our overseas economic programs, and, without question, the key to our ability to win friends throughout the world. It is high time that we do something about it.

I ask unanimous consent, Mr. President, that the thoughtful address of Representative JOHN BRADEMAS, to which I have referred, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN LANGUAGES AND THE NATIONAL INTEREST

(Text of an address by Representative JOHN BRADEMAS, Third District, Indiana, at the annual spring meeting of the Indiana Foreign Language Teachers Association, Valparaiso University, Valparaiso, Ind., April 11, 1959)

Some years ago I spent several weeks in Mexico where for the first time I had the opportunity to try out my high school Spanish. At one stage of a conversation, I groped for a phrase to indicate that I was, for any one of a number of reasons, embarrassed. Not knowing the exact word, I reached for a cognate and confidently said to my Mexican friends, "Con toda franqueza, estoy embarazado." They shrieked with laughter and amazement.

For the non-Hispanists among you, "embarazado" in Spanish means "with child" and, I need hardly add, is an adjective confined to the feminine gender, i.e., "embarazada."

After an experience like that I require no persuasion of the importance of understanding foreign languages.

CITES INTEREST IN LANGUAGES

I am honored by the opportunity to speak today at the annual spring meeting of the Indiana Foreign Language Teachers Association. There are several reasons I feel at home with members of your organization. Because my father was born in Europe, early in life I became aware that there were languages other than English, although, to my later regret, I did not trouble to take advantage of the opportunity to learn his native tongue, Greek.

My own graduate studies in the modern political history of Spain could not have been completed had I not been able to use my knowledge of Spanish, somewhat improved from the visit to Mexico, to interview Spaniards who had themselves participated in the events I was seeking to analyze.

As your chairman has indicated, I have also been a college teacher and am therefore familiar with some of the problems you face.

It happens, moreover, that I serve on the General Education Subcommittee of the Education and Labor Committee in the House of Representatives and I am, therefore, directly concerned in my legislative duties with the field of education.

The vastly increased interest which Americans are now demonstrating in education at every level is, of course, a source of great encouragement to us all. It is with respect to one of the most significant areas in the field of education that I should like to speak today, the area of foreign languages.

The United States has in the postwar world assumed the awesome and troubling, but nonetheless indispensable, burden of leadership of the free world against the tyrannical aspirations of Soviet communism. We have undertaken programs of political, military, and economic cooperation with our friends and allies throughout the entire world. Yet we still pursue what I should describe as a semi-isolationist policy when it comes to learning the languages essential to communicating with our friends, understanding the uncommitted peoples of the world, and evaluating the challenges posed by our potential enemies.

THE LANGUAGE GAP

More than 3 million of our citizens are living and working abroad as members of the Armed Forces, the diplomatic corps, and various technical missions engaged in industry. Yet comparatively few of these Americans can speak any language but their own with fluency. It is a simple fact that we are woefully behind the times in learning foreign languages. And there can be little question that the interest of our country suffers, and suffers seriously, because of what, to paraphrase another more controversial aspect of our national security system, might be called our language gap.

U.S. DIPLOMATS LACK LANGUAGES

The problem of the language gap in America is particularly acute in the one spot where it should not be—our diplomatic corps. An Ambassador or consul in a foreign capital is perhaps an exception rather than the rule if he speaks the language of the country to which he is assigned. Gen. Alfred M. Gruenther declared a few weeks ago that, of the 8,000 men and women who recently passed the academic requirements for the Foreign Service Institute of the Department of State, only 300 had a language qualification beyond English. Our embassies and legations are forced to employ thousands of foreign nationals as translators and office staff largely because there aré no Americans qualified for these jobs.

I am glad to say that, thanks in part to the criticisms of James Reston, the distinguished correspondent of the New York Times, the Foreign Service Institute has in the last couple of years intensified its efforts to train more of our Foreign Service officers in foreign languages. But there is a long way to go before the United States does an effective job, even for those who are the official representatives of our Government abroad, of bridging this language gap.

"THE UGLY AMERICAN"

In "The Ugly American," that disturbing and challenging novel about Americans stationed abroad, Eugene Burdick and William J. Lederer provide a parable which dramatizes the link between foreign languages and the national interest. If the mythical Asian country of Sarkhan, the Russian Ambassador promises the natives thousands and thousands of tons of rice to stem a local famine. The rice arrives but it is American rice, on each bag of which Sarkhanese Communists have stealthily stenciled in Sarkhanese for each citizen to see and read for himself: "This rice is a gift from Russia."

The Americans take pictures of the distribution of the rice and the smiling faces of the now happy people. There is no comment from any of the Americans present. None of them can read or understand Sarkhanese, and they do not know what is happening.

It would not be difficult to spend the rest of my time here today citing factual, not fictional, examples of how our incompetence in languages has damaged our relations with foreign countries and, by so doing, has worked against the vital interests of the United States. Members of the Indiana Foreign Language Teachers Association, however, do not need to be persuaded of the significant relationship between foreign languages and the national interest.

I do think it would be profitable for us to examine briefly our deficiencies and then ask ourselves what to do about them.

The language gap of which I speak is in large part of our own making. Beginning with World War I, foreign language instruction was systematically discouraged in our public schools, with 22 States passing laws forbidding the teaching of German and other foreign languages. Some shortsighted persons would likewise today impair our national security by insisting that we should not provide for the teaching of Russian in our public schools.

Although advances in aviation and communication in the period between World Wars I and II brought foreign lands closer and closer, Americans have held to the be-

lief that the time spent studying languages could be more profitably employed in other academic endeavors. We are now tasting the fruits of this irresponsible attitude.

FEW U.S. HIGH SCHOOL STUDENTS STUDY LANGUAGES

Today less than 15 percent of our total public high school students are studying a modern foreign language. Of these, only a handful are studying Russian, German, Portuguese, Italian or Chinese. None are learning such strategic world languages as Japanese, Arabic, Hindi, Malay, Bengali, or Ukrainian.

Even if we decided right now to expand substantially the language study opportunities for our young people, it would be impossible to find enough adequately trained teachers. Two years ago the supply of new high school language teachers was over 25 percent short of the demand, and I have no doubt that the current rise in interest in language education has made the shortage of competent teachers still more serious.

Today, partly because of the lack of qualified teachers, less than one half of our public schools are able to offer a course in any modern foreign language. A recent survey showed that only 24 percent of Indiana's schools offer instruction in a modern foreign language.

RUSSIANS EMPHASIZE LANGUAGE TRAINING

Our failings in this area are all the more tragic when they are compared with the achievements of our cold war adversary. On the primary and secondary school level, most Russian students begin language training in the fifth grade and continue language training for 6 years. Before completion of their high school studies they will have spent 660 hours learning another language.

Those Soviet students who go on to college are required to demonstrate foreign language competence in order to get into college and must take at least 2 years of languages while there. The Soviet Union has also developed extensive language training programs for diplomats and for technical people sent abroad with their foreign assistance programs.

U.S. Supreme Court Justice William O. Douglas warned only last month of "the fierce competition from the Russians who have made language one of their great specialities."

"Telugu"—and I am quoting Justice Douglas—"is a language spoken by 33 million people in India. Yet we have not six people who can read a Telugu newspaper. When the Soviet delegate arrives, however, not only he but his staff are versed in Telugu. The Russian foreign language expert is not only the foreign service official but the Soviet technical expert as well. In medicine alone, Russia is turning out many more doctors than she can use at home. These doctors of hers are trained in Asian and African languages as well as in medicine. They are prepared to practice abroad and to spread the gospel of communism. What is true of the Russian doctor is also true of the Russian engineer, agricultural expert, and scientist."

LANGUAGE GAP COMMANDS CONCERN

That the language gap is beginning to command the concern of more and more persons in our country is evidenced by three random articles I have come upon in the last few days. The Laporte Herald-Argus, published just a few miles from where we now meet, said in an editorial last month that "the blithe insistence of Americans doing their stretches of time in distant lands on keeping aloof from the 'natives,' refusing to learn the language, appreciate the customs, or participate as citizens-for-a-time does us irreparable harm, and explains a good deal of the anti-American sentiment in many areas."

The current issue of Women's Day, a magazine sold in many supermarkets, contains a stimulating article entitled, "Why Can't Our Children Speak a Foreign Language?"

John R. Walsh, education writer for the Louisville Times, in a recent report, describes the sweeping plan of Catholic colleges, high schools, and elementary schools in the Louisville area to coordinate language teaching from top to bottom and to place strong emphasis on the elementary level.

PRAISES PROF. WILLIAM RILEY PARKER

I am sure then that there is growing recognition of the serious shortcoming of this country in the development of persons skilled in modern languages and of the fact that this weakness is prejudicial to the best interests of the United States. The next question is: What can we do about it?

The natural resource which can most quickly be utilized is the trained body of language teachers now engaged in teaching. Certainly no one would dispute the proposition that all teachers would benefit by an opportunity to increase their knowledge of the subjects they teach. In an excellent study for UNESCO, entitled "The National Interest and Foreign Languages," Prof. William Riley Parker of the University of Indiana, presently Chief of the Language Development Program in the U.S. Office of Education, cites the example of the language teacher who has only the minimum training required to teach languages and, as a result, has reached the limits of his knowledge after teaching a 2-year course. If we are to give our students competent and extensive training in languages, we must have teachers who know the languages as thoroughly as possible.

Let me pause to pay a word of tribute to Dr. Parker for the splendid work he is doing to remedy the lag in languages we are discussing. All of us in Indiana should be proud of his contributions, and I want to express the hope that all of you who have not already done so will read Dr. Parker's first-class analysis of foreign languages and the national interest.

HAILS NATIONAL DEFENSE EDUCATION ACT

I am very pleased to tell you of a significant effort now underway to attack the basic problem in language development in the United States: the shortage of good language teachers. The National Defense Education Act, passed by the 85th Congress, contains a number of provisions which are evidence of the awareness of Congress of our deplorable backwardness in this field. In fact, the only one of the 10 titles of the act which rode serenely through all the hearings and all the debates was the one dealing with languages.

The National Defense Education Act provides for the establishment of summer foreign language institutes where language teachers may take additional training in the languages they teach. Four institutes have already been set up for this summer at the Universities of Colorado, Maine, Michigan, and Louisiana State. Because we in Congress last month voted a supplemental appropriation of $75 million for the Defense Education Act, six more institutes will be established this summer. They will accommodate an additional 600 teachers. The institute program should, in its first year of operation, provide 8 weeks of training for 1,000 teachers.

The need for this kind of program and the enthusiastic response on the part of language teachers is demonstrated by the fact that the first institute established—at the University of Colorado—has received applications from every State in the Union at the rate, as of last month, of 100 per day.

For those of you interested in the foreign language institutes, and I hope that includes everyone here, I might say that the program provides a $75 weekly stipend for public school teachers, plus $15 a week for each dependent.

Parenthetically, let me mention a conversation I had in Washington a few days ago with Senator HUBERT H. HUMPHREY, of Minnesota, and Eugene Burdick both of whom told me of the tragic fact that the Army Language School at Monterey, Calif., a first-class center for the teaching of languages, is operating at less than half capacity.

URGES INCOME TAX DEDUCTION FOR LANGUAGE TEACHER TRAVEL

With the increasing emphasis on teaching students to speak, as well as to read and write foreign languages, I think it might be wise to encourage teachers to increase their knowledge of the spoken language. The best way to achieve this goal is to spend some time living in a foreign country.

I am sure that most of you would be happy indeed to travel abroad, but, as college teachers, you are inhibited by the lack of money. Because I am so deeply convinced of the value of such travel, I am considering the introduction of legislation to permit language teachers a partial income tax deduction for the expenses of trips designed to increase their knowledge of a foreign language.

CITES AREA CENTERS FOR RARE LANGUAGES

The summer institute program represents a very promising start in our efforts to provide this Nation with competent linguists, but it does little to increase the number of trained language teachers or to provide trained linguists, teachers, and teaching materials for the so-called exotic languages, those which are rarely taught in this country.

Our incompetence in the field of the exotic languages is demonstrated by a recent survey made by the American Council of Learned Societies which revealed that at least 50 languages—each of them spoken by more than 2 million people, 14 of them spoken by between 10 and 42 million—are not taught in any American college or university.

The National Defense Education Act does, however, provide a means for attacking our lack of proficiency in the exotic languages. The act provides for the establishment of language area centers for the development of facilities to teach these languages. Let me list the goals of the area center program:

(a) Intensive courses available frequently and at geographically distributed locations.

(b) The production of several complete sets of reliable and effective teaching materials.

(c) Adequate instruction in related area studies.

Some of these language area centers would use existing facilities at colleges and universities. Others would be developed from scratch. The centers would be financed through a system of matching grants. If we can put these centers into operation, we should be able to build up a pool of trained linguists who, in turn, would be available to train more students throughout the Nation. The development of suitable materials would provide insurance should we quickly need large numbers of trained personnel in any specific language.

You will be interested to know that the study conducted by the American Council of Learned Societies showed the languages most needed now by Americans are Arabic, Chinese, French, German, Hindustani, Italian, Japanese, Portuguese, Russian, and Spanish.

One or more area centers will be established for all of these languages except French, German, Italian, and Spanish, which are available at most colleges and universities.

NOTES STUDENT LOANS TO ENCOURAGE TEACHERS

The Defense Education Act also encourages the college student to consider a language-teaching career by providing writeoffs on

student loans, granted under the act, to students who subsequently teach in the public schools. The student is allowed to writeoff 10 percent of his loan for each year that he teaches up to a maximum of 5 years.

The important place given to languages in the National Defense Education Act is, I believe, a symbol of the growing realization among the citizens of the United States of the contribution to our country of your profession. The Indiana Foreign Language Teachers Association is to be congratulated for following the recommendation of the Modern Language Association that each State establish a group to include all teachers of foreign languages in the State. State educational officials will look to organizations like yours for advice and help in putting the foreign-language provisions of the Defense Education Act into practice.

PROPOSES NATIONAL LANGUAGE FOUNDATION

Indeed, I would urge that your organization and others like it consider seriously an effort to create an agency similar to the National Science Foundation for the purpose of marshaling support for the study of foreign languages and cultures. Just as the National Science Foundation is a source of strength for scientific endeavor in our country, so, too, a National Language Foundation could serve as a coordinating agency and rallying point to intensify interest in language education.

It will be 2 or 3 years before we can see evidence of real progress from some of the programs I have discussed. Meanwhile, all across the Nation parents, teachers, and school boards are displaying an awakened interest in language education. Students, housewives, and factory workers are arising with the sun to take Russian on early morning television programs. PTA groups are asking schools to teach Russian or Japanese to their first graders.

This new interest is a splendid example of the capacity of the American people to respond to a challenge. There is, however, a danger that these crash programs will collapse because of an inadequate foundation and the lack of a continuing planned program.

CALLS FOR LANGUAGE TRAINING FROM PRIMARY TO COLLEGE LEVEL

A good deal is said about the advantages of teaching the fundamentals of a foreign language to young children who have the ability to assimilate such knowledge without pain or embarrassment. I believe that we should do all we can to encourage the teaching of languages to children at the primary level, provided that at the same time we prepare advanced training for these students at the secondary and college level.

These primary programs should be carefully planned so that we do not disappoint both the students and their parents by starting on an exciting venture, only to be stopped by the dead end of inadequate preparation.

SUGGESTS FOREIGN-BORN AMERICANS TEACH LANGUAGES

I shall dare to make another suggestion.

There have been many cities and towns ready and willing to begin language instruction in the primary grades, but which were unable to find qualified teachers. This, in many cases, is not because we lack a significant number of competent linguists in this country, but rather because too few of these linguists meet State and local teaching certification requirements.

The suggestion I shall make is not a criticism of our certification requirements, but is rather a commonsense approach to the basic problem: How can we enable more Americans to learn foreign languages in the immediate future?

I would suggest that we make use of the many educated immigrants and foreign nationals now living in the United States who have complete command of their native tongue, who have the intelligence and background to teach these languages, but who may lack the necessary college credits to qualify as teachers.

It would seem quite possible tht evening or summer courses could adequately prepare these people to teach languages to primary students, especially since the language teacher could have the aid of the regular classroom teacher. Later these people could be replaced by regularly trained teachers, or, if they wished, could take the courses required by State laws to become fully qualified teachers.

In the meantime, they could be imparting their knowledge of the correct pronunciation, tone, and inflection of their native language to the receptive minds of young students. These students would then be able to take full advantage of advanced courses on the high-school and college level.

URGES IMMIGRANTS TO TEACH THEIR CHILDREN NATIVE TONGUE

Foreign-born Americans and foreign nationals living in our country are an invaluable resource whom we have too long neglected. In this connection, let me say that I believe it is a patriotic duty of American citizens of foreign birth to teach their children a second language. Immigrants should take pride in the fact that they can contribute in this significant way to the security and well-being of their adopted country.

PRAISES CULVER ACADEMY RUSSIAN PROGRAM

Let me take this opportunity to point out that here in Indiana there are many school systems which have already started to improve the teaching of foreign languages. Very near here, for example, the Culver Military Academy has only recently hired a highly qualified language scholar to teach Russian to its students.

Maj. Gen. Delmar T. Spivey, superintendent of the academy, told me that the course was instituted because, "aside from the questions related to communism, when a country is as large in land mass and as populous as Russia is, the impact of its culture on Western civilization will be so great that it is absolutely essential for our citizens to gain a better understanding of this culture."

General Spivey added that he had found it very difficult to find a person competent to teach the Russian courses. I might say that I am glad to see that Saint Mary's College, where I taught for a time, has just begun to offer courses in Russian.

SPEAKING IN STRANGE TONGUES

Russian is but one of the many languages in which this country is deficient. In a world that seems to change overnight—every night—those of us who believe deeply in democracy as the best political expression of the dignity of the individual must speak clearly to the peoples of the world, millions of whom are now for the first time moving to the stage of human history.

We must, if we are really to be understood by these peoples and to understand them, speak to them in their own language.

This is the fundamental reason we must bridge the language gap.

In the Acts of the Apostles we read of those who were speaking in strange tongues.

The future of free civilization will very largely depend on how well we in America can speak strange tongues and listen to them.

How well we speak and listen depends in turn on how well you, the members of the foreign language profession, teach our young people.

Yours is a high and noble calling and I am confident that you will respond with dedication to its challenges.

Extension of Medical Resources

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. JAVITS. On April 5 the Honorable ERNEST GRUENING, U.S. Senator from Alaska, officiated at the dedication of a new library, auditorium, and lounge at the Albert Einstein College of Medicine of Yeshiva University in New York City.

The facilities dedicated were the D. Samuel Gottesman Library, the Mary and Karl Robbins Auditorium, and the Max L. and Sadie Friedman student-faculty lounge, constructed on the campus of the college of medicine. The units, embodying the most modern facilities for medical education, were a medical library with provisions for 200,000 volumes and periodicals; an auditorium seating 838, equipped for closed-circuit color television; and a student-faculty lounge, providing for informal get-togethers of students and faculty.

Speakers at the ceremony, in addition to Senator GRUENING, were Dr. Samuel Belkin, president of Yeshiva University, and former New York State Attorney General Nathaniel L. Goldstein, chairman of the board of overseers of the college of medicine.

Addressing the assemblage of leaders in industry, community affairs, and education, Dr. Belkin declared:

Let there be a friendly rivalry among scientists of different lands for new discoveries against cancer, heart disease, and other dread killers. Let the libraries of the great cities vie with one another on the size and quality of their book collections. Let the major universities of different nations compete in the scope and daring of their educational programs. Let nations be judged on the merits of their medical training and research rather than on the size of their warheads.

In a greater sense and larger measure, we are dedicating ourselves here to the spiritual and democratic concept of the infinite worth and sacredness of the human personality. Because human life is sacred, it is our moral duty to do everything in our power to preserve it.

General Goldstein, referring to the teamwork of scientists and businessmen who had helped create the college of medicine, said:

In the world competition for better health facilities, more educational opportunities, higher standards of scientific achievement, we need fear no nation in the world. A free-enterprise system that can give rise to institutions like the Albert Einstein College of Medicine is its own proof of essential soundness and creativity.

Medical advances in our golden age of science have paradoxically raised alarming new problems in health. With the increase in our population, particularly of the aged, health and disease problems have arisen which call for a far greater tempo in medical education and the numbers of medical researchers, teachers, and physicians.

Mr. President, I ask unanimous consent that the address by the Senator

from Alaska be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR ERNEST GRUENING, OF ALASKA, AT THE DEDICATION OF THE D. SAMUEL GOTTESMAN LIBRARY, MARY AND KARL ROBBINS AUDITORIUM, MAX L. AND SADIE FRIEDMAN STUDENT FACULTY LOUNGE AT THE ALBERT EINSTEIN COLLEGE OF MEDICINE OF YESHIVA UNIVERSITY, APRIL 5, 1959

It is a privilege to participate in any ceremony which further commemorates the name of Albert Einstein, though it is beyond the power of the living to enhance by words the fame of that great man. No posthumous tributes can add one cubit to his stature. He belongs to the ages. In the roster of immortals who have signally advanced the frontiers of knowledge, and whose contributions were milestones in the progress of mankind, only a very few in all recorded history may be deemed comparable: Archimedes, Copernicus, Galileo, Newton, Pasteur, Darwin. But Einstein was not only a great scientist, he was also a great humanitarian—a philanthropist in the generic sense of that word, a lover of his fellow man. He deeply sensed the philosophic import of his cosmic discoveries in physical science. He was keenly aware of their epochmaking impact.

So it is doubly significant and twice just that the college of medicine of Yeshiva University was named after him. For a college of medicine combines, as no other institution could, pure science, of a character which directly benefits both the individual and society, and extension of those benefits with a total disregard of barriers of race, creed, or country. What institution could be nobler in purpose?

I am happy to be here with you at the dedication of three important additions to this already great and prospectively greater and enduring institution—the library, auditorium, and a student and faculty lounge. It is a welcome assignment to bring you the greetings of the 49th State, and as a Member of the U.S. Senate, where Alaska is represented for the first time. Alaska's elevation from territorialism and the recent admission of Hawaii, which followed more or less naturally after Alaska had, so to speak, broken the ice, are important steps forward in the application of that most basic of American principles, the principle of government by consent of the governed.

The Senate is deeply concerned with the problems which this ceremony today signalizes—health, medical education, and research to promote that health. A Senate resolution of the 85th Congress adopted as recently as last August authorizing a complete study of all matters pertaining to international health, research, rehabilitation, and assistance programs, was based on the declared assumption that "mankind's efforts for the conquest of disease have become a matter of ever higher priority in the judgment of the American people and the Congress."

The first of a series of these studies, under the auspices of the Senate Committee on Government Operations of which I am a member, is about to appear and I have been reading the galley proofs thereof. One of the encouraging facts cited in this report is that expenditures for national medical research have risen from $88 million a decade ago to $330 million last year and that the Federal Government's participation in the same period has risen from 32 percent of that total to 56 percent; an increase by Uncle Sam from $28 million a decade ago to $184 million. There is no better test of the Government's interest in a project than its willingness to appropriate for such project. Here, as in other fields, actions speak louder than words. So the Federal Government's interest is tangible and demonstrable.

In addition, in this, the 86th Congress, another highly important joint resolution, known as the International Health and Medical Research Act of 1959 is slated, I hope, for early action. It is sponsored by Senator LISTER HILL, of Alabama, chairman of the Senate Committee on Labor and Public Welfare—the committee whose jurisdiction includes both education and health.

Cosponsored by 58 Senators, of whom I am happy to be one, this measure is designed to establish the procedures which can mobilize the Nation's health resources so that our scientists can participate effectively in a cooperative effort with the scientists of other countries against the still unconquered diseases that afflict all mankind.

It is scarcely necessary to enumerate these diseases to this assemblage. In 1957 cancer killed one American every 2 minutes. If we project that figure into a rough approximation of its worldwide toll—although we do not have statistics available for the world population—we will discover approximately one cancer fatality every 10 seconds on this planet. Many of the fatalities occur in early adulthood. It is among the premature deaths, among the parents of the young, among the breadwinners, among those still in the prime of life, that are found the great personal tragedies.

Last year diseases of the heart and cardiovascular system accounted for approximately one-half of the total deaths from disease in the United States—some 800,000, and of these more than one-fifth had not reached the age of retirement.

Mental illness which now affects over 10 million Americans and appears to be on the increase, is a vast field only beginning to be explored.

Modern invention, the steadily accelerating tempo of contemporary life, ironically, bring new medical problems. Automobiles on the faster throughways increase the accident rate and require emergency antishock treatment and surgery which were not required in the horse and buggy age. Aviation medicine—to take care of the physiological concomitants of rarefied atmosphere, rapidly changing atmospheric pressures, and other implications of supersonic speeds into space—is upon us. This is a field closely linked with national security and the preservation of the freedom we enjoy.

Radiation from atomic fallout has brought new grave perils, new medical time-bombs, the full import and consequences of which we are not yet wholly aware, except that they present new challenges both to medicine and to statesmanship.

It is the objective of this legislation now before the Congress to sound a call for world cooperation in an organized onslaught against disease and ill health and the resolution has been given an appropriate short title, namely "Health for Peace Act." It asks for an appropriation of $50 million annually. Its passage by the Congress will serve notice to all peoples that the United States desires worldwide cooperation, not for war among nations, not for mutual destruction of our fellow human beings, but for an all-out war against the common enemy of man. Modern methods of communication and transportation render such cooperations more feasible. As the world has shrunk through the annihilation of distance and reduction of travel time, cooperative effort is not only facilitated but is rendered more obligatory through the rapid spread of infectious diseases which can span continents with a speed heretofore nonexistent.

It is an interesting fact that Senator LISTER HILL, who is responsible for so much good legislation dealing with health, such as the Hill-Burton Hospital Act, is the son of a noted American surgeon, Dr. Luther Hill, who was the first to perform a successful suture of the human heart. He had studied in London under the great Sir Joseph Lister, who introduced aseptic techniques into surgery, and had given his son the name of LISTER.

Likewise I want to bring you the greetings of Alaska, until a few days ago I could have said our youngest State, whose citizens will be keenly interested in this young medical school. At present only 118 physicians are licensed to practice in Alaska, an area one-fifth as large as the 48 States. Vast areas in that great domain lack adequate medical services. This unfortunate condition exists in all but 11 of our largest communities and in the immediate surroundings of certain hospitals established by the U.S. Public Health Service. These hospitals are designed to take care of our native population—"native" being an Alaskan word for people of aboriginal descent, that is, of Indian, Eskimo, or Aleut blood, but, by a curious reverse racial discrimination which we are trying to rectify, these agencies will not treat whites. Large Alaskan regions, the Yukon Basin, many areas both coastal and in the interior, are almost totally lacking in medical services, and many of their people live and die without benefit of therapy. Alaska's crucial needs are best illustrated by giving you these tragic facts:

We have in Alaska the highest recorded rate of eye, ear, nose, and throat infections and their complications, such as mastoiditis.

Although our incidence of tuberculosis has been greatly reduced in recent years from the shocking ratio of nine times what it was in the 48 States 10 years ago, it is still a great and smoldering danger.

Infant mortality is high in rural Alaska, mostly in children less than a year old, and this is largely due to nutritional and hygiene factors.

Dental disease in rural Alaska is extreme and exerts an inevitable adverse influence on general health. Some communities have never had dental care. Instead they have dental caries.

These conditions are the heritage of nearly a century of colonialism. We have liquidated that colonialism on paper, through statehood, but the economic and social consequences of those 92 years of neglect and discrimination remain to be disposed of. And here is a challenge for the forthcoming graduates of this and other medical schools, as well as for our State and Federal authorities.

I am not quite sure why I was so signally honored with the opportunity to dedicate these great new additions to the Einstein College of Medicine. Perhaps an explanation may be found in some personal references. Medicine has played an important part in my life. My father was a practicing physician in New York. He was an oculist and an aurist, probably the last man to practice both these specialties in Manhattan, where, prior to his death in 1914, these two important branches of medicine, as in other metropolitan areas, had come to be separately practiced. My father attained distinction in both, having been elected president of of two societies that, in his lifetime, dealt with each, the American Ophthalmological Society and the American Otological Society. Since his day otology has expanded its domain, laterally and vertically, has annexed the nose and throat, or perhaps better said, has formed a tripartite union with rhinology and laryngology. But in earlier days nose and throat were considered somewhat apart from eye and ear. Fortunately medical disciplines, unlike some labor unions, are not prone to jurisdictional disputes.

So I grew up in a medical atmosphere and, even as a boy, became familiar with the institutions that my father served: The New York Eye and Ear Infirmary, the Mount Sinai Hospital, and the German Hospital, later renamed the Lenox Hill Hospital, in which he successively passed through the various echelons and ultimately became the

consulting surgeon in his specialities in these hospitals. While still in school, I watched him perform a mastoid operation at Mount Sinai and remove a cataract at Eye and Ear. My father was once asked what the definition of a consulting surgeon was. In a humorous vein he replied wryly that a consulting surgeon was one who was called in at the last minute to share the blame.

The assumption was inevitable that, as the only son in the family, I would follow in father's footsteps, and I did study medicine and obtained my M.D. at Harvard Medical School. However fascinating the pursuit of medicine, a number of factors led me to the belief that I would be happier in attempting to diagnose and treat the ills of the body politic rather than the ailments of the bodies corporal. So I decided to give up medicine and entered newspaper work, starting as a cub reporter. It was a serious blow to my father. But he became reconciled, after I had become an editorial writer and he found that a number of my editorials were being reprinted in the Journal of the American Medical Association and hailed by its editor as welcome examples of seldom encountered correct comment on medical matters in the daily press of the day.

So my medical education proved of great value in journalism, as it did likewise later in Government. In fact, one of my collateral efforts, although I was on what was known as the editorial side of newspapers—as reporter, copy desk editor, rewrite man, editorial writer, city editor and managing editor—was to try to persuade the business office of the newspapers for which I worked to ban medical advertising.

In those days, the first and second decades of the century advertising of quack doctors and of patent medicines that were guaranteed to cure cancer, tuberculosis, venereal disease, "female troubles" and every known ailment, was carried almost universally in the daily press. The lucrative patent medicine business was exposed by Samuel Hopkins Adams, a great journalist, who died only a few months ago at the age of 88, in a memorable series of articles in Collier's weekly, labelled "The Great American Fraud," subsequently published in book form. The unholy collusion between newspapers and this fradulent medical advertising he subsequently unmasked in fiction form in a novel called "The Clarion," whose scene was laid in a New York up-State city where some widely publicised patent medicines were manufactured and indeed were one of that community's principal industries. "The Clarion," in the novel, was the name of a locally published daily trying to free itself from that industry's control.

Adam's crusading served to awaken the public conscience and to mobilize public sentiment by making clear that, through the publication of these fraudulent nostrums, newspaper publishers were accessories to the killing of innocent people. I found it helpful to get Samuel Hopkins Adams to come to Boston to address its chamber of commerce and to challenge these derelict publishers in their hometown. It was a bombshell, but it achieved the desired result.

But, before I turn from these personal recollections to the important and stimulating aspects of this occasion, I want to add that my medical education enabled me to help build and develop a school of tropical medicine in Puerto Rico, securing for it from the Federal Government substantial sums which I was dispensing as Administrator of an agency known as the Puerto Rico Reconstruction Administration, and, later, to have the school of tropical medicine expanded into the School of Medicine of Puerto Rico.

While in Alaska, my medical education enabled me to work more effectively to create a full-time department of health and to make a start in combating tuberculosis and other endemic diseases there, after a virtually total neglect of public health by the Federal authorities whose responsibility this had been during the first three-quarters of a century of American rule in Alaska.

But, as I have pointed out, Alaska still lacks much that it needs in the way of medical care and health facilities. Within this month, one of my medical friends from Fairbanks was here in the East looking for practitioners for his clinic, and similar shortages exist elsewhere. We know that our medical schools are not graduating the number of physicians who are needed. I am confident that the Einstein College of Medicine will make a major contribution to alleviating that deficiency.

I will not burden you with statistics, but one that is striking is that the medical educational facilities in the United States with 80-odd medical schools have been insufficient to take care of half the applicants or anywhere near the need. The number of these applicants may be expected to increase and in relation to population growth and need the percentage of accepted students to diminish. Hence the great value and importance of the Einstein College of Medicine.

This college emphasizes as no other institution could the international character of science and particularly of medicine. Located in the most cosmopolitan metropolis on earth, with populations of ethnic groups often numerically greater than in the largest cities in the land of their origins, a magnet for the greatest talent, a receptiveness to that talent regardless of race or creed, it furnishes, in this land of freedom, the ideal center of hospitality for the scientists of lands less free.

Such was Abraham Jacobi, who, imprisoned in Germany for participating in the revolution of 1848, escaped and here in New York established the first pediatric clinic in America. Such was Albert Einstein and countless other physicians and scientists driven from their homeland by the obscurantism and racism of Hitler. Here were welcomed the refugees from Mussolini's Italy, from Franco's Spain. Here are welcome and will be welcomed whatever freedom-loving men and women have defected or will defect from the tyranny of Communist imperialism, or of any other police state.

In this age which has witnessed such a resurgence of nationalism, has seen the erection of barriers to travel and intercourse which a generation ago we believed had been forever outgrown, it is more than ever important to insist upon the international character of the profession of healing. In no arena of human endeavor have the men and women of so many nations contributed as they have to the advancement of medical science.

Hippocrates the Greek, father of medicine; Galen the Roman; Avicenna the Persian were among the pioneers in what was then the art of healing. We need but name a few of the luminaries whose work advanced medicine into a science to make clear beyond preadventure the international character of medicine.

Vesalius and Leeuwenhoek, from the Netherlands; Arrhenius the Scandinavian; Harvey, Jenner, Bright, and Lister, Englishmen; Pasteur, the Curis, Binet, Charcot, from France; Casal, the Spaniard; Helmholtz, Virchow, Graefe, Roentgen, Koch, Ehrlich, Germans; Mendel and Freud, from Austria; Banting, from Canada; Metchnikoff and Pavlov, from Russia; Noguchi and Takamine, from Japan—these are only a few of a glorious list before we come to the great contributions of our fellow Americans with Jonas Salk and his antipolio vaccine as the latest bright star in the international galaxy. I hesitate to venture into an enumeration of the other stars in the American medical firmament. That would constitute a major address all by itself.

This vast medical center which has arisen from a wasteland in six miraculously short years, the buildings we are today dedicating, were born of a rare teamwork of businessmen and scientists, idealists all, yet practical men and women. These farsighted and public spirited citizens were fired with the vision of a Jewish-sponsored medical school—the first in our Nation's history. It would, they knew, continue the age-old contributions of the Jewish people to the health and welfare of mankind. They helped build this city of training, research, and healing that surrounds us here. They gave freely of their thought, their time, and their money to achieve that great objective.

They hoped, and their hope will be generously fulfilled, to emphasize by this creation that we are well into the golden era of medicine, the rapidity of whose advances must be consonant with the urgency of this age. They want to accelerate the great progress made in recent years—to spare the deaths and personal tragedies that came to many stricken by illnesses for which a few short years later a cure was found. They were aware that in the last 10 years, due largely to the discovery of sulfa drugs and antibiotics, the death rate has declined almost 12 percent. This means that 1,700,000 Americans are alive today who but for medical research would be in their graves.

They knew that surgical techniques had advanced so far that the touch-me-nots of yesteryear now hopefully invite the newer skills of surgeon and anesthetist, which save lives that but a few years ago would have been doomed.

They had seen the passing or great diminution of the infectious diseases that a generation ago swept communities with epidemic virulence. They have seen the incidence and fatality of diphtheria, typhoid fever, scarlet fever, tuberculosis, penumonia, poliomyelitis, and much else, greatly diminished. They have seen life expectancy steadily increased. But they have also seen cancer and heart disease take their steady, perhaps increasing, toll. They have seen little headway made against crippling arthritis.

So they have deployed the laboratories, the classrooms, the operating rooms, the therapeutic apparatus, the most modern equipment in every sector, to wage a vigorous and unrelenting battle against sickness and premature death.

Adjacent are the thoroughly equipped facilities of the Abraham Jacobi and Nathan Van Etten Hospitals, and now the new D. Samuel Gottesman Library in which are housed some 200,000 volumes, in the expanding and multiplying subsciences together grouped under the all-inclusive title of medical books and publications—these recording the steady advance from conjecture and hypothesis to experiment, to trial and error, to proved experience, to near certainty—the cumulative experience of past and present, the prognosis for a still better future.

This great Mary and Karl Robbins Auditorium, visually linked to vital points in the medical center with its closed-circuit television, its modern equipment for auditory and visual communication, a center for the dissemination of information to medical and lay public alike on prevention and care of disease and on the maintenance of health.

This bright and cheerful lounge named for Max L. and Sadie Friedman, which will serve as a meeting ground for faculty and students and as a place for pleasurable relaxation and social contact.

I would like, in conclusion, if it were not deemed inappropriate, to paraphrase and adapt the immortal words of Abraham Lincoln:

We cannot dedicate these great gifts for the welfare of mankind. The Jewish people, in their unquenched idealism, in their

age-long martyrdom, in their unremitting devotion to freedom, in their unceasing quest for the higher and better life, have dedicated these facilities far beyond our poor power to add or detract. The world will little note nor long remember what is said here. But uncounted tens of thousands through the years to come will never forget what will be done here.

Inching Along Toward Peace

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. HUMPHREY. Mr. President, on March 30, during the recent Easter recess, it was my privilege to address the Dade County Bar Association in Miami, Fla. I spoke on the subject of the Berlin crisis and set forth my ideas on the course of action we should follow in order to protect free West Berlin and maintain the peace.

I ask unanimous consent that my address, entitled "Inching Along Toward Peace," be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INCHING ALONG TOWARD PEACE

(Address by Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, before Dade County Bar Association, Miami, Fla., March 30, 1959)

We live in a time of continuous crisis. We have been numbed by screaming headlines about Suez, Germany, Baghdad, and Budapest. Now we are in the middle of the Berlin crisis. This is not just another international crisis. It is probably the most serious and fateful problem faced by the United States and the free world since the end of World War II.

We all know what is at stake in Berlin—the two things we value most—peace and freedom. A false move or a serious miscalculation could be the spark that would ignite a nuclear holocaust. If free West Berlin falls, it is not inconceivable that West Germany would eventually follow, and if West Germany falls, the nightmare of a new tyranny would sweep over all of Europe.

Berlin is the focal point in the mighty struggle between Communist tyranny and the free world. The situation is fraught with danger. But I believe that firmness, wisdom, and solidarity with our closest allies will give us the strength we need to meet the challenge posed by Mr. Khrushchev's thinly disguised ultimatum which falls due on May 27.

In my remarks about the seriousness of the Berlin crisis I would like to make a few general observations in the interests of understanding. I do not want to say or do anything that will make the job of the executive branch any more difficult than it now is. In fact, I seriously considered whether I should say anything at all in public on so delicate an issue. I hope my comments will help to clarify the situation in its deepest and broadest aspects.

A sound policy toward the Berlin crisis will require all the patience, understanding, and courage we can muster.

If the American people understand the depth of the crisis I believe they will be willing to pay the price to save West Berlin. We know that peace and freedom are indivisible and that both are at stake in Berlin. And if freedom is snuffed out in Berlin the cause of freedom and justice throughout the world will suffer.

The gravity of the Berlin crisis necessitates that we enter into face-to-face talks with Russian leaders.

In his address to the American people the President rightly insisted on both firmness and our willingness to negotiate—as many of us have been urging. I am gratified that he is now willing to go to the summit.

We must always be ready to undertake any honorable move that will further prospects of peace.

The test of our greatness and leadership is not to be found in the formalities of diplomacy, but, rather, in the sincerity of our purpose. With a large part of the world in the control of dictators, vital decisions will be made by heads of state. To suggest otherwise is to ignore the real facts of political life. Therefore, let us proceed to the summit conference fully prepared with purpose and program, and in unity with our allies. We must do our homework better than we have in the past, and know what we want and what we are going to propose.

The willingness to negotiate is only the beginning, not the end, of a responsible policy toward the German situation. Our major problem now is to develop a viable negotiating posture in concert with Britain, France, and West Germany. To enter into talks with the Russians, either at the foreign ministers' level or heads of state level, ill-prepared or disunited, is to invite humiliation and even disaster.

I want to emphasize to you today my belief that it would be excessively imprudent to hold the proposed summit conference without utilizing the unique facilities of the United Nations.

As we go into the coming summit conference, we need to invoke the moral authority of the purposes and principles embodied in the charter of the United Nations.

And, in my opinion, the best way to do it effectively is to hold the summit conference within the framework of the United Nations.

We can't be part-time members of the U.N. turning to it in desperation at the last moment only after we have bungled efforts to solve the world's problems alone. We can't take an off-again, on-again attitude toward the United Nations, if we want to help keep it an effective force for peace.

When we had a crisis in the Middle East and Russia proposed a summit conference, we insisted that any such conference be held through the United Nations.

Yet now, as we approach a summit conference which all agree is urgent, we seem to have regrettably turned our back on the U.N.—and our back upon our other allies we represent in the occupation of Berlin.

The presence of the Secretary-General at a summit conference would mean the symbolic representation of all the members of the United Nations who may object to four powers presuming to settle an issue which can mean peace or war for the entire world. Peace is the responsibility of all nations.

It is not only the conference itself which should be brought within the framework of the United Nations. There is also the brighter prospect through such a conference of bringing within the framework of the United Nations the administration of any eventual agreement of a safer regime for Berlin. Such a regime might well include a permanent U.N. presence for Berlin.

The United Nations Charter recognizes the role of normal diplomacy, and charges the nations to seek solutions to their problems in the first instance through peaceful means of their own choice.

Nevertheless, the presumption must be that in dealing with general problems which threaten international peace and security, international conferences should be conducted within the framework of the United Nations.

The United Nations offers many advantages for international conferences, whether involving few or many States.

One of the advantages of a conference within the framework of the U.N. is that such a conference has the moral backing of the charter, and would be directed toward objectives compatible with the purposes of the charter.

Our purpose, in any summit conference, would stand that test. It would be Soviet purposes that would become subjected to world scrutiny.

WHAT THE COMMUNISTS WANT

It seems to me that the Soviet Union wants three things in Europe and has created the Berlin crisis as a lever to gain them:

1. The Soviet Union wants the three Western Powers to get out of West Berlin. It ultimately wants the entire city to be under complete Communist control.

2. She wants to use the Berlin crisis to force the Western Powers to negotiate an all-German settlement favorable to the Soviet Union. She prefers a united Germany tied closely to the Communist bloc. She will settle immediately for two Germanies. In other words, the status quo with East Germany the Communist state under firm Soviet control and influence. The least acceptable alternative that the Soviet appears willing to consider is a neutralized and denuclearized Germany which she hopes eventually to swallow up, by one means or another.

3. The Soviet Union sees in the Berlin crisis an opportunity to split the Western alliance. We must never forget that the primary objective of Soviet policy in Europe is to weaken NATO and to divide the United States from her allies. We cannot permit any of these Soviet objectives to be fulfilled. It is inconceivable that we would retreat from West Berlin. To do so would be to forfeit world leadership and in fact to become a second-rate power. I am convinced that the Soviet Union prefers to gain its political objective in Europe without nuclear war, and I know that the United States and our allies want to avoid a nuclear Armageddon.

We should make every effort to avoid getting into a position where we would be required to use force first. I am sure our Government will do everything possible to avoid a provocative or hostile act. We should, however, make it crystal clear that we will not be forced out of Berlin, nor be denied access to or in any way accede to any effort to starve into submision the West Berlin population. It must be clearly understood by Moscow and East Germany that we are prepared to take any action necessary in support of these policies and commitments.

U.S. POLICY OF RESOLUTE FIRMNESS

Last November I stood in West Berin with its able and courageous mayor, Willy Brandt. I vowed then, and I vow today, to support a policy of firmness, to uphold the right of France, Britain, and the United States to maintain garrisons in West Berlin until a legitimate peace treaty is signed.

This is the position and policy of our Government. We can all be grateful that we do not stand alone. Britain, France, and the 12 other members of the NATO alliance stand with us. We will not surrender. We will not be pushed out.

What does standing firm mean? It does not mean holding fast inflexibility to old positions which have helped to produce the present unhappy stalemate. The real issue, said Walter Lippmann recently, is "whether to stand pat on positions that have become

untentable or to move to new positions from which the western allies can recover the political initiative." Standing firm means that we must match our firmness with imagination, courage, and a willingness to negotiate with the Soviet Union. It means firmness in our fundamental position and flexibility in our strategy and tactics. Standing firm and willingness to negotiate are not, as some people suggest, contradictory policies. They are two elements in any viable policy in the Berlin crisis. We must stand firm in order to negotiate effectively. And we must have solid bases for negotiation if we want to stand firm.

It is imperative that the best minds of our country—those persons qualified as experts on the problems of Central Europe and Germany as well as Soviet policies and tactics—be called upon at once for intensive consultation directed toward policy formulation.

In the weeks between now and May 27, we, in concert with our allies, must explore every possible honorable means that can ease this crisis and point in the direction of a just and equitable settlement.

It is not enough just to negotiate and talk. We must have clearly in mind the objectives we seek, and the means and ways of achieving those objectives without bargaining away the rights of others, or in any way weakening our own security.

I am gratified that our Government is at last taking anew the leadership in preparing for these important conferences.

Yet I would be less than candid if I did not warn the American not to expect quick and easy solutions out of the impending negotiations.

It must constantly be kept in mind that there are no short-time, short-run, immediate answers to these grave, perplexing, long-range problems. Negotiations will require persistent patience. They will require a willingness to endure almost unbelievable, tedious discussions of long duration.

But we must be perpared to negotiate and negotiate as long as there is the slightest prospect of relieving world tension and minimize the danger of war.

The hope of peace and understanding with the Soviet Union is not to be found in political deals.

We cannot leap over our problems and differences.

They must be slowly chipped away, through our contacts in the United Nations, our participations with the Soviet in the U.N. agencies, through our exchange programs, and what we hope will be gradual changes within the Soviet Union.

At best, we will inch along toward peace and understanding.

Let us hope and pray we have the emotional stability and maturity to persevere. And let us hope and pray that no attempts will be made to find quick solutions which will ultimately be regretted because of ill-considered actions or ill-advised consideration.

We know that our national security is not and should not be a partisan matter. But genuine bipartisanship in foreign policy does not mean that the loyal opposition silently acquiesces in all policies advanced by the administration.

The Berlin crisis is both a danger and an opportunity. It is a danger to world peace if we display signs of weakness, indecision, or appeasement. It is an opportunity if we recognize the sharpness of the crisis and proceed to explore every means of peaceful settlement, not only of the Berlin and German situation, but indeed the relationships between the United States, its allies, and the Soviet Union in all of Central Europe. Wise, prudent, and courageous statesmanship is needed now as never before. We must be prepared to follow the course that may be tedious, frustrating, and characterized by insults, threats, and abuses for months to come. The war of nerves has been intensified.

In this struggle, the victory will come to those who clearly understand the relationship between power and principle, maneuver, and objective. We cannot afford to be found wanting in any of these.

Make no mistake about it, a policy of firmness with negotiation is the only policy that will avoid surrender on the one side, and minimize the risks of war on the other.

COOPERATION WITH ALLIES AND RESTRAINT URGED

We must act in harmony with our allies, Britain, France, and West Germany. This means more than coordinating our pronouncements about standing firm. It means hammering out a unified policy and strategy to give us strength for bargaining, and to undergird our determination if negotiation should break down.

If we had worked a bit closer with our allies and had strengthened the consultative process within NATO during the past 5 years, perhaps we would be in a better position than we are today. But let bygones be bygones. If we ever needed the wisdom, strength, and counsel of trusted allies we need them now.

Yes, these are dangerous days and the situation is explosive. But these are also great and challenging days where spiritual and brain power may save us from the dangerous alternative of the use of firepower.

The alternative to war is peace, and it is in the pursuit of peace that we will find our greatness and fulfill our destiny.

Citation of Hon. J. Edgar Hoover as Humanitarian of the Year

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. HOLLAND. Mr. President, a few days ago a great tribute was paid to Mr. J. Edgar Hoover, Director of the FBI, when he was cited as Humanitarian of the Year by the Variety Clubs International for his contribution in the fight against juvenile delinquency. This is certainly a well-deserved honor.

I ask unanimous consent that an article entitled, "FBI Chief Cited as Humanitarian," referring to this award published in the Washington Daily News of April 3, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWENTIETH WINNER—FBI CHIEF CITED AS HUMANITARIAN

FBI Director J. Edgar Hoover today was named Humanitarian of the Year by the Variety Clubs International for his tremendous and continuing contribution in the fight against juvenile delinquency.

The Variety Club, a worldwide organization of people in all branches of show business, named Mr. Hoover in Las Vegas today at the end of its annual 4-day convention.

Formal presentation of the award will be made here some time next month, the club said.

The members also took note of Mr. Hoover's monumental efforts in safeguarding the Nation against the insidiousness of communism.

Recognition of Mr. Hoover's work was made by a committee of 70 newspaper editors, 25 college presidents plus all living past recipients of the award.

Mr. Hoover is the 20th winner of the annual award. Previous winners include Dr. Konrad Adenauer, Henry Ford 2d, Herbert Hoover, Sister Kenny, Bernard Baruch, and Sir Winston Churchill.

"We feel the name of Mr. Hoover constitutes a valuable addition to the list of distinguished individuals from all branches of human endeavor who have received this award in previous years," Club Chief Barker George W. Eby said.

Deterrent Power?

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Coos Bay World, entitled "Can Dead Man Taste Revenge?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAN DEAD MAN TASTE REVENGE?

Arguments over whether the United States still has sufficient deterrent power to keep the Soviet Union honest, and whether this condition will prevail in 1 year, 2 years, or 5 years, fill those who want only to live and work with cold horror.

In Washington, the annual debate over defense capabilities is at its height. The argument is more vigorous than ever before, which is perhaps a sign that our situation is more critical than ever before.

Last week's Life magazine did a study of two schools of thought on defense.

One school believes our best method of maintaining the deterrent effect on Soviet attack potential is to maintain an assortment of weapons—some missiles, some Strategic Air Command wings equipped with long-range jet bombers, some aircraft carriers for shorter attacks, some missile-equipped submarines.

The other school is chiefly filled with younger officers who believe America's salvation from defeat by the Communist bloc is reliance on the superhorror weapons of the missile-hydrogen bomb age: intercontinental ballistics missiles with thermonuclear warheads, and a lot of them.

The administration appears committed to the first school of thought. So be it. But, reading elsewhere, it seems this commitment does not extend so far as to actually provide the equipment with which to carry it out.

A big question, as argued by experts, is whether the Strategic Air Command will have adequate time to get its superbombers off the ground, aimed for the Soviet Union, after the Russians begin lobbing intercontinental ballistic missiles, with hydrogen warheads, toward U.S. targets.

Today, apparently, SAC does not have the ability. Warning time that Soviet missiles are on their way appears to be from 0 to 10 minutes, not really enough time to get sufficient planes in the air for an effective counter-attack. But it also appears that the Soviet does not have enough missiles at present to launch a successful attack on all U.S. retaliatory bases, assuming a 50 percent accuracy for their weapon, which can

kill everything in a 5 mile radius and cripple everything far beyond that area. Experts disagree as to when the Soviet will have the capability—1 year, 3 years, 5 years.

When the Soviet capability is there, then what?

Probably at that time, U.S. warning systems will provide as much as 20 minutes of SAC takeoff time, enabling the U.S. to retaliate to some extent. Probably this retaliation, under recent Pentagon theory, will be against population instead of against defenses. At least some of the SAC bombers, which are really obsolete already, would get through with their dirty hell bombs.

There is the horror.

In 20 minutes, we say, a hundred, 200 superhydrogen bombs will be exploding all over the United States, killing millions, destroying our defense potential, and spreading a deadly radioactive pall cross the length and breadth of the land.

In 20 minutes, we will be dead.

In that 20 minutes, we will launch a counterstroke—a weak one but at any rate a counterstroke—against those who have killed us. We will be dead when our stroke is delivered, but it will hurt him, perhaps kill him, after we have been dead for hours.

Can a dead man taste revenge?

That's carrying arguments about deterrents to the ultimate conclusion.

A deterrent is meant to deter, not to kill. The power of the deterrent through the years we had it was meant never to be used for actual delivery of massive retaliation. It was meant to frighten the Kremlin so that the Soviet would not initiate a war for fear of the sureness of our retaliation.

This is still the idea of the deterrent. This is the argument of the first school of thought—that Soviet knowledge that SAC can deliver some sort of retaliation against the Soviet heartland, even after the fatal messengers are winging our way from Russia, and we are all as good as dead, will keep the Soviet masters from pushing the red buttons marked "Omaha," "San Francisco," "New York City," and all the hundred or so other names representing population centers, missile installations, and Strategic Air Command bases.

Whether the deterrent deters this year, next year, 5 years hence, is open to debate. And it is being debated by experts.

But a deterrent, if continued, must surely some day lead to the retaliation phase.

One has only to be a human being and not an expert then to ask: Can a dead man taste revenge?

Taxation of Patronage Allocations of Cooperatives

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. MORSE. Mr. President, I have just received a copy of a resolution dated March 28 adopted by the Union County Pomona Grange, La Grande, Oreg., relative to taxation of patronage allocations of cooperatives.

I ask unanimous consent that the resolution be printed in the Apendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas there is much pressure on Congress to enact tax legislation on cooperatives that would be unfair: Therefore be it

Resolved by Union County Pomona Grange this 28th day of March 1959, That we ask Congress to enact legislation establishing a single tax levy, consistent with other partnerships upon patronage refunds of farmer cooperatives by taxing them at face value in the hands of the member; be it further

Resolved, That Congress reject any attempts to fix any interest to be paid on such patronage refunds on the period of redemption thereof by such farmer cooperatives.

HENRY WEATHERSPOON,
Master.
LAURA E. BATES,
Secretary.

New Frontiers To Be Conquered by Americans

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. YARBOROUGH. Mr. President, on any given night our television sets offer a variety of programs which recall the days of what is termed "the frontier." In introducing these programs, the announcers speak as though frontiers were a thing of the past. Although it is true we have expanded from coast to coast, America today faces new and thrilling frontiers. These frontiers are in all the fields of human endeavor.

Even if the pioneer no longer pulls up stakes and finds new lands to clear, there are still minds to clear by improving our knowledge. Today's pioneer fears raids by hostiles—hostile bacteria which must be fought with energy equal to that with which the settlers of days past defended their wagon trains. There are still great areas to be explored, if not on land, then in the fields of human relations, prevention of poverty and hunger and disease, and the continuing endeavor to provide a better life for all our people.

Just as the earlier pioneer went armed with ax and rifle, today's pioneer comes armed with education. Education and knowledge, provided by better schools, are the keynotes of our modern frontiers and the continuing work toward "life, liberty, and the pursuit of happiness."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in Life magazine for April 6, 1959, under the heading "America's Durable Frontier."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICA'S DURABLE FRONTIER

Man has ever had a compulsion to go west, to follow the sun. Whether he seeks the rainbow's end, a passage to India or the seven cities of gold hunted by the conquistadores, he has heeded the call of his blood, and gone. Out of his thrusting movement has come, not only America's discovery, but America's own odyssey, the winning of the West.

As time goes, this odyssey was only a moment of history and recent enough to be remembered by men yet living. Yet already it is becoming folklore, celebrated (and distorted) in the smoking guns of the horse operas now dominating 8 out of 10 top TV shows, as if today's Americans, bored with abundance and hungering after some drowned Atlantis, lost youth or more challenging day, find all these in glorifying a vanished frontier.

Is the frontier closed? Certainly the gloomers who think so have a case, just as did Thomas Malthus, whose deep pessimism (in the 18th century) about overpopulation was proved wrong by the frontier's own tremendous enlargement of man's food, wealth, and space. Perhaps the physical frontier is disappearing. But its conquest, a physical event of enormous grandeur, was more than that. It was also a state of mind—as much a cause of the conquest as its product—which has come to characterize the American and to set him apart, in his ideas, enthusiasms and dreams, from the third old lands of his multiple origins.

As soon as the indentured servants finished their terms in the tidewater they struck out for the freedom and the boundless land of the southern uplands, soon to be joined by the new tide of Scotch-Irish and Palatine Germans streaming down the Allegheny ridge from the Philadelphia gateway. Feeling crowded if anybody settled within 5 miles, they pushed on across the mountains, and the West was wherever their axes were making the latest clearing. Soon they sang:

"Me and my wife and my wife's pap
Walked all the way to the Cumberland Gap."

The 13 States had been able to make a union but it was these men who transformed it into a Nation. They first began to talk of national roads and demanded national improvements. Regionalism was submerged, as in Indiana and Illinois, where the upland southerners who settled there were quickly joined by restive Yankees pushing westward from Vermont and New York, and soon by the first tide of Germans, Irish, and, later, Swedes, and others. The new American could say (in John Latouche's great ballad) that he was quite a mixture, including: Greek and Turk and Czech and double Czech American.

Out of the medley came the strength of hybrid vigor, people who grew taller and stronger, like the Nation itself. Out of it came an Abraham Lincoln who could write that the Mississippi was intended to flow through one country, and (when the Vicksburg victory made that certain) rejoice: "The Father of Waters again goes unvexed to the sea." And out of it also came the state of mind, the boundless American optimism, the refusal to believe anything impossible, the conviction that all barriers are made to be conquered by the adventurous spirit of men.

As long as this spirit lives, the frontier will never die. Already some "Fifty-niners" are prodding into the Alaskan spaces. But even when all new land is gone, the pioneer spirit will continue to uphold what the new land offered: freedom, equality, justice, and the dignity of man. It can probe the frontiers of weather control, melting the icecaps, harnessing the energy of the oceans, creating new Americas by turning salt water fresh and reclaiming the deserts, penetrating the mysteries of inner matter and of outer space. A great frontier lies in breaking the last outposts of tyranny, not by conquest but by the irresistible power of unarmed truth (Pasternak's words) and free man's example.

Strengthening the Civil Defense Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. WILEY. Mr. President, the cold war, with the threat of a hot war always in the background, continues to emphasize the need for protective measures for our civilian population in the awful event of an attack.

To help provide such protection, dedicated and patriotic citizens are attempting to develop an effective civil defense program.

For the most part, the major responsibility for civil defense efforts has been left to the leaders in communities. We recall, of course, that at the last session the Congress enacted a very modest piece of legislation, Public Law 85–606, to help planning and programing of the overall civil defense establishment. We recognize, however, that the magnitude of the responsibility in this field continues to be tremendous.

Despite this, however, courageous leaders in communities throughout the country are making constructive efforts to move forward with an improved civil defense program.

Today I call particular attention to the civil defense program being set up in a seven-county area in Wisconsin. As a part of the overall planning, county and municipal governments and civil defense organizations will integrate their resources into the civil defense operational services for any emergency that may arise. These services include: attack warning, police protection, handling the movement of people from a threatened community, radiological defense, manpower mobilization, and a number of other such services.

To further illustrate the constructive work being undertaken by community leaders to provide a more effective civilian defense program, I ask unanimous consent that an article appearing in a recent issue of the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE SET UP IN SEVEN COUNTY AREA—REGIONAL DIRECTOR TO BE NAMED TO HEAD TEMPORARY SERVICE IN EMERGENCY

A regional civil defense director for the seven county metropolitan Milwaukee target area (MMTA) is to be named under a plan announced Thursday.

The plan also provides for the coordination of all civil defense activities of Milwaukee, Waukesha, Racine, Kenosha, Ozaukee, Washington and Walworth counties.

The director would supervise temporary functions for local governments made inoperable by war, nuclear bombing or natural disaster. He also would be the commander in chief in perfecting a regional civil defense setup and directing its emergency services.

MEET AT COURTHOUSE

The plan was discussed Thursday at a meeting of public and other officials at the courthouse, convened by the MMTA civil defense commission.

The director will be appointed by Maj. Gen. Ralph Olsen, State civil defense director. The functions, meanwhile, will be carried out by the cochairmen of the commission's planning and operating committee, George W. Carnachan, Milwaukee county civil defense coordinator, and Don Carleton, city of Milwaukee civil defense coordinator.

The county and municipal governments and civil defense organizations will integrate their resources into the civil defense operational services for any emergency that may occur or be declared by the Governor.

SERVICES ARE LISTED

These services will include attack warning and communications, command and control administration, police services, movement of people, welfare, transportation, engineering, radiological defense, home defense, fire fighting and rescue work, manpower mobilization, intelligence, medical and public health, information, continuity of government, training, and mortuary requirements.

The aim of the plan, it was explained by Carnachan, is to get people to safety, provide security, care for the sick and wounded, set up housing, feed and clothe refugees and reunite families.

He said there also was a need for laws to extend the powers of peace officers across municipal boundaries, to permit counties and cities to relocate the sites of government temporarily and to allow seizure and rationing of food, fuel, and clothing for the common good.

Organization of American States

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. YARBOROUGH. Mr. President, the Organization of American States, composed of 21 good neighbor countries in the Western Hemisphere, observed its 69th birthday on April 14.

As the Washington Daily News commented:

As befits one approaching three score and ten, it is confident, respected, and serene.

The OAS has brought about some fine programs for better health and social welfare in its member countries. And it has promoted a spirit of friendliness and a means of working together to look out for each other's interests and to provide a better life for all.

We of the United States of America wish to extend our best wishes to our Latin American neighbors and again say to them "mis mejores deseos y buena suerte," our best wishes and good luck, for continuing success in the years to come.

Mr. President, as part of paying my respects to the Organization of American States, I request unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Daily News for Monday, April 13, 1959, under the heading "Happy Birthday."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAPPY BIRTHDAY

Tomorrow the Organization of American States celebrates its 69th birthday. As befits one approaching three score and ten, it is confident, respected, and serene.

The OAS has had a great degree of success in keeping the borders of this hemisphere calm and inviolate. Its programs have promoted significant improvement in health and social welfare. But most important of all, it has led the 21 countries to view themselves as members of a single family where differences of opinion may occur but where the welfare and safety of all is the paramount interest.

With the creation of the Inter American Bank (the $1 billion draft charter was signed last week) there is evidence of continued vigor in the search to find the best means to solve the hemisphere's critical problems of economic health.

The OAS, where each member, large and small, is guaranteed protection when he is threatened, help when he is hurt, and at all times the dignity and respect commensurate with full and equal partnership, represents the best in the free world's human associations.

At 69, OAS is showing the vigor and intelligence of youthful prime, and we wish it the years of Methuselah which were, as we remember it, at least 900.

Emergency Unemployment Benefits

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Help to Michigan," from the Detroit News of March 9, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO HELP TO MICHIGAN

The sudden decision of House Democratic leaders to press for further extension of emergency unemployment benefits has brought from the Eisenhower administration a disclosure that it, too, has been thinking along the same line.

It is not clear which decision to "do something for the unemployed" prompted the other. But it is abundantly clear that the motivation on both sides is political. Clear also, at least to us, is the fact this competition in political humanitarianism will help exceedingly few of those whom the lag in employment recovery has left jobless.

In Detroit and Michigan, particularly, the proposed extension of benefits will be a distinctly minor blessing. Of the 364,000 currently unemployed in Michigan, all but 30,000 have already exhausted their regular and extended benefits or will have done so by April 1, when the present program expires. Only the 20,000, and those present jobholders who hereafter become unemployed, would be eligible for the further extension proposed. Helpful as that might be, it would present a bleak prospect for the great majority who would get nothing.

A further objection to the proposal from the Michigan standpoint is that this new extension, like the last one, would be financed first by Federal loans but ultimately by a levy on State employers. Because the

Michigan provision for unemployment benefits is among the most liberal as to both term and amount, the levy on State employers would be correspondingly heavier than in other States. The best hope of Michigan's unemployed is not benefits but jobs. It will not help to attract payrolls to Michigan, if the effect of the proposed legislation is to widen still further the comparative costs of unemployment insurance as between here and other States.

What would best serve Michigan and Michigan's unemployed would be the plan urged by the AFL–CIO for a national 39-week benefit term applicable to all States, including those now granting as little as 16 weeks. We hope the administration may be persuaded to back this plan, which the southern-dominated leadership in Congress significantly finds unsuitable.

The Padre of the Americas

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. KEATING. Mr. President, Father Joseph F. Thorning yesterday delivered the opening prayer in the other body of Congress on the occasion of the celebration of Pan-American Day. It is fitting that the famed padre of the Americas should be accorded this great honor for the 15th consecutive year, for over the years he has worked unceasingly in behalf of the good neighbor policy, and to promote greater understanding and cooperation among the American Republics.

Many citizens interested in the good neighbor policy look upon Father Thorning's presence and prayer yesterday as a memorable anniversary of patriotic service to our country. Because of its significance and the wide interest in his work, I ask unanimous consent that a synopsis of the work accomplished by my friend, Father Thorning, be printed in the Appendix of the RECORD.

There being no objection, the synopsis was ordered to be printed in the RECORD, as follows:

THE REVEREND JOSEPH F. THORNING, PH. D., D.D.

Joseph F. Thorning is the son of a New England mother and a Viking father. The mother came from Springfield, Mass., while the father, hale and hearty at the age of 94, worked as a shipbuilder on the shores of Lake Michigan.

Born at Whitefish Bay, Wis., on April 25, 1896, Joseph Francis Thorning received his early education at Marquette Academy, Holy Cross College, and St. Louis University. While at St. Louis, he was invited to prepare a series of articles on international friendship for the national review, America.

This series led to his election as chairman of the Europe committee of the Catholic Association for International Peace. His first monograph, "National Security and International Peace," was published under the auspices of this association.

In 1931, Joseph F. Thorning, now ordained to the priesthood in the Jesuit order, was awarded a doctorate in sociology, economics, and political science by the Catholic University of America. His doctoral dissertation, "Religious Liberty in Transition," is still regarded as a classic on the subject, according to Carlton J. H. Hayes, onetime Seth Low professor of history in Columbia University and wartime Ambassador to Spain.

In late 1931, Dr. Thorning, now associate editor of the quarterly, Thought, was asked to serve as European correspondent of America and special correspondent of NCWC news service.

These assignments took Dr. Thorning to the United Kingdom, where he developed his interest in international studies under the direction of Sir Alfred Zimmern. Another of his friends at Oxford was Francis de Zulueta, regius professor of civil law. He also exchanged views with Father Martin C. d'Arcy, S.J., celebrated Thomistic scholar at the university.

Oxford University furnished a splendid headquarters for research and writing with the opportunity of making frequent excursions to European centers of learning. Among the universities which Dr. Thorning visited were the Sorbonne, the University of Salamanca, the University of Fribourg (Switzerland), Munich, Bonn, and Heidelberg. At Geneva Dr. Thorning was invited by officials of the National Broadcasting Co. to give a transatlantic address, a novelty at that time, on the so-called disarmament conference. In this period, Dr. Thorning also wrote articles and reviews for the Commonweal.

Returning to the United States, Dr. Thorning was appointed special lecturer on sociology and acting dean of the graduate school in Georgetown University by the Very Reverend W. Coleman Nevils, S.J., one of the most famous presidents of that institution.

It was at Georgetown that Dr. Thorning began his series of conferences with Father Edmund A. Walsh, regent of the school of foreign service. As a result, these two intellectuals were often described as the two leaders who, for 30 years, best understood the nature of the Soviet Union and the mentality of the Soviet hierarchy.

When Father Walsh was asked by the general of the Jesuits to prepare a volume on the cause and cure of Marxism, he entrusted the pivotal first chapter of the positive phase of this scholarly study to Dr. Thorning. In this chapter Joseph F. Thorning explained, in practical terms, the celebrated labor encyclical, "Forty Years After," by His Holiness, Pius XI.

While at Georgetown, Dr. Thorning formed his friendships with Ambassador J. H. Jefferson Caffrey (first career diplomat to hold the blue ribbon post at Paris, France); with Ambassador Walter J. Donnelly, who has had brilliant service in Colombia, Cuba, Brazil, Peru, Panama, Costa Rica, Venezuela, Austria, and Germany; and with the Honorable H. Freeman Matthews, now U.S. Ambassador to Austria.

In 1937, by appointment from His Excellency the Most Reverend Michael J. Curley, archbishop of Baltimore and Washington, Dr. Thorning became chairman of the department of social science in Mount St. Mary's College, Maryland, and professor of ethics and church history in Mount St. Mary's Major Seminary. At this post, he wrote the monograph on social reconstruction, "A Primer of Social Justice," with a preface by Archbishop Curley.

In May 1938, at Budapest, Hungary, it was reported in the New York Times that Dr. Thorning established a world record by broadcasting, over the facilities of the National Broadcasting Co., the story of the International Eucharistic Congress, in seven languages.

Then, as in 1937, he visited all the battlefields in the Spanish civil war, interviewing leaders on both sides. When he returned to the United States, Dr. Thorning was described by Archbishop Curley as one of the greatest authorities in the Nation on Spanish affairs.

Once more in Europe in the summer of 1939, the Maryland educator traveled throughout the Balkans. World War II broke out while Dr. Thorning was a guest of the bishop of Nice on the French Riviera. Upon his return to America, he predicted the fall of Adolf Hitler. Years previously, in a notable series of articles in "America," Dr. Thorning had furnished the first systematic, scientific exposé of Hitler and nazism (1931). Indeed, his piece on "Five Years of Hitlerism" had been featured by the religious news service of the National Conference of Christians and Jews in 1938. Dr. Thorning, in the early thirties, had also written the longest series ever to be published in "America" on the program of Soviet collectivism for the United States.

Upon the conclusion of the Spanish civil war in 1939, Dr. Thorning was awarded the rank of knight commander in the Order of Isabella the Catholic. His articles on Spain and about other European countries had been publicized from Bombay, India, to Brisbane, Australia. One result was that the Historical and Geographic Institute of Brazil, upon the death of Prof. Percy Alvin Martin, of Stanford University, unanimously elected Dr. Thorning as its one honorary fellow in the United States. At the same time, he was nominated as a director of the American Peace Society, associate editor of "World Affairs," and a fellow of the American Geographical Society.

Throughout the summer of 1941 Dr. Thorning served as director of the first inter-American seminar to South America, with headquarters at the University of San Marcos, Lima, Peru. The next year he established inter-American seminars at the National University of Mexico and the University of Havana, Cuba. One result was a unique distinction: Dr. Thorning was awarded the degree, doctor of divinity, honoris causa, by the Catholic University of Chile, a pontifical institution. It was the first award of this dignity to a North American. Simultaneously the Republic of Ecuador conferred its national decoration, the Order of Merit. This decoration was given at the hands of His Excellency Don Galo Plaza, then Ambassador and subsequently President of the Republic.

In February 1948 Dr. Thorning was a guest of the Venezuelan Republic for the inauguration of Don Rómulo Gallegos in Caracas. While in Venezeula on this visit, and on other occasions, he explored the archives of the National Academy of History.

In the summer of 1949 Dr. Thorning made the midshipman cruise to Europe, as a guest of the U.S. Secretary of the Navy, on the battleship U.S.S. *Missouri*, flagship of Task Force 61. In this capacity he was invited by Rear Adm. Allen E. Smith, commander of the task force, to preside as chairman at the daily 2-hour seminar on conditions in France, the United Kingdom, Belgium, the Netherlands, Italy, and the Iberian Peninsula.

In February 1950, as a guest of the Republic of Haiti, Dr. Thorning attended the International Exposition, celebrating the 200th anniversary of the founding of the Haitian capital, Port-au-Prince. Subsequently he was awarded the national decoration of the Republic, the Legion of Honor and Merit.

In 1951 Dr. Thorning was appointed to serve as an official member of two U.S. special diplomatic missions, the first for the inauguration of President Getulio Vargas in Rio de Janeiro, Brazil, and the second for the inauguration of President Anastasio Somoza in Nicaragua.

Nineteen hundred and fifty-two was signalized by the publication of Dr. Thorning's

most recent book, the biography of Don Francisco de Miranda, precursor of South American freedom and independence. "Miranda: World Citizen" had a preface by Sumner Welles and the introduction by Galo Plaza, President of Ecuador. In his preface, Sumner Welles wrote as follows:

"I regard this biography of Francisco de Miranda by Dr. Joseph F. Thorning as an immensely valuable contribution to the cause of inter-American understanding."

Twice in 1952 the editors of the New York Times book review described "Miranda: World Citizen" as "one of the outstanding books of the year." This life of the fabulous Miranda, published by the University of Florida Press, is now in its second printing.

On June 19, 1950, at colorful ceremonies on Constitution Avenue, Washington, D.C., Dr. Thorning gave the invocation, dedicating the beautiful bronze figure of José Gervasio Artigas, champion of Uruguayan independence. This program, heard on the Voice of America, included speeches by Ambassador José Antonio Mora, now Secretary General of the Organization of American States, Dr. Alberto Lleras Camargo, now President of Colombia, Bogotá, Colombia, and the then U.S. Secretary of State Dean Acheson.

In 1953, Dr. Thorning was a guest in Europe of Congressman Thurmond Chatham of North Carolina, a distinguished member of the Foreign Affairs Committee of the U.S. House of Representatives. Together they visited Spain.

In 1954, at the 10th Pan American Conference, Caracas, Venezuela, Dr. Thorning acted as special adviser to the chairman of the U.S. Senate Subcommittee on the American Republics, the Honorable BOURKE B. HICKENLOOPER, of Iowa.

In 1955, at the request of several leaders of both Parties in the U.S. Congress, Dr. Thorning made a survey of social and economic conditions in all the Republics of Central America: Panama, Costa Rica, Nicaragua, Honduras, El Salvador, and Guatemala. In the meantime, he had been awarded several more high National decorations: the Order of Francisco de Miranda (Venezuela); the National Order of the Southern Cross (Brazil); The Cross of Boyacá (Colombia); and the Order of Carlos Manuel de Céspedes (Cuba).

Upon the reestablishment of full diplomatic relations between the United States and Spain, the Spanish Government awarded to Dr. Thorning two of its most coveted decorations for his outstandingly brilliant leadership in the cause of friendship; The Grand Cross of the Order of Isabella the Catholic and the Grand Cross of the Order of Alfonso the Wise (Spain's highest award for cultural achievement).

In 1956, with White House approval, Dr. Thorning served as an official member of the U.S. delegation, headed by Vice President RICHARD M. NIXON, at the inauguration of the new President of Brazil, Juscelino Kubitschek.

Two months later, Dr. Thorning was invited by His Excellency, the Most Reverend Octavio A. Beras, Archbishop Coadjutor of Santo Domingo, to be a delegate and spokesman for North America at the closing session of the International Congress on Christian Culture for the Peace of the World.

In 1957 he was asked to lecture in the National War College on "The Role of Latin America in the Free World Coalition."

For 15 consecutive years, Dr. Thorning has been invited by the U.S. Congress to deliver the invocation to start Pan American Day in the Capitol. On these occasions, he has been hailed by U.S. Senators and Representatives as "a great American and a man of God." It was Senator MIKE MANSFIELD, who characterized Dr. Thorning with the title which has now become popular, "The Padre of the Americas." Few inter-American functions in Washington are complete without his presence.

Recognizing New Dictators

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Recognizing New Dictators," written by Constantine Brown, and published in the Washington Evening Star of April 14, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECOGNIZING NEW DICTATORS—NEWSPAPER EDITORS' INVITATION TO CASTRO TO SPEAK IN WASHINGTON IS CRITICIZED

(By Constantine Brown)

Fidel Castro, self-appointed Prime Minister and supreme boss of Cuba, will be given the same treatment of unofficial courtesy which the State Department gave Soviet Deputy Premier Anastas Mikoyan.

Both have bloody hands—Mikoyan from tens of thousands of Hungarian freedom fighters; Castro from the blood of many innocent Cubans.

It is barely conceivable that, burdened by responsibility and anxious to maintain his position of power, Prime Minister Castro eventually may change and become "just another Caribbean dictator" and forget his leanings toward the political and social doctrines of Marx, Lenin, and Stalin.

Castro's predecessor, Fulgencio Batista, started his dictatorial career as a revolutionary whose heart was bleeding as much for the underprivileged masses as that of Castro. The signal for the revolution was given when President Machado ordered a cavalry regiment to ride over strawberry patches belonging to independent growers who were competing with the personal friends and supporters of the dictator. Then (in 1933) as now Moscow agents were roaming the islands and inciting people to arson and murder.

Washington recognized the new regime in Cuba at that time because the man who brought about the revolution, Cavalry Sergeant Fulgencio Batista, held no official position in the newly formed government. It was 7 years later, in 1940, that he became Cuba's President. Thus in recognizing the revolution which threw out the ruthless Machado-de Cespedes administrations, we did not depart officially from our policy of having no truck with dictators or military juntas.

The fact that Batista had no official role (although we knew he ran Cuba) enabled us to recognize the new regime without losing face. In those days the American Government was less prone to adopt the expediency policy in its foreign relations. It had just been decided to recognize the Communist Government in the Soviet Union because, it was said, the blood on the hands of its rulers had long ago dried up. But the men in the State Department and White House would not dream of clasping hands with rulers whose hands were still dripping with the blood of their victims who preceded them in office.

The tenets of morality of the administration in Washington and for that matter, judging by the invitation extended to Fidel Castro by the American Society of Newspaper Editors, also of the American people have changed in the last quarter century. Our Government has definitely adopted expediency as a policy in its dealings with foreign governments.

The old inflexible rule that you don't deal with murderers who become monarchs or presidents of republics is being abandoned. The yardstick for recognition is now expediency—and that is frequently misjudged by domeheads in the State Department who write policy papers. The most blatant example is that in Iraq last summer when we recognized the regime of the murdering gang of Gen. Abdul Karim Kassem within a very few days after the bodies of our loyal friends, King Faisal and his top advisers, had been thrown in a ditch. The explanation given by our policymakers was that Kassem might not become a tool of international communism and if we handled him properly might remain in the Baghdad pact.

The present developments in the Middle East show how pathetically wrong were those who urged quick recognition of the Iraqi regime. When we rushed with equal speed to recognize Fidel Castro, we merely followed the new pattern of expediency rather than political morality. At the present time the free and Communist worlds alike recognize that this is the modern trend. The actions of governments do not, however, always reflect the feelings of the people. It is for this reason that the invitation extended to Castro by the American Society of Newspaper Editors is regarded as more important than the recognition of the Cuban dictator by the American Government.

Newspaper editors do not have to adopt expediency in choosing the honored guests who will address them. They can afford to be highly selective. The fact that Castro may be news is no argument in favor of inviting him. These men who are the greatest force in molding American public opinion do not need to make sensational headlines at their yearly meeting.

The editors' reception of Fidel Castro will reverberate all over the seething, restless, and strife-ridden Southern Hemisphere where Khrushchev is now trying so hard to make hay.

The Berlin Crisis

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "The Berlin Crisis," given by the Honorable Adlai E. Stevenson on March 5, 1959, in Boston, Mass. He rightly insists that our greatness as a nation is being tested in Berlin. I also agree with him that the Democratic Party, as a responsible opposition, should help to give a sense of direction to the American people in this crisis, a vital task which the administration has failed to perform.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BERLIN CRISIS: A FOCUS FOR NEW GREATNESS

(Speech by Adlai E. Stevenson, attorney; presidential candidate of Democratic Party 1954, 1958, delivered at a dinner meeting, Boston, Mass., March 5, 1959)

We meet as Democrats, but the grave crisis in Berlin reminds us again that we must think as Americans, indeed our parties exist and should exist only as they serve the Nation.

After so much peace talk and propaganda, the Russian leaders have set the stage for another showdown in Berlin—the one place in Europe where the Western Powers are at an extreme tactical disadvantage.

The Soviet plan to maneuver the western garrisons out of free Berlin was first thrust at us in such an uncompromising and abrupt manner that one could well question whether negotiations with Russia at any level could be anything but fruitless. Not only were Mr. Macmillan's quiet efforts to sound out Russia's intentions drowned in a tirade of abuse and threats, but senior Russian officers chose this moment to boast of Russia's superiority in death-dealing missiles, and even the talks at Geneva on the control of atomic testing have, at this very time, reached a deadlock on the key issue of inspection.

All the talk of peace, of relaxing tensions and of better relations hardened into cold, uncompromising willfulness and power.

What purpose is served by this sudden return to the brutal hostilities of the cold war? Are such threats and bullyings the language of responsibility when the survival of humanity is at stake? Has Mr. Khrushchev no compassion for the feelings and the fear in so many human hearts? This was not the language of a man of peace. It was the deadly old jargon of the man of power.

But now, in the last few days, another miraculous and sudden change in the Russian climate has taken place, and we are assured that this tough talk was only for campaign purposes. I haven't noticed that the Communist Party needed much help in Russian elections.

And I get cold comfort from the Kremlin's fleeting flirtations with sweet reason. This isn't a time for capricious talk and arbitrary positions by anyone, let alone the heads of states charged with preserving peace. And we are all grateful to Mr. Macmillan for his contrasting restraint, open-mindedness and firm dignity during his trying visit to the Soviet Union.

But why has this crisis been thrust upon us? Why is Mr. Khrushchev stubbornly insisting on his unilateral solution of the German problem? Why is he taking risks of such enormity?

I wonder if the dictators in the Kremlin could be making the mistake that has destroyed nearly all the tyrants of this time—the mistake of underestimating and misunderstanding their opponents. Has Mr. Mikoyan taken back from America the impression of a people enervated by comfort and the foolish slogans of peace and prosperity? Has he mistaken the voice of free debate for the expression of doubt and division?

I talked with him when he was here and detected no such confusion. But if this is by any chance an element in the Russians' sudden disregard for all save their own interests, let me add my voice at once, with all the energy and conviction that I can command, to warn them not to drive this Nation too far and not to mistake the underlying temper of our people.

The memory of Hitler is much too fresh for citizens in this country, whatever their political convictions, to believe that knuckling under to threats can pave the way to a lasting settlement. Munich was the prelude to total conflict, not to "peace in our time."

I would plead with the Russian leaders to remember their own terrible experience with appeasement of Hitler—or to recall the more recent miscalculation which sent North Korean troops into South Korea in the belief that the Americans, once out, would never come back.

These are not partisan memories in America. They are the very stuff of our most recent historical experience. When the President says we will not give in to force, he speaks for all of us. I pray that there are no illusions in Moscow on this vital score.

But Russia's new pressure may not spring simply from a miscalculation of the American mood. I believe the men in the Kremlin also suffer from some acute political compulsions which may be driving them to bring the situation in Germany to a head.

The satellite empire in Eastern Europe is unstable. Tito's declaration of independence is now 10 years old. The East German outbreak of 1953, the riots in Poland and the Hungarian revolt of 1956 point to the insecurity of these minority Communist governments and the whole Soviet position in Eastern Europe.

Whatever the other reasons for precipitating a crisis over Berlin, it doubtless reflects their fear that this island of freedom through which tens of thousands of Germans flee from East to West creates a special degree of instability in a generally unstable area.

For this reason, I trust that we shall not show too much unwillingness to negotiate at the summit or at any other level. In the critical field of popular support we play from strength in Europe. No bayonets prop up Western governments. They are rooted in the assent of the peoples. But in uneasy Eastern Europe only Soviet military dominance insures Moscow's control.

Don't we have a supreme interest in reducing that control by gradual withdrawal of Russian forces? Have the Eastern European countries any other hope of national freedom? Don't we in the West—and I include West Germany—have a supreme interest in exploring new ideas on the possible future shape of a European settlement?

WITHDRAWAL HELD UNLIKELY

Because of the dependence upon their garrisons in Eastern Europe, I doubt if the Russians will negotiate seriously on the possibilities of withdrawing their forces. But if, despite all their protestations and propaganda about peace, self-determination of peoples, and noninterference, they dare not risk serious negotiation, we shall at least have recovered the initiative and made clear our own readiness for a more stable and hopeful settlement.

While under no circumstances will we forsake the people of free Berlin or compromise on the question of free access, we must face the fact that no Russian withdrawal can be secured without a modification of the Western position. In order to take, we will have to give. And one must equally face the widespread fear in Western Europe that any search for an alternative to the status quo ultimately entails a total American retreat—back to isolationism and "fortress America."

We cannot dismiss this sense of insecurity, especially among our good friends in West Germany. But I wonder whether this fear of American withdrawal from Europe and its affairs is not becoming a real enemy to thought, maneuver, and flexibility on the Western side?

Actually, in the age of missiles, supersonic flight, and Lunik, the concept of "fortress America" is wholly obsolete. We cannot escape the human situation. It involves us all. The America of 1959 is not the America of 1939. And the deterrent in Europe today is not just the six American divisions stationed in Germany, but the knowledge that a Russian attack means retaliation by America's Strategic Air Force.

The Russian leaders must know this. And I would urge them to ponder the Korean crisis of 1950. In that case, in a genuine effort to reduce tension, America withdrew its troops. The Communists misread the signals and evidently took this for an expression of American disinterest. But the North Korean invasion brought America promptly back—fighting.

Though Korea is, in contrast, of marginal strategic importance, the American response was clear and immediate. Who can suppose it would be less so if the vital security of Europe were at stake?

I repeat, I do not believe we Americans can ever again stand aside while aggression attempts to take history by force. We are involved permanently in mankind's efforts to evolve a workable security system, and our concern is far too deep rooted to depend only upon the location of American soldiers. Any negotiated settlement in Europe would have behind it the full weight of American commitment and the full strength of our arsenal and our economy. In the missile age, Fortress America is no more.

So I would say: Let us yield nothing to force in this Berlin crisis. But I don't think the issue of who stamps the passés is important.

If the Russians hand over their control functions to the East German government or sign a separate peace treaty, I cannot see that any great harm is done. The East Germans are so blatantly and totally dependent upon Russian military support that no ceremonial dickering about their status or functions will change them from puppets, as someone said, "even to puppies."

I am reminded of the Finnish Communist Republic established by Stalin, which so failed to command popular support that in the end the Russians forgot about it, too.

Any interference with the West's freedom of access to Berlin must be understood by the Russians to entail the risk of war. But, with this position clear, let us seek to explore with the Russians the possibility of a settlement in Europe less unstable and explosive than the present situation—one that gives some hope to the millions from the Baltic to the Black Sea who yearn for freedom again, one that is based upon the tremendous asset of freedom as a popular force, and one that is finally rooted in America's lasting commitment to Europe, whatever the local pattern of security may be.

I would hope that in this supremely difficult time, when Secretary Dulles' illness has deprived our Government in Washington of its only active practitioner in the field of foreign policy, that the Democratic Party, as a responsible opposition, would use its influence to focus public opinion to make good the perilous deficiencies of the executive branch and provide a little of the leadership an uninformed and bewildered public so desperately needs.

I would trust that our distinguished Democratic leaders in the Senate would consult together and bring their collective weight and wisdom to bear responsibly on the crisis. This opportunity for a demonstration of party responsibility is matched only by the urgency.

We are fortunate that we have a number of Democrats in Congress, like Senator FULBRIGHT, with exceptional experience and wisdom in foreign affairs. And I trust that the administration too will draw upon these resources at this time so that we can face what may be the greatest test of this decade in a mood of national determination and unity.

The months ahead are far too grave for partisan bickering or for personal competitiveness in political influence. I believe the

whole country would respond to a Presidential lead, telling us of both the danger and the opportunity we face. And, if the administration is silent, let us, as the loyal opposition, speak with all the gravity and wisdom that we possess.

This crisis can still be a focus for new greatness. And the greatness of America is the greatest purpose of our great party.

Community Enterprise at Grassroots Builds Portland, Oreg., Zoo Railway

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. NEUBERGER. Mr. President, many of us in the Federal Government are continually encouraging action at the grassroots level to combat juvenile delinquency, to provide healthful recreation, and to stimulate interest in scientific and technical devlopments.

All three of these goals have been attained by my home community of Portland, Oreg., in its construction and expansion of the Portland Zoo Railway, which will be the most elaborate and farflung recreation railroad ever built in our land.

The city government, business firms, labor unions, schools, and civic organizations all have cooperated to launch this undertaking. In addition, some 20,000 local people have purchased shares of stock in the enterprise; many of these are children, making an investment for the first time in their lives.

Business Week magazine for March 28, 1959, has published a most comprehensive and thorough description of the history of the Portland Zoo Railway. Furthermore, I myself wrote an article about this extraordinary project for the issue of Railway Progress magazine of January 1958, under the title "Portland Builds a Railroad." The Business Week article is entitled "A Railroad So Popular It Must Expand."

Indeed, expansion has occurred even since the Business Week article was printed. The vast Weyerhaeuser Timber Corp. has agreed to build a fire train for the Portland Zoo Railroad system, which traverses magnificent stands of fir and cedar forests. The Portland Trust Bank has loaned $20,000 to the Portland Zoological Society for enlargement of the railway, and no security was demanded. Charles Francis Adams, president of the bank, has described the action as welcome because his institution desires loans which are good for the customer, good for the community and good for the bank. A loan to the Zoo Railway is in that category.

The 104th Infantry Division, of the U.S. Army Reserves, has agreed to construct two-thirds of a mile of track for the Zoo Railway at the Oregon Centennial Exhibition and Trade Fairgrounds, for this is a prime feature of our State's 100th year. The commander of the division, Brig. Gen. Eugene Cushing, will bring 200 men to tackle the job as a training exercise. General Cushing is arranging for division chaplains to conduct Catholic and Protestant services to be held at the centennial rail track site Sunday, April 19.

Advising and assisting the soldiers in the track laying will be executives of the railroads serving Portland: The Southern Pacific, Northern Pacific, Union Pacific, Great Northern, Spokane, Portland & Seattle Railway, Northern Pacific Terminal Co., and Portland Traction Co. These rail men will be led by John H. Jones, manager of the Northern Pacific Terminal and president of the Portland Zoo Railway.

Assisting also will be members of the Construction and General Laborers' Union, Local 320, and the Brotherhood of Maintenance of Way, AFL–CIO.

Approximately 3,000 crossties have been donated to the Portland Zoo Railway by the Templeton Lumber Co. of Portland, of which Herbert A. Templeton is the president and moving spirit. This was arranged by Bert Thomas, vice president of the Valsetz Lumber Co., a division of the Templeton lumber holdings. These ties are now at Valsetz, Oreg. They will be loaded in freight cars and hauled without charge to Independence, Oreg. From that point the Portland Zoo Railway will bring them to Portland.

The Oregon Building Congress, a group of contractors, suppliers, labor leaders, architects, engineers, and others interested in the building industry have voted to join with the Portland Zoo Railway in designing and building a 250-foot glulam bridge over a scenic ravine north of the new bear grottos. This bridge, supported by two large wood arches, will be 40 feet above a series of pools housing waterfowl. The bridge will provide a truly beautiful and spectacular feature of the Portland Zoo Railway route. Completion of the bridge, a part of the Washington Park line, is slated for August 1, 1959.

I have cited all these accomplishments and donations, Mr. President, because they demonstrate what can be attained at the local level by public-spirited people, whether they are in industry and management or in the ranks of trade unions and organized labor.

So that a record may be compiled of the unselfish and altruistic community interest in the Portland Zoo Railway, I ask unanimous consent to have printed in the Appendix of the RECORD the article published in Business Week of March 28, 1959, on this unique project and my own article published approximately 1 year earlier in the pages of Railway Progress on the same general subject.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Business Week, Mar. 28, 1959]

A RAILROAD SO POPULAR IT MUST EXPAND

From the Aberdeen & Rockfish to the Zug Island Road, it takes 14 columns of fine print to index all the transportation lines whose vital statistics appear in the fat monthly Official Guide of the Railways. Nowhere in the list, though, is the Portland Zoo Railway, despite the fact that in Portland, Oreg., union station its emblem enjoys equal prominence with those of the five major railroads serving the city.

The Zooline, a strikingly uncommon carrier that's an exception to almost every contemporary railroad rule, currently traverses half a mile of realistic 30-inch gage track in the new municipal zoo at Portland. More roadbed and rolling stock are soon to come.

OPPOSITES

It sounds slightly Lilliputian, yet in its own small way the Zooline represents an achievement to make the harried brass of the class I roads take note.

While most railroads are disconsolately dropping runs or ripping up track altogether, the Zooline is aggressively laying new iron and ordering new equipment, to add to a system that first went into operation only last June.

Against an earnings picture of the most unmitigated gloom on the grownup roads, the Zooline figured 1958 revenues at $9.70 a mile, though its accounting procedures might not pass muster with an ICC auditor.

While more and more of the rails advertise "freight service only," the Portland Zooline is designed exclusively for the delight of passengers.

PITCHING IN

The effort that went into creating Portland's Zoo Railway had all the community participation of an oldtime small town quilting bee, though Portland, at 404,000 population within the city limits alone, is far out of the quilting bee class. Businessmen donated cash and time, industrialists contributed facilities and manpower, and ordinary citizens even doubled as "gandy dancers" to pound spikes and set rails.

The same spirit is continuing as the line expands and as it ties in with next summer's celebration of the Oregon Centennial, the 100th anniversary of statehood.

HOW IT BEGAN

At the outset, the railroad was only an incidental feature of the plans for Portland's new zoo, for which the city's voters approved a $4 million bond issue in May 1954. The new zoo was to replace a cramped, moth-eaten layout, and mainly because the sponsoring Portland Zoological Society included one or two rail buffs, the budget included $25,000 for a recreational railroad.

From the beginning, perhaps the prime mover has been 53-year-old Edward M. Miller, assistant managing editor of the Oregonian, Portland daily, and a quietly ardent aficionado of the rails.

Miller's first step was to arrange a study of recreational railroads in operation all around the country—from Seattle to Spartanburg, S.C., Sunbury, Pa., and St. Louis. The findings: Most lines were both popular and profitable especially those elaborate enough to appeal to adults as well as children.

WIDENING PLANS

This report contributed to the decision that a $25,000 toy train such as usually featured in zoos just wouldn't do for Portland. Anyway, Miller and cronies felt a bigger layout would be more suitable for the hilly, fir-studded terrain on which the zoo was to be built.

About this time, Miller cautioned the zoo architects that eventually they would be designing the zoo to fit the railroad, rather than vice versa. "They laughed when we first warned them about that," recalls Miller, "but they soon stopped."

BABY AEROTRAIN

After a design competition among Portland architects and engineering firms, rail planners selected a proposal from Northwest

Marine Iron Works, a maker of sawmill and heavy machinery and heavy marine engines. Northwest Marine's staff included a mechanical engineer, John Flaschner, with experience in rail equipment manufacturing in his native Hungary. Flaschner worked up drawings for train roughly half the size of an ordinary passenger train, to run on 30-in.-gage track (standard gage: 56½ in.).

The diesel locomotive was a scaled-down version of General Motors' experimental Aerotrain, and it was to trail four passenger cars topped with clear plastic for unobstructed views. Inside, there would be room for 99 adults or 132 children.

To go along with the train, the zoo architects shuffled bear pits and monkey houses to provide room ultimately for 6,460 feet of right-of-way through the grounds, with tunnels, trestles, stations, a shop, and sidings. All told, train and track, the system would cost $280,000.

HELP WANTED

Northwest Marine agreed to build the train at cost, and a Portland fabricator, Hirschberger Sheet Metal Co., went to work making the locomotive and car bodies.

It was an ambitious program, considering that originally only $25,000 had been allocated for the Zooline. But Miller and Stewart H. Holbrook, Portland author, already had a plan. Forming the Portland Zoo Railway Co., they invited brass of regional railroads to lunch and made their pitch. "Railroads are becoming more and more a legend in the popular mind, less and less a living reality," said Miller. "Why not help us build in Portland a recreational railroad for children which they will never forget?"

Railroad executives are traditionally conservative, but the Portland group was moved by Miller's plea. To work with the Zooline, they tapped Jack H. Jones, manager of Northern Pacific Terminal Co., jointly owned by Northern Pacific, Southern Pacific, and Union Pacific, which runs Portland's passenger station and surrounding yards.

MAN OF ACTION

Jones took over as president of the Zoo Railway. At the time, there was doubt whether the initial stretch of track—half a mile with loops at each end, to make a one-half ride—could be finished in time for the proposed opening in June 1958.

The Terminal Co. shops turned out two 30-inch-gage cars for a work train. Miller and Jones found a 30-inch-gage diesel logging engine rusting in the yard of Portland Machinery Co. With a new cab and a coat of red paint, the diesel became "Casey Pioneer" and started hauling the work train.

Then Jones organized "Gandy Dancer Day," with hundreds of Portlanders volunteering to help lay track. The pace still wasn't fast enough; so crews of real-life gandy dancers quitely appeared.

Jones also recruited other railroad brass to the Zooline. Frank Landsburg, an ICC inspector, became safety director—and, thanks to his official Government inspection, brought a big reduction in liability insurance rates. Other volunteer executives flocked to the Zooline from the Southern Pacific, Union Pacific, Northern Pacific, Great Northern, and Spokane, Portland & Seattle.

MORE TRACK

No sooner was the Zooliner first in operation than attention turned to an extension through virgin timber along steep slopes, with spectacular views, to the city's Washington Park, which adjoins the new zoo tract. There wasn't any money to pay for it, but the Southern Pacific donated 40 engineering man-days to map a route. Then the Spokane, Portland & Seattle provided a detailed engineering study worth $5,000. James Yost, Inc., general contractors, volunteered to do the work for just the cost of labor.

To begin meeting Yost's weekly payroll, the Zooline started issuing stock—at $1 a share, offering as dividend two free rides when the extension was complete. Bartenders in all of Portland's taverns wore engineer's caps and peddled the stock to patrons; schoolchildren canvassed neighborhoods.

FREE BALLAST

The Cinder Hill Co., of Prineville, Oreg., gave 2,500 yards of ballast, which the railroads hauled to Portland free in cars loaded by Prineville and neighboring Redmond. In return, every youngster in grade schools of the two cities got a free share of Zooline stock.

With all this help the Zooline finished the right-of-way and laid almost 3,700 feet of track on the extension before winter rains halted work.

CENTENNIAL TRAIN

The next scheme was a train for the 100-day Oregon Centennial next summer. At the celebration it would bring revenue to the Zooline; later, the rolling stock could be used on the Washington Park route.

For this train, George Burton, a service-repair supervisor in a Portland radio, TV, and music store and a leader of rail-fan groups, is building a replica of a classic old steam locomotive from authentic drawings. Fellow rail buffs are helping in the labor, and all of Portland's foundries are contributing parts. Five cars similar to those on the first Zooliner are under construction at Northwest Marine Iron Works and Hirschberger.

To cope with an expected flood of passengers, the Zooline plans to put still another train on its home track by summer—this one built around the Casey Pioneer work locomotive. Hirschberger is doing the job for $6,000—"cash when he catches us," says Miller.

BONANZA

Miller is still sketchy about where all the money will come from, but he exudes confidence nonetheless—as well he might, from the results of the original Zooliner's first 80 days of operation last summer.

The figures are such as few professional railroaders ever see: in 80 days 107,000 paying passengers and a net profit of $5.61 per mile on revenues of $21,339. Even though this doesn't take into account capital costs, depreciation, or all the free services, it still gives the Zooline every reason to believe its passenger business is here to stay.

[From Railway Progress, January 1958]

PORTLAND BUILDS A RAILROAD

(By RICHARD L. NEUBERGER)

In his recent autobiography, Bernard M. Baruch, adviser to Presidents, has told how the sight of expresses and fast freights highballing through his native Camden, S.C., invariably instilled in him a youthful desire to be the owner of the Southern Railway.

My own boyhood ambitions followed a more modest scale. Watching Union Pacific, Southern Pacific, and Great Northern Mallets coping with our rugged Oregon mountain grades, I decided that sometime I might qualify to be a brakeman, conductor, or even an engineer.

These yearnings, alas, always remained unrequited. For one reason or another, I never became a railroader. Now, however, there is to be some belated measure of compensation. At the ripe old age of 44, I have been invited to serve on the board of directors of a railroad. Even though it is of only 30-inch gage, the blare of air horns trills in my ears and the smell of diesel fumes twitches my nostrils. Despite the railroad's projected total length of a mere 2½ miles, I already feel the earth quavering to the rumble of its locomotives. Perhaps the personal satisfaction is so great because this railroad will carry the most precious cargo of all—children.

My home city of Portland, Oreg., where I was born and raised, is undertaking to build and operate the most elaborate and picturesque home-sized railroad yet planned anywhere in the United States. It will be part of a brandnew zoo in the city's fir-mantled hills, so our system is officially known as the Portland Zoo Railway Co.

No railroad, large or small, was ever more of a community project. Leading citizens are raising funds for its completion. Railroad management and labor in the Portland area are contributing both work and materials, as well as general operating wisdom and know-how. Manufacturing firms are producing the motive power and rolling stock at cost. This spontaneous voluntary effort has been necessary because Portland, a city of 400,000 residents, is constructing a zoo rail route far more elaborate than that ever attempted by metropolitan centers with 10 or 12 times Portland's population.

To begin with, the 30-inch gage is no toy. Railway Progress has reported that jungle products of India and Ceylon are hauled on some 2,000 miles of actual operating railroads of this slender width. Furthermore, the 2½ miles of Portland Zoo trackage, while no threat to the Pennsylvania or Santa Fe in length, will actually outdistance the only other two major recreational systems in the country which might be considered its rivals—Disneyland, near Los Angeles, and the Detroit Zoo railroad.

The first stage of the Portland Zoo Railway is now nearing completion. This is 1¼ miles of track looping around the new zoo, plus a sweep to be added through primitive forests of conifer trees and up the ramparts of a wooded canyon. As income is collected at the ticket office, another 1¼ miles will be thrust into the most densely timbered solitudes which stockade the city limits of any community in the United States.

The train penetrating these scenic surroundings will be of substantial proportions. The locomotive, patterned generally after General Motors' Aerotrain, will haul three streamlined coaches and a club car in which soft drinks and ice cream can be served. Each car will have a capacity of 24 adults or 32 children. Length of the entire train will be 112 feet, 9 inches. The 24-foot locomotive will weigh 12,000 pounds and develop 140 horsepower. It will be held by a governor to a maximum speed of 15 miles an hour, because some of the track will go over high viaducts or along the sides of steep ravines. Dead-man controls will bring the train to an automatic stop in the event of sudden emergencies.

Perhaps because children all over the State of Oregon are thrilled with the prospective completion of their railroad, high-priced talent has been put at the disposal of the Portland Zoo Railway Co. on either a volunteer or at-cost basis.

Certain unusual aspects of this extraordinary little railroad have required that the train be built locally. Portland's damp climate, refreshed with rainstorms from the Aleutians, called for cars with glass roofs of the vista-dome variety rather than the open-type coaches in vogue at California's sunny amusement parks. The spectacular but hazardous right-of-way dictated a gage wide enough to eliminate dangerous spills. Interviews with small fry ruled out locomotives which looked like steamers. "We want diesel streamliners," said they and it was evident from their tones that anything less would have an adverse influence upon patronage.

So the zoo train is being constructed in Portland, according to these and other special stipulations. An iron works and a sheet-metal company are combining to handle the job on a nonprofit basis. Cost to the

zoo fund will be approximately $60,000. If the train were manufactured by Northwest Marine Iron Works and Hirschberger Sheet Metal along conventional fiscal lines, the expenditure would amount to at least $100,000. Locomotive and cars have been designed by a rail enthusiast named John Flaschner, who fled to America from the tyrants and barbarians invading his native Hungary. In Budapest he had worked as an engineer for a firm building trains for the export market. Rolling stock which took shape on Flaschner's drafting board is still in service on South American and African railroad lines.

With such men as Flaschner placing their talents at the disposal of the little zoo railroad, help began to come from other sources. L. R. Smith, Portland superintendent of the Southern Pacific's extensive operations in Oregon, put one of his regular survey crews to work locating the right of way for the extension through the stately forests surrounding the zoo. This spared the fund of the children's railroad at least $1,500. A manufacturing firm in distant Los Angeles agreed to fabricate the switch frogs for the entire system without any payment at all, which represented a saving of $1,000. Bricklayers from the building trades unions put trowel and mortar to thousands of bricks at the zoo while foregoing their wages, and much of the building material was presented as a gift by local suppliers.

Two men have been principally responsible for organizing this kind of participation. One is J. H. (Jack) Jones, manager of the Northern Pacific Terminal Co., who serves as president of the Zoo Railway. The other is Edward M. Miller, assistant managing editor of the Portland Oregonian, the newspaper which recently won a Pulitzer prize for exposing alleged criminal elements in certain labor unions. Miller, one of the mayor's civic appointees to the Portland Zoo Commission, is a zealous railfan who would rather travel by train than via Cinderella's coach-and-four. Before the first bulldozer ever had cleared ground for a bear pit or tiger grotto, he decided that the majestic terrain was ideal for America's finest recreation railway. To make this possible in spite of the limited population and financial resources of the community, Miller had to enlist an immense quantity of volunteer skills and equipment.

The newspaper executive rallied to his cause Jack Jones and other local railroaders by stressing one theme consistently. "Look," Miller would tell them, "fewer people every year have direct contact with railroads, as travel by airplane and private automobile increases. This means railroads are becoming more and more of a legend in the popular mind, less and less a living reality. Yet trains have great dramatic impact on people. Why not help us build in Portland a recreational railroad for children which they will never forget? It not only will have a profound effect in our own State of Oregon, which is an important source of raw materials to be hauled eastward, but its fame will radiate throughout the land. And the children thus thrilled and entertained will some day be the shippers of this country's freight. • • •"

"I decided Ed Miller was about 200 percent right," said Jack Jones, "and that's why I agreed to become president of the Zoo Railway. I also decided that, if I were the head of a big system myself, I would endow children's lines in zoos and parks all over the United States, with the colors and emblems of my own particular system very much in evidence. What better way to make an impression on the next generation of Americans?"

As head of the Northern Pacific Terminal Co., Jones would have to feature a chameleon's multiple colors to please all his bosses. The system, which operates 100 miles of track in or near Portland's Union Station, is owned jointly by the Union Pacific, Southern Pacific, and Northern Pacific Railroads. When the Portland Zoo picked up $4,000 at the Oregon State Fair in Salem with an exhibition, Jones provided one of his railroad-section gang crews to erect and dismantle the zoo's tents. He also persuaded the Spokane, Portland & Seattle Railway to haul to the fair the first car fabricated for the zoo train.

Another railroad celebrity whom Ed Miller has recruited for the forested zoo system is Stewart H. Holbrook, the noted Oregon author who specializes in books about Americans and American folklore. One of his most heralded volumes, "The Story of American Railroads," has been a persistent seller ever since it was first published in 1946. Holbrook, who will be chairman of the board of the railroad, contemplates an imposing list of officials, ranging from general superintendent to chief of redcaps. These will stem predominantly from the ranks of railway management and labor in Oregon.

Although all of these individuals long ago grew to manhood, they are deriving great nostalgia at present from seeking a name for the zoo train and an official medallion for the zoo railroad. Designer Flaschner favors Bluebird for the domeliner which will swoop through the fir glades. The first medallion featured a jolly elephant in an engineer's visored cap. This drew some frowns from the Democrats on the board of directors, so a frolicking Bengal tiger was substituted instead. "Anyway," rationalized one of the Democrats defensively, "tigers are cousins of cougars, which are indigenous to Oregon, while elephants don't have a solitary kin among the wildlife of our State."

On June 1, 1958, the most lovingly-created zoo train ever to operate in America will make the inaugural pilgrimage over a recreational route without scenic counterpart anywhere in our Nation. Youthful passengers in the club car of the Bluebird will order their first root beers and Eskimo pies. Some lucky youngster will ride the fireman's strategic seat—at an extra cost of $1 from dad's wallet. Small young faces will dot the glass-enclosed vistadomes as the hillsides and evergreens fleet past.

But the real fun will be enjoyed by all of us adults who watch proudly from the station platform.

Nomination of Lewis Strauss To Be Secretary of Commerce

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Drew Pearson, published on April 12, 1959, with respect to Adm. Lewis Strauss, who has been nominated to be Secretary of Commerce, and Dr. J. Robert Oppenheimer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DREW PEARSON SAYS: "DR. ROBERT OPPENHEIMER, ONCE PURGED BY ADMIRAL STRAUSS, FEELS NO BITTERNESS TOWARD HIS JUDGE AND PROSECUTOR; OTHER SCIENTISTS DO; PRICELESS SECRETS REVEALED TO RUSSIA IN OPPENHEIMER TRIAL"

WASHINGTON.—In Princeton, N.J., the man who built the atomic bomb goes about these spring days as if he had never been subjected to one of the most unfair purges of the McCarthy era.

Dr. J. Robert Oppenheimer is tall, stooped, and thin almost to the point of emaciation. But if he suffers from his past experience he does not admit it. He even jokes about those days when "Lewis," referring to the Chairman of the Atomic Energy Commission who ordered his trial, was his "friend."

There were long, dark hours for the scientist shortly after he was forced to leave the Atomic Energy Commission for "slanting his advice or tempering his professional opinion because of apprehension that such advice or opinion might be unpopular." For months he did not write or speak about his inquisition. But bitterness, if there ever was any, has now gone out of his heart. Oppenheimer does not even feel bitterness for the man who ordered his trial—Lewis Strauss.

All over the United States, however, scientists, who knew Oppenheimer either personally or by reputation, are watching the Senate hearings to ascertain whether the man who purged him will now be confirmed for promotion to Secretary of Commerce. They are watching the Senate hearings because they know that any favorable outcome will mean that Congress puts the stamp of approval on the purge of the man who built the atomic bomb.

SECRETS TO RUSSIA

The details of that purge have now been largely forgotten. They have even grown dim in the minds of Senators. They are still fresh, however, in the minds of scientists. They suffered along with Oppenheimer; they wondered if they would be next.

They especially remember that although Dr. Oppenheimer was completely exonerated of disclosing any secrets, the chairman who tried him, Admiral Strauss, was a party to disclosing a long chain of vital secrets in order to convict the man he sought to purge.

He disclosed:

1. The exact date when Dr. Edward Teller discovered the hydrogen bomb. This gave Russia the priceless means of estimating just how many bombs we could have built since then—in brief, the size of our atomic stockpile. The size of our stockpile is the most carefully guarded secret in the Nation. But for the sake of convicting Dr. Oppenheimer, it was disclosed.

2. The fact that the Air Force had worked out a long-range system of detecting Soviet H- and A-bomb explosions.

3. Various details about the H-bomb which could give Soviet scientists a very clear picture of our important discovery. This again was one of the most carefully guarded secrets in the Nation. Yet it came out during the course of the Oppenheimer trial, revealed in the course of trying to convict him.

4. The fact that we have been able very accurately to analyze Soviet air samples, so we know exactly the type of material the Russians have in their stockpile. This could permit the Russians to change their method of bomb detonation.

Russian intelligence would have spent millions and risked the lives of many to secure this information. Yet all they had to do was read the printed transcript of the Oppenheimer trial.

Today the man whose education, associations, political philosophies, from boyhood to

manhood, were scrutinized and diagnosed in one of the most excruciatingly painful inquisitions held since the days of Galileo, walks about his garden in Princeton, trying to forget the past.

But thousands of other scientists who suffered with him and shunned Government service because of him have not forgotten. They are watching to see whether the Senate promotes the chief judge and inquisitor at the Oppenheimer trial.

Resignation of Walter S. Robertson as Assistant Secretary of State for Far Eastern Affairs

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. BYRD of Virginia. Mr. President, few men have served more difficult positions of our Government with greater ability and honor than Walter S. Robertson of Virginia.

His recently announced decision to resign as Assistant Secretary of State for Far Eastern Affairs has been followed by widespread tribute to his great service.

I desire to join in this tribute and I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Richmond Times Dispatch of April 8, and articles by William S. White, David Lawrence, and Marquis Childs.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Richmond Times-Dispatch, Apr. 8, 1959]

WALTER ROBERTSON PROVED RIGHT

It is seldom that a public official goes out of office with as many tributes to his ability, his dedication, and his integrity as those which are being heard for Walter S. Robertson of Richmond.

Mr. Robertson's announcement last week of his retirement as Assistant Secretary of State for Far Eastern Affairs, effective July 1, would have been noted ere this in these columns, but for the urgent and pressing necessity for extended comment on the Perrow Commission's report and Governor Almond's message dealing therewith.

Walter Robertson's steadfast and unyielding determination to fight Red China with all the power he possesses, is now seen by practically everybody to have been the right policy. That country's brutal and cynical attack on Tibet has opened the eyes of those who for years were inclined to poohpooh Mr. Robertson's clear-sighted realism as "narrowness" or "fanaticism." Even Nehru of India has had his eyes opened.

Columnist William S. White, one of the keenest observers in Washington, paid a glowing tribute to Mr. Robertson in this newspaper yesterday, and David Lawrence called him in yesterday's News Leader "truly one of the great public servants of our time." Marquis Childs, who is as liberal a columnist as Lawrence is conservative, wrote last September that "the administration's policy on China is embodied in one man" (Mr. Robertson), and paid admiring tribute to his "skill, intense conviction and unflagging persistence."

All these qualities were needed as Walter Robertson battled for years against a clique in Washington and throughout the country which was trying to undermine his adamant opposition to Red China and his unyielding support of the Nationalist Chinese on Formosa. What made his struggle doubly exhausting were the recurring ulcers which have plagued him intermittently since he took his present post in 1953.

A less dedicated man would have given up long ago and returned to Richmond, where he could work a normal 8-hour day, instead of remaining at his desk in Washington 12 or 14 hours a day, usually 6 and often 7 days a week.

He says he wouldn't be resigning now, despite his health problem, were he not convinced that there will be no yielding in Washington to Communist China. His confidence in this regard is reassuring, for with Secretary of State Dulles seriously ailing, and Acting Secretary Herter apparently scheduled to take over, many wondered if the policy toward Red China would be as strong as ever. Apparently it will.

This should make it possible for Mr. Robertson to return to Richmond and regain his health, sure in the knowledge that the policy for which he fought so ably—and despite such physical handicaps—has at last been vindicated before the world. The Red Chinese butcheries in Tibet have made that vindication certain.

[From the Washington Evening Star, Apr. 6, 1959]

NONRECOGNITION OF CHINESE REDS—STATE DEPARTMENT LOSING ROBERTSON AS PEIPING SHOWS ITS BRUTALITY ANEW

(By William S. White)

The stoutest defender of one of the most truly rational of the foreign policies of the Eisenhower administration is leaving office just as events are proving how right he has been all along.

Walter S. Robertson is resigning as Assistant Secretary of State for Far Eastern Affairs amid new and overwhelming evidence of the brutality of the Chinese Communist regime of Peiping. The Chinese Communists have driven the young Dalai Lama, the god-king of Tibet, from his homeland. They are baying at him like fierce hounds in the refuge granted to him in India by Prime Minister Nehru.

Mr. Nehru has spent years righteously tuttutting our absolute refusal to make any deal with Peiping. So, unhappily, have most of our allies, though in a less pompous way. Perhaps he is now learning that there has been more to the steadfast American policy of nonrecognition of the bandit regime in Communist China than mere stubborn wrong-headedness. For the implacable Red neighbors toward whom he has been so very reasonable are increasingly unreasonable with him for sheltering their chosen victim.

It is sadly possible, however, that it will require yet another really big Chinese aggression, similar to their aggression against our own troops and those of all the United Nations in Korea, to convince the well-meaning that you can't do business with Peiping.

The departure of Mr. Robertson, therefore, raises special problems, apart from its historic irony. His role, though a sturdy one, could well be overstated; he was not the initiator of nonrecognition, but only its faithful executor.

Basically, it has been the policy of Secretary of State John Foster Dulles and also of a great majority of both political parties in Congress.

All the same, Robertson, a Virginia banker in private life, had a degree of political protection which his Foreign Service career-officer successor, J. Graham Parsons, cannot hope to have. As the voice of Dulles, Robertson had in Dulles a backer who was the most powerful member of the Eisenhower Cabinet. He had the support, too, of the dominant conservatives in both parties.

(True, he was supported also by ultraconservative extremists who did much to alienate reasonable opinion from a policy that was sound in itself but suffered, as other policy has, from some of its friends.)

Thus, the whole domestic political understructure for maintaining nonrecognition is now twice weakened. First, there was the incapacitation by illness of Mr. Dulles. Now there is the exit of Mr. Robertson, who also is in poor health.

No one in Washington pretends to know exactly what is in the mind of the monolith of terror that is Communist China. But many fear that Peiping, which for years has been trying to shove or shoot its way into the United Nations, may try again before many months have gone.

Certainly the times will be evilly ripe. A spirit of accommodation toward Soviet communism is spreading, in the understandable and general Western hope that some decent cold war armistice can be struck at the summit conference.

Any outbreak of Communist-inspired trouble in Asia would be a most damaging distraction, and there would be temptation to buy it off. Indeed, it probably would be unwelcome to the Russian leaders, because they need a summit settlement. There is, however, increasing doubt among highly responsible intelligence sources here that Moscow can necessarily control Peiping. The Red Chinese have already put in a slave system so vast and coldly wretched, so totally denying the human personality, as to frighten the Russians themselves.

It will not be surprising if the eastern branch of international communism seizes the opportunity to put on more pressure for recognition, perhaps bloody pressure, while all are preoccupied with the summit.

It is possible that some such estimate underlies the fact that the United States is preparing simply to deploy a naval and Marine task force to the western Pacific.

[From the Washington, D.C., Evening Star, Apr. 6, 1959]

ROBERTSON'S CHINA POLICY BATTLE—RETIRING ASSISTANT SECRETARY OF STATE FOUGHT TO DENY RECOGNITION FOR PEIPING

(By David Lawrence)

Sometimes it takes the news of an illness or a departure from public office to bring about a true evaluation of the services of a man to his country. The announced resignation of Walter S. Robertson from his post as Assistant Secretary of State for Far Eastern Affairs focuses attention on the valiant and successful fight of a sick man to keep America from blundering into recognition of the Red China regime.

Mr. Robertson, who leaves the Department of State in a few weeks, says frankly he never would give up his work if he did not feel assured that the United States will not yield to the tyrants in Peiping. Few people outside the Government are aware of the indefatigable battle Mr. Robertson has waged against all manner of intrigue that has been going on inside and outside the Government to win for Red China a place in the United Nations and diplomatic recognition by the U.S. Government.

Mr. Robertson served under the Truman administration, but has played an even bigger role under the Eisenhower administration in steering foreign policy as it relates to Asia. It was most unfortunate to read the other day a comment by former President Truman accusing the Eisenhower administration of "surrendering" because an

armistice was signed in Korea. All one has to do is to read the book by Adm. C. Turner Joy, who presided for the United States at the Panmunjom negotiations, to find out that, before the Eisenhower administration came into power, the American representatives had been instructed to accept the principal portions of the final agreement.

They did so, and only a dispute about exchange of prisoners remained when Mr. Eisenhower became President in 1953. So the real question was whether to repudiate or to honor the agreement made by the Truman administration. President Eisenhower chose to honor the signature of the United States on the sections already agreed upon by the previous administration.

As a matter of fact, it is only in what happened prior to 1950, when State Department officials were being accused by congressional committees of catering to Communists in the Far East, that there is any basis for controversy. In a speech delivered 3 weeks ago at Ottawa, Canada, Mr. Robertson said:

"Since 1950, the difference in basic China policy between former President Truman and President Eisenhower is the difference between tweedle-dum and tweedle-dee.

"In early 1950, following the Communist takeover of the mainland in December 1949, at about the time of British recognition, President Truman vetoed the recommendation made to him that we recognize Red China. The Republican attack on the Democrats in the 1952 election campaign was not on basic China policy as it then was, but rather on what was alleged to have been the vacillations and blunders which had helped create the Frankenstein monster of Red China and enhance its menace to the free world.

"In 1956, an election year, a Democratic-sponsored resolution, reaffirming support of the Republic of China and opposing the seating of Red China in the United Nations, passed the House of Representatives by a vote of 391 to 0 and by 86 to 0 in the Senate. Not a single Congressman or Senator of either party was willing to vote against this resolution. This is a phenomenon unprecedented in American political history.

"When the parties later assembled for their national conventions, they adopted almost identical planks in support of this policy. In the recent Taiwan (Formosa) crisis, Mr. Truman was among the first to come out in strong support of President Eisenhower's position.

"To repeat, the differences of opinion about China policy do not represent differences between political parties, but rather differences between individuals, irrespective of party lines."

Mr. Robertson has made numerous speeches about the whole China problem in the last few years, and has been perhaps the country's most outstanding champion of the American policy in the Far East. He says opposition to the Red China regime is not based on "disapproval of an ideology or an economic system, much as we abhor both."

He asserts that American policy is based "on the collective security of the free world." He sees any possible acceptance of Red China's regime as meaning the liquidation of American alliances in the Philippines and Southeast Asia, danger to the Korean Republic and the collapse of our military allies in the Western Pacific, who possess considerable manpower which, if not available, would have to be substituted for by millions of American soldiers.

Mr. Robertson points out that very few countries have recognized Red China since the Communist aggression in Korea in June 1950. He adds:

"Instead of being isolated, we stand with the overwhelming majority of the countries of the free world in this position. It is essential that this majority continue to stand together."

Walter Robertson's espousal of the cause of a free China will long be remembered. And it is a safe bet that he will continue to give whatever energy he has left to the cause for which he has struggled this last decade, despite frequent intervals of ill health. He is truly one of the great public servants of our times.

[From the St. Louis Post-Dispatch, Apr. 5, 1959]

WEST PURSUING WORN TACTIC IN RAISING INDIGNATION OVER REDS' SUPPRESSION OF TIBETANS—COMMUNIST CHINA'S POWER CONTINUES TO GROW AS ALLIES MISTAKENLY HOPE THAT ANGRY DENUNCIATION WILL TAKE CARE OF FAR EAST SITUATION

(By Marquis W. Childs)

WASHINGTON, April 4.—What happened in Poland, in Czechoslovakia, and in Hungary is now occurring in the remote, almost dreamlike country of Tibet.

Communist power is crushing with relentless force the ancient way of life of a people who have lived to themselves since time immemorial in the high Himalayas. It is bent on wiping out all traces of dissent and difference to achieve the mass conformity of an all-powerful state.

The tragedy of Tibet as the Dalai Lama and his followers are hounded out of the country, has set off a wave of indignation in India. The ties with Tibet of religion and commerce have long been close. For Prime Minister Nehru, the realization of what Red China means by "autonomy" for Tibet is obviously painful.

The moral indignation with which the West reacts is now an old story. It is the automatic response to a tragedy repeated many times over. Perhaps because it is so familiar, this response tends to be an exercise in righteousness, giving us a comforting feeling that merely by exploding in angry denunciation we are accomplishing something.

DANGEROUS ILLUSION

That is a dangerous illusion, as even a glimpse at the past makes clear. The anger over the betrayal of Czechoslovakia 11 years ago was deep and real. Yet Communist power has organized that country in such a way that production today is at a high level.

It would be comforting to think that the iniquitous methods used by the Red Chinese were bound to fail. This is the conviction so often expressed by American policymakers. While in the long run it may be true, in the long run, as has been wryly said, we shall all be dead.

In the meantime, there is the fact of China's ever-growing power. A recent visitor to Peiping, with a long background of experience in China and every reason to detest communism, has come out with a report of the extraordinary progress being made in the construction of highways, factories, government buildings, hotels, and airports. In the 10 years since the Communists took over, China has a new look.

The "great leap forward" proved too ambitious and one consequence is that the Chinese are defaulting on their trade agreements. But this, in the view of a stanch capitalist from the West, is only a temporary condition. In the present phase, the excesses of the "great leap forward" are being compensated for. It is a pause before another stride forward.

There is nothing essentially new in this. Almost every observer of whatever nationality has reported the amazing organization of the Chinese mass under the constant goad of propaganda, surveillance, reward, and punishment. What more advanced industrial nations do with machines, the Communists are undertaking to do with harnessed manpower.

QUARANTINE THEORY

Shortly before his unexpected resignation as Assistant Secretary for Far Eastern Affairs, Walter Robertson, who has shaped America's China policy in recent years, made in Canada a speech that put as forcefully as possible the whole quarantine theory. A man of dedicated zeal rare in Washington, he put the case this way:

"The Peiping regime was imposed by force with the volition of only an infinitesimal fraction of the Chinees people. Today, after 9 years, less than 2 percent belong to the party. It has kept itself in power by bloody purges and the liquidation of some 18 million of mainland Chinese in 9 years. In our view, the security interests of ourselves, of Asia, and of the free world as a whole demand that we take no action which would create international prestige for this regime, which would increase its capacity for advancing its objective of communizing all of Asia, or which would betray the hopes of those having the will and the courage to resist it."

The premise in this is that American recognition would give Red China a prestige it does not now have. It does not answer the question of how we are to meet the challenge of ever-growing Communist power other than by moral indignation stirred when some particularly bloody deed commands the headlines. The moralistic tone may well serve to conceal the reality of China's power and therefore encourage us to wait for the inevitable triumph of virtue.

GEOGRAPHICAL BARRIER

In the recurring tragedies that have seen one nation after another go down under Communist aggression, either from internal subversion as in Czechoslovakia or by naked force as in Tibet, two factors have inhibited the West. The most obvious one is geography.

In each instance, the country taken over has had a border with communism so that infiltration or invasion has been relatively easy. The power of the West has been once or twice or many times removed from the scene of the disaster.

To intervene in Tibet would mean complicated air drops of men and materiel from bases near enough to make such an attempt practical. The United States has bases in Pakistan, but Pakistan has formal diplomatic relations with Red China and whether permission would be given for an attempt to halt Communist aggression is doubtful. The massive assistance in men and transport planes necessary for any such strike in incredibly difficult terrain is simply not available, even if there were any intention here to try to check the Communist takeover.

The second factor is the cloak of internal quarrel which the Communists have managed to throw around the use of force. Thus, in Tibet, a convenient puppet, the Panchen Lama, is brought out to give a cloak of legality to Communist action. In Czechoslovakia, the tragedy was played out behind a mask of acquiescence by native Communists.

The West observes the rule of law and the canons of diplomacy. In meeting any crisis, the democracies must take public opinion into account, while the dictatorships act without regard to dissent or criticism. This may help to explain why the burst of angry indignation is too often the beginning and the end of Western reaction.

What many observers are saying is that the West must follow up with constructive action to strengthen the free world, even though it calls for far more resolution and sacrifice than is now evident. The Tibetan

situation points up this criticism. The Dalai Lama has taken refuge with a few of his followers in India and Nehru has promised him sanctuary.

INDIA HIGH TARGET

But India is a target high on the Communist list. The province of Kerala in the south is already Communist-controlled. As Nehru's Congress party loses its dynamism with age and internal dissension, the Communists push forward. The danger is far from imminent—the threat of a takeover may be 5, 10, or even 20 years away. Nevertheless, it is real, and the time to avert it is now and not when a crisis poses the question of whether and how to act.

The response to Tibet could well be the launching of a far-reaching program of aid and loans for India. There is already a considerable program, but as Nehru pointed out to a recent visitor, former Gov. Averell Harriman of New York, while it may be sufficient to hold off bankruptcy, it does not permit growth and development. In this way communism would be challenged and India would have a chance to show how progress can be made in a free society.

That is the essence of the matter. There is no way to calculate the help that Soviet Russia has given Communist China. It has been vast and the objective is simple: To enable Red China to demonstrate to Asia and the world that communism can make over a feudal country into a modern industrial nation.

The outcome of this contest between communism and freedom in raising standards of living—between China and India—means everything to Asians. China's successes thus far have had a wide propaganda effect. Unfortunately, American policy has taken too little account of the realities of this contest. One searches in vain for any recognition of it in Robertson's Canadian speech.

Today, as in the past, there are only two choices available to us: The anti-Communist Republic of China, our friend, or the international Communist regime of Peiping, a deadly enemy dedicated to our destruction.

No one questions the enmity of Communist China. But there are those who argue that there is another choice. It is the choice between the Communist system and its advance under a modern form of slavery and the opportunity in the West to forward the progress of such free and uncommitted nations as India with an all-out program of assistance.

A Look at Foreign Aid in Thailand

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. TALMADGE. Mr. President, one of the most objective analyses of how American foreign-aid funds are being spent around the world in an effort to make over other countries in our image was contained in the April 9, 1959, issue of the Wall Street Journal. I refer to an article, by Vermont Royster, entitled "Anatomy of an Aid Program." Although it attempts to draw no conclusions, it is a powerful indictment of the follies and excesses of foreign aid as it presently is being practiced by the United States. I ask unanimous consent, Mr. President, that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANATOMY OF AN AID PROGRAM—A LOOK AT THAILAND SHOWS THE U.S. PROBLEMS ALL OVER THE WORLD

(By Vermont Royster)

BANGKOK.—An inquiring American who wants a clear look at what the U.S. foreign aid program is trying to do all over the world can hardly do better than to come here to serene and peaceful Thailand.

The aid program here is small, as those things go; its $20 million a year sinks almost unnoticed in a total foreign aid budget of $4 billion. It seems to be handled with reasonable care; at least it has not been plagued with public scandals.

Moreover, it is an aid program that does not have to wrestle with the special problems that, in so many countries, are used either to justify or excuse the results. The Thai Government is solvent. It has been spared extreme political chaos. The Siamese people lack neither rice nor roofs. They are easy-going and happily unconscious of any great problems.

Perhaps all this robs the American aid program here of a certain amount of color. But it does permit the ICA to plan its program under almost ideal circumstances and its more than one hundred officials to apply them with a minimum of hindrance. And so if the present U.S. program can look good anywhere, it should look good here.

It certainly looks ambitious. The American foreign aid help for the Siamese reaches into the financial structure of the country, the homes, the schools, down Bangkok streets, across rice paddies and into the almost impenetrable jungle.

ADMINISTRATIVE MACHINERY

To see how, perhaps the best way to begin is with a glance at the size of the administrative machinery the International Cooperation Administration has found necessary to erect to spend this $20 million a year.

At the top of the U.S. Operations Mission ("Usom" is a ubiquitous word in Southeast Asia) is the Office of the Director together with an Office of the Deputy Director. Spread out below them is a rather intricate array of division offices, reporting not only to the Director but in some cases to each other.

These are, separately, an Office of Technical Services, a Division of Agriculture, a Division of Education, a Division of Public Health, the Public Administration Division (this is to help the Siamese run the thousand-year-old city of Bangkok), a Division of Public Safety (to make the Siamese better policemen), an Audiovisual Division (teaching with pictures), a Training Division (to teach the Thai Government how to govern Thailand), a Division of Public Works and a Division of Industrial Development.

These, of course, are only the divisions dealing directly with aid to Thailand. To do the housekeeping and general management of these divisions there must be other administrative divisions. There is, for example, an Office of Management to keep track of the other divisions, an Office of Finance to keep track of the money, and an Office of Programing to coordinate the programing of the programs of the separate parts.

Even so, categorizing these on an organization chart does not give the full sweep of the U.S. aid program to this small country, because under nearly every division there are branches or sections for specific projects.

A sampling of these shows that even in an underdeveloped country atomic energy is not neglected; there's a program for training a cadre of nuclear scientists. There's a skilled-labor training program, a regional telecommunications program, an English language teaching program (few USOM personnel speak Siamese), and a project for stimulating villagers to take more active interest in community affairs.

Nor are these merely paper programs. For example, a visitor finds that though the Siamese, being blessed with rich land and adequate rainfall, are a people who have never know famine and who are heavy rice exporters, they are nonethless getting the benefit of a very active and extensive agricultural program.

The United States is bringing to Thailand the American system of farm extension services, and even the 4-H Clubs. More than 100,000 farmers have been instructed to date, more than 250 extension agents have been trained in American methods, and something like 4,000 farm boys have been signed up for 4-H. Not content with this, the agriculture program envisions for the future creating a "unified extension service with clear line of administration, staffed with best available personnel; trained extension workers at national and regional levels and establishment of plans for continuous training of future extension workers."

But this is only a part of what we plan for Siamese farmers. Some time this year the USOM agency plans to demonstrate contour cultivation on some 200 farms and to organize some 30,000 village seed associations. About 50 breeding bulls are being brought in and will be distributed to selected villages. The American cooperative marketing system is being encouraged, and this year a cooperative management program will be organized for more than a thousand families.

Meanwhile, industrial development is not being neglected. Technical surveys are underway of the country's mining and water resources, including an airborne geophysical survey. The highway program involves not only actual roadbuilding but the reorganization of the Thai Highway Maintenance and Equipment Division and the replanning of the streets of Bangkok.

There's also an airport construction program, an air communications program, a meteorological program and, in fact, "a comprehensive program" for the reorganization of the whole Thai transportation system.

Nor is U.S. aid limited to agriculture and industry. There's a health program which includes teaching 7 million Thai householders to spray for mosquitos (this would be followed up with a "surveillance program"), training doctors, organization of district health units.

And so it goes on. The educational program embraces projects on the elementary, secondary and university levels of the Thai school system. "Usom's" arm also reaches out, through the Public Administration division, into local city planning, the National Government's taxing and budget offices. The United States also plans to "improve the Thai Government economic policy and planning procedures," to revamp its statistical services, and in general guide its officials in doing their jobs.

In short, ambition is a small word for the U.S. aid program in Thailand. Indeed it looks less like a program to give an economic boost to these hard-working and self-reliant people than an effort to redesign, if not to remake, their country. The visitor must constantly remind himself that this is a very small program, less costly, less complicated and less comprehensive, compared to others.

A visitor, touring the country, can see that some of these projects have in fact helped the Siamese people. You can't put $20 million a year into so small a country, build highways through the jungle, or fight malaria, without leaving some benefit behind.

But passing over entirely the question whether the program has a point other than generosity, you can't look at this program—a plain, rather ordinary, standard U.S. aid program—and its effect on the Siamese people and fail to see that by its very nature it has some built-in problems that the system itself makes insuperable.

For example, one of the chief complaints of foreign aid officials (and one of their excuses when things go wrong) is that they can't get enough good people to fill all the billets in these far-away places.

ONE OF 70

Yet Thailand is only one of 70 countries in which we have aid programs. And the scope of this comparatively small program would require, to be carried out properly, more than a hundred first-class officials, not only technically knowledgeable in their fields but in their manners, vision and understanding.

So it is hardly surprising that the director here, who strikes the visitor as an able man, has his personnel problems. To run a program of such magnitude he needs superior accountants, horticulturists, entomologists, soil chemists, veterinarians, livestock biologists, parasitologists, sanitation engineers, highway engineers, electrical engineers, civil engineers, machinists, geologists, doctors and nurses, electronics technicians, air operations specialists, police administrators, and meteorologists, just to name a few.

Look for instance, at what the aid director's "TO"—or technical organization chart—calls for in just the single category of police administrators: He needs a chief police adviser, a deputy police adviser, a police program officer, two police program assistants, four police adviser investigators, and a police adviser who's a training specialist. That's only the beginning. He also needs police advisers who are specialists in border control, traffic control, logistics, identification and laboratory investigation, not to mention a police adviser (administrative) to run it all.

In addition to all of this there are, of course, the secretaries, clerks, auto drivers, and miscellaneous personnel necessary to keep all this administrative machinery functioning. And these people, too, are unofficial U.S. ambassadors abroad.

Now since it is difficult to find enough competent people to fill all these billets in little Thailand, it is plainly impossible to find them in sufficient numbers for all the other countries too, in many of which the program is mammoth compared to here.

Thus the inquiring visitor is brought relentlessly to the conclusion that the sheer size of the U.S. aid program, and the scope of what it is trying to do, makes the personnel problem an almost impossible one.

Unfortunately this is not the only problem built in by the size and concept of the foreign-aid program. More important for our own self-interest, are the irritations it creates among those blessed with our giving.

Consider that here is a country which, for all that it may be backward by American standards, has managed to get along for a thousand years without U.S. dollar aid or U.S. aid advisers. Its people are proud of their independence, their tradition, their own way of life and are probably as successful in the pursuit of happiness as any people can be.

Yet here come the Americans with a program which, when you look at it, would remake the country from one end to the other, from top to bottom. There is no area of Siamese life—schools, farms, business, language, homes, government, customs—left untouched in some fashion by the U.S. aid program.

No one, be he a visitor here among the ancient temples and palaces or a stay-at-home reading about it, need be surprised that a program so conceived rubs many Siamese the wrong way. Certainly the evidence of it is not hard to find.

REFUSE ADVICE

It crops up even in the official ICA documents when officials plaintively report that all is not going well, because the Siamese are reluctant to accept all their advice. "Only limited progress has been made to date due to the reluctance of the Thai Highway Department to accept the advice * * *." Or when they note that part of the job is to sell a program to the Siamese, one operational goal for the 1959 health program, which we designed, is "to secure official backing of the Thai Government."

It crops up in conversation, polite and courteous though the Siamese be. By any abstract standards it may be progress to fill in the dirty, old klongs (or canals) that once made Bangkok the Venice of the East. But it's bound to seem a mixed blessing to poor people who once could move readily by boat and now have to forage for some kind of motor transport for the modern boulevards.

The Government officials with whom the visitor talks are not unmindful of the value of dollar bills, but nonetheless they can be a little rueful of all that comes with them. Some of what comes with the dollars is the feeling that the Americans are meddling in everything. And sometimes what comes are real practical problems.

One such practical problem is inflation. Since every country nowadays (including the United States) has an inflation problem, Thailand might have one without our help. But our help does intensify it. The U.S. aid also intensifies the management problems of the Thai Government by increasing the number and the scope of tasks undertaken by the Government. Furthermore, the Thais could not possibly keep up such a program without the United States; so some of them are beginning to wonder if the Americans will not have to stay forever.

This last feeling is met quite frequently once the visitor gets outside the Government offices. Among the people, who may not see how helpful the Americans are being, it is even easier to find a kind of weary wishing that they would just all go home.

One friendly Siamese, with a twinkle in his eye, put it to his American visitor this way: "I suppose we ought to be glad that you are helping us, but we do wish you wouldn't help us so hard."

So here is the U.S. aid program to Thailand, a classic miniature of our economic-aid programs. It's small in dollars, perhaps, but it's plainly big in ideas. And, as this visitor says farewell to Bangkok, it is with a growing sense of wonder at what we think we are trying to do all over the world.

The Fight To Save Sunday

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. DERWINSKI. Mr. Speaker, recently I read an article in the April issue of Catholic Digest entitled "The Fight To Save Sunday." The subhead of the article is "If It Becomes Just Another Day To Make a Buck, Everyone Will Suffer."

Considering the importance of this article, I ask permission to revise and extend my remarks at this point in the RECORD to include the text of this article. The article as it appeared in the Catholic Digest is as follows:

THE FIGHT TO SAVE SUNDAY—IF IT BECOMES JUST ANOTHER DAY TO MAKE A BUCK, EVERYONE WILL SUFFER

(By Elliott W. Robbins)

I had been told that I might find a flagrant example of business-as-usual on Sunday near Paramus, N.J. The cop who took my 50-cent toll on the George Washington Bridge (between New York City and Fort Lee, N.J.) explained just how to get there along Route 4. The time was a little before noon on a Sunday in mid-November.

When I arrived a few minutes later I found that the large shopping center—with its branch department stores, carwash service, discount carpet shop, and seat-cover outfit—was shut tight. There were no cars in the parking lot, no visible signs of activity.

I was only mildly surprised. I knew that the Holy Name Society of the Church of the Annunciation in Paramus had passed a resolution opposing unnecessary business on Sundays. Later, I learned that the local citizens had voted decisively to close things up.

Arthur Mannebach, chairman of the committee of the New York Professional Sodality, had informed me that almost every one of the 49 States has laws banning Sunday business. The laws would be enforced, he said, wherever citizens made an issue of enforcement.

A mile or two farther on my journey, I turned left on Route 46. Here, apparently, was an area where no issue had been made of Sunday business. I stopped near a highway store for women's and children's apparel. To judge from the eight cars out front, business was light. Inside the store, music was playing. Two small children were rocking on a teeter-totter that operated when you put a dime in the slot.

A little farther down the highway I hit the jackpot: a big shopping center wide open. Parking spaces were filling up rapidly. An outdoor speaker was going full blast. As I got close enough to see the vegetable concessions and soft-drink bars, I could hear what was being broadcast: a church service from a gospel tabernacle.

Inside, I found a carnival-like atmosphere. Each concession seemed to have its own radio. There were booths selling men's clothing, hardware, books and magazines, and religious articles. A pitchman was demonstrating a child's parachute toy, all the while making an eerie sound with a kazoo. Vendors of Italian sausage rolls were handing out the stuff as fast as they could put them up.

The forces of business-as-usual on Sunday go blithely on their way, helped immeasurably by the fact that many competitors close on Sunday. They beckon to the housewife with newspaper ads and radio commercials that urge her to bring the family and to buy big-name merchandise at terrific discounts. Signs advertise coffee at 20 cents below market price. This is the come-on. The establishments make their big money on refrigerators and TV sets, which nobody needs to buy on Sunday. The shops are open, most of them, from 9 to 9 the other 6 days of the week, too.

Governor Meyner, of New Jersey, last August signed a new law banning Sunday business. The unsophisticated visitor, finding a shopping center still doing business on a Sunday in November, might well ask what the score is. Many a conscientious store owner could ask the same question.

The answer, in a word, is "confusion." New Jersey's old Sunday law banned practically everything except business involving charity or emergency. Police looked the

other way where certain types of violations were concerned and when activity was slight. Then came the development of huge highway shopping centers, often located where their taxes give them a disproportionate influence on township officials.

Merchants in the regular business districts found business being drained away. They called for enforcement of the law. Police listened sympathetically. Then a discovery was made. The law provided no penalties. When violators pressed the point, the New Jersey Supreme Court decided that the law had no force.

Chief Justice Vanderbilt did not agree. In his minority opinion, he warned that the decision could "affect both living and business in almost every municipality of the State." After describing the Sunday business problem as one of the most far-reaching problems ever to come before the court, he declared that the situation was one where sound business standards were degenerating into the "business ethics of the jungle."

A provision in the law had provided that a local community could add penalties by passing a referendum which modified the law. Some communities had done so. The modification provided for sale of such items as newspapers, milk, prepared foods, as well as for the operation of restaurants, gas stations, and other "necessities."

In 1955, the Advocate, official organ of the Archdiocese of Newark, began a campaign to preserve Sunday as a day for worship and family life. It sent registered letters to New Jersey State legislators asking their opinions on the Sunday situation. For a number of issues it published the replies: pro, con, and fence-straddling. Eventually the legislators went through the motions of preparing another Sunday law, with penalties, but they excepted three shoreline counties which contain resort areas like Atlantic City.

The legislators were "off the hook." They had passed a law against Sunday business. But the legality of the new law has been challenged because it makes exceptions for three counties. And while the issue remains in doubt, shops in many areas run wide open on Sundays.

The situation threatens to destroy many small independent merchants located in the regular business districts and to hurt even the large stores. These businesses have served their customers for years, given support to local charities, and paid their share of taxes for State and municipal services.

George S. Hochberg, a New Jersey lawyer, went out one Sunday to demonstrate what could be bought when regular stores are closed. In drugstores and gas stations he purchased camera film, flash bulbs, a Scrabble set, a hula hoop, a Polaroid camera and camera print machine, car wax, a ball-point pen, a whiskbroom, and stationery. At a local golf club he found golf hats and shirts for sale. He reports that he could have bought clocks, lunch boxes, and luggage. All these products, he says, compete directly with what his client sells. His findings show why some people think effective Sunday laws must be commodity laws governing the sale of specific products.

Many reputable concerns not only observe Sunday closing laws, but enthusiastically advocate them. William J. Kent, Jr., president of the large Bohack grocery chain, declares, "We believe that our people are entitled to this day to relax, and to give attention to their religious duties and to their home obligations." He cites economic arguments for Sunday closing: "I believe that a 7-day week would result in such added expense to the individual that it would actually raise the price of food. That would be bad for the customers and bad for the general economy."

Bruce Gimbel, president of Gimbel Bros., says that he most emphatically is opposed to Sunday selling. Since his stores have food and restaurant sections which could legally remain open, the question is not just an academic one for him.

George W. Dowdy, president of the National Retail Merchants Association, and J. S. Mack, head of the Variety Stores Association, both warn of the destructive nature of Sunday selling. Mr. Dowdy says that Sundays "make no contribution to the good name of retailing, perform no vital service for the vast majority of customers, and contribute little to the Nation's economy. They create public relations difficulties for retailing, and contribute mightily to the industry's problems of personnel relations and recruitment."

Civic and religious organizations opposing Sunday business include the General Federation of Women's Clubs, the Protestant Council of New York, the National Catholic Welfare Conference, and the Lord's Day Alliance.

New Jersey is only one of the States that have Sunday business problems. In Ohio, Bishop George J. Rehring of Toledo has denounced the desecration of Sunday. His protest came as the result of an announcement that a large supermarket chain planned to open six more of its shopping centers for Sunday business. In Billings, Mont., Protestant and Catholic churches sponsored a series of newspaper advertisements protesting against Sunday business as usual.

Labor is generally against Sunday work. Many contracts, like that of the Amalgamated Meat Cutters and Food Handlers in Wisconsin, contain clauses against Sunday work or specify double time for Sunday. Businessmen and workers alike want a day of rest, undisturbed by thoughts of business being snatched away by competitors who remain open while they are closed.

Sunday closing is by no means just a religious issue. The desire for a day of rest is confined neither to Christians nor to people on this side of the Iron Curtain. A member of the Russian delegation to the UN told me that in Russia the usual policy is for nobody to work on Sunday. (This policy has nothing to do with religion, he hastily assured me; it is simply based on the conviction that everybody needs a day off.)

One of the arguments of the Sunday law violators is that, after all, "those who believe that Sunday should be a day of rest can stay closed." Illinois Chief Justice Hershey has demolished this argument. "If there is to be a cessation from business or labor at a particular time," Chief Justice Hershey wrote, "a day for that purpose must be designated for all, and not one day for some and another day for others, even though the one selected is regarded by the majority of the people as their Sabbath or day of rest. This involves no religious discrimination, since the Sunday regulation is based fundamentally on civil and not religious considerations. It is a regulation of business to promote the moral and physical welfare, and is valid as an exercise of the police power."

Of course, there will always be opportunists who see in Sunday business a chance to make big profits fast. One large store has declared it is worth a quarter of a million dollars a year to stay open on Sunday. In a sense, the situation offers the same kind of opportunity as existed under the old prohibition law. When the established liquor dealers were out of business, bootleggers found a huge demand for illegal sales, and the whole underworld empire grew from the profits.

Consistent enforcement of laws is essential if Sunday is to be saved from opportunists. But successful enforcement of Sunday laws depends on the public's determination to regard Sunday as a genuine day of rest; as a day for family activities and religious observance. So the problem comes down, in part at least, to a question of education. How can a decent attitude toward Sunday be fostered.

The New York Professional Sodality has shown the way for Catholics. That organization of business and professional men and women has drawn up a Sunday code. It calls for family worship at Mass, no unnecessary buying or selling, no servile work. Other groups can establish similar programs to rescue Sunday from those who have adopted the just-another-day-to-make-a-buck philosophy.

Second City in United States of America

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. MICHEL. Mr. Speaker, the following editorial from the Peoria Journal Star sets out very graphically the size and growth of the Federal bureaucracy by referring to it in size as the "second city in the United States of America." Those of us who have long been foes of a big centralized Federal Government are happy to have editorial support in this form, although with due respect to the present Republican administration, I should like to point out that the 2,361,000 men and women now on the civilian payroll of the Federal Government are 288,400 fewer than were on the payroll when this administration took over the reins of government in January 1953 from Harry S. Truman. Senator BYRD's own report of January 1953 discloses that at that time the civilian Federal payroll numbered 2,649,400. In other words, notwithstanding all the talk of a growing Federal bureaucracy, the number of Federal employees has not increased in the past 6 years under Republican administration, but has been decreased better than a quarter of a million even during the period when we have been experiencing an unprecedented growth in the overall economy:

[From the Peoria Journal Star, Apr. 13, 1959]

SECOND CITY IN THE UNITED STATES OF AMERICA

New York City still is the largest city in the United States but Chicago and Los Angeles can quit squabbling over which is second largest. Neither one of them is.

Bigger than either Chicago or Los Angeles is an imaginary city called Federalville. It's made up of the people on the Federal payroll and their families. Right now, according to an estimate made by Senator HARRY F. BYRD, of Virginia, it numbers at least 5,489,325. And it's still growing. It seems only a matter of time until it will surpass New York also.

Senator BYRD reaches his figures this way: He says that the Federal payroll now totals 2,361,000 men and women. Assuming half of these are unmarried and taking the Census Bureau's estimate of 3.65 persons in the average American household for the other half, you get the figure of 5,489,325.

This means that our Federal taxes are providing the salaries on which live as many

people as reside in the city of Chicago. The monthly Federal payroll is estimated at a billion dollars.

Senator BYRD, who long has been the leading advocate of economy in government, says that more than 150,000 of these Federal jobs could be abolished wtihout reducing efficiency in the slightest.

But we aren't reducing jobs; we seem to be increasing the number. That's why even New York's population figure isn't safe from being passed by the fastest-growing municipality in the United States—Federalville.

It's time we put a stop to the increase in Federal jobs and began trying to see to it that we keep Federalville in second place.

Modernization of the Public Land Townsite Laws

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 20, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from an executive communication from Assistant Secretary of the Interior Roger Ernst, with which was enclosed a draft of a proposed bill to consolidate, revise, and reenact the public land townsite laws. I have introduced the bill as H.R. 6290.

Under the public land townsite laws, there were created thousands of our prosperous western towns and cities of today. However, only one townsite in the Western States has been created under the general townsite laws since World War II—the town of Wallula, Wash., on the shores of the reservoir created by McNary Dam.

For several decades, the public land townsite laws have practically gone into disuse in the south 48 States, although continuing active in Alaska. Nonuse is partly due to the obsolete character of many provisions. More importantly perhaps is the preoccupation of the public and so-called land locators with the Small Tract Act. The administration of the latter act has been shown in hearings conducted by the Committee on Interior and Insular Affairs in California in 1957 to be an inefficient means of passing title to public land home and business sites in areas of rapid urban and suburban growth.

The purpose of H.R. 6290 is explained in the extract, which follows:

Over the years the Congress has enacted a series of laws providing for the withdrawal, location, use, and disposal of townsites upon the public domain. The varying procedures prescribed by these laws are partially interdependent, partially alternative, and partially unrelated. Many of the provisions of these laws have become obsolete by reason of such circumstances as changes in other provisions of the public land laws, disposition of substantially all the public lands within a particular category upon which a particular set of provisions was designed to operate, or development of new and better techniques for townsite planning and management that have caused the public to lose interest in employing the older and less advantageous techniques. Practical experience has also revealed a number of particulars in which the existing laws are ambiguous, contradictory, incomplete, or otherwise in need of technical improvement. In short, the time is now ripe for a comprehensive revision of the townsite laws in their entirety.

The proposed bill is designed to establish an integrated up-to-date set of legal rules to govern the administration of public land townsites throughout the United States. While the chief needs for townsites are in Alaska, nevertheless situations that call for the creation or enlargement of townsites also arise from time to time elsewhere in the United States. The provisions of the proposed bill are patterned upon those features of the present laws that have worked best in actual practice and that appear to offer the most favorable opportunities for encouraging the formation and growth of needed communities. The bill also seeks to bring about a formal measure of local participation in all phases of townsite administration.

Proposed Purchase by Stutsman County of a Tract of Land Lying Adjacent to Jamestown Dam

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Board of County Commissioners of Stutsman County, N. Dak., regarding a tract of land used by the Bureau of Reclamation and an offer to negotiate the purchase of the land.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED APRIL 7, 1959, BY THE BOARD OF COUNTY COMMISSIONERS OF STUTSMAN COUNTY, N. DAK.

Whereas the United States of America, on April 24, 1952, acquired title in fee to the east half of the northeast quarter of section 23, township 140 north, range 64, west of the fifth principal meridian, Stutsman County, N. Dak., for use as borrow material in connection with the construction by the Bureau of Reclamation, Department of the Interior, of the adjacent Jamestown Dam on the James River; and

Whereas the taking therefrom of large quantities of materials for said dam, long since completed, left a deep, ugly, and unsightly pit, dangerous and unsafe to life and health, a blemish on the improved reservoir area, and an eyesore to project visitors; and

Whereas it is believed that the Bureau of Reclamation has no further need of said tract, that its value is very small because of the deep excavation thereon and the high cost of refilling and leveling the same, and that the pit is fast becoming a nuisance because of the rapidly spreading, uncontrollable noxious weeds growing therein; and

Whereas the said board is desirous and anxious that Stutsman County, N. Dak., acquire said property for public purposes in connection with the park development in the reservoir area and for other public use: Now, therefore, be it

Resolved by the Board of County Commissioners of the county of Stutsman and State of North Dakota, That the Secretary, Department of the Interior, be, and he hereby is, respectfully requested to determine and declare said property surplus and not required for the needs and the discharge of the responsibilities of Federal agencies; and be it further

Resolved, That the Administrator, General Services Administration, be, and he hereby is, respectfully requested to determine and declare said property surplus and not required for the needs and the discharge of the responsibilities of Federal agencies; and be it further

Resolved, That the county auditor transmit by certified mail authenticated copies hereof to project manager, Bureau of Reclamation, Bismarck, N. Dak.; regional director, region 6, Bureau of Reclamation, Billings, Mont.; Commissioner, Bureau of Reclamation, Washington, D.C.; regional director, region 2, National Park Service, Omaha, Nebr.; Director, National Park Service, Washington, D.C.; regional commissioner, region 6, General Services Administration, Kansas City, Mo.; Secretary, Department of the Interior, Washington, D.C.; Administrator, General Services Administration, Washington, D.C.; Governor of North Dakota, Bismarck, N. Dak.; Senators WILLIAM LANGER and MILTON R. YOUNG, and Representatives QUENTIN N. BURDICK and DON L. SHORT, Washington, D.C.

Approved:

ALBERT BREDAHL,
Chairman of the Board of County Commissioners.

Attest:

GEORGE WHITNEY,
County Auditor.

Flood Control in Sandusky River Watershed

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BAUMHART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Thurston-Zwir Post, No. 121, of the American Legion in Fremont, Ohio, one of the sections in my 13th Congressional District hardest hit by the latest flood disaster of this spring. The resolution speaks for itself, and is an expression of the deepest feelings of my constituents regarding their desperate need for relief in the form of flood-control projects.

The loss and damage to property, both real and personal, has been of the severest type, and has caused intense suffering hand hardship throughout my district. This in turn has extended to other areas in the State, and we all rightfully feel our plea for the necessary funds to carry out proper flood control is most legitimate.

I therefore present this resolution, on behalf of the Thurston-Zwir Post, No. 121, of the American Legion, of Fremont, Ohio, and commend it to the attention

of the entire Congress of the United States:

RESOLUTION: FLOOD CONTROL IN THE SANDUSKY RIVER DRAINAGE AREA OF NORTHWESTERN OHIO

Whereas the city of Fremont, and parts of Sandusky County, Ohio, suffered and experienced a heavy loss of, and damage to property, as a result of two disastrous floods of the Sandusky River, in January and February 1959, both within a space of 3 weeks time; and

Whereas the city of Fremont, and parts of Sandusky County, Ohio, have suffered from heavy losses of property in the past, from many disastrous floods of the Sandusky River; and

Whereas business and industry in the city of Fremont, have suffered heavy losses in real property, equipment, machinery, tools, goods, trade and services, in both of the 1959 floods, and floods of the past; and

Whereas residential property owners and citizens of the city of Fremont have experienced great losses in real and personal property, in the two floods of 1959, and floods of the past; and

Whereas the danger and risk of floods in the city of Fremont, from the Sandusky River, discourages, deters and prevents the location of new industries and business in this city: Therefore be it

Resolved, That it is the sense of Thurston-Zwir Post No. 121, Inc., the American Legion, Department of Ohio, in regular session assembled at Fremont, Ohio, to petition and solicit the Congress of the United States of America, to authorize and appropriate the necessary funds and moneys, for surveying, dredging, cleaning, straighten, and widen the Sandusky River, from the Sandusky Bay to the city of Fremont; and be it further

Resolved, That the Congress of the United States of America, authorize and appropriate the necessary funds and moneys, for surveying and aiding in the construction of dikes, dams, reservoirs, and the like, along by the Sandusky River, in the counties of Sandusky, Seneca, Wyandot, and Crawford, to prevent floods in cities and communities located along side of the Sandusky River, from Bucycrus to Fremont; and be it further

Resolved, That copies of this resolution be forwarded by mail to the folowing: Hon. A. DAVID BAUMHART, Member of Congress from 13th Ohio District; Hon. FRANK J. LAUSCHE, U.S. Senator from Ohio; Hon. STEPHEN M. YOUNG, U.S. Senator from Ohio; the American Legion, Department of Ohio; Chamber of Commerce, Flood Control Action Committee.

Adopted by unanimous vote of the post, this 6th day of April 1959.

RICHARD G. NUHFER,
Commander.
CARL H. STROUP,
Acting Adjutant.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 15, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup broadcasts of the Farmers Union Grain Terminal Association of St. Paul, Minn., on April 10 and 13, 1959.

There being no objection, the text of the broadcasts was orderd to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF APRIL 10, 1959

How big is a farm? We hear so much talk these days about farmers and farm problems and Government farm budgets that it is worth taking a look at the facts.

Actually, it requires surprisingly little in the way of either area or agricultural activity to be classified as a farm. Officially, any place of three or more acres is a farm if it raises as much as $150 worth of produce a year exclusive of the garden. An even smaller acreage can be classified as a farm if it has production worth $250.

Obviously, any operation that size, or even two or three or four or five times that size, is not a farm in the sense that we talk about farming. It is estimated that there are about 4.5 million farms in the United States today and at least 1 million of them are farms only by the grace of statistical measurement. They might be small acreages owned by people who work in the city and live in the country—"hobby acres" sort of thing. In some parts of the country a few people may even scratch out a sowbelly existence on a few acres. But that's a social problem, not a farm problem.

And these tiny units have every right to exist. This is a free country. If a city man enjoys dabbling in the earth nothing should prevent him. But let's not call this weekend retreat a farm. Let's draw a line between farms that are operated to support a family and acres that are operated for fun or as a sideline.

That leaves maybe 3.5 million farms. About 5 percent of these have nothing to do with families. They are corporation farms. Some examples of the biggest of these are Seabrook Farms in the East, the British-owned Delta & Pine Land Co. in the South—and Campbell in Montana. Most of these giant operations are admirably equipped to take care of themselves.

The real backbone of American agriculture is found in the 3-million-plus commercial family farms. These are the farms that are doing the most efficient and economical job of feeding 173 million Americans and many millions of people overseas.

But they are in trouble. Many family farmers are forced to work off the farm to keep going. The reason is simple enough. Farm prices are too low, farm operating costs have never been higher.

This is the farm problem. So far it has defied solution. But a solution must soon be found because if the family farmers cannot survive the corporations will take over and industry's "administered prices" will be brought to the farm markets. That would be a sorry day for consumers.

These family farmers are tackling their own problem with every weapon at hand. They are organizing and sending their spokesmen to Washington seeking better farm laws. They know that the organized farmer has the best chance to survive.

And they are using their cooperatives more and more to gain even greater marketing and supply efficiency. They are building up and redirecting their co-ops to meet the challenge of bigness in business. That's why GTA is expanding and moving into new fields. So join your neighbors. Join the family farmers who are organizing to help themselves—GTA the co-op way.

GTA DAILY RADIO ROUNDUP OF APRIL 13, 1959

One of the big national farm magazines blushed all over its editorial face the other day. It took an opinion poll of farmers and with great fanfare announced the results. But things didn't turn out the way the magazine said they would.

In its April issue this magazine said that its poll showed 55 percent of its 3.5 million farm readers want no controls, no floors, and no price supports. Instead, they want the Government to "clear out of farming."

To quote a sentence from the magazine: "This poll reveals that the South's farmers are no longer the high price support and strict control advocates they once were assumed to be."

But no sooner had the magazine hit the mailboxes than results of this spring cotton referendum came out. They tallied up just about opposite from the findings of the magazine poll. The overwhelming majority voted for plan A, the longstanding program of acreage allotments with a higher support. Only 15 percent voted for plan B, which called for overplanting with only a token price support.

So opinion polls have their hazards. Maybe people have a way of saying one thing and doing another. Or maybe the farmers were just poking fun at the opinion testers.

But we suspect that the cotton farmers were dead serious about the way they voted in their referendum—just like the wheat farmers who have always voted around 95 percent in this area to stick by their wheat program.

The Wall Street Journal, the eastern businessman's newspaper, was perplexed enough to send its reporters into the cotton areas to find out the "why and wherefore" of the vote. One Texas farmer said he voted for acreage allotments because "it's the difference between making a little money and losing a lot." Another cotton farmer, in Arkansas, said he voted for plan A because it is "safer and saner." Overplanting just doesn't make sense, he told the Wall Street Journal reporter, "what with the extra expense for insecticides, fertilizer, and labor. I'd end up with less money than under the allotment plan. I'd be planting those extra acres just for fun."

A farm manager of 1,576 acres in south Texas said his operation would "go in the red" under plan B, even though it would let him plant 40 percent more acres to cotton. Plan B, incidentally, was highly favored by the administration and Secretary of Agriculture Benson. But the cotton farmers turned it down. They voted to hold back on production.

So this appears to be more evidence that farmers are willing and eager to abide by intelligent production controls. But in return they need a decent break on prices or price supports. And that's a reminder that farm prices are made in Washington and that in just about 1 month now Secretary Benson must announce the alternative plans he'll offer wheat farmers in the wheat referendum next June. That will decide what's going to happen on wheat in 1960. It will be another serious decision for farmers.

But while farm prices are being made in Washington—remember to keep your co-ops growing—GTA the co-op way.

The Right To Earn Versus Social Security

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. LEVERING. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD an

article from the May 1959 issue of the Journal of Lifetime Living, by Dwight S. Sargent, entitled "The Right To Earn Versus Social Security."

In this piece, Mr. Sargent brings out the fact that many elderly people need the extra earnings they might make, over and above their social security. I think it is worthy of my colleagues' attention.

The article is as follows:

THE RIGHT TO EARN VERSUS SOCIAL SECURITY

(By Dwight S. Sargent)

Few people these days question the value of social security. But let's talk about one phase of social security which I think should be changed.

In the midthirties when the social security system began, our country was in a depression. Jobs were hard to get. So, one of the then legitimate objectives of the social security program was to get workers of 65 and over out of the labor market to make room for younger workers.

At the time there was considerable discussion whether social-security benefits should start at age 65 or at 70. Without much doubt, the need to make room for younger employees was a strong argument for selecting the lower age figure of 65.

Accordingly, the first retirement test rules required an applicant for social security to return his check for any month in which he earned $15 or over. But since 1937, when the first social-security payments were made, this $15 sum has been progressively increased to the present $100 a month ($1,200 yearly) which may be earned without the loss of a month's social-security benefit.

We all know what is going on today. By and large, men 65 or older and women 62 or older do not accept part- or full-time jobs which would pay them over $100 a month—because if they did, they would lose their social-security benefits for that month. And no one can blame them.

TYPICAL CASES

Consider a man of 65 with a wife aged 60. Let's say he is drawing $116.50 from social security and is offered a part-time job at $40 a week. Ignoring the tax angle, he figures that if he accepts the $40 a week job he will actually net only $15.40 from it because he will lose 11 social security checks a year. He decides he won't do $40 worth of work for $15.50, and declines the job. As a guess, maybe 35 percent of all men his age are in the same position.

But it is even worse if the same man has a wife aged 62, or older. In that case, his gross improvement by working would be only about $3 a week, for both he and his wife would lose their social-security benefits. Possibly 60 percent of the men aged 65 fall in this category.

Now let's say this same man has a wife and children under 18, and that he now receives a combined total of $254 a month in social-security benefits. Taking a $40 a week job under these conditions would mean a loss of some $13 a week, for he would lose 11 of his 12 social-security checks.

In short, under our present system one is penalized for being useful. For doing more, he gets less. I feel that it should be just the opposite. The rules should provide an incentive for being productive.

I base this on the premise that the average man who works and earns is an asset to the Nation, whereas the average retiree is pretty much of a liability. If our older citizens were encouraged to do more in order to have more, the number that would then go back to work would increase the productive total of the country and decrease its liabilities.

No one seems to know how many people now collecting social security benefits would actually go back to work if the present rules were reasonably liberalized. Some believe that the $100 now allowed is adequate. They argue that many of our people drawing social security are disabled and can't work anyway, while most of the balance can't, or don't want to, earn more than the present allowance. But on the other hand, there are many older people now in the working force who would probably retire and draw benefits if the law were liberalized to permit larger earnings in retirement. This, in turn, would raise the costs of the program to the taxpayers.

Let's Eliminate Roadblocks in Interstate Highway System

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter from Mr. George C. England, mayor of the city of Inglewood, Calif.

The city official, I believe, clearly sets forth the problems imposed on the completion of the Interstate Highway System by the pay-as-you-go plan provided for in the Highway Revenue Act of 1956. The adverse effect of this proviso is and will be felt by many other communities faced with traffic congestion.

Therefore, Mr. Speaker, I respectfully urge my colleagues to give full consideration to the following letter:

LETTER FROM MR. GEORGE C. ENGLAND, MAYOR OF THE CITY OF INGLEWOOD, CALIF.

APRIL 8, 1959.

Hon. JAMES ROOSEVELT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN ROOSEVELT: The Inglewood City Council, at their meeting on April 7, requested that I write to you, urging your support of measures to insure completion of the Interstate Highway System during the 16 year construction period originally planned and repealing the so-called Byrd amendment of the Highway Revenue Act of 1956.

It is our opinion that provision should be made for the highway trust fund to borrow from the Treasury to make up shortages as they occur, to be repaid from the trust fund with interest, in later years as surpluses occur.

The pay as you go plan provided for in the Byrd amendment will seriously undermine essential highway improvements in our State. The problem in Inglewood has been particularly severe, with a great many of our streets carrying traffic volumes of 25,000 vehicles and over, per day. The majority of this traffic is through traffic from aircraft plants, defense and other industries surrounding the Los Angeles International Airport and other sections of the county; as well as traffic of visitors from all over the United States to the beaches and other seaside attractions.

The freeway program in our area is the only means which we know of that will assist in solving this serious problem. These freeways are being financed, in part, by the Interstate Highway construction program and any delay in appropriations will, of necessity, delay the construction of these facilities so essential to the entire economy of our area. In addition, it would disrupt the orderly prosecution of work already planned and would seriously undermine the engineering organization of our California Division of Highways.

We know you are cognizant of the critical need of an adequate highway system as an integral part of the national system of Interstate and Defense Highways and that the economy of our country is substantially dependent upon the early completion of this system. While our particular problem is only one of many thousands, to us it is critical and demands a solution.

We will appreciate your consideration of our comments on this most important matter.

Sincerely,

GEORGE C. ENGLAND,
Mayor.

Forgotten Warriors

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article with reference to the Spanish-American War, which appeared in the National Tribune-The Stars and Stripes recently.

FORGOTTEN WARRIORS

Ask the average young man or woman in high school or even college today what they know about the Spanish-American War and the chances are they will not know what you are talking about.

We will go a little further on the subject. Ask the average Member of Congress about the Spanish-American War and he or she may recall that they passed a law or laws limiting the date of that particular conflict from April 1898 to July 4, 1902. These are the limiting dates of the War with Spain, the Boxer Rebellion and the Philippine Insurrection.

The fact is overlooked that from July 4, 1902, to December 31, 1913, many thousands of Americans fought the fiercest of wars against fanatical Moros and other tribes in the Philippines.

Not a war? Ask the man who fought in tropical jungles against the hatred of their opponents in heat and rain, with forced marches, often without sufficient rations, and almost always without proper medical care.

From time to time there have been introduced bills which would give these servicemen the same rights as are now enjoyed by the men who fought between April 1898 and July 4, 1902. These bills have been good bills. Sometimes they have been passed by the House but bypassed in the Senate.

There is actually a precedent which is worthy of consideration when it comes to a decision on these measures. It may be recalled that during the Indian Wars men who had fought against hostile Indians in the winning of the West were granted pensions. Those who did not leave their home camps or forts and who did not participate in these Indian campaigns were not granted a pension but those who took part in the cam-

paigns were given pensions because they had fought with the so-called hostiles.

Surely, never did any man fight against more fierce and hostile tribes than did the men who fought between July 4, 1902 and December 31, 1913, in the Philippines.

Surprise attacks, massacres, bolos flung in the darkness of night, along with the fierce heat of the tropics, were but part of their service. But they are denied recompense for this service because of the present delimiting dates.

It is time that their service was recognized and in their behalf the National Tribune-The Stars and Stripes asks Congress to lose no more time in recognizing that service. Let us not make fish of one and fowl of the other. If service against hostile Indians in the West is worthy of reward so, also, is service in the Philippines between July 4, 1902 and December 31, 1913. It is high time to right a wrong which has long existed. This is as good a time as any.

Inflation: Cause and Cure

EXTENSION OF REMARKS
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mrs. WEIS. Mr. Speaker, last week I received one of the most intelligently written, thought provoking letters it has been my privilege to read since becoming a Member of the House.

Because it was written by a resident of my congressional district, because it deals with one of the most serious problems confronting this country, and because it deserves the careful attention of every thinking American, I am pleased to include in today's RECORD the letter which I have received from Mr. Milburn E. Wilson, of Rochester, N.Y.:

GERBER BABY FOODS,
April 8, 1959.

Hon. JESSICA McC. WEIS,
House Office Building,
Washington, D.C.

DEAR MRS. WEIS: My personal concern about the deep inroads that are being made on sound economy by inflation prompts me to write to you at this time. My friends, business associates, and others I come in contact with from day to day join me in this concern. The threat of inflation today is greater than ever, and unless positive action is taken by the Congress to turn the tide immediately the value of the dollar—already seriously devalued—could become well-nigh worthless.

The President has made a plea to the Congress for a balanced budget in 1960. I am sure this is a sincere plea and one that should be heeded in all deliberations. The President has also made a sincere plea to labor leaders and business leaders to hold the line on wages and prices.

No one will deny the theory that it is desirable to raise our standard of living. But to do so by forcing prices ever higher defeats the purpose and soon will come the day of reckoning.

Labor unions continue to demand and get wage increases that go beyond increases in productivity. Sumner Slichter, Harvard economics professor, estimates that in recent years hourly compensation of employees (including fringe benefits) has risen more than twice as fast as output per man-hour. Jules Backman, professor of economics at New York University, estimates that in the years 1956–57 average hourly earnings in manufacturing industries, including fringe benefits, were increasing at a rate of 6 to 7 percent a year, while output per man-hour was increasing at a rate of less than 1 percent per year.

Our thinking today with regard to taxation, spending, paternalism, and more taxation has destroyed all incentive for improvement, investment, and positive thinking for the betterment of all the people.

The Bureau of Labor Statistics can furnish you with excellent information to show that historically prices go down after wars and during recessions. But after the price inflations of World War II and Korea prices did not fall. Neither did they fall during last year's sharp recession. This is food for thought, and we must find the means to break this trend. William McChesney Martin, Chairman of the Federal Reserve Board, has said: "This battle against inflation is at a crucial point."

How is it possible for anyone to plan his financial future when we are confronted with the following facts:

Item	1946 price	1958 price	Total rise
			Percent
Milk, quart	$0.17	$0.25	47
Bread	.10	.19	90
Coffee, pound	.34	.93	173
Bus fares	.079	.162	105
Movie tickets	.40	.50	25
Gasoline, gallon	.147	.22	50
Coal, ton	15.97	29.14	82
Steel, pound	.027	.06	122
Copper, pound	.14	.25	78
Lumber, board foot	.04	.12	200
Auto (Chevrolet)	1,081.00	2,600.00	140
Tuition alone (year)	150.00	502.00	235

Consider the impact, on retirees with fixed incomes (and their numbers are swelling annually because of the extension of life expectancy), of the above figures.

What can be done about all this? Let's take a look at what England is doing in contrast. For 11 years after the end of World War II, prices rose there at the rate of 4 to 5 percent a year. People got the idea that continually rising prices was a normal way of life. Then in the fall of 1957 the government took a firm stand against this trend. The traditional weapons against inflation were dusted off and sent to battle. The rediscount rate was allowed to soar to 7 percent. Government spending on capital improvements was cut back to the previous year's level, and a limitation was put on installment buying. A council was appointed to closely watch the results of this program. Recently, that council reported that the program was a success. Installment loan restrictions did check the rise in sales of consumer goods. Higher interest rates and bank credit restrictions did reduce the amount of business borrowings. Government capital outlays restrictions did prevent spending from rising as fast as it had been. Profits also rose more slowly. There were few wage increases, and the average rise was smaller. There was an easing of demand for labor. The number of married women working declined and so did overtime. But unemployment never went much higher than 2 percent, and production went up a little. Inflation was dampened down, and prices leveled off. And no one suffered seriously in the process.

The Wall Street Journal for Thursday, April 2, 1959, on page 24 contains an article titled "British Report Indicates Nation Has Come Out of Slump Into Biggest Boom in Years." It is well worth your reading as it is further evidence that inflation can be controlled with commonsense thinking and without crushing any segment of the public. The article states that "prices hardly changed at all last year."

I do not intend to have this letter contain nothing but destructive criticism and without some note of suggestions for positive action for the immediate future, so here are some steps that I believe should be taken:

1. The Congress must insist that the Government live within its means.

2. The executive branch must be able to live within a balanced budget and work toward eliminating present debt.

3. The Federal Reserve Board must be encouraged to throw its weight against inflation without fear of criticism from any quarter.

4. Organized labor must be made to understand that wage increases, including fringe benefit increases, be geared to increased productivity.

5. Businessmen, especially large industrial companies, must exert every effort to hold prices down.

6. The public must be willing to accept a program leading to a stable price level and thus must be properly informed so that it would be willing to accept it.

I feel that a sound program against inflation will also serve to cure many of our other ills, such as juvenile delinquency; for, among other things, it will alleviate the necessity for the married woman with children to continue working and stay at home where she is sorely needed.

Sincerely yours,

GERBER PRODUCTS CO.,
MILBURN E. WILSON,
Office Manager.

Loyalty Oaths and Patriotism

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. ROOSEVELT. Mr. Speaker, this session has seen the introduction of measures to amend the National Defense Education Act to eliminate the negative disclaimer affidavit, a provision which is a negative approach in the matter of loyalty and in contradiction to our constitutional concepts.

One of the most able speeches on the subject of loyalty was made by my charming and competent colleague, Congresswoman EDITH GREEN, on the floor of the House on March 9.

As one of the many who has introduced legislation to amend the National Defense Education Act in the matter of the negative disclaimer affidavit and as one who commends my associate for her incisive and needed comments, I am more than pleased to bring to the attention of my colleagues the following editorial which appeared in the March 31, 1959 issue of the monthly publication of

the United Papermakers and Paperworkers, AFL–CIO:

A LECTURE LONG DUE

Our most enjoyable reading last month was the speech of Congresswoman EDITH GREEN, Democrat of Oregon, attacking the notion that loyalty oaths are a protection against communism.

A former schoolmarm, Mrs. GREEN delivered what was, in effect, a lecture on constitutional intent to her colleagues—more than that, it was a lesson in positive (as opposed to negative) patriotism.

She directed their attention to that section of the Constitution which says "no religious test shall ever be required as a qualification to any office or public trust."

Then Mrs. GREEN explained the climate in which that constitutional guarantee had been drafted. The Founding Fathers, she explained, "hated and despised the only test oaths with which they were familiar in the age of autocracy in which they lived. That age was an age of intolerance in the religious field. They were determined that no such nonsense would plague the country they had founded.

"It has remained for our time to revive the principle of the test oath, not attaching it to religion, but to patriotism, and equally sacred emotion, and one, which like religion is too fine an expression of man's highest aspirations to be made a vehicle for the fears of the insecure."

The Oregon Congresswoman went on to point out that the first to seek camouflage by taking such an oath would be the very persons against whom the oath is directed. She reminded the House that the Communist "is bound in conscience by no oath."

On the contrary, she said, "It is not the Communist who refuses such oaths, it is the dedicated American, true to the grand oath which Jefferson swore—the oath of eternal hostility to every form of tyranny over the mind of man."

Mrs. GREEN places disclaimer oaths in their proper perspective. They are not merely un-American, they are patently anti-American. They represent an affront to the democratic heritage of this country, a heritage which protects the dissenter, the unorthodox, the nonconformist, and, in that protection, demonstrates the fundamental strength of our free political system.

Scripture and Benediction Offered by Acting Chaplain Rev. Charles W. Holland, Jr., B.D., Th. M., at the Dedication of the Robert A. Taft Memorial Tower, April 14, 1959

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Scripture and benediction offered by Acting Chaplain Rev. Charles W. Holland, Jr., B.D., Th. M., at the dedication of the Robert A. Taft Memorial Tower, April 14, 1959.

The Word of God says, "And even things without life giving sound, whether pipe or harp, except they give a distinction in the sounds, how shall it be known what is piped or harped?"

Omnipotent and omniscient God, eternal Father, we know that for centuries bells have been used for various purposes. They have been used to summon men to battle and yet again to ring out the message of liberty, they have been used to herald the approach of a great catastrophe, and yet to summon men to the peace and joy of worshiping Thee in Thy complete righteousness and purity.

We realize if there should be dissonance of jarring and unmodulated instrumental sounds, the message of these bells would not be understood. Dear God bless Thy children; that like these bells we might always sound a clear note which would echo the high ideals, rock-like integrity and unconquerable commonsense, of the one for whom this memorial has been erected. God bless his family, bless our President, and all the leaders of our great Nation to Thy glory, in Thy precious name we pray. Amen.

Improving State Welfare Programs

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FORAND. Mr. Speaker, although great improvement has been made in the welfare programs in this country during the past quarter century, experience has shown that much more needs to be done, especially in the State programs.

I am today introducing a bill providing for such improvements.

This bill is designed to alleviate the plight of those many families throughout the country who find themselves in need as a result of unemployment and other factors beyond their control and for whom no provision is now made under Federal law. This bill, which would authorize the Federal Government to assist the States in meeting the full range of needs now confronting their public welfare agencies, is similar to bills I have introduced in previous Congresses but is given a new urgency by the persistence of unemployment currently affecting some 5 million American workers and their families.

This bill, entitled the "Public Welfare Act," incorporates the recommendations of leading national welfare organizations representing both public and voluntary agencies. Taken together with the bill, H.R. 4700, previously introduced by me to extend health benefits to beneficiaries of the old-age, survivors, and disability insurance program and the bill establishing minimum benefit standards in the unemployment insurance program which I am likewise supporting, this bill rounds out the program of immediate improvements in our total social security program urgently necessary to meet the most pressing needs today confronting large segments of our population. As such, the basic provisions in the bill have the support of the American Federation of Labor and Congress of Industrial Organizations; the American Public Welfare Association; the National Association of Social Workers, and other groups representing those affected by our social security measures.

We are rightfully proud of the steady growth in coverage and benefits under the social insurance aspects of the social security program and the extent to which this has reduced dependence on public assistance among the able-bodied aged, surviving widows, and the older disabled group. Last year improvements were also made in the financing of public assistance and in the child welfare program. But pride in progress cannot be allowed to blind us to the areas of insecurity and hardship that still remain. Extensive and persistent unemployment over the past year has served to remind us of the vulnerability of our working people to the hazards of the modern economy. We must move toward a national policy which, first, reduces the chances of any individual or family in the United States becoming needy but, second, provides its own built-in assurance that if this contingency befalls, provision will be made to meet those needs. This is the purpose of my bill.

Public welfare provides the ultimate protection to individuals under our total system of social security. When all other resources fail, it is to the State and local public welfare agencies that an individual must turn for help. If a worker cannot find a job, when his unemployment insurance rights and savings are exhausted he becomes dependent upon public assistance. If a worker or farmer or small businessman becomes ill, he may find his savings quickly exhausted in heavy medical and living expenses. Then he has no choice but to turn to his State or local public welfare office. But under the present assistance provisions of the Social Security Act the Federal Government takes no responsibility for assisting the public welfare agencies in meeting the needs of people who do not qualify under the four existing categorical programs of old-age assistance, aid to dependent children, aid to the blind, and aid to the permanently and totally disabled. As a result, in most States provision for the needy unemployed is miserably inadequate and even, in some localities, virtually nonexistent. In other States with a heavy incidence of unemployment, funds for the purpose have been repeatedly exhausted despite every effort to make adequate provision. It is self-evident that the States with heavy and persistent unemployment not only have a disproportionate need but are in the worst fiscal position to meet that need from State and local resources.

Unemployment is an attribute of the national economy, and the development of policies to assure individual security is a national responsibility. The Federal Government should not only take steps to prevent unemployment and to assist depressed areas in making needed economic readjustments, but it should also assume its fair share of responsibility in protecting all its people, wherever they may live, against its hazards. The first line of defense is through a strengthened unemployment insurance program; the second is through a

strengthened program of public welfare which is the purpose of this bill.

Public welfare, under our Federal system of government, is the primary responsibility of the States and their political subdivision. The grant-in-aid system, which has developed extensively as an instrument of public policy since 1933, is designed to combine the advantages of decentralized administration with the broader financial base of the Federal Government and the need for basic national programs in areas of national concern. My bill, following this extremely successful principle, is designed to give the States the maximum latitude in adapting their own public welfare programs to changing needs. It does not affect the existing provisions of titles I, IV, V, and XIV of the Social Security Act but rather offers the States the option of combining all or part of these specialized public welfare programs for particular groups into a comprehensive program of aid for all needy persons and of needed social services. The administrative and policy advantages of such a simplified plan are obvious, especially to the individual in need of public welfare aid, who today often finds himself bewildered by a variety of agencies, eligibility standards, and requirements. Many State welfare policymakers and administrators would welcome the opportunity to move in this direction but are today prevented by the limitations of Federal law. On the other hand, there is no compulsion upon the States under my proposal to abandon any specialized welfare program which is felt to be serving the best interests of a particular group.

The rapid growth in our social insurance programs has created a substantial change in the character of the public welfare function which has not yet been reflected in changes in Federal and State law. Increasingly, public welfare is being called upon to meet the unusual or unpredictable situation or to provide for needs which have not yet been provided for through social insurance or other preventive measures. Thus, the nature of the public welfare task tends to change in emphasis. Today, for example, many retired OASDI beneficiaries are obliged to turn to public welfare for help when they become ill. But soon it is hoped we can provide hospital and related benefits for these people as a part of the insurance program. No one wants a large public welfare program, but we do want one which is sufficiently flexible and comprehensive to meet actual need as it occurs. The only way to do this is through legislation which provides the machinery, the policies, and the built-in financing provisions to meet such needs whenever they arise. We do not want to be confronted aagin with the need for emergency legislation as we were in 1933—or even last year, or again this year, with our unemployment insurance program. We want a strong institutional structure that can be quickly adapted to actual needs whether they arise from economic factors, social change, or disaster situations.

The State public welfare agencies have been handicapped in adapting their own programs and in making the best use of their own resources and personnel by the rigid compartmentalization and restrictive scope of Federal aid. This bill proposes to remedy this situation by providing the optional alternative of a single public welfare plan with more adaptable provisions relating to eligibility, financing, and scope of service. In return for this greater flexibility, States are required to provide assistance for all persons who qualify within their own standards of need without arbitrary exclusions such as those based on residence. The bill also recognizes the importance of individual determinations and service as an intrinsic element in all public welfare functions thus making it possible to bring about a closer coordination of all welfare programs in a single public welfare agency. The advantage of such a simplified approach to the person who needs help to the administrator, and to the public constitutes a major argument for giving early consideration to this proposal.

In the statement which follows a more detailed explanation of the provisions of this bill is given.

First. General: The bill provides a new title XVI for the Social Security Act under which a State could submit a comprehensive public welfare plan for assistance to needy persons and welfare services as defined in the bill. States that wish to do so could continue to operate programs of assistance under the existing provisions to titles I, IV, X, and XIV but the new matching provisions described below are applicable only to title XVI and the usual provision is made to preclude assistance payments to any individual under more than one title of the act. For most States the scope, flexibility, and financial provisions of title XVI would probably prove an inducement to change, but the optional feature would ease the transitional process and make it possible for a State, which wished to retain certain programs—as, for example, aid to the blind—on the present basis, to do so.

Second. Coverage for assistance: This bill makes it possible for a State to receive Federal aid for assistance to any needy person, including those who are in need because of unemployment, and not exclusively for those over 65, blind, permanently, and totally disabled, or those meeting the restrictive definition for aid to dependent children—as at present. Administration by categorical groups would, however, be optional with the States, provided the basis for establishing the categories was reasonable. Assistance could not, however, be paid to persons residing in public institutions other than medical institutions nor to patients in an institution for tuberculosis or mental disease.

Third. Financial ceilings or the maximum average payments subject to Federal aid would be increased to $75 a month for all adults and $50 for all children. Present maxima in old age assistance, aid to the blind, and aid to the permanently and totally disabled are based on an average of $65 a month; in aid to dependent children the present ceiling is an average of $30 for each individual.

Fourth. A new and simplified system of matching would replace the present formulas. Under the proposed formula the total of all assistance payments—within the average ceilings as shown in 3 above—would receive a 62 percent Federal reimbursement in any State whose average per capita income was the same as that of the United States as a whole. For States above this average the percentage of Federal reimbursement would be proportionately decreased but would in no case fall below 50 percent. For States with a lower than average per capita income the percentage of Federal reimbursement would be proportionately increased but the maximum level of reimbursement would be 80 percent. Under this formula the needy in both the high and low income States would benefit: The former by the higher reimbursable ceilings and the latter by the higher rate of reimbursement.

Fifth. Welfare services provided by the public welfare agency would be subject to the same rate of reimbursement as assistance payments. Increasingly those persons turning to public welfare agencies for aid are those with special needs requiring knowledgeable service for their solution. Such service can often help speed the return of the individual to self-support, secure for him the care he needs from other sources, prevent serious or long-term future difficulties, and reduce the cost to the public of extended dependency. For example: Many people needing medical care or rehabilitative service do not know what provisions are available or how to go about applying for them: Many people are lingering in general or mental hospitals simply because they have no other place to go—and no one to help them find such a place; many people living in areas where their former source of livelihood has ceased to exist need help in moving to areas of new opportunity; many children might be saved from juvenile delinquency or other forms of costly social maladjustment if their parents received helpful guidance at the crucial time or—in cases where substitute family care was necessary—the child welfare services of the public welfare agency could make prompt and adequate provision for their adoptive or foster-care placement. An advantage of this bill to the child welfare program is the fact that it permits child welfare workers to apply assistance funds to the placement of needy children requiring foster care. The grave injustice done to this neediest group of children under the present act, which denies assistance to children not living with a close relative, was pointed out by the welfare report of the Commission on Inter-Governmental Relations.

Sixth. Simplified administration, with consequent benefits to those requiring public welfare aid as well as to those who do its work and pay its cost, is provided in this bill in several ways. Matching on the average of all payments, the optional elimination of categorical administration, and the provision of the same reimbursement formula for all types of aid would permit reduction in paperwork with subsequent reduction in the cost of overhead administration. The bill also requires that the program be administered by a single agency at each level of government. From the point of view of the individual or family requiring help the advantage of a single agency is obvious.

Seventh. Availability of benefits: The bill make is a condition of the broadened base of Federal financial assistance provided by this new title that its benefits should be available to all qualified persons without residence or citizenship requirements. No public welfare program can be considered to be fulfilling its function as the ultimate guarantee against individual need if it arbitrarily excludes needy persons solely because of their length of residence. The very factors that make it essential for the Federal Government to share the broad public welfare responsibilities of the States make it equally essential that such aid be available to all.

Eighth. The Virgin Islands and Puerto Rico: This bill rights a long-standing injustice toward our fellow American citizens in the Virgin Islands and the Commonwealth of Puerto Rico by extending to these jurisdictions the same program provisions as apply in the States and Territories.

Ninth. Confidential assistance records: This bill restores to all persons receiving assistance under this title the protection formerly required by all titles that the facts concerning their receipt of assistance be treated as confidential information.

Tenth. Personnel training: The bill recognizes the serious shortages in qualified public welfare personnel by providing special financial aid on a continuing basis for training such personnel.

The Advent of the Common Law of England in the New World

EXTENSION OF REMARKS
OF
HON. THOMAS N. DOWNING
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DOWNING. Mr. Speaker, on May 17, 1959, the Virginia State bar will commemorate an event of great historical importance to this nation with a celebration at Jamestown, Va.

The ceremony on that day will honor the first introduction of the common law of England to the new world when the first Colony at Jamestown was established in 1607. The Governor of Virginia, the British Ambassador and the President of the American Bar Association will speak in honor of the occasion.

The common law which we inherited from England is the source of true justice and it is proper that this great and significant event be appropriately honored.

The General Assembly of the Commonwealth of Virginia, believing that the people of our great Nation should forever cherish and remember this important event in our national history, passed the following resolution and the Governor, pursuant thereto, issued the following proclamation, all of which I make a part of this RECORD:

SENATE JOINT RESOLUTION 3

Joint resolution relating to the advent of the common law of England in the New World

Whereas the common law of England was first introduced in the New World when the colony at Jamestown, Va., was established in 1607, by virtue of provisions of the charter granted to the Virginia Company of London in 1606; and

Whereas the Virginia State bar will commemorate this event of great historical importance with a celebration at Jamestown on May 17, 1959; and

Whereas the principles of the common law form the fundamental basis for the system of justice enjoyed by the people of Virginia and of its sister States: Now, therefore be it

Resolved by the Senate of Virginia, the House of Delegates concurring, That the General Assembly of Virginia calls to the attention of the people of Virginia the importance of the advent of the common law in this land in the year 1607, and of the principles of justice, fair dealing and liberty thereby established in this land.

ADVENT OF COMMON LAW—JAMESTOWN 1607 DAY

The common law of England was the growth of many centuries and its aim was to provide justice and fair dealing. Without such law, the great charters of English constitutional liberties would have offered little protection and a sturdy and independent race of men would have been at the mercy of those who ruled.

In England, the common law was the law of the land and the declaration that it would be in full force and effect in the Colony of Virginia was contained in the first charter granted in 1606 to the Virginia Company of London. While other colonists, in time, claimed the common law as a measure of rights and of protection when they migrated to this country, the settlement of Jamestown in 1607 marked the beginning of a fundamental system of laws for this Nation.

The Convention of 1776, which directed the Virginia delegates to the Continental Congress to propose a resolution declaring our separation from England, ordained in general convention at Williamsburg on July 3, 1776, that the common law of England and all acts of Parliament made in aid thereof prior to the fourth year of the reign of King James I, and which were of a general nature, shall be in full force until altered by the legislature. This ordinance of convention may still be found in the code of Virginia.

The other original States also adopted the common law and today, except as modified by statute, its principles are in force in all of the States of the Union other than Louisiana.

The Virginia State bar has planned to commemorate the advent of the common law through Jamestown by erecting a tablet in the Old Church on Jamestown Island at dedication services to be held on May 17, 1959.

Now, therefore, I, J. Lindsay Almond, Jr., Governor of Virginia, do hereby designate the 17th day of May 1959, as the Advent of Common Law—Jamestown 1607 Day and do call upon the people of Virginia to commemorate this ocassion and give thanks for their rich heritage of freedom, long protected and guarded by the common law.

Given under my hand and the lesser seal of the Commonwealth, at Richmond, this 11th day of February, 1959, and the 183d year of the Commonwealth.

J. LINDSAY ALMOND, JR.,
Governor.

By the Governor:

MARTHA BELL CONWAY,
Secretary of the Commonwealth.

Nixon Adds to Lead Over Rockefeller

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. SPRINGER. Mr. Speaker, I attach herewith the results of the most recent Gallop poll on the standing of Vice President NIXON with the voters of the country, as reported in an article from the Washington Post of Friday, April 10. It shows a net increase in his popularity of three percentage points over the second-place runner since January of 1958.

I also append herewith another article from the Washington Post of the same date by U.P.I. showing NIXON with a 3-to-1 lead with the Republican county chairmen throughout the entire Nation. This condensation of a poll taken by Look magazine also indicates that in the State of New York, of the 30 GOP leaders, 13 were for NIXON, 15 for Rockefeller, and 2 expressed no opinions. This is indeed a splendid showing on the part of the Vice President in a State where his opponent is the Republican Governor:

[From the Washington Post and Times Herald, Apr. 10, 1959]

NIXON ADDS TO LEAD OVER ROCKEFELLER

(By George Gallup)

PRINCETON, N.J., April 9.—While his chief rival, Gov. Nelson Rockefeller, struggled with tax problems in his home State, Vice President NIXON consolidated his position as the No. 1 choice of Republican voters for their party's 1960 nomination.

NIXON's popularity for the nomination has remained unchanged since the first of the year.

Although still in second place, Rockefeller has lost ground since January—a period during which he championed the politically controversial cause of increased taxes for New York State voters.

Here are the standings today compared with those recorded in January.

Choice of candidates (Republicans only)

	Today	January 1959
	Percent	*Percent*
Nixon	56	56
Rockefeller	23	27
Lodge	8	6
Stassen	7	3
Others	2	3
None; no opinion	4	5

In an open primary test immediately following the November 1958 elections, the Vice President was in first place among Republican voters with 51 percent of the vote while Governor Rockefeller, in his initial appearance on the list of prominent Republicans, was in second place with 31 percent of the vote.

Perhaps of equal significance to the trend of sentiment in Republican ranks is the shift recorded since the November elections among the independent voters.

In November, Rockefeller and NIXON were in a tie for first place as the independent choice for the GOP nomination in 1960—each had 29 percent of the vote.

The following table shows the trend of the independent sentiment since then—as recorded in January and in the current test:

Choice of candidates (independents only)

	Today	January 1959
	Percent	*Percent*
Nixon	41	32
Rockefeller	23	31
Lodge	18	13
Stassen	9	11
Others	2	1
None; no opinion	7	12

Governor Rockefeller's tax program, which was at first attacked from both Republican and Democratic quarters, has since been widely hailed by the press as a great Rockefeller victory.

Just what impact, if any, this will have on his popularity across the Nation will be measured in future Gallup poll tests of potential Republican candidate strength.

[From the Washington Post and Times Herald, Apr. 14, 1959]

NIXON LEADS ROCKEFELLER 3–1 WITH COUNTY LEADERS

NEW YORK, April 13.—Three out of four Republican county leaders said in response to a survey that they favored Vice President RICHARD M. NIXON over New York Gov. Nelson Rockefeller for the GOP Presidential nomination in 1960, it was disclosed today.

Letters asking GOP officials to state their choice between the two men were sent out by Look magazine.

Of 1,957 replies received, the score was 1,374 for NIXON, 469 for Rockefeller, with 114 noncommittal.

Rockefeller leaped into the national limelight last fall when he defeated Democratic Gov. Averell Harriman while Republicans throughout the country were taking a trouncing. His first act as Governor was to push a record spending and taxing program through the GOP-controlled State legislature.

The magazine said its survey disclosed that NIXON's greatest support came from the larger States such as Pennsylvania, California, Michigan, Illinois, and Ohio, while Rockefeller received his heaviest backing in Southern States.

"Rockefeller has it 2-to-1 over NIXON in Alabama," the magazine said. "The two men just about break even in Arkansas. NIXON has the edge in Georgia, but there is great interest in Rockefeller, and this is true generally in other Southern States."

The magazine said that of the 30 GOP leaders in New York who replied to the survey 15 were for Rockefeller, 13 for NIXON, and 2 expressed no preference.

Integrity and Courage—Address by Herbert Hoover at Dedication of Taft Memorial

---

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include the following address by former President Hoover.

INTEGRITY AND COURAGE—ADDRESS BY HERBERT HOOVER AT DEDICATION OF THE ROBERT A. TAFT MEMORIAL, WASHINGTON, D.C., APRIL 14, 1959

Possibly I knew Robert A. Taft during his public life longer than any living person. But I never think of him as Robert. As with millions of Americans he was Bob to me. And, on this occasion, I shall speak of him as Bob, as I have always done during the 36 years of our close friendship and deep affection.

When our country joined the First World War in 1917, Bob was rejected for service in the Army. Seeking some place for service, he joined the legal staff of the war organizations under my direction. That included not only service in Washington, but also service in Paris during the negotiation of the Treaty of Versailles. That great conference on the fate of the world was going on almost next door. Part of Bob's duties were to work with the American delegation and, at times, the delegations of other nations. Here began his first experience in international conflicts.

In those overcrowded days in Paris, the principal members of my staff and I dined together as the only moment when we could consider our overall plans and policies. On one of these dinner occasions Bob joined in with an impressive advocacy of the League of Nations. One of his observations I remember well was an analysis of article 10 of the Covenant and his fears that it might be a stumbling block in Senate ratification.

Later I watched with great pride his rise in public life through the Ohio State Legislature to the U.S. Senate, and his manifold services to our country ever since.

But it is not my purpose to discuss his great record of service to the American people. That has been done and will be done again many times.

As indicative of Bob's character, it is not inappropriate for me to relate my relation with him in his last days.

As Bob was very ill some of us had urged that he come to New York to consult specialists of the medical profession. On June 12, 1953, he hobbled into my apartment on crutches saying he had arranged the appointment for a checkup at a leading hospital later in the day. During 2 hours we mainly reviewed our American situation at home and abroad. He gave not the slightest indication of anything other than that he expected to continue in the battle for his ideas and principles.

I visited him at the hospital where again his conversation bore on these subjects which dominated his mind.

I thought he intended to remain in the hospital where he had the aid of the leaders of the medical world.

But on June 24, a few days after these visits, I attended a small conference in Washington on certain public matters. To my astonishment, Bob was there and taking an active and, as usual, a highly intelligent part. I chided him for leaving the hospital. But he stated he must attend to some important matters in the Senate. Incidentally, 3 days later, he hobbled into the Senate and asked permission to introduce an earlier speech on justice to Poland.

On July 1, I went to Washington especially to see him and urge that he return to the New York hospital. His reply, which remains indelible in my mind, was:

"My friend, you know what is the matter with me. I know what is the matter with me. I am going to die with my boots on."

This anecdote of his courage and devotion to his country was a passing incident. But to me, who had known him from boyhood, this was but another example of his magnificent courage and devotion which never wavered.

Bob's other outstanding quality of character was his intellectual and moral integrity.

His sense of duty, his acknowledgment of obligation, his essential loyalty and patriotism were unusual in a day when men compromised their souls for the crumbs of popularity.

He believed in political parties as a foundation of our elective system. To the end he remained an outstanding leader of the Republican Party. But his mind soared above the party. He regarded himself responsible to safeguard this Nation from the corrosive poisons that were a veritable fallout from the socialistic and communistic bombs being hurled upon this earth. These poisons not only came from Soviet Russia, but they also came form centers of irresponsible intellectualism which had made a creed of change for no greater purpose than to change. He became in the Senate a bulwark against those forces of reaction that would tear the United States into sects and cults of warring theorists. He brought to the social problems of his country a trained and practical mind.

In these late years of my life, I look back with a glowing memory of those men who early joined with me in the work of relieving human beings from starvation and pestilence. Young Bob Taft came into this work early in his life and from it he learned to what depths of misery human beings can be made to sink, not only by the course of events, but by faulty thinking, by whimsical decisions on the part of those who are in control of governments.

This early experience gave much to Bob's direction. His interest in the rights and dignity of man was paramount; his efforts for the worker and their families were endless; his concern with housing and health, untiring.

Robert A. Taft was an official with a social conscience. He not only would not desert his post; he never deserted his people.

Of course, he bore his cross. He was denounced as an isolationist, as a reactionary, as an enemy of the poor and a friend of the rich. These attacks never shook him, because of his philosophy and moral attitude toward life. His conscience was always clear. He was one who lost no sleep nights worrying that he would be found out. He lost much sleep over the fate of his country. He knew to the end that his was a moral attitude toward life and men and that he

had given to his country his last full measure of devotion.

And so upon this hill where long he served the American people stands this monument not to his greatness but to his virtue. Who is great and who is small in a Republic? It hardly matters. What does matter is that the essential virtues among men and women which made this country strong, which built great cities and verdant farms out of a wilderness, which stand for moral principles in public life, be preserved by reminders of such men as Robert A. Taft.

Fortunately, in the belfry of this monument there is a magnificent carillon.

When these great bells ring out, it will be a summons to integrity and courage.

The Ridiculous Case of Mr. Daly

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Virginian-Pilot, Norfolk and Portsmouth, Va., on Monday, March 23, 1959:

THE RIDICULOUS CASE OF MR. DALY

If the mayor is shown on a television newscast greeting a visiting beauty queen in his official capacity, his opponent for office is entitled to equal time. If the latter can't find a beauty queen to match the mayor's, he must be given an opportunity to do or say something—anything—to square accounts. And this something must be masqueraded before the public as news.

This is what the Federal Communications Commission has said in interpreting the law in the Lar Daly case in Chicago. President Eisenhower is right when he terms the effect of the decision "ridiculous." Frank Stanton, president of CBS, is right when he calls it a serious abridgement of freedom of the right to report news.

Briefly, Daly, a perennial candidate for office, objected when the two major candidates for the Chicago mayoralty nomination—one of them the incumbent mayor himself—were depicted in regular news telecast filing nomination papers, and when the mayor was shown greeting President Frondizi of Argentina at the Chicago airport, Daly won equal time on a regular news telecast.

None of the newscasts in question featured political speeches. They simply reflected the station's legitimate efforts to cover what is believed to be news. In a very real sense this vital editorial right was circumscribed in the Daly case. As Mr. Stanton pointed out, a station which had to devote equal newscast time to the dozens of candidates in a primary would have to solve its problem by presenting no primary news at all.

The trouble stems from the wording of section 315 of the Federal Communications Act, not from the FCC, whose Chairman is in favor of changing the act. The purpose of the pertinent part of the section is to provide equal time for candidates who wish to make political speeches, so that no single political view can black out all others on the television networks. But the section is worded loosely, as indicated by this excerpt from the FCC's rules and regulations:

"But if any licensee shall permit any candidate to use its facilities, it shall afford equal opportunities to all other such candidates for that office."

No distinction is made between equal time for a political speech initiated by the candidate and equal time on a legitimate newscast initiated by the station. It is a distinction which must be made.

Remedial legislation has been introduced in the Congress by Representative GLENN CUNNINGHAM. It should be acted upon favorably by the lawmakers.

Art Wall, Jr., Masters Open Golf Champion

EXTENSION OF REMARKS
OF
HON. STANLEY A. PROKOP
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. PROKOP. Mr. Speaker, the people of the 10th District of Pennsylvania are very proud of the recent achievement of one of our neighbors, Art Wall, Jr., of Honesdale—Wayne County—Pa., who was recently crowned as the Master Open Colf Champion at Augusta, Ga. Art Wall, Jr., is a true friend, a cooperative neighbor and by all means, a master golfer.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Scranton Tribune, Apr. 7, 1959]

ART WALL, MASTERS CHAMPION

All northeastern Pennsylvania delighted Sunday in the tremendous feat of Art Wall, Jr., the native son and resident who won the Masters Golf Tournament at Augusta, Ga., one of the premier golfing events of the year. A victory by the modest Honesdale competitor would have been welcomed under ordinary circumstances. But the manner in which this triumph was fashioned made his success all the more thrilling.

Wall's many friends and followers in this region were quite satisfied with his performance during the first 3 days of play. Because he was 6 strokes behind the leaders after 54 holes, they were confident he would finish well up in the money. It was felt, however, that his winning the tournament was out of the question.

But Mr. Wall took care of that. In what has been described as the most fantastic finish in the history of the event, Art went over the last 18 holes with a 6 under par 66. The sensational performance overtook the field and withstood the best efforts of the other leading golfers who finished behind the Honesdale athlete.

It has been the Tribune's privilege to record the golfing prowess of Art Wall for many years. His name has been on the Tribune's sport pages since boyhood, when he began making holes in one on the course in Wayne County. Wall's uncanny ability to roll up a succession of holes in one made him a subject of a Ripley "Believe It or Not" feature some years ago.

Wall's progress took him through any number of tournaments in this part of the country and he was a collegiate star at Duke University. Upon entering professional ranks he worked with determination to win standing in one of the most competitive of all sports. His advance was steady but not spectacular.

This year, Art Wall's name has been on the lips of every golf devotee in the land. His winning of the Bing Crosby tournament and other successes have made him the leading money winner this year and he solidified his position Sunday by scoring the greatest single triumph of his career. The Tribune is happy to join in the congratulations due Art Wall, the 1959 Masters champion.

[From Scranton Times, Apr. 6, 1959]

REASON TO BE PROUD

All of northeastern Pennsylvania and particularly his native Wayne County can share in the pride at the performance of Art Wall Jr., in capturing the coveted Masters golf tournament championship at Augusta, Ga., yesterday. The victory, achieved under most dramatic circumstances, brought Wall what is probably the richest prize open to the pros of golfdom.

The Masters champion, who had blazed a trail of glory in the other major links tournaments in which he had participated this year, has thus brought added luster to his hometown of Honesdale. What with Gen Lyman Lemnitzer having just climaxed a distinguished military career by his appointment as Army Chief of Staff, the Wayne County seat certainly has reason for being proud these days.

"Blame Yourself if Democracy Isn't Responsive"—Excerpts From a Speech by Clark Mollenhoff, of the Cowles Publications, Delivered at the University of Cincinnati, March 3, 1959

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. SCHWENGEL. Mr. Speaker, it has been my privilege to read the speech which Clark Mollenhoff, of the Cowles publications, delivered at the University of Cincinnati on March 3 of this year. His address was entitled "Blame Yourself if Democracy Isn't Responsive."

From this title, you will know that this address deals with the apathy which exists among large segments of the voters throughout the land. This is an aspect of democracy which concerns me very much, and with Mr. Mollenhoff's permission, I have taken certain excerpts from the speech and ask consent that they be reprinted here so that others can search their souls, as I have done, to try to find ways in which to dissipate this apathy. Excerpts of the speech follow:

Unless this is a highly unusual student body, you are probably a pretty good cross-section of the complacency of America in politics.

You are the highly respectable. You feel you know what democracy means, because you are students and have read about it in textbooks. Democracy is something that George Washington, Thomas Jefferson, Abraham Lincoln, and a few other assorted heroes established as a part of our form of government. You feel that the battles for democracy are over in this country. You are con-

tent to sit back and enjoy this birthright handed down to you by others.

When you leave the campus, you will vow to be interested in politics because it is the respectable and decent thing to do. You will reason that politics needs people like yourself to overcome the ignorance of the masses. You will regard yourselves as enlightened, as educated and understanding the issues. There will be phrases from your college texts that will stick with you. They will trip off of your tongues, and you will leave the impression among many of your acquantances that you understand government.

Some of you will take the highly practical business approach to politics. You will be the middle-of-the-roaders on everything. You will be understanding of all positions, except any position that might be considered extreme. You will do your best to avoid any comments that are of an extremely critical nature, for there are those who would regard such comments as partisan. You may even try to keep a foot in each political camp, because you think it is good business.

Some of you will be in the political faddists. You will follow the majority. If it is popular to like Eisenhower, you will like him. If it is popular to criticize him, you will follow that line. If it is popular in your circles to dislike Joe McCarthy, you will criticize him on all counts. If it is popular to hate Walter Reuther or Herbert Hoover or Franklin D. Roosevelt, you will obediently comply. It is easier to go along with labels. It is easier to accept a popular view than to do the study necessary to have a balanced judgment. You may follow the line of some columnists who dislike dealing in facts, but regard themselves as dealing in enlightened impressions. This makes it easy to criticize officials for being too rash, or a few weeks later to accuse another official of having failed to produce a dynamic or an imaginative program.

Some of you will become strict partisans. You will fall into a group that terms everything that is disliked as radical or leftwing. Or, you may be the other extreme partisans who find everything the other party does is reactionary.

Unless something jars your sense of duty, only a few of you will have the industry to really work and learn the facts behind the complex problems that face the Nation. Unless someone stirs your conscience, only a few of you will have the courage to try to do something to stop those forces that work constantly to undermine democracy.

I hope that I can stimulate just a little more interest in thoughtful participation in government. Democracy is not necessarily a success in the broad sweep of history unless it continues for many more years to demonstrate that people can and will learn enough to be able to govern themselves. To succeed our system of government needs thoughtful participation by citizens as officeholders, as taxpayers, as witnesses before governmental bodies, and as plain voters. * * *

Law enforcement must depend on the citizens as well as the police, prosecutors, and judges. If our Government is to succeed, the police must be able to depend on reasonable cooperation from citizens who have knowledge of crimes, or other information that is detrimental to society. Citizens must avoid the attitude that there is something dishonorable in telling the truth to law enforcement officials.

If our courts and our congressional committees are to obtain the truth, it is necessary that the citizens respond to subpenas and to the best of their ability relate the facts without trying to exaggerate or minimize the incidents.

As jurors, each citizen has a duty to weight the evidence carefully and apply reasonable standards under the instructions of the court. If our judicial system is to work and command respect, it must not be thrown out of balance by jurors who let race, religion, nationality, or personal prejudice influence the verdict. * * *

Voters' lethargy is at fault when there is widespread fraud or mismanagement in government. It cannot be overemphasized that your rights are involved in nearly every major scandal that perverts or corrupts government. * * *

There is a common tendency for voters to pay little attention to government. They drift, and they rationalize their lack of interest by explaining that they fill their role in a democracy by periodically going to the polls when something important is up.

I enjoy seeing voters storming to the polls, infuriated at tax bills. Ready to pull the lever in condemnation of government extravagance. I like to see them march out at election day and slap down a safety commissioner, sheriff, mayor, judge, or Governor who wastes public funds or is associating with the underworld. This is democracy in action, but there is too little such action.

It is not enough to stir out and vote every few years when an issue hits directly at your pocketbook. And, there are times when a good citizen should take a long view of democracy and vote against his pocketbook. It is not enough that you express yourself only when the arbitrary action or improper conduct of a public official happens to prick your sense of right and wrong.

Unfortunately, there are many vital issues that voters ignore. They ignore them because they do not understand them well enough even to see that their own personal rights are at stake.

It isn't just the Teamsters Union that is involved when Teamster Boss Hoffa dips into a million dollar tax-exempt treasury in Detroit to help elect city prosecutors, judges, mayors, and Governors. Your right before those public officials could be at stake.

Involved is your right to aggressive investigations, and aggressive enforcement of the law if you, your family, or your friends are the victims of gunmen, robbers or extortionists. This is vital to you, for you cannot live without fear if your law enforcement officials—police, prosecutors or courts—have been bought or influenced by the money of a corrupt union or a corrupt business.

If you can't count on reasonably good law enforcement, then your person and your property are not safe. If you can't count on fair administration of justice by the courts, then you have lost nearly all of your rights.

There is a slogan which says we should "See America First." I would say that it should be "Know America First."

It is as good to know as much as possible of international affairs, but it is a mistake to become so concerned with studying international affairs that you don't know your own Government.

You must know your own system thoroughly if you are to be in a position to analyze other systems, and compare them with your own. Don't be afraid to look at the weaknesses of your system, because in examining it thoroughly you will come across the strengths that make democracy the best system when there is true citizen participation.

Time is a problem for all of us, so we must give priority to those things most important. Ask yourself what you can actually do about international affairs, and you will find there is little you can do unless you plan on making politics or the foreign service a career. Even our President and Secretary of State are limited in their control of the international scene. They can devise the most perfect program, and have 100 percent support in the United States, but they must still depend on the cooperation of allies and the reasonableness of the Soviet bloc.

I am not saying you should abandon interest in foreign affairs. I am merely saying you should concentrate on those matters which you can influence for a better operating democracy.

Study your city, county, State and Federal Government. Dig into both sides of every major dispute, and try to come up with your own conclusions without relying on the force of public opinion. Don't be afraid of arguing one point of view, and don't be afraid to change your mind when you find from time to time that you've jumped at a wrong conclusion.

In learning to know your local government, you will learn about State Government. In learning about State Government, you will naturally follow some threads into Federal Government. If you have done your homework properly, you will be in a good practical position to examine other governmental systems and to analyze the problems involved in international organizations such as the U.N. or NATO.

If you study no more than the Teamsters Union, you would get a good working knowledge of the real—not theoretic—problems of guaranteeing free elections. You would also see how easy it is for union democracy to be turned into union dictatorship, and it will make you more sensitive to those forces that tend to break down and corrupt democracy in unions and in Government.

I do not intend to paint a picture of bad government, and I do not want to destroy your faith in the many fine officials in government. I do want to impress you with these facts:

Government officials are human beings, and they will be only as good as the voters make them be.

They will be swayed by the human desire for money, and they will rationalize their petty larcency or grand larceny on grounds that they have earned it through public service.

They will stay honest as long as they believe that the voters' and the law-enforcement system will punish dishonesty.

They will be courageous and rise above themselves if they feel only reasonably certain that crusade for clean government will be rewarded by your support.

Those who steal your rights and your money will try to make it appear that your rights are not really in jeopardy. They will try to distort the picture or minimize their thefts and tell you that your financial interest is so small that you should not be concerned. They will feed you the line that "everybody is doing it," and that somehow you are naive or too much of an idealist if you become enraged at a little dishonesty in government.

If you swallow this line, then you are no better than those rank-and-file Teamster Union members who kick in their $5 a month in dues, and declare they don't care what Jimmy Hoffa and his friends do with it. You are not free citizens in a democracy under those circumstances, you are spineless and in danger of becoming conscienceless.

There are crooked officeholders who have been reelected year after year by spreading the word that their opponent is just as big a crook as they are. If you have to choose between two rascals, then throw the old rascal out and take the new one. You can throw the new one out in a couple of years. When you are faced with such a dellimma, vote in rebellion against those proven to have violated the public trust.

Proposed Guaranteed Farm Storage Program

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 15, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Eddy County Crops and Soils Committee Projected Planning Group.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

EDDY COUNTY CROP IMPROVEMENT ASSOCIATION,
New Rockford, N. Dak., April 6, 1959.

The Honorable WILLIAM LANGER,
Judiciary Committee,
U.S. Senate,
Washington, D.C.

"RESOLUTION ADOPTED AT MEETING OF THE EDDY COUNTY CROPS AND SOILS COMMITTEE PROJECTED PLANNING GROUP, MARCH 13, 1959

DEAR SIR:

"1. Whereas the surplus grains are now in the hands of the storage industry; and

"2. Whereas the flow of grain into the commercial market can be stabilized by on-the-farm storage; and

"3. Whereas the farmers would receive a greater share of the consumers' dollar, and at a decrease in the expense to the Federal Government and the consumer; and

"4. Whereas the cost of storage can be reduced by farm storage; and

"5. Whereas CCC could then reduce holdings, thereby deducing surplus; and

"6. Whereas farm storage of vital foods would be an asset in the form of decentralization of vital food supplies in case of national emergencies: Now, therefore, be it

"*Resolved*, That we are in favor of giving the farmer a guaranteed storage program on farm stored grain; whereby a farmer would get his loan price, plus storage, for a period up to April first on the third year following the harvest of that crop. The loan price plus storage would be paid at date of loan. If at any time the farmer redeemed his grain before this date, he would be liable for the full price of the loan plus interest. If at any time the Government called the grain in, the farmer would not be liable for any storage used."

If at any time the Government wishes to cut acreage; then price of commodity should go up in the same percentage ratio; this being in line with manmade supply and demand.

Sincerely,

A. J. MULLENBERG,
Chairman, Crops and Soils Committee,
Eddy County Projected Planning.

Now be it resolved that the above resolution be forwarded to:

The Honorable Dwight D. Eisenhower, President of the United States, Washington, D.C.

The Honorable Ezra Taft Benson, Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C.

The Honorable ALLEN J. ELLENDER, Chairman, Agriculture and Forestry Committee, U.S. Senate, Washington, D.C.

The Honorable HAROLD D. COOLEY, Chairman, Agricultural Committee, House of Representatives, Washington, D.C.

The Honorable JAMIE L. WHITTEN, Appropriations Committee, House of Representatives, Washington, D.C.

The Honorable W. R. POAGE, Agricultural Committee, House of Representatives, Washington, D.C.

The Honorable DON L. SHORT, Agriculture Committee, House of Representatives, Washington, D.C.

The Honorable MILTON R. YOUNG, Agriculture and Forestry Committee, U.S. Senate, Washington, D.C.

The Honorable QUENTIN N. BURDICK, Interior and Insular Affairs, House of Representatives, Washington, D.C.

The Honorable HUBERT H. HUMPHREY, Agriculture and Forestry Committee, U.S. Senate, Washington, D.C.

The Honorable LEE METCALF, Ways and Means Committee, House of Representatives, Washington, D.C.

Mr. Glen Talbott, State president, North Dakota Farmers Union, Jamestown, N. Dak.

Mr. James Patton, National president, Farmers Union, Denver, Colo.

Mr. Charles B. Shuman, president, American Farm Bureau Federation, 2300 Merchandise Mart, Chicago 54, Ill.

Mr. R. D. Magil, president, North Dakota Farm Bureau, Verona, N. Dak.

Mr. Herschel D. Newsom, master, National Grange Headquarters, 744 Jackson Place NW., Washington, D.C.

Mr. M. W. Thatcher, general manager, Grain Terminal Association, St. Paul, Minn.

The Honorable John Davis, Governor of North Dakota, Capitol Building, Bismarck, N. Dak.

The Honorable FRANK CARLSON, U.S. Senate, Washington, D.C.

The Honorable WILLIAM LANGER, Judiciary Committee, U.S. Senate, Washington, D.C.

The Honorable ODIN LANGEN, Government Operations Committee, House of Representatives, Washington, D.C.

The Honorable VICTOR L. ANFUSO, Merchant Marine and Fisheries Committee, House of Representatives, Washington, D.C.

Mr. O. S. Stauffer, president and publisher, Capper Puplications, Inc., 121–123 W. Eighth Street, Topeka, Kans.

Mr. Dick Hanson, editor, Successful Farming, 1716 Locust Street, Des Moines, Iowa.

Mr. Lane Palmer, managing editor, Farm Journal, Inc., Washington Square, Philadelphia, Pa.

Mr. W. D. Hoard, Jr., general manager, 28 Milwaukee Avenue, West, Fort Atkinson, Wis.

Mr. R. E. Nicholson, general manager, the Dakota Farmer, Aberdeen, S. Dak.

Mr. William H. Kircher, managing editor, the Farmer, 55 East 10th Street, St. Paul, Minn.

Mr. Frank Waddle, editor, Better Farming Methods, Mount Morris, Ill.

Mr. Joseph E. Wills, superintendent, Senate Press Gallery, 2907 John Marshall Drive, Arlington, Va.

Mr. William J. Donaldson, Jr., superintendent, House Press Gallery, 3730 Brandywine Street, Washington, D.C.

Letter From Polish Refugee

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following letter from a Polish refugee, Mr. Tadeusz Gasowski of Detroit, Mich., for whose relief I introduced a private bill which passed the House and Senate during the 85th Congress. I thought this letter would be of interest to all Members of the House since it indicates just how much the people behind the Iron Curtain look to this country for encouragement and reassurances that they are not forgotten by the free world.

DETROIT, MICH., *April 13, 1959.*

Hon. Congressman ALVIN M. BENTLEY,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BENTLEY: I know that you will be glad to hear that I have just received a letter from my sister in Warsaw, who writes me that President Eisenhower's speech on the occasion of the anniversary of NATO made a tremendous impression on all the people of Poland, lifting their spirit, morale, hope, and raising the confidence in the United States and the Western World. She writes that this was the best news for Polish people since the end of the Second World War, which has enslaved Poland and other Eastern European countries.

"We like Ike more and more," she writes in her letter.

Very respectfully yours,

TADEUSZ GASOWSKI.

Lawrence (Mass.) Council No. 67, Knights of Columbus, Protests Presentation of Television Commercials Which Offend Public Morals

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Lawrence (Mass.) Council No. 67, Knights of Columbus, on March 16, 1959:

"Whereas certain commercials, especially those advertising ladies' undergarments, currently being shown on television, tend to be indecent and immoral in nature; and

"Whereas such commercials are being exhibited in ever-increasing number and variety; and

"Whereas such commercials are undesirable and improper for viewing by the public in general and by the youth of our Nation in particular; be it

"*Resolved*, That the Massachusetts State council strongly protests the presentation of television commercials which offend public morals; and that notice of its protest be sent to the Columbia Broadcasting System, the National Broadcasting Co., the American Broadcasting Co., and the Federal Communications Commission."

The above resolution was offered, considered, and unanimously voted by the members of Lawrence Council No. 67 at the regular meeting of the council held March 16, 1959.

RENO J. ORLANDO,
Grand Knight.

Attested:

ALBERT J. PETERSON,
Recording Secretary.

H.R. 2729

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert the following letter written by Mr. George J. Burger, vice president of the National Federation of Independent Business, to a glass dealer, Mr. R. N. Park, of Waterloo, Iowa, which I believe is self-explanatory. The letter deals with my bill H.R. 2729, and I believe helps justify its introduction:

MARCH 26, 1959.

Mr. R. H. PARK,
Park Paint & Glass Co.,
Waterloo, Iowa

DEAR MR. PARK: Your certified letter dated March 21 received yesterday and contents of same very carefully noted. In view of the fact you sent a copy of your letter to Congressmen Bentley, Halleck, McCormack, Senators Long, Sparkman, Johnson, and FTC Chairman Gwynne, we are likewise sending a copy of our answer to them.

Our files disclose that there has been correspondence between this office and yourself beginning in July 1957 and, due to this and other correspondence and our contact with people in the glass industry over these past 2 years, we have kept this subject matter in front of us in view of other industries having the same problem so that we could evaluate the overall and at the proper time take the proper action.

If the writer's memory serves him right, the problems of the glass dealers as it relates to their source of supply was brought to my attention some 4 or 5 years ago. In fact a conference was held in Washington, the office of the federation, with a representative spokesman of the independent glass dealers in St. Louis, at which time they proceeded to confer with Federal Trade Commission officials.

Apparently there has been lack of overall unity in your group. We found this out from contacts in this office by a representative spokesman of the glass dealers in the North Atlantic States. We recommended to them that there should be unity in action on the overall objective. Particularly note this in my statement that I made before the House Interstate and Foreign Commerce Committee on March 20, this year, copy enclosed.

The writer, in his private capacity prior to his official connection with the federation 12 yars back, has been in closest daily contact with both the House and Senate Small Business Committees since their inception. This is an 18-year background that should put us in a position in the overall evaluation of these committee's operation in behalf of small business.

In the early days of the committees, both in the Senate and in the House, in 1941 and 1942, to the everlasting credit of those committees, although they lacked legislative power in introducing legislation they were able to develop legislative action out of the committees and followed through consistently on the recommended legislation. This applies particularly to the action of the Senate Small Business Committee in 1942, legislative action created within the committee itself, and I am referring particularly to the rubber tires bill that provided for complete divorcement of tire manufacturers in the retail field.

Within the past week or two a press conference was held by the House Small Business Committee and it will be found at that time the writer put a question to the Chairman and members of the committee in the press conference, "Realizing that the committee lacked legislative authority, could small business expect some positive action coming out of the committee that would recommend to another standing committee legislative action on the problems affecting various small businesses?" We maintain and rightfully so, that, no discredit to the committee, the study period is over and small business looks for positive relief.

To the credit of the House Small Business Committee in 1947, through our engineering we were able to have the committee take positive action in forcing the hands of the Federal Trade Commission to invoke the quantity discount rule for the rubber tire industry. That was the first time that that action was instituted for any industry during the life of the Robinson-Patman Act.

The action of the Government in this case has been kicked around in the Federal courts and we have made respectful demands on both committees for a thorough investigation of the handling of this major case by the Government agency. Although we were promised nearly 2 years ago that such action would be instituted, up to this time no positive action has been taken.

Bear in mind that this action of the Government at that time applied only to the rubber tire industry in public hearings before the Senate Commerce Committee, and that committee was aware of the importance of this action that if the rule was validated it would have far-reaching effect on other industries plagued with the same monopolistic tactics as the rubber tire industry. In other words, it would have been beneficial no doubt to you in the glass industry.

As to the operation of manufacturers in the retail field, it would be well for you to review the docket of Federal Trade Commission versus Goodyear Tire & Rubber Co., the order dated March 5, 1936, and then you will have the whole history of the overall action of the manufacturers operating in the retail field in unfair competition with their own independents.

To the everlasting credit of Congressman ALVIN BENTLEY, I believe the record will show either late in November or early in December, 1958, the Congressman asked me to confer with him on any recommendations we could offer to him that would bring relief to efficient independent business. A conference was held with the Congressman's staff on the preliminaries and in this preliminary conference the utilization of present antitrust laws was considered, not new legislation.

Shortly thereafter I had arranged conferences with the five members of the Federal Trade Commission and also with the head of the Antitrust Division of the Department of Justice. The conference with the Commission was held on December 10 with four of the five members present, the conference lasting 2 hours and 20 minutes with no interruptions and this is something out of the ordinary. The conference was confined to the present laws entrusted to the Federal Trade Commission as to enforcement in bringing the necessary relief to small business, no particular industry involved. To the credit of the Commissioners, it was probably one of the most productive conferences ever held in behalf of small business, with close attention to the problems given by all members of the Commission, those present.

Later in the day a similar conference was held with the head of the Antitrus Division, 1 hour or more and with no interruptions. In both of these conferences, fortunately, I was accompanied unexpectedly by the Assistant to the President of the Federation.

Upon our return to the office, I prepared a memorandum as to the results of these conferences and I requested him to prepare his memorandum, and then both memorandums were reviewed one by the other. There was no collusion. The memorandums disclosed that under the present Robinson-Patman Act, as to certain unfair trade practices, the action was deficient to bring the necessary relief to efficient independent business.

Then he returned to our head office in Burlingame, Calif., and he prepared a memorandum for the proposed new legislation that would strike at the unfair practices of certain major manufacturers in the retail field. He made at least four specific recommendations of what the legislation should embody. Bear in mind, neither he nor the writer are economists or members of the legal profession, but form our conclusions from actual true experience in the business world.

I might add that the writer has had 50 years' experience in the automotive servicing field, owning and operating his own independent business for 30 years or more. So, this gives me the factual information of the basic problems that are existing within all segments of that industry, which includes your own.

With this information, then we conferred further with Congressman BENTLEY's staff and the outcome of that conference was continual conferences through the cooperation of Congressman BENTLEY with the House Legislative Counsel to draft the best possible legislation that would be enforceable by the Government and the courts.

Bear in mind that the Federation stands for free and fair competition. We have never received any direct directions by majority vote calling for any action that would bring about price fixing, either direct or indirect.

No legislation that could be drafted could ever hope to cure all problems, however, a start must be made and, you believe it or not, at the recent hearings on the fair trade legislation before the House Interstate and Foreign Commerce Committee, no single person present, representing many groups in favor of the fair trade legislation, rendered one adverse opinion against the Bentley bill, H.R. 2729. In fact, I may state that the chairman of the House Judiciary, in a short conversation with him last week, stated to me, when I explained the objectives of the bill, in simple understanding words, "Burger, that's a good bill, nothing wrong with that." And, only yesterday, the executive manager of possibly one of the most successful trade associations in the United States, I am referring to the National Association of Retail Druggists, stated to me that the Bentley bill was a good bill and that he was going to make recommendation that the bill be reported out favorably in a separate report. A representative of a consumer group that was present stated in substance the same thought.

You will be interested in a statement filed with the committee by a spokesman of the glass industry. He cites numerous cases of unfair competition but it is noted that in the statment no recommendation is made as to procedure to correct this. Bear in mind, Mr. Park, this is no criticism.

Let me conclude this letter, Mr. Park, that if this legislation as proposed by Congressman BENTLEY is approved by the Congress, it can result in major attention by many industries to accept this bill, as voted by the Congress, and put into effect constructive sales policy—and if they fail to take positive action, then Congress itself, to protect independent business, will be forced to bring about more drastic legislation.

Let me confirm this statement in no uncertain terms. The rubber tire industry is notorious in its action in the retail field,

I'll say some of the major rubber companies, and if they don't "stop, look, and listen" on the proposal as outlined in the Bentley bill, there will be no alternative action, as it applies to that industry, but for Congress to take positive action on the rubber tires bill, which is still pending in the Congress.

It is my opinion, and not from a professional standpoint, that a corrective start has been made to bring about fair competition through the splendid action of Congressman BENTLEY, H.R. 2729, and we believe that it ratified by the Congress will go a long way to bring about long over due fair competition in the retail field as it applies to all industries where they are in competition with their own independent retailers.

Further, small business owes a vote of thanks to Congressman BENTLEY, and possibly thanks to the federation, for what we are attempting to do is to bring about the necessary relief.

I want to take this time to complement you for giving us your views, in fact, it is through constructive suggestions from our members that we are able to follow out their recommendations to the letter, as our interest and sole interest is to serve the best interest of efficient independent business nationwide.

Sincerely yours,

GEORGE J. BURGER,
Vice President, National Federation of Independent Business.

WASHINGTON, D. C.

Boland Pays Tribute to Secretary Dulles

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. BOLAND. Mr. Speaker, I am saddened to learn of the resignation of Secretary of State Dulles. I am sure that all of the peoples of the free world feel likewise. He had a profound knowledge of world affairs gleaned over a lifetime of study and experience.

In my judgment, he was a great Secretary of State who served in that post during one of the most difficult diplomatic periods in the history of our Nation.

DULLES' CONTRIBUTION TO MAINTENANCE OF WESTERN ALLIANCE

Despite great personal sacrifices, he made exhausting trips throughout the world and successfully matched wits with the Communists. His contribution was immeasurable in keeping the Western Alliance together under the most trying circumstances.

His role was compounded with difficulty because he could place little or no reliance on the words of his Soviet adversaries. Yet he had a sixth sense in anticipating Soviet weakness and he was a master at persuading Western statesmen to stand firm with him on vital issues. His adamant position forced the Soviet to retreat many times.

HE WAS ONE OF THE WORLD'S OUTSTANDING STATESMEN

Mr. Speaker, I am sure that when historians view his tenure in perspective, they will record that Secretary of State Dulles was one of the outstanding statesmen in the fight against the spread of communism.

Electric Power From the Oceans

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, volumes have been written concerning the urgency for all-out efforts for American scientific improvement to meet the Soviet threat. Although the past year has seen an upsurge in scientific activity, it appears to me that we are barely scraping the surface toward attainment of this objective.

Use of the oceans in the generation of electricity is a distinct possibility. In Maine, we are particularly interested in the development of the Passamaquoddy tidal power project. It is hoped that the International Joint Commission report on the Quoddy project, to be released in October of this year, will recommend the construction of a facility to harness the tides in order to generate electricity. If the report is favorable, oceanographic research could play an important role in the development of this project.

The following article, which originally appeared in the New Bedford Mass., Standard-Times, outlines yet another exciting possibility for the development of electricity from oceanic sources. We are naturally happy that our English allies have been highly successful in undertaking research in this field. But where are the funds to support similar achievements by American scientists? We cannot continually trail the international scientific field without losing the prestige and stature so necessary to our success in the cold war. Intense concentration in the field of oceanographic research is urgently required. A lesser effort might prove catastrophic.

The article from the Standard-Times follows:

SEA BATTLE, 1958: KEY TO SURVIVAL, XII—UNITED STATES IS LAGGING IN RACE TO HARNESS H-BOMB

(By Everett S. Allen)

(Whether it be for war or peace, the oceans of the world probably hold the secret to humanity's future. The nation that unlocks those mysteries first will direct the future course of mankind. One of the world's outstanding ocean-study centers is the Woods Hole Oceanographic Institution. There and at other marine-science research centers in the East, The Standard-Times conducted a 2-month study to determine who is ahead. These stories tell the results of that research.)

The harnessing of the hydrogen bomb to produce from the oceans enough electricity to supply mankind for 1 billion years is just a matter of time. To Americans, the most important aspect of this international race for cheap power is that the United States presently is not leading the field.

There is considerable evidence to indicate that diplomatic courtesy, rather than scientific justice, brought about the joint United States-British announcement on this process, referred to as hydrogen fusion. For non-Government authorities in both countries have indicated the British scored a clear "first" in the controlled release of the H-bomb type of energy for eventual peaceful application.

FRANCE IN RACE, TOO

It may be that other nations also are ahead of American scientists in this field. Both the French and Russians are known to be working on it. Roger Baifas, director of France's research center on thermonuclear fusion, said experiments were being conducted at the laboratory of Fountenay-aux-Roses near Paris and that "there is no doubt that France is in a good position in the race for thermonuclear energy."

I. V. Kurchatov, director of the Atomic Energy Institute of the Soviet Union's Academy of Sciences, said "several more years of strenuous research" will be required before thermonuclear power can be harnessed successfully for industrial use. He acknowledged the British had attained "signal scientific results" in their efforts along this line.

Here's what the British "breakthrough" amounts to:

This hydrogen fusion process involves the fusing of four nuclei of hydrogen into one nucleus of helium. This is the process responsible for the immense amounts of energy, in the form of heat and light, given off by the sun.

PLENTIFUL IN SEA WATER

The type of hydrogen that scientists are attempting to fuse is deuterium, which is present in enormous amounts in the ocean, and which derives its name from the fact that it is twice the weight of normal hydrogen and is therefore in the category of heavy hydrogen.

Two problems exists in attempting to fuse nuclei of deuterium to generate electricity in quantity. First, a very high temperature is required. Secondly, some type of special container is needed to contain the gas after it has been raised to the temperature needed.

It has been estimated that temperatures of 370 million degrees Centigrade would be required to establish a fire of deuterium that would be self-sustaining and that would give off more energy than was required to keep it going. This temperature is more than 20 times that of the interior of the sun.

As for the container, scientists are using an electrical current to create a magnetic field inside of a material container. This prevents the hot gas from touching the walls of the actual container and thus losing its energy.

American experiments report the reaching of temperatures of as high as 6 million degrees.

TO SURPASS THE SUN

On February 5, Sir John Cockcroft, Nobel Prize-winning director of the British atomic research establishment at Harwell, told members of the Royal Society in London that Britain's Zeta apparatus soon would surpass the sun's core temperature, which he estimated at 15 million degrees Centigrade.

The British group at Harwell also has been credited with being the first in the world to report a 5 million-degree temperature, which at the time of achievement was about five times greater than any temperature achieved up to that time. It is believed, for example, that the French have attained temperatures of deuterium plasma up to about 1 million degrees. What the Russians have accomplished is not known.

Most important of all, however, is the British success in keeping the hot gas away from the walls of the container in which it is heated; if this cannot be achieved, it falls in temperature. The British have accomplished this for periods of two one-thousandths to five one-thousandths of a second, during which the heated gas has been isolated from the tube's walls. Harwell reports there appears to be no fundamental reason why longer times, together with much higher temperatures, cannot be achieved.

LONG-RANGE PROJECT

Dr. Peter Thonemann, research director of Britain's Zeta project, has announced there is no reason why temperatures exceeding 100 million degrees should not be achieved with equipment based on the Zeta principle.

One pound of deuterium could produce 43 million kilowatt-hours of power. The average American family uses about 3,000 kilowatts a year.

This is, however, not a short-range project; best estimates indicate fusion might be harnessed for the production of power in 10 to 15 years. It certainly will be years before we will be able to build and operate commercial reactors utilizing the ocean's deuterium, thus producing electrical power in sufficient quantity for meeting the needs of mankind.

It will take years to develop a thermonuclear device that yields more energy than it consumes; it will take years to get such a device from the status of laboratory experiments to a full-scale power producer, as Lewis L. Strauss, Chairman of the Atomic Energy Commission, has indicated.

But it is a matter of time only before the oceans will produce a cheap and virtually inexhaustible source of electrical energy for a world that already is scanning its dwindling fuel supplies with apprehension—and those include both coal and oil.

RACE IS VITAL

It is, therefore, critically important, not only for domestic well-being and the maintenance of a standard of living that could be lowered only with agony, for Americans to keep in the forefront of this contest.

This is true even if war is not on the horizon—and no one can be sure of that—even if only the cold war continues, in which it is fundamentally necessary to uphold the prestige of the United States in the eyes of the underdeveloped nations. These nations need cheap power; they will have a tendency to turn to those countries, East or West, that can give it to them. Once hydrogen fusion is licked, it can be used on rivers, lakes, and ponds, as well as the ocean, so every country would find it practically adaptable.

Sputnik is flashy, it is visible. When the United States lagged in that race, millions of Americans became irate and demanded action. Hydrogen fusion, at the moment, is both difficult to understand and not in the least spectacular. So most of America, which failed to comprehend what it was reading when the first announcements were made of this process, is not demanding anything.

But if it should be that the cold war were resolved in the theaters of politics, sociology, science, and economics—instead of through gargantuan military contests—the alliance that could show the way to bringing lights, heat, electric motors, automatic water pumps, and refrigeration to the have-not peoples of the world would be a long way ahead.

ENGINEERS NOT ENOUGH

Sometimes, there is a tendnecy to forget this is not the era of World War II when the fruits of British scientific thinking (fog-dispelling apparatus, submarine-detecting devices, radar improvements, and jet propulsion) were handed over the U.S. engineers to be put to practical application.

Engineers alone are not enough. The time has come when the United States has to give its well-qualified scientists the encouragement, time, money, and atmosphere in which they can do their own thinking. No nation has a monopoly on ideas, but the United States voluntarily has deprived itself of its quota.

In America, for far too many years, there has been a woeful lack of emphasis upon pure science—particularly in the field of oceanography and other affiliated earth sciences—which has had a tendency to make us a one-horse country as far as new ideas are concerned, the high horsepower of our superficial gadgetry notwithstanding.

Address by the Honorable Stuart Symington, U.S. Senator, at the Kansas Democratic Club in Topeka, Kans.

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. GEORGE. Mr. Speaker, a great address was delivered on the evening of April 11 by Hon. STUART SYMINGTON, U.S. Senator from Missouri, before a dinner meeting of the Kansas Democratic Club at the Municipal Auditorium in Topeka, Kans.

An overflow crowd of 600 heard Senator SYMINGTON and enthusiastically demonstrated their approval of his forceful speech. Seating arrangements were insufficient for nearly 300 who had purchased tickets and were compelled to dine in nearby hotels, most of whom returned and stood in the auditorium during the Senator's address.

Kansas democracy is extremely proud of our neighboring statesman from Missouri, and we hope he will return to the Sunflower State many times in the future and we are certain that he will contribute materially to the great Democratic victory that will be ours in 1960.

Mr. Speaker, I ask that the address of Senator SYMINGTON be inserted in the RECORD and recommend that it be read by all Members of the House:

THE DEMOCRATIC PROGRAM: INVESTMENTS IN THE FUTURE OF AMERICA

It is a real privilege to be here at your annual banquet, and I am very grateful for the honor of being asked to come to Topeka.

This address tonight is not made easier by the distinction of the Democrats who have preceded me. The rollcall of former speakers at this banquet goes all the way back to that great popular leader of democracy, William Jennings Bryan.

It includes such distinguished Americans as Woodrow Wilson, Cordell Hull, and Jouett Shouse; and such good friends as Scott Lucas, Jim Farley, Tom Hennings, and Albert Gore.

In 1951, you were able to hear from that beloved gentleman whose loss we still feel deeply, Alben Barkley.

And in 1957, your speaker was the No. 1 Democrat—not only of my State, but also of the country—Harry S. Truman.

Such distinguished predecessors make one humble; but it is comforting to remember you and I are neighbors.

Your State and mine have a common boundary, including a great river, and this boundary gives us common problems.

There was a time, shortly before, during and after the Civil War, when relations between Kansas and Missouri became a little strained. But that is all over now.

In fact, more and more Kansans and Missourians are seeing eye to eye on matters of politics.

The people of both our States have learned that the best way to obtain effective government for all the people is through the Democratic Party.

Look at the Democratic story right here in your great State.

Thirty years ago—even 20 years ago—if anyone had come to Topeka to talk to a Democratic meeting, he might well have talked to an almost empty hall. What a difference today. You have a Democratic Governor. You have three Democratic Congressmen, and last November you almost elected three more.

And let me make this prediction—in 1960 you'll elect not only three more Congressmen, but a United States Senator along with them.

Yes, my Democratic friends, the record shows that you are making Kansas a real two-party State. That is good for you, good for Kansas and good for America.

Much effort on the part of many people has gone into the building up of our party in Kansas.

And one feature stands out. That is the way your magnificent Governor, George Docking, has won the confidence of the citizens of Kansas.

He has placed your government on a basis of good business management, the kind of management so sadly lacking under the Republicans in Washington today.

Governor Docking has practiced sound economy without sacrificing State services. Through his open door policy toward visitors and the press, he has brought your government closer to the people than ever before.

Every Democrat in America is mighty proud of George Docking.

The Democratic Party has also been strengthened by the record of FLOYD BREEDING in Congress; and I am sure it will be strengthened even more by your new Congressmen, NEWELL GEORGE and DENVER HARGIS.

My friends, seven years ago a group of Republicans came here to Kansas to start a "Crusade."

Today the Republican Party in Washington has dropped all pretense of leading any "crusade."

The watchword on the Potomac now is "politics as usual."

Because time is running out on the Republican administration, capable men are becoming steadily harder to find.

Even when they are found, often they are passed over for important public office because they don't have the blessing of the Republican National Committee.

As their time runs out, we find public officials casting around for cushy corporation jobs in the industries they regulate. This practice does not aid their dedication to the public interest.

The result, if not at times chaos, is something pretty close to it.

In fiscal policy, the Republican theme for the next 2 years seems to be a take-off on the old Western song: "There's a tax cut in the sky, by and by."

In defense policy, it is another song: "Praise the Lord, but spare the ammunition."

And this Republican administration is the only government in the history of the world which has undertaken to convince the people that they must reduce spending at home while increasing it abroad.

With such policies it is inevitable that the Republicans are approaching the brink of internal chaos among themselves.

Before last fall's elections, a prominent member of the administration wrote a book "A Republican Looks at His Party."

Now we understand he is writing a new one, "A Republican Looks for His Party."

The Republicans are now trying to pull themselves together for the next election—and so they have appointed a large committee whose sole job is to give their party a fresh new image in people's minds.

This phrase "public image" is a bit of Madison Avenue-ese that needs translation into plain English. It means not what you are, but what people think you are.

So the Republicans are trying to find out what will be the best thing for people to think they are. The answer to that is very simple—Democrats.

Any amusement over the plight of the Republican Party, however, should not distract us from where that party has now placed this country.

It takes little vision to realize that the challenge faced today is greater than any ever faced before by the United States.

The philosophy of State supremacy, as expressed in the Communist dictatorship, has declared economic, psychological, sociological, technological, political, and at times military war against us.

A mighty effort is being made to isolate us in a world where lethal weapons can go from continent to continent in less than 30 minutes. Yet our response to this challenge continues to be slow, grumbling, and inadequate.

The same is true here at home. We are not planning adequate education for our children, or proper conservation of our resources, or enough protection for those citizens who have made their contribution and have now reached the evening of their lives. The chief excuse the Republicans give for this drifting, both at home and abroad, is that if we try to do better we will spend ourselves into bankruptcy.

In 1889, for the first time in peacetime, the Congress appropriated a billion dollars. In those days the Speaker of the House was a Republican—Thomas Reed. And when people complained to him about his billion-dollar Congress, Tom Reed said: "Yes; but this is a billion-dollar country." I wish the Republicans today had some of Tom Reed's commonsense.

Measured by our national product, we now have a $450-billion country—the greatest, richest, most resourceful country in the world. We can afford whatever is necessary for the good of America.

We Democrats are labeled "reckless spenders," but this is just another charge not supported by the facts. Between 1947 and 1952 the Democratic administration showed a net surplus of $4 billion. Between the fiscal years of 1954 and 1959 the Republican administration operated at a net deficit of $20 billion. And last year this administration ran up the largest peacetime deficit in our history.

Now there is a significant difference between what the two parties want to spend for. We Democrats want to increase spending for assets—for schools and roads, hospitals and dams, and airports. Based on the record, Republicans have increased spending for interest. Since 1953 the annual interest on the national debt has increased by $1½ billion, and is now the second largest single item in the budget.

They want to save dollars. We do, too; but we also want to save farms and cities and useful lives.

They have adopted the philosophy that high permanent unemployment is now characteristic of capitalism. We want to give every American who wants to work a chance to work, in order to strengthen the country.

They believe in retrenchment to balance the budget. We believe the way to balance the budget is through the prosperity of full production.

The bills we Democrats are pushing in this Congress—bills for airports, schools, and housing—are not spending bills. They are investment bills—investments in a brighter future for America.

Some people say, "You're right; we do need these projects, but we can't afford them unless we either raise taxes or run a deficit." But if we had today a businesslike administration, we wouldn't have to raise taxes.

You all know my ideas of the billions which could be saved if we started operating our defenses on the basis of progress instead of continuing to let them drift on the basis of tradition.

Now let me give you another interesting case, released recently by the Internal Revenue Service. That Service audited some 36,000 returns of business and professional taxpayers. They found that, if the same kind of audit could be extended to 6,700,000 returns for the same year, the taxable income of these taxpayers would have been increased by 20 percent. And that would have yielded $2.7 billion in additional taxable income. In other words, if we had enforced efficiently the present tax laws, we could have obtained taxes or $2.7 billion more without changing the tax rates at all.

When it took office, this administration fired 3,000 people from the enforcement section of the Internal Revenue Department. What a false sense of economy. Even if the salaries of these 3,000 people averaged $10,000 a year—which they didn't—would the saving of that $30 million justify tax evaders dodging the payment of billions? So you see these poor managers have billions of dollars of additional taxable income available right under their noses if they would only put in good business practices to collect it.

As Americans, we want this tax money and all tax money to be spent for the best possible investments in prosperity and peace. As Kansans and Missourians, we know that one of the most solid of all investments lies in the control of water, primarily flood control.

We all remember the flood on the Kaw and the Missouri in 1951. It cost the Kansas City area alone $1 billion. The tax revenue lost to the Government as a result of that one flood was greater than the entire cost of the projects which could have prevented it.

Despite such occurrences, the present administration refuses to invest in water projects. Projects like those at Lawrence, Fort Scott, Melvern, and Hillsdale are being held up by the sharp budget ax of this Republican administration. The Republican policy toward water resource development seems to be: cut now, suffer later. Water projects needed also for industrial development. New industries are springing up each day. Factories are looking for good places to locate. A new industry needs space and also needs a steady supply of adequate fresh water.

Kansas has acres of land ready for industrial development. If the abundant water resources you now have were properly utilized so they could go to work for industry, your future prosperity would be placed on a broader, firmer footing.

Now a word about our farm program. It is not necessary to tell a Kansas farmer that our present agriculture program is a mess. He knows it. In the past 6 years, the leaders in the Department of Agriculture have built a record which even they are now ashamed of. They have spent $30 billion of our money on a farm program that just doesn't work. Secretary Ezra Taft Benson has spent more money than all the 14 preceding Secretaries of Agriculture combined. And what has he produced? Low farm prices, high food prices, and a mountain of surplus foods.

Before coming into Government, I was a businessman for a good many years. If any businessman tried to run his plant or office the way the Department of Agriculture has been run for over 6 years, he would go broke. Back in 1952 and 1953, the Eisenhower-Benson crusade was going to get the Government out of farming. Well, let's look at the record. In January of 1953, the Commodity Credit Corporation owned $1 billion of farm commodities. In January of 1959—just 6 years later—that inventory was well over $5 billion. And according to the latest Department of Agriculture report, just released last week, the total investment in farm commodities—inventories and loans—is over $9 billion.

But this is not all, because in his last budget message to Congress, the President admitted that by June of 1960, the total investment would be $10 billion. Based on information presented to the Senate Agriculture Committee, and my own study of the situation, I believe the President much underestimated, and that by June 1960 Government investment in farm commodities will be close to $12 billion. How's that for getting the Government out of farming?

Mr. Benson goes around the country speaking in such great agricultural centers as various city chambers of commerce, complaining about the farm problem. But what plans has he made to solve that problem?

A few weeks ago, when Mr. Benson came before our committee to ask authority to spend more billions, we asked him questions any banker would ask a businessman who requested a loan. I asked him if he had any definite plans to move his gigantic inventory. He conferred with several of his 14 assistants who were back-stopping him at the hearing. Then said he had no definite plans.

I asked him how much inventory he though he would move this year. He said he did not know.

I asked him how long it would take to move it. He said he didn't know that either.

Mr. Benson should know that his farm program is bankrupt primarily because it is based on the false theory that the way to lower farm production is to reduce farm prices. As millions of farmers and many of us in Congress have insisted for a number of years, this theory just does not work. And here is why. We all know there are fixed costs connected with farming—payments on notes and mortgages, installment payments on equipment, out-of-pocket costs for fertilizer, seed, fuel, and such. In recent years, these costs have been steadily going up. To meet these fixed and out of pocket expenses, and at the same time take care of family expenses, farmers must have a minimum income. That income, of course, is derived from price times volume minus costs.

If your price goes down at the same time your costs go up—and that has been the case in recent years—you have only two choices: increase your volume, or go broke.

In the past 6 years nearly 4 million farm people have been forced off our farms. But the rest of our farmers have taken the other course. They have taken advantage of every new technique of farming to vastly increase their production.

The story on wheat is a typical example. Since 1952, wheat price supports have dropped from $2.20 to $1.80. Has this brought about lower production or expanded consumption? Of course not.

While the price of wheat to farmers has dropped 18 percent since 1952, per capita consumption of wheat has decreased 11 percent. Last year wheat production set an all-time high—nearly 1.5 billion bushels—and this was with some 5 million acres in the soil bank.

In an effort to deal with the wheat situation, the Senate Agriculture Committee asked the Secretary to submit a new wheat bill. He offered two alternative suggestions. One of these was, in effect, no price-support program at all. Under this alternative, wheat price supports would be as low as 75

percent, not of parity, but of the average price during the last 3 years. It is a farce to call this a price support. A price 25 percent below what you have been getting isn't any support. At best, it is a floor with a hole in it.

The ultimate goal of the Eisenhower-Benson wheat plan is to lower prices until "price supports are adapted to feed use relationships." Those are Mr. Benson's own words.

Do you know what the price of wheat would be under such an arrangement?

My good friend, Senator MILT YOUNG, of North Dakota, and I asked the Agriculture Department about this. They finally admitted that, at present corn and feed grain prices, wheat price supports would be between $1.15 and $1.20 a bushel, in order to be at "feed use relationship." Long before the price got that low, thousands of wheat farmers would go broke, and Mr. Benson knows it.

The other alternative wheat plan suggested by the administration would lower prices; and, at the same time, sharply reduce wheat acreage. This is no wheat program. It is just a rehash of the same old Benson policy of economic attrition.

With the cooperation of the farmers of America, we in the Congress plan to write a new farm bill. This bill will include an effective wheat program based on sound economic principles, and on the belief that farm families deserve an opportunity to earn a return on their labor, investment and managerial ability comparable to that earned by other segments of the economy.

Last month we held comprehensive hearings on new wheat legislation; and heard representatives from many of the farm organizations, from the National Association of Wheat Growers, and from others interested in sound new wheat legislation.

There are certain basic requirements which must be included in any sound effective farm program. That program must give the farmer a fair price for his product. It must give farmers the tools whereby they can compete more favorably with the other closely organized segments of the economy. Any sound long-range farm program must be designed to bring farm production more nearly in line with realistic needs—at home and abroad.

It must face up to the gigantic inventory problem. The productive capacity of the American farmer is not an economic curse. It is, and it should be handled as, a blessing. With wise policies, we can use this capacity to further prosperity at home and peace and prosperity abroad.

Millions of our own people in the United States are undernourished. One hundred thousand children in one of our States have only one-third of the calories and proteins they need in their daily diet. Throughout the world, millions suffer from starvation, while the food that could nourish them, stored at a cost the President himself says amounts to a billion dollars a year, wastes away in our storage bins and warehouses.

The people of other nations are like our people. They want peace in the world. They want food and clothing for themselves and their children. If we can move our food inventories to people in need, we will be using our country's greatest blessing to accomplish our country's noblest purpose.

Twice in our history while under Democratic leadership, this Nation has been called upon to fight for freedom. Today, as Democrats, but primarily as Americans, we demand that our country be made strong enough to preserve our freedom. But this in no way impairs our dedication to peace. In fact, it would further that dedication.

The two greatest charters of peace in our history were drafted by Democrats, the 14 points of Woodrow Wilson and the 4 freedoms of Franklin Roosevelt. Today, we Democrats again advocate the path to peace through a universal disarmament agreement, negotiated from a position of strength.

With firm leadership, we can create an America greater than any we have ever known. With firm leadership we can create the kind of permanent peace our forefathers and our sons dreamed of and died for.

We should dedicate ourselves to creating the kind of permanent peace that would justify our going anywhere in the world and saying with even greater pride, "I am an American."

Address of George M. Harrison, President of the Brotherhood of Railway Clerks, to the National Conference on Unemployment, at Washington Armory, April 8, 1959

EXTENSION OF REMARKS
OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. STAGGERS. Mr. Speaker, I would like to include in the Appendix of the RECORD the address of George M. Harrison, president of the Brotherhood of Railway Clerks, made at the National Conference on Unemployment, in Washington, D.C., April 8, 1959. It is my belief that President Harrisons' well prepared and thought-provoking remarks are of interest to each of us, and I call the attention of the Congress to his enlightening address:

ADDRESS OF GEORGE M. HARRISON, PRESIDENT OF THE BROTHERHOOD OF RAILWAY CLERKS, TO THE NATIONAL CONFERENCE ON UNEMPLOYMENT, AT WASHINGTON ARMORY, APRIL 8, 1959

President Meany, and delegates to the conference, we have come together here to discuss the grave national unemployment crisis. We have a serious and a disheartening task before us. In the face of a sick national economy, we find it necessary to call the attention of the American people and the American Government to the millions of casualties which that sickness has brought to the working people of the country. Some of us had hoped that the day was long past when such extensive suffering would be brushed off lightly by our Federal Government. We thought that the indifference of the Hoover administration would nevermore appear in Washington. But today we find it necessary to force this human catastrophe to the forefront of national attention. We must not and we will not allow this suffering to continue, if anything we can do will bring about its correction.

The unemployment crisis that brings us here today is nationwide. Every industry and every corner of our country is suffering from this economic catastrophe. We come here to exchange our ideas and our information, so that we may deal with the whole problem more effectively. I want to tell you about unemployment in my industry, on the railroads of America, as I learn from you about unemployment in other industries. I know, as you do, that each industry has its own particular type of problem. Each industry has its own variation of the general illness that has thrown our millions of workers out on the street.

That you may know about railway unemployment, I must begin long before the 1957 recession struck. Unemployment on the railroads has been a chronic illness. Many thousands of skilled and experienced railway workers had been thrown on the industrial scrap heap since the end of World War II. The sharp decline in employment in the last 18 months has been much more serious, to us, than it would have been if so many of our people had not already been out of work.

We had almost a million and a half railway workers when the war ended in 1946; we had a million and a quarter in 1950; but we had only 1 million railway workers in 1956. Employment in 1956 was back at the level of the great depression. We were hauling more than twice as much traffic in 1956 as we had before the war, with a smaller number of railway workers.

That drop in railway employment was due to the great changes in our industry. Some of those changes are well known. Powerful new diesel locomotives had been substituted for the old steam power. The freight and passenger trains of today are much longer, and travel much faster, than the trains of earlier years. We have new systems of communication, far superior to those in use a few years ago. Railroad yards are being made increasingly automatic. Railroad tracks, ties, and road-beds have been vastly improved, and the machinery for maintaining tracks has been revolutionized. Office devices of almost unbelievable complexity have been introduced throughout the industry.

For a quarter of a century these changes have been going on. They have been greatly accelerated in the last decade. Productivity of the railway workers who remained in the service has increased very rapidly. You might not believe it, in face of the charges you read in the papers about featherbedding among railway employees. But the fact is that our output per man-hour has increased much more than even the rise in manufacturing industries. From 1921 to 1946, an even quarter century, our productivity rose by well over 100 percent. Output per man-hour went up another 50 percent in the next 10 years. When this recession hit in 1957, railway workers were producing three times as much per man-hour as in 1921.

Railway traffic was twice as great in 1956 as in 1921. But railway employment was down by 60 percent. That gives you an idea of what we were facing even before this recession began.

We tried to provide for these unemployed workers in every way we could. Up until 1949, railway workers were on a 48-hour week. In that year, we succeeded in establishing in our industry the universal 40-hour week, that American workers generally had been enjoying for many years. We got the 40-hour week without reduction in take-home pay, effective September 1, 1949.

In the first 8 months of 1950, with the 40-hour week, the railways handled exactly as much traffic as in the first 8 months of 1949, on a 48-hour basis, and with exactly the same number of employees. Output per man-hour rose by 20 percent between 1949 and 1951.

After 1950 total railway employment continued to decline.

Railway traffic in 1956 was 16 percent above 1949—railway employment was down by 15 percent. Technological change was becoming even more rapid.

Now let me tell you what has happened since this recession began in 1957.

In December 1956, we had just over 1 million railway workers.

In December 1957 we had 900,000, and in December 1958 824,000.

Railway traffic, of course, had declined. But the railways had reduced employment even more. Railway workers were producing more per man-hour in 1958 than they had at any time in railway history.

Now let me tell you what has happened in the last 6 months. Railway traffic began to improve in the summer of 1958. Carload-

ings in the first 3 months of 1959 were 6 percent above 1958. But railway employment continued to decline. The number of railway workers had dropped about 7 percent from even the low level of 1958. Business was up, employment was still going down.

Now it doesn't take any great mind to figure out what has been happening to railway earnings as a result of that change.

During the first months of the recession, net profits of the railways fell off; but they were still well above many other years.

Beginning in Setpember 1958, railway profits rose rapidly. For the last 4 months of 1958 the railroads were earning at the rate of over $1 billion per year, in net railway operating profit. That is higher than in most of the postwar years, very near the peak earnings of that period. Net earnings were 20 percent above the fall months of 1957.

Railway profits were being protected, were being raised, at the expense of railway employment—even while traffic was rising again.

Now I must tell you one more special feature of railway unemployment.

A large part of the railway labor force works on maintaining railway tracks and equipment. You will understand that keeping up the railway plant is of the first importance. Poorly maintained tracks, poorly maintained cars and locomotives are not only poor management. If the machines in your factory are not kept up, that is poor management. But when your factory machine breaks down, the danger and the loss is comparatively small. When a railway car or locomotive or roadway is not well maintained, it is a multiple danger. It endangers the employee on the train. It endangers the passengers or the goods on that train. There is danger to other workers, other property, other people. So that when a railway management skimps on maintenance, in order to increase profits, that policy is indefensible.

That is just what has happened. Railway maintenance forces have been cut to the bone. Railway equipment is in bad order. Railway tracks and roadbeds are undermaintained. But railway net earnings are soaring again. They are getting the profits out of the industry—by throwing the employees onto the streets.

These employees, like the workers in other industries ,are not just statistics. Each of them is a human being, and most of them have other human beings dependent upon them.

Here, too, we in the railway industry have some special characteristics.

The unemployed railway worker usually has a special skill that is not found in other industries. Many thousands of these unemployed live in what we call railway towns, where there is no other industry. Even the part time, casual work that can sometimes be found in the bigger cities is not available in these railway towns.

We can tell you some things about these unemployed railway people. As you all know, we have a separate unemployment compensation law. We can get more detailed information than in most other industries. Let me tell you about these unemployed.

We had over 300,000 drawing unemployment benefits in 1958. They came from every State in the Union. They were out an average of 111 days of waiting period and compensation. That was the highest average recorded unemployment we have ever had since the law was passed, in 1938. And that average is not the full story, because it does not include all the unemployed time. Many thousands of these railway workers used up all their unemployment compensation. The average I gave does not include the time after their compensation was exhausted.

How many used up their compensation? Twenty-four out of every hundred unemployed railway workers used up their benefits. That figure has never been exceeded—and equalled only once—since the law was passed.

I hope you can see in these figures the extremely critical problem we face in the railway industry. The longest average unemployment, and the exhaustion of unemployment compensation, make this year one of the bleakest and blackest the workers in the industry have ever known.

But that is still not the whole, or the worst, of the story.

At the end of 1956, before the recession began, we had 211,000 experienced railway workers who had not worked at all in that year.

Fifty thousand of those were men and women over 40 years of age, almost without hope of finding suitable employment in other industry, even in good times.

But the workers who were unemployed in 1958 make an even more shocking story. Of the 300,000 drawing benefits in that year, 111,000 were over 40 years old.

Unemployment was greater, on the average, among the older employees than among those under 40.

Not only were these older workers unemployed for longer periods, but more of them used up their unemployment compensation.

Twenty-six out of every hundred among the older unemployed were out so long as to draw all the compensation provided for them.

These older railway workers are the very ones least able to find employment elsewhere. These were men and women who had invested their lives in the railway industry—110,000 of those who drew benefits in 1958 had given more than 10 years of service.

I hope I have been able to convey to you the outlines, at least, of this unemployment catastrophe. To the hundreds of thousands of railway workers, already out on the street in 1956, the railroads have since added another 200,000. The hardship and the suffering of these men and women has been extreme; the distress is multiplied by the fact that a very large proportion of them are older workers, with long service in the industry.

But the worst is apparently not yet known. The last fiscal year was the worst in history; but the current year is piling new and worse figures onto that terrible peak. There were over 300,000 unemployed in the last fiscal year, ending in July 1958. In the last 6 months of 1958, more than 225,000 railway workers drew unemployment compensation. That is an increase of 40 percent over the last 6 months of 1957—and we know, from other information, that railway employment is still shrinking.

Railway traffic has turned upward; railway net earnings have gone up, approaching the peak profits of the whole postwar period. But railway unemployment has grown worse, more are unemployed, unemployment is longer, and benefits are being used up more rapidly.

That is the railway picture. I do not know how I can make more clear to you that the railway workers are in a truly desperate plight. To every one of you, familiar at firsthand with the suffering that unemployment means, I need add no more. But I would like to say a few words to men from that other world, where unemployment is only a figure, to which they can shut their eyes.

Newspapers of yesterday gave us what is said to be the inside story of unemployment compensation. We are told that high-pressure and high-priced lobbyists have been working—openly and under cover—to defeat the proposals for liberalizing unemployment compensation. I wish I could take those lobbyists, and the men of wealth whom they represent, into the homes of some of the unemployed railway workers. I wish they could face the problem of food for the table and shoes for the children, the problem of rent day, and the doctor bill. Perhaps the heads of the great corporations who finance those lobbies could be humanized, if we could only get them to visit the homes made desolate by the specter—by the reality—of losing a job. If we could take their eyes off the stock market quotations, and their minds off the hope of escaping Federal taxation, we might make them realize that America is a nation of people, and that those people—millions of them—are suffering undeserved hardships that can and should be relieved.

But the job facing us is not just that of relieving unemployment, in my industry or in yours, or in all American industries. Our critical situation—economically, at home, and in our foreign relations—is that the United States has been slowing down. Our economy, that should be expanding, has been contracting, and shrinking. We have the natural wealth, we have the capital, we have the skilled labor. No one can set a limit to the possibility of growth in this great Nation. But it is possible for little men of small vision to arrest that growth, by the timidity of their outlook. We can grow, we must grow—and while today we must take care of our unemployed, tomorrow we must provide jobs for all of them. Let those who lead the Nation, the heads not only of government but of our great corporations as well, set for themselves a goal that is in keeping with our national possibilities. An expanding economy is the true hope of all of us. Labor will join wholeheartedly with Government and employers in seeking that expansion.

Let us take care, now, of the casualties of unemployment—and let us for tomorrow plan and achieve an America in which unemployment will be conquered, and new and greater heights of health, comfort, and happiness be reached by all of us together.

Statement on Civil Rights

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. HOLTZMAN. Mr. Speaker, as you know, the Committee on the Judiciary, Subcommittee No. 5, is currently holding hearings on civil rights.

I would like to include in the RECORD at this point the statement on civil rights issued by the Liberal Party of the State of New York:

STATEMENT ON CIVIL RIGHTS BY THE LIBERAL PARTY OF NEW YORK STATE

The section on civil rights in the Liberal Party's national legislative program for 1959 has this to say:

"The United States should be the leading exponent of freedom—freedom from poverty, freedom for political and social change, and freedom of equality for men of all races and religions. If we are to be successful missionaries of freedom to the rest of the world, we must learn to live in freedom ourselves. The unfinished work of our democracy is to insure the civil rights of all our citizens by

eliminating all manifestations of segregation and discrimination.

"We were encouraged by the enactment in the 85th Congress of the first Civil Rights Act in 82 years. Although the Civil Rights Act of 1957 is inadequate and but a short step toward needed and desirable legislation, it was nevertheless a step in the right direction. It is regrettable that, despite the compromise nature of the bill and the seeming support given by Southern political leaders to the principle of the right to vote, many such leaders are impeding implementation of the law. In several Southern States steps have been openly taken to circumvent the law and to prevent Negro registration and voting.

"It is most unfortunate that the Civil Rights Commission and the Civil Rights Division of the Department of Justice established by the Civil Rights Act of 1957 have been tardy and timorous in carrying out their mandates. The law originally gave the Civil Rights Commission a life span of 2 years until September 1959, yet the Commission did not initiate its first investigation until recently and it appears to be more concerned about convincing the public of its neutrality on the issue of segregation than it is in securing compliance with the law. It has created State advisory committees but has not moved expeditiously as regards investigations, public hearings and the use of its subpena powers to compel testimony or disclosures of records at such hearings. (Most of its members have indicated a desire to resign.)

"The Civil Rights Division (of the Department of Justice) has done little to acquaint citizens with the provisions of the law or procedures for redress of grievances as to their voting rights. It has initiated only one suit despite rampant denials of the right to vote and the ample authority it enjoys under the law.

"While progress toward desegregation of public schools in compliance with the Supreme Court decision is being made, resistance to the law of the land continues and has been intensified in some States. In light of official defiance of law, it is not surprising that extremists such as the Ku Klux Klan, and the White Citizens Councils commit acts of violence and terror. The bombings of homes, schools, and places of worship demonstrate once again that flouting of law by political leaders leads to a spread of lawlessness both geographically and as regards its victims.

"Court orders are not self-implementing. The executive branch of Government has a responsibility to see that court decisions are carried out. The President has not sufficiently exercised the great moral authority, prestige, and influence of his office in support of the Supreme Court decisions. Such action would encourage the many persons and groups throughout the country, including the South, who believe in orderly compliance with the Supreme Court ruling and would form an effective force under his leadership to bring about such compliance."

The Liberal Party at this time urges that the bill sponsored by Chairman EMANUEL CELLER, be favorably reported to the House by the Judiciary Committee, and that every effort be made to secure passage of this measure, especially with regard to the reinstatement of title III, which authorizes the Attorney General to initiate civil actions against those who deprive anyone of civil rights on account of race, color, religion, or national origin.

The Liberal Party further urges the enactment of the measure introduced by Representative WILLIAM M. MCCULLOCH, making mandatory the retention of voting records for a period of 3 years.

Helped to Death

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. WESTLAND. Mr. Speaker, I want to call attention again to the problem of Federal interference in matters that concern local communities. This problem is ably stated in an editorial that appeared in the April 9, 1959 issue of the Snohomish County Tribune, a newspaper published in my congressional district at Snohomish, Wash.

The last sentence of this editorial is worth serious thought, because it is a fact that we could easily get to the point where we could be helped to death. Individualism helped make this country of ours the greatest in history. Federal interference, such as including Everett, Wash., and Snohomish County in the Seattle standard metropolitan district, stifles individualism, and could lead to our loss of freedom.

The editorial, entitled "Looks Like We've Been Dealt In," follows:

LOOKS LIKE WE'VE BEEN DEALT IN

Although all our independent instincts rebel against the idea of becoming a satellite community in the so-called greater Seattle metropolitan area, it looks like we've been dealt in, whether we like it or not.

Mayor Oscar Wirsching recently received a letter from the Office of Statistical Standards, Bureau of the Budget, Washington, D.C. In this missive, Mayor Wirsching was informed that all of Snohomish County, including Snohomish, has been included in the Federal Government's definition of the "Seattle-standard metropolitan area." In this connection, we should expect eventually to lose some of our independence of action, especially in the area of planning, water supply, sewer disposal, and communications.

By this, we mean that someday we can expect to take orders from a Seattle-dominated agency, probably to be called the Greater Seattle Metro District, which will have the power to override local considerations in many affairs. When the Federal Government takes the view that Snohomish County belongs in Seattle's orbit, then it becomes official, since Federal funds and supervision come into play with the new science of metropolitan planning.

For instance, we can see the day coming when we won't be able to run our own water supply, but would be forced to surrender our rights on the Pilchuck to the metro district for "the greater good of the metropolis." Or all local buslines combined into one big, government operated system.

How does the Federal Government get off, bunching us in with Seattle and its problems, you might ask? Well this is how that question was answered in the letter to Mayor Wirsching:

"On the basis of a study made * * * during October 1958, it was found that of the presently estimated resident labor force of 42,260, approximately 23 percent are employed in King County. As indicated in criterion 6a, if as many as 15 percent of the resident labor force of a contiguous county are so employed, such a county is considered as being socially and economically integrated with the central county (King) and included in the standard metropolitan area definition.

"In this case of Snohomish County, the criteria is adequately met with the survey figure of approximately 23 percent."

This is not pleasant news, from the standpoint that some of our independence will be sacrificed; but it shouldn't be unexpected news. We've seen this coming for a long time, even before the establishment of the King County Metro District.

Ever since this country turned to Federal bureaucracy to solve its local problems, we have been surrendering local control over the conduct of our affairs. We rely on Federal aid for schools, sewer construction, roads and highways, urban renewal, flood control and almost every other function of local government.

How can we accept these billions without accepting the controls and restrictions that go along with them? We dearly love those Federal dollars, but we squawk like laying hens when the laws start hemming us in. Maybe it's time we too started reexamining our lives and deciding whether we need all this help or not. Frankly, it could easily get to the point where we get helped to death.

Dirksen Carries Hopes for Senate GOP Unity

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. SPRINGER. Mr. Speaker, many of my colleagues will recall the work capacity and the ability of EVERETT DIRKSEN while a Member of the House.

He has demonstrated again his great capacity to get things done as minority leader in the other body. I append herewith an article by Jack Bell of the Associated Press under the dateline of Washington, April 12, as printed in the Decatur Herald—Illinois—of April 13, 1959:

ILLINOIS REPUBLICAN HEWS TO ADMINISTRATION LINE—DIRKSEN CARRIES HOPES FOR SENATE GOP UNITY

(By Jack Bell)

WASHINGTON, April 20.—President Eisenhower has found a new pinch hitter for his administration in Senator EVERETT DIRKSEN, (Republican of Illinois), and is reported mighty happy with the discovery.

Using the Senate as a forum, Minority Leader DIRKSEN has taken it upon himself to go to bat for the administration every time it is assailed in a major way by the Democrats.

In his latest effort last week, the robust 6-foot Senator from Illinois arose from his front-row seat, donned his sparingly used glasses and proceeded to a scathing attack on the Democratic Advisory Council for its criticism of Eisenhower administration foreign policies.

There was a time in the not-too-distant past that DIRKSEN himself might have disagreed with some of the international aspects of Eisenhower's policies.

All of that has changed. "Ev," as he is known to his colleagues, enlisted under the Eisenhower banner a couple of years ago in obvious preparation for the job he now holds as GOP floor leader.

He professes 88 percent support for Eisenhower's legislative proposals. The DIRKSEN stewardship goes much further than that. Much to the pleasure of the White House, he operated under a completely different concept than his predecessor, former Senator William F. Knowland of California.

Knowland made it perfectly clear at the outset of his stint in the leadership he regarded himself as the representative of the Senate's Republicans only. He said it was not his job to take orders from anybody but those Republicans—and that included the General in the White House.

The White House never was sure just when Knowland would jump the administration track. The California Senator did it frequently on such international issues as supplying aid to Yugoslavia.

While Knowland often arose to defend some administration policies, he could be stonily silent while Democrats assailed others with which he did not himself agree.

DIRKSEN has no such reservations. His creed is that he is the administration's spokesman in the Senate. If he has to double back around some roadblocks he himself helped erect in the past, that's just one of the penalties of a job he is mighty proud to hold.

Although he was opposed for the leadership post by a group of Republican liberals who looked askance at his conservatitve record, DIRKSEN has effectively silenced any opposition from that quarter.

He has literally left the liberals nothing to complain about in the way he goes about his job. At the same time he has kept the GOP conservatives happy.

Through long years of outlining his thoughts on almost every subject in little black notebooks, DIRKSEN has built up a treasury of information on which he can draw quickly and effectively for any kind of speech. He can drop an appropriate Biblical quotation quicker than most of his opponents can drop a hat.

This ability has made DIRKSEN a man to be reckoned with in the Senate's sometimes rough-and-tumble debate. Nobody pushes him around without getting a smilingly delivered dig in the ribs in return.

Beyond all this, DIRKSEN has shown he is doing his homework. He knows details of bills that sometimes are vague to members of the committees which have brought out the legislation. He is seldom caught short in parliamentary maneuvering.

Holmes, Sweet Holmes

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. HECHLER. Mr. Speaker, the following syndicated column by Holmes Alexander appeared in recent issues of the Parkersburg (W. Va.) News, Charleston (W. Va.) Daily Mail, and many newspapers through the country:

HECHLER PREACHES MUTINY ON THE BOUNTY BUT FINDS HE IS FLOGGING WRONG CULPRIT

(By Holmes Alexander)

WASHINGTON, D.C.—Congressman KEN HECHLER, who represents 10 West Virginia counties in the Ohio River Valley, was preaching mutiny on the bounty. He was telling the House Agriculture Committee that the free food for needy families in his district was not enough and not what the needy people were demanding.

Congressman HECHLER, born on Long Island and brought up in Missouri, is a strolling New Dealer who recently came to West Virginia and won this seat last year in the Democratic landslide. Now he was laying into the Republican Secretary of Agriculture with charges of ignorant indifference to human suffering ("Let 'em eat shrimp cocktails") and was tagging the Republican administration with spending billions for defense and peanuts for tribulation.

Representative HECHLER had it all going his way until some of the senior Democrats pointed out that he was flogging the wrong culprit. It turned out that the bottleneck was not at the Agriculture Department, but down at the West Virginia localities where the food hadn't been requested or hadn't been distributed for lack of funds, organization or manpower. This seems to be true in other States.

You can see what comes next. The Secretary of Agriculture has almost limitless emergency power to declare that a surplus exists in anything which Americans eat, chew, smoke or wear. He then, can make this surplus product available to "needy" families. Secretary Benson has done this in record amounts of food and dollars to a record number of Americans who are responding in record volume of complaints about the quantity, quality, and variety.

Next? Well, the trend of legislation in the 86th Congress is to vest more and more authority in federalia. Specifically, it may not be long before the Agriculture Secretary not only assigns food to the needy, but fetches it to the door. And pretty soon, as Congress broadens the definition of "needy," we can expect to find huge areas in the United States where people will learn to sing for their supper while obliging bureaucracies serve it up.

If this seems alien to the American tradition, the reason may be that our legislators are turning to non-American models for social betterment. In a major speech in support of his own area redevelopment bill, which was recently passed by the Senate 49–46, Senator PAUL DOUGLAS told a Friday afternoon Senate audience (about six or eight Senators when I was there) that the nearly $400 million measure for rebuilding rural-urban slums "would not result in a radical new program which has never been tried." Was Mr. DOUGLAS saying that Federal factory-building was an old American usage? Oh, no. "The countries of Western Europe," he went on, "have had similar programs * * * the financing * * * made possible by U.S. foreign aid dollars."

Well, I thought I'd heard everything till now. The DOUGLAS line of reasoning is that the American communities are comparable to the foreign lands which were laid to waste by war and then threatened by Communist overthrow. Great Britain actually went to the halfway house of national socialism and Senator DOUGLAS cited, with seeming approval, the British Distribution of Industry Act, passed in 1945 and extended last year. Under this British law, any community having a high rate of unemployment which is likely to persist would get preferential treatment by the Government. This is legislation which flies in the face of Nature by promoting the preservation of unfit communities. The only foreseeable result would be to perpetuate the obsolete sites where industry and agriculture have failed, and to prevent the natural birth of new cities and farm communities where the future wealth must be created, if at all.

Thus Congressman HECHLER and Senator DOUGLAS are double-teaming, the former to pin down the population of our migratory race with drive-in restaurant service from the Federal granaries, the latter to invest in ghost towns and to make it the business of Congress to prevent (although it won't work) the founding of new Detroits and future Pittsburghs.

There is no denying that the industrial revolution has brought privation and hard luck to many Congressional Districts and States. But this is a modern problem, even futuristic. It won't be solved by imitating the Pharaohs and building pyramids with gang labor in the unproductive desert sands.

Mr. Speaker, I am tickled pink that Mr. Alexander has given me all this free publicity. You know, new Members of Congress sometimes have a hard time trying to convince the folks back home that they are really making a dent on the Washington scene. Statistically, any Member is less than two-tenths percent of the entire membership of Congress, but of course the influence of a freshman Member of the House of Representatives is even less.

When a freshman Member arrives in Washington glowing with the flush of victory, sometimes he feels pretty big. Then comes the big disillusionment when he is not even recognized by the hotel doorman.

Lucky indeed, then, is the Congressman who incurs the opposition of a columnist—sometimes spelled c-a-l-u-m-n-i-s-t. I am very proud of this column for a number of reasons. I am proud that Mr. Alexander called attention to my efforts to distribute some of our staggering food surpluses to our needy people here in America, for why should there be starvation in the face of bulging granaries? I am proud that Mr. Alexander calls me a "strolling New Dealer"—which is better than being a creeping reactionary. I am proud that he associated me with that noble warrior, Senator PAUL DOUGLAS, who has always been one of my idols in his battles for economic justice. I am proud, too, that all West Virginian will rise up and demonstrate that their land does not consist of the "desert sands," "ghost towns," and "unfit communities" which Mr. Alexander tries to label them.

Mr. Speaker, men in public life must have a good sense of humor. They must be able to laugh at themselves and enjoy it. If it were not for columnists like Holmes Alexander, I would recommend a program which would transport 20 public officials at a time out to be deposited in folding chairs on the rim of the Grand Canyon for 2-hour periods of silent contemplation every now and then. But fortunate we are that we have people like Mr. Alexander in the business.

Now, if someone would just introduce me to Mr. Westbrook Pegler.

Potato Postulate

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. McINTIRE. Mr. Speaker, many of us are already well acquainted with the health-contributing characteristics of the Irish potato. To the attention of those not fully familiar with the potato's

health-promoting powers, I recommend the following article by James Hasson, M.D., as it appeared in a recent issue of the Maine Line, a trade publication of the Bangor & Aroostook Railroad:

POTATO POSTULATE

(By James Hasson, M.D.)

People used to pity the Irish who were so poor that they had to live on potatoes. The next time you see a bunch of new Canadians, listen to the brogue of the ginger-headed 6-footer with shoulders on him like a prize-fighter and fists like hams. Not Californian peach-fed hams these, but Irish potato-fed. It was not only economics that made the Irish eat potatoes—it was also sound commonsense. The mother of that man you watched lift a sack of cement as if it were a bag of feathers knew what was best for him when he was a boy—and gave him potatoes, lots of them.

That woman did not need a doctor to tell her that potatoes were good for her boy, because some long-inherited primitive instinct provided the knowledge. What does your dog do if its stomach is upset? It eats grass which will make it well. Nobody ever taught it to do this—it just knows what is the right thing to do. I am a Harley Street specialist and the majority of the people whom I treat have, unfortunately, had their primitive commonsense and their best animal instincts bred out of them by generations of overrich living. They come to me with a variety of ailments—rheumatism, lumbago, the so-called displaced disk, skin disorders such as acne of the young, rosacea, and generalized eczema. They expect, sometimes even demand, complicated and expensive treatments, and I can see the doubt in their eyes when I tell them that a simple diet of potatoes will put them right. But, when I insist, they follow the regimen I lay down for them, and are surprised at its success. What is the regimen? A potato diet. Boiled potatoes or potatoes baked in their skins with butter, black pepper, salt, and a few drops of lemon juice. Why the lemon juice? Because it provides the extra vitamin C which is necessary in all diets.

Why potatoes? Ask a chef what he does if, in error, he oversalts a dish. He will tell you that he drops in a few boiled potatoes because they absorb the excess salt. But what has excess salt in food got to do with the functions of your body? Potatoes have the same quality in your stomach as they have in the oversalted sauce—they absorb acidity. And one of the greatest dangers of continued indulgence in rich foods and alcohol is that the acids in your body, and particularly uric acid, become too plentiful for your organs to eliminate. These acids are the equivalent to the excess salt in the sauce, and a potato diet will rid your body of them and add years to your life. This removal process is called anti-intoxication.

"But I'll get fat if I eat too many potatoes."

Bosh! Let me tell you what happens to the food you eat. Ideally, if you have a properly balanced diet, every bit of good is extracted from your food and is used to restore the energy you have spent since the last meal. It is when the stomach has completed this task that it feels empty, and grumblingly demands more fodder to work upon. But if you stuff yourself with rich food and drink too much alcohol you are placing a heavy burden on your digestive processes. Your intestines, your kidneys and your liver protest because they can't cope, and you have a feeling of fullness, indigestion and even spots before the eyes. Your unlucky organs do the best they can to separate the good from the bad, but their efficiency is impaired and the damaging acids, such as uric acid, pass into your system.

From the fat content of your food your body takes only as much as it needs and stores the rest, usually somewhere around your midriff. There is no fat in the potato diet except that supplied by the small amount of butter, but your body needs a reasonable amount of fat. So, when you are on a potato diet, the body will have to draw upon its reserves. The result is a decrease in your girth. As for the uric acid, that is absorbed by the potatoes and passes out of your system. But the diet, to be really effective, must be continuous and systematic for 2 or 3 days every week.

A person between 40 and 65 should, in my opinion, avoid spirits, wines, and rich foods for 3 to 4 months every year while he follows the potato diet. But, even if you only follow the weekly 2 or 3 days of potato diet (always baked or boiled potatoes, mind you, not fried), you will be lengthening your life.

How often have you heard this conversation, even joined in it?

"Funny about Joe, dying like that within a few years of retiring. He'd worked like a slave for years to get a decent pension and enough to retire upon, then, bang. He's gone."

"Yes; sad, sad. But a lot of guys seem to go that way. Must be because they have no work to do, and no hobbies. I'm going to get myself a hobby when I retire."

No, get one before you retire; get one now. And make your hobby the potato diet. It was not because Joe had no hobby that he died so quickly after retiring. He'd been stuffing himself with good food and drinking far too much liquor for years. He'd been slowly poisoning his system, but while he was working his energy absorbed much of the surplus calories and helped to get rid of the acids. When he took to doing practically nothing he lost neither his appetite nor his thirst, but his organs could not cope any longer. They gave up the unequal struggle and Joe gave up the ghost.

But had Joe eaten a balanced diet (which would not have stopped him from occasionally having the little bit of rich something he fancied), had he gone on a potato diet, he would have lived to enjoy his years of retirement. Are you going to enjoy yours? Then you'd better start the potato diet right away.

Propaganda? Of course this is propaganda. Propaganda, not to increase the consumption of potatoes but to increase the length of your life. Try it.

A greedy man never just dies. He kills himself, he commits suicide. Old age is brought on, hastened along by corrosion of the organs through wrong and injudicious eating and drinking.

Now this potato diet. What? You're sick to death of the word "potato"? Are you sick of life, too?

Hoffa-Bridges Threat to Nation

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford (Ill.) Register-Republic of April 13, 1959, entitled "Hoffa-Bridges Threat to Nation":

HOFFA-BRIDGES THREAT TO NATION

The American public will readily understand the potential threat to a vital lifeline of the Nation in James R. Hoffa's proposal to consolidate all unions engaged in transportation of people and goods—on land and sea and in the air. From both west and east coasts last week, steps were taken to set up joint committees composed of representatives of Hoffa's Teamsters' Union, Longshoremen, Seafarers, and the Maritime Union.

The threat on the west coast is more critical because in that area Hoffa is making overtures to Harry Bridges, whose International Longshoremen's and Warehousemen's Union was expelled from the old CIO in 1950 on the ground that it followed the Moscow line more than it did the CIO line.

Hoffa's union and the longshoremen could exercise a powerful force over commerce. Now that Hawaii has been admitted as a State, Bridges' left-wing union, which has a firm grip on the islands' sugar and pineapple industry, is in an even better position to throttle shipping.

The AFL–CIO, which expelled the racket-ridden Teamsters' Union last year, has attempted to nip Hoffa's plot in the bud by ordering affiliates of the federation not to have anything to do with the Teamsters. But Hoffa's power is so great that the AFL–CIO ban has had little effect; when the Teamsters halt deliveries or throw up picket lines, other unions generally do not challenge the action.

Teamster and dock-worker officials on both east and west coasts say that current steps toward establishment of joint-action committees are not preliminary to a confederation of transport workers. But against those statements must be considered Hoffa's words last November 3, when he said that his plan to merge truckdrivers, seamen, longshoremen, and air-transport workers would not be stopped by the McClellan racket-investigating committee or the courts of the land.

The public would be almost helpless if Hoffa, the man who tried to unionize New York City police last year, carried out his transport federation scheme. This empire would take in about 50 unions and at least 3,500,000 workers; it would have a stranglehold on the U.S. economy.

The Hoffa-Bridges threat can be stopped in its tracks if Congress takes action to put labor unions under provisions of the Anti-trust Act. Hoffa has defied the AFL–CIO and monitors appointed by a Federal district court to supervise the Teamsters' Union; Bridges, after successfully opposing efforts of the U.S. Government to deport him to his native Australia, recently toured Europe, including Russia, and was accorded a welcome by America-hating union leaders.

Hoffa and Bridges would not be able to defy the law and to ignore congressional committees if they were subject to the same antitrust laws which apply to business and industry. These power-hungry labor leaders have already been given too much rein; their transport federation dream should be exploded before it is too late.

Pitifully Uninformed

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of April 14, 1959:

PITIFULLY UNINFORMED

One of the most alarming things about the United States, and our people, is the fact that they read less and less, apparently, of the serious, informative, and educational things. As the latest example, a widespread poll recently revealed that almost 40 percent of those interviewed did not know that Berlin lay within Red-ruled East Germany.

As has been pointed out so often, the trash which makes the best-seller list, and which makes hundreds of thousands of dollars for its authors, reflects a melancholy picture of what the American people think about, read, and do with their leisure time.

Two courses which every American youngster should study, and which most of them do, are U.S. history and the history of the Communist movement. And, U.S. history should certainly cover the years to the present, since the international picture changes so frequently these days, it is mandatory to give our youngsters an up-to-date history of events up to now.

Of equal importance, and a more urgent problem, is the challenge which faces each citizen—the challenge of keeping himself somewhat informed. Rather than watching television for endless hours, reading sex novels, and piddling away all one's life with leisure, in various forms, each of us should devote some time daily to keeping abreast of the news, and the issues of the day, in order that we might be better citizens.

New York Dinner Will Honor Celler

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the March 1959 issue of the Jewish War Veteran.

The Jewish War Veteran award of its Gold Medal of Merit to Congressman CELLER is a highly deserved tribute, and I join his many friends who will honor him on April 18.

NEW YORK DINNER WILL HONOR CELLER

On Saturday evening, April 18 Jewish War Veterans will present its coveted gold medal of merit to Representative EMANUEL CELLER, Democrat-New York, at a dinner in his honor at the Hotel Statler in New York City.

Maj. Gen. Julius Klein, Past National Commander, is honorary chairman of the dinner.

Congressman CELLER, known affectionately as "MANNY", was awarded the Medal through unanimous resolution by Jewish War Veterans at its convention in Los Angeles last year.

What kind of a man is "MANNY CELLER"? Nobody can put it better than has Mr. CELLER himself in his autobiography, "You Never Leave Brooklyn":

"You never leave Brooklyn. The life that spills over from Pitkin Avenue follows you to the placid, well-ordered Connecticut Avenue of Washington, D.C. The hoops, the kites, the skates, the sleds, the fights of Brooklyn's children follow you to the streets of official Washington, where no children scamper through the streets or tumble under your feet. The shadow of Brooklyn tenements falls upon the low houses of Washington.

"Externally, Washington is a lady—proper, hatted and gloved, as becomes a lady. Brooklyn is a woman, overlarge, aproned for work, with a crisscrossed heart."

EMANUEL CELLER came to Congress in 1923 and in his 36 years both as a Member of Congress and as chairman of the Committee on the Judiciary of the House of Representatives has thrown himself into the battle for the rights of the plain people. Sometimes he is a voice alone in his defense of free speech, free press, free assembly, and all civil liberties. His understanding that democracy anywhere affects democracy everywhere has led to his magnificient support of such democratic countries as Israel and India. Two of his fiercest engagements are in the areas of reducing monopoly power and liberalizing our immigration laws.

His whole record speaks his background and his heart, for he came from Brooklyn and his knowledge of the poor and downtrodden is personal and experienced.

EMANUEL CELLER was born in Brooklyn on May 6, 1888. He attended the public schools, was graduated from Boys High School of Brooklyn in 1906; from Columbia College, New York City, in 1910, and from Columbia University Law School, New York City, in 1912. He was elected to Congress November, 1922. But these facts do not tell the story of MANNY CELLER. He worked as a recreation teacher during his summers. He sold wine after his father's death to help himself through school. He practiced law; he studied music, and to this day plays both the violin and the piano. Now, at the age of seventy-one, he is a man of intense energy, of deep understanding, and still as alive to the issues of the day as he was when he first entered Congress. Today he is the dean of the New York delegation, and considered one of the best informed and staunchest Liberals in the House.

Do You Care About Freedom?

EXTENSION OF REMARKS

OF

HON. KEITH THOMSON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. THOMSON of Wyoming. Mr. Speaker, the Lifeline radio program features daily broadcasts by Wayne Poucher, radio minister for this nationwide patriotic and religious educational movement.

Mr. Poucher, whose daily commentaries on public affairs and sermons are broadcast over a large number of radio stations throughout the country, is a fervent and sincere crusader in the cause of freedom.

Under leave to extend my remarks, I wish to insert the text of a recent broadcast by Mr. Poucher, entitled "Do You Care About Freedom?" in the RECORD so that all Members may have an opportunity to read his inspiring message:

We heard a story recently about a man from the Midwest who paid a visit to New York City. Later he was telling friends about walking down a New York City street when he suddenly saw a stranger in the crowd clutch at his chest and then fall to the sidewalk, writhing in pain. "When I got to the corner," the midwesterner said, "I looked back and the man was lying where he had fallen. People were stepping around him and paying no attention to him. Nobody seemed to care."

Of course, the moral of that story is obvious. The visitor to New York was quick to condemn the coldness of the people there—but he himself did not stop to help the fallen man. The New York visitor was like so many of us—he wanted someone else to be the good Samaritan—he was waiting for "they" to do what was necessary.

In just the same way, Americans all over the land are waiting today for they to preserve our individual liberty and save our Nation from its enemies. But they are not going to do it, my friends. This is a job you are going to have to do—you and all other Americans who care about freedom. And who does care about freedom in America? Why, millions of constructive Americans care. Those who know the history of our Constitution and who realize that its basis is the guarantee of individual freedom, care deeply about maintaining local self-government in our Nation.

There are Americans everywhere who care passionately about their country and its symbols: The flag, the national anthem and other partiotic songs, the anniversaries of our freedom's birth, the good name of the United States. They feel a great pride in expressing their love of their country. They agree with that Member of the U.S. Congress who said, many years ago, "The love of country is nothing more than the love of every man for his wife, child, or friend."

And then there are men and women among us who care gravely about the solvency of the National Treasury. This concern very definitely has something to do with honor and integrity. The national character of the United States is injured when, despite a backbreaking burden of taxation, the Government continues year after year to run heavily into debt. This concern over our fiscal soundness also relates to the corruption of character by Federal giveaways. Those who call for sound economy in Government are not selfish persons devoid of human considerations. They are normal persons who place great value on ideals and principles. These are among the people who care about America. They are the constructives.

Opposed to them are two groups. One group is made up of the complacent, the apathetic, those who either say that everything is all right or say there is nothing they can do about the things that are wrong. They fall easily into the traps set for them by the third group—a group made up of the mistaken, the sworn enemies of the kind of freedom that is traditional in America.

The mistaken have no use for the Constitution of the United States, based as it is on guarantees of individual freedom and limitations on the power of big government. The mistaken sneer at the feeling that patriots have for this land of liberty. The mistaken encourage and promote more and more Federal spending and bigger and bigger Federal deficits. The mistaken are those who, whatever the cause, can always be counted on to place the interests of the United States last.

Against the efforts of the mistaken, we must, my friends, place the full strength of all those who care about a free America. Truth and knowledge are the great weapons possessed by those who care. With truth spread by knowledge we can awaken those who care. With truth spread by knowledge we can awaken those who are sleeping, and with our combined strength we can successfully resist the onslaughts of the mistaken against freedom in America, against civilization in the world, and against the love of God in the hearts of men.

Let us remember our history. Liberty was no mystery to our American forebears. They knew that in a self-governing nation, liberty must be universally understood or it is certain to be destroyed. Once the average citizen hands the keeping of his liberty over

to anybody else, he already has lost his liberty. These were the fundamental facts recognized by the Founding Fathers and set down in plain words in our Declaration of Independence and the Constitution of the United States.

Understanding—effective understanding—is the basic need. It is the responsibility—yes, and the privilege—of patriots to spread among their fellow Americans the understanding of the love of freedom and love of country that will save us from disaster. It is a task that must be accomplished by Americans who care—that can be accomplished only by them—that can be accomplished, in your area of relationships, only by you.

Public Interest Ignored—Kennedy Labor Bill Covers Only What Unions Accept

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following article by Holmes Alexander, which appeared in the Rockford (Ill.) Register-Republic of April 13, 1959, and is entitled "Kennedy Labor Bill Covers Only What Unions Accept":

PUBLIC INTEREST IGNORED—KENNEDY LABOR BILL COVERS ONLY WHAT UNIONS ACCEPT

(By Holmes Alexander)

WASHINGTON.—Senator JACK KENNEDY, front runner for the Democratic presidential nomination, owes his early lead to energy and a winning personality. But the way things are going, he could find himself more beholden to the American labor movement than a successful candidate in America ought to be.

The prospects of three other presidential possibilities have been recently explored in this place. RICHARD NIXON'S forte is experience and an open record; STUART SYMINGTON'S is a proved ability in business management and labor relations; LYNDON JOHNSON'S is leadership and parliamentary skill. But Kennedy stands out as the favorite of the AFL–CIO, the spokesman for prolabor legislation, and the gadfly of the probusiness opposition.

All this is confusing and unfortunate. Senator KENNEDY is not a laborite or a leftist. Nothing about him deserves the Republican epithets of radical—meaning in NIXON'S language, an extremist. But it may be—and this is written in friendship and warning—that KENNEDY and his backers don't realize how far toward this precipice the Senator's labor reform bill (S. 505) is taking them.

The Senator, for example, has been forced by competition to take a position which opposes making union officers criminally responsible for misusing union funds. True, the Kennedy bill does not blacklist fiduciary responsibility, which is the legal phrase. But of the four principal labor reform bills now before Congress, only the Kenendy bill fails to include a fiduciary provision.

The Kennedy bill is much softer than its three competitors in the matter of financial disclosures by union officers. The Kennedy measure relies on criminal procedures, while the Goldwater-administration bill (S. 748) would provide actions of disapproval by the Labor Department and the National Labor Relations Board. Two other bills by Senator MCCLELLAN (S. 1137), and Congressman BARDEN (H.R. 4473) go still further. They require that the union financial reports be certified by a certified public accountant.

Senator KENNEDY'S bill includes a difficult legal obstacle for the removal of a union officer by vote of the union members. There is a show-cause phrase in the Kennedy bill which is significantly left out of the bill by Senator MCCLELLAN, whose committee has interviewed so many slippery characters. Again, the Kennedy bill is unlike the Goldwater, McClellan, and Barden bills in the matter of protecting union members from threats and violence by union officers and goons. The Kennedy bill tends to federalize jurisdiction over labor affairs which now lie in the no man's land between Washington and the States. Two of the other three bills favor States rights when in doubt, and the fourth bill does not take up the subject. The Kennedy bill deals very gingerly with labor picketing and deals not at all with secondary boycotts, two matters on which the AFL–CIO is very touchy.

In virtually every case Senator KENNEDY does what the labor leaders desire or will tolerate, and what the business community regards as undesirable and often intolerable. This may not be so bad. Labor is entitled to liberal champions in Congress, but there is reason to feel that some of the Kennedy positions are harmful not merely to business but to the public interests. This appears to be true in places where the Kennedy bill fails to go as far in protective language as the McClellan bill. The American Farm Bureau Federation, which represents a large nonlabor public segment, says this of the Kennedy measure:

"The bill nibbles around the edges of the labor racketeering problem. It's no more than a gesture toward what needs to be done. People would be lulled by its enactment into a falses assumption that Congress has discharged its responsibility for effective labor reform legislation."

This is what the labor bosses want, but it is not what the American people are asking their statesmen to produce.

Mandatory Import Quotas

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include an editorial which recently appeared in the Montpelier Evening Argus, Montpelier, Vt. This editorial shows clearly the great and growing concern of Vermonters, as well as people elsewhere, over the adverse effects of the recent order imposing mandatory import quotas:

[From the Montpelier (Vt.) Evening Argus, Mar. 21, 1959]

THE OIL ORDER

From every conceivable standpoint, the Federal Government's imposition of a mandatory system of import quotas on crude oil, gas, and other principal petroleum products is as irresponsible as it is unwise and unnecessary. It is clearly a decision made in homage to a group of special interests—some of the purely domestic oil companies—at the expense of the general welfare.

It will undoubtedly lead to an oil and gasoline price increase, thus furthering the pressures of inflation, which the Federal administration, incidentally, is supposed to be fighting on other fronts.

It can do nothing but harm to our already damaged foreign trade and foreign relations programs, being, as it is, a restraint on free world trade and competition.

It may well lead to further interference by the Government in economic controls, if the administration's promise to police the program is carried out.

The Government, which sounded more than a little embarrassed at its own decision, gave off with some sop about this being in the interest of national security. This is red herring nonsense, and smells as such.

That statement completely ignores the fact that the restrictions apply equally to Canada. How, now, could there be any interception on the U.S. bound oil on the sea in this case? Canadian officials had protested the decision even before it was made as another example of breaking down friendly relations between the two countries.

And in neutral countries overseas how does the Government think this decision will be interpreted? How else but a contradiction of our high and mighty sounding phrases about international cooperation and free trade? And, in all honesty, what else is it?

The blow may well hit New England harder than other parts of the country, since the import restrictions apply also to residual oil.

President Eisenhower included this in the compulsory program despite repeated protests from the New England delegations in Congress and from others in this part of the country.

Instead of listening to these entreaties, the Government went ahead with a decision that can only result in increased oil prices in New England and give inflation a further impetus all over the country.

What of Tibet and the United Nations?

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. BASS of Tennessee. Mr. Speaker, on April 11, 1959, the Daily Herald, of Columbia, Tenn., one of the outstanding newspapers of my district, carried an editorial relating to the U.N., which I think merits the attention of the membership of the Congress. I would like to call my colleagues' attention in particular to the comments in regard to this country's failure to remain on the diplomatic offensive in our relations with Communist countries.

The editorial follows herewith:

WHAT OF TIBET AND THE UNITED NATIONS?

What good is the U.N. anyway?

We ask this question in view of the action of Red China in taking over once proud and independent but primitive Tibet.

The revolt in Tibet is certainly a challenge to the U.N. and an opportunity. But it is not even being seriously considered that the U.N. take even token action.

The United Nations acted with great indignation and no success when the Russians brutally suppressed a popular revolt in Hungary.

Although U.N. action did not amount to much, and although the Russians would not even permit the Secretary General of the United Nations to go to Hungary, when things were in a state of turmoil, the cooky-pushing element in New York adopted vari-

ous resolutions, and staged a pretty good propaganda battle against the Russian occupation of Hungary.

Now it is agreed that the Russian action in Hungary hurt them in various parts of the world, all the way from Europe to Asia. It was blunt proof that Soviet talk of peace, etc., is a mere sham and that the satellite nations are actually kept under Russia's thumb by military force.

Now the Chinese Reds have brutally suppressed a revolt in Tibet. Few people know much about Tibet, and few of them care too much about it, but the opportunity for a major propaganda victory is there—if the allies or the United Nations would exploit it.

Instead of concentrating all our attention on Berlin, the allies especially the United States or the United Nations, should focus the world's attention on Tibet, should protest conditions there, and should continue to protest the Russian domination of the Balkan countries. We should counter the Russian squeeze on Berlin with the demand that the Russians withdraw from the small countries they occupied after World War II, and carry on our own aggressive public relations campaign throughout the world.

Unfortunately, the Western World has missed many a propaganda opportunity in recent years. Likewise, we have been inclined to spend more time on the defensive, answering charges made against us, than we have spent on the offensive. We should keep up a drumfire propaganda barrage on Hungary, on Tibet, on the domination of the Balkans, and on the various forms of suppression of freedom which are practiced in Russia and all Communist countries.

Negroes Speak Under Duress of NAACP

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an editorial from the Florida Times-Union, Jacksonville, Fla., of April 19, 1959:

NEGROES SPEAK UNDER DURESS OF NAACP

The invitations which are being mailed this week by the Jacksonville Beach Chamber of Commerce to 1,500 high school graduating classes in the Southeast for a visit to the local strands is a reminder that commencement season is not far off in the segregated school systems of Dixieland.

The white youngsters who will respond to the hospitality of our local beaches and enjoy one more class outing are no different from the Negro children of the same age category and school level. Take for example, the Florida High School Senior Day observance last Saturday attended by 1,500 Negro high school seniors at Florida A. and M. in Tallahassee.

Whether conditions remain as they are, with the young people of each race enjoying the privilege of remaining unintegrated may depend on the State legislature now in Tallahassee, where the members of that lawmaking body will undoubtedly have to listen to specious reasons why they should submit to a "little bit of integration."

They will be offered that pabulum in language which is labeled the "moderate approach."

In writing their opinion as to why the Negro children who were at Tallahassee last week and those who will visit our beaches should engage in this activity together, the Justices of the Supreme Court said under the present arrangement in the South the colored youngsters are suffering psychologically because of segregation.

No greater puerility ever came from the pens of supposedly adult human beings.

Ask those young Negroes who were at Florida A. and M., under conditions where they can respond without being under the duress of the NAACP, whether they would want it the proposed new way or the old way. They would say, if they spoke in honesty, that the psychological wounds incurred from going on a beach party in social atmosphere which was forced upon them carried infinitely more danger of psychological wounds.

That's commonsense, and not something out of an "educational psychology" book, and that is the reason our Florida legislators will refuse to submit to any other plan. Why should they when it was never in the divine scheme of things to be otherside, the turncoat southern moderates to the contrary notwithstanding?

The Aftermath of the Sacco-Vanzetti Case and Effect on World Opinion

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. FULTON. Mr. Speaker, I am pleased to present Pennsylvania Supreme Court Justice Michael A. Musmanno's views on the aftermath of the Sacco-Vanzetti conviction and its effect on world opinion:

THE AFTERMATH OF THE SACCO-VANZETTI CASE AND EFFECT ON WORLD OPINION

(By Pennsylvania Supreme Court Justice Michael A. Musmanno)

Never in the annals of criminal trials which ended at the gallows or in the electric chair was a case of the prosecution so completely demolished as it was in the Sacco-Vanzetti case. Not only were all identifying witnesses, without exception, proved to be untrustworthy for one reason or another, but many of those associated in an official capacity with the case on the Commonwealth's side were proved to be unworthy of the offices they held. The defendants Sacco and Vanzetti spoke English but occasionally testified in Italian. The official court interpreter, Joseph Ross, was charged with distorting questions and answers of Italian-speaking witnesses so as to favor the prosecution and injure the defendants. Why would he do this? It developed later that he was very close to Judge Webster Thayer, for whom he often acted as chauffeur. His attachment was so intimate that he named his son, Webster Thayer Ross. Was he capable of so flagrant an act of injustice as misinterpreting evidence which had to do with defendants on trial for their lives? I do not know, but it is a matter of record that before the date of the execution Ross was serving a term in prison for attempted bribery of a judge.

And then there was Massachusetts Attorney General Arthur K. Reading, who represented the Commonwealth in the latter hearings in the Sacco-Vanzetti case. Mr. Reading admitted to me that the defendants were entitled to apply to every member of the U.S. Supreme Court for a stay of execution. However, after we had communicated with only four, and there were five more yet to see, Reading notified the Governor that there was no legal impediment to executing Sacco and Vanzetti at midnight, August 22, even though the warrant of execution could have been fulfilled any time during the next 7 days. Following the executions, Reading often publicly proclaimed that the defendants had had a fair trial. Several months later the Massachusetts House of Representatives impeached him on the charge of accepting a bribe of $25,000 in connection with an organization he was investigating. He resigned his office. Still later he was disbarred.

And then there was the Government agent Shaughnessy who made adverse reports on Sacco and Vanzetti. Before the Sacco-Vanzetti case ended, Shaughnessy was sentenced to a 12-year term in prison for highway robbery.

Degradation, exposure and repudiation followed many of the principals on the Commonwealth's side of the case. In contradistinction, there was never produced any derogatory evidence (aside from the alleged participation in the indicted crimes) against the characters of Sacco and Vanzetti. In the 7 years of bitter prosecution and in the 31 years which have followed, not one incident has been presented revealing the shoemaker and the fishpeddler as anything other than kindly disposed, charitable, honest workingmen. It is simply contrary to every experience in life to believe that men of such unblemished personal integrity could participate in brutal and sordid murder. One could almost feel that a wave of insanity, similar to that which hanged the Salem witches, swept over the condemning hierarchy to kill two men who lived lives so diametrically opposite to the lives of murderers and bandits.

The case got to the supreme judicial court of Massachusetts on appeal but that court, under the then existing law, was not empowered to review the entire record and decide whether the charge of murder had been made out. The law was changed by this respected legislature in 1939 and I do not think there can be any doubt in the minds of lawyers anywhere that if the Sacco-Vanzetti record went to the supreme court of Massachusetts today under the present law, an absolute discharge of the defendants would be ordered.

Are Sacco and Vanzetti to be disgraced throughout all the centuries and the milleniums of the eternity to come because of the delay of 12 years in the passage of a law which would have assured them a new trial and an almost positive acquittal in 1927?

On April 9, 1927, Judge Thayer sentenced Sacco and Vanzetti to death in the electric chair and an appeal was made to Gov. Alvan T. Fuller for executive clemency. One can almost feel sorry for Governor Fuller because there was thrust on him a burden for which he was not equipped. With his limited qualifications he did the best he could, and that best was deplorable. So far as court procedure and evaluation of evidence were concerned, he brought to the case a severely circumscribed capacity, which, combined with an inordinate vanity, could only lead him to a chaotically confused view on the entire legal controversy and could only carry him, which it did, to a conclusion which was devoid of order, empty of logic, and totally destitute of the most rudimentary concept of justice.

A couple of instances will illustrate Fuller's manner of evaluating evidence which could free or hang the persons placed in his charge. Vanzetti's defense at the Plymouth trial was that he could not have been in Bridgewater on December 24, 1919, committing a crime there, since, on that day he was selling fish in Plymouth. In reviewing the case, Fuller said he was a businessman and he wanted to see things in black and white. He said that Vanzetti's story would be a good one if it could be proved, by means of an express

company receipt, that fish had been sent to him from Boston, as he said it had been sent, for him to sell in Plymouth. Defense counsel searched through endless records at the fish piers in South Boston and, almost by miracle, found a book of express receipts which specifically recorded the shipment of fish made to Vanzetti, and fish which he sold on December 24, 1919. But now what had been so important a piece of evidence, when Fuller thought that it did not exist, turned out to be of no consequence when it was actually presented to Fuller.

Another illustration. One of the items of evidence against Sacco was a cap alleged to have been found at the murder scene. The prosecution claimed that they proved the cap belonged to Sacco because of a hole in the lining, theorized to have been made when Sacco hung it on a nail above his workbench. Katzmann argued that the jury had the right to convict Sacco on the cap evidence alone. Judge Thayer confirmed the importance of the cap in the Commonwealth's case. Governor Fuller said to me that the hole in the cap convinced him of Sacco's guilt, but when I uncovered the evidence that the hole had really been made by the chief of police looking for identifying marks within the lining, the Governor said that this disclosure was really not important.

Fuller appointed an advisory committee but that committee obviously did not know the record and made numerous serious errors. Although they either ignored or degraded all defense evidence, they heard and declared to believe a witness for the prosecution who was so irresponsible that even Katzmann would not use her at the trial. This woman, Lottie Packard, testified before the Committee that she saw Sacco at 11:30 in the morning at the place where the murder occurred at 3 p.m. When she was asked how she happened to know Sacco, this extraordinary person replied:

"Why, I don't know, gentlemen. I talked with Governor Fuller, and I don't remember, my head is too full of music and things like that, to remember."

Her former employer said of this woman:

"I will tell you, I think she is about 12 ounces to the pound."

The chief of police said:

"My honest and frank opinion is that that girl is a nut. * * * I have known her since she was born. She ought to be in the Brookline Psychopathic Hospital. * * * She is crazy. * * * She imagines things. She has pipe dreams."

But the committee insisted in believing her. They said:

"The woman is eccentric, not unimpeachable in conduct. But the committee believes that in this case her testimony is well worth consideration."

One of the principal reasons which motivated Fuller's refusal to commute the sentence of Sacco and Vanzetti was the fact that the whole world pleaded for mercy for the two men. He was resentful that the world should show an interest in what was happening in Massachusetts, as if Massachusetts were his own private kingdom over which he exercised monarchical authority. Another reason for Fuller's refusal to save Sacco and Vanzetti was expressed by the New York Herald Tribune in the following language:

"It is evident that the decision has not wholly blotted out the impression that political views have colored their fate."

The attitude of Fuller and his advisory committee throughout their hearings and eventual findings lend credence to the fear often expressed that the purpose of the extrajudicial proceedings was to lend respectability to a discredited trial, and that the possible innocence of the subjects was of little consequence compared to upholding the institutions of Massachusetts. But, in point of absolute verity, we who protested the Sacco-Vanzetti execution were as much concerned about maintaining the stability of the courts and government in general as Fuller and his committee. We believed that government could be made stronger rather than weaker, by the acknowledgment of error—and a correction of that error.

France was not ashamed to admit that her military courts were wrong in convicting Alfred Dreyfus. England was not humiliated when she admitted, through a parliamentary investigating commission, that her courts had erred when they twice convicted Adolf Beck, although he was innocent.

I cannot allow myself to believe that Massachusetts would be less noble than England or France in rectifying an injustice. And until that injustice is corrected, it will go on and on. The Sacco-Vanzetti case will not die. Abraham Lincoln, in a message to Congress, said:

"We cannot escape history. * * * The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation. * * * The way is plain, peaceful, generous, just—a way which, if followed, the world will forever applaud, and God must forever bless."

Massachusetts cannot escape the verdict of history. She will either nobly acknowledge an error or go on vainly fighting the hosts of truth and vindication. Massachusetts has an obligation to herself to cast off the yoke of censure which world opinion has fastened upon the State; she owes a duty to the people, who are justifiably proud of their State, to scour away the stain on her banner. And, in loyalty to America, of which she was an indispensable and glorious architect, she should correct the misimpression which has been engendered throughout the world as to the true character and spirit of America and Americans.

Who can doubt that the United States, in spite of all her tremendous sacrifices in blood and treasure for the betterment of the world, today is at the ebb tide of her prestige? Who can doubt that she is looked upon as egotistic, avaricious, arrogant, and devoid of sympathy for those who are less economically fortunate than herself? And how did this shocking situation come about? The ebbing of the tide began with the Sacco-Vanzetti case. Prior to that time America was admired and loved by the peoples of the world as a land of freedom, liberty, equal opportunity, and tolerance. Then came the conviction of two humble foreigners on evidence which failed to convince the intellect of mankind and brought a pang of pain to the heart of the world. Do not say that we in America have no responsibility to try our cases so as to satisfy the world. I say we have the moral obligation, if we wish to enjoy the respect of the world, to conduct ourselves in a manner which bespeaks fairness, equity, and justice to all.

Judge Thayer may have thought that no one would detect his misrepresenting the record, he may have dreamed that no one would tell how he was maligning and cursing the defendants while hypocritically announcing he was protecting their rights. And Katzmann and his accomplices may have thought that the world could never learn of their cunning, their plotting, and their scheming to convict two men they could not believe were guilty.

But somehow the world knew that all was not well in Massachusetts. And so, in manners which were legitimate, and in ways which were respectful, people gathered in halls, they met in public squares, they filed in procession, they signed and sent on petitions to America—the America of justice, the America of heart as well as of money—pleading, praying that Sacco and Vanzetti not be put to death. Instead of welcoming these prayers, instead of appreciating the feel of the heartbeat of the world, a few men in Massachusetts, dressed in a little brief authority, snarled and sneered. They were not going to be intimidated by people from across the seas, they said. But where was the intimidation, and who were the "intimidators"?

They were coal miners, laborers, carpenters, bricklayers, college professors, lawyers, religionists, poets, scientists—men from every walk and station of life. Among the petitioners were such illustrious and respected names as Anatole France, Ramsay MacDonald, John Galsworthy, H. G. Wells, Arnold Bennett, Romain Rolland, Fritz Kreisler, Maximilian Harden, Albert Einstein, Mme. Curie, Marquis Guy de Lasteye (the grandson of Lafayette), Alfred Dreyfus. They did not threaten intimidation, they did not proclaim an invasion. They only asked for mercy, the mercy of understanding.

But while Governor Fuller and a few others, standing on the ramparts of a superficial or prejudiced knowledge of the case, fulminated and hurled thunderbolts of wrath against these good people, there were others in America, and I am proud I was one of them, who thanked God that humanity was so universal that the peasant of Yugoslavia, the farmer of Australia, the rancher of Uruguay, and the schoolteacher of Sweden pleaded for justice for two men whom they did not know and with whom they had no bond except that of sympathy for their plight—the plight of two helpless creatures caught within the crushing gears of a monstrous injustice. They knew with John Donne that:

"No man is an island, entire of itself; every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the less, as well as if a promontory were, as well as if a manor of thy friends or of thine own were; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee."

And so they sent telegrams, wrote letters, and prepared petitions praying that Sacco and Vanzetti not be killed, until and unless the proof was positive and conviction complete, because they were constantly learning of new evidence which continued to swell the clouds of doubt enveloping the charge of guilt. And then, one day, there burst upon the horizon of despair the thrilling news of the confession which exonerated Sacco and Vanzetti. The heart of the world leaped with hope. Surely, now, exoneration was at hand, or at least a new trial. But achingly the petitioners were to hear that the few obstinate men at the controls of the machinery spurned the confession, sneered at all new evidence, mocked the defense, and scorned the entreaties sweeping in from every point of the globe. Never in recorded history was there such world-wide demonstration in behalf of two men condemned to death.

And as Judge Thayer refused motion after motion, and as the appellate court rejected appeal after appeal, and as the Governor played with the lives of the defendants like a cat plays with a mouse, the hearts of the lovers of America began to fail them, a touch of skepticism began to chill their souls; a doubt began to enter their minds that—perhaps, after all—America was not the land of the free and the home of the brave. And while the petitions still continued to pour into Massachusetts from every corner of civilized creation pleading, supplicating for mercy for the poor shoemaker and the humble fish peddler, the few men, still clad in their little brief authority, went scowlingly ahead to tear away the canvas covering the grim electric chair.

And so, on the night of August 22, 1927, the miserable deed was done. The throwing of the electric switch on that catastrophic night darkened the light in many a home in every country and clime. It also blew out the candle of faith in America as the land of justice, of humanity, and of mercy. An English periodical sadly remarked:

"For the first time in 150 years the flag of the United States has been treated in every land as the symbol of a great wrong."

William Allen White, the celebrated American newspaper editor, said:

"I am satisfied that Sacco and Vanzetti were innocent of the crime for which they were executed. Their execution was a crime for which America lost prestige in the eyes of millions all over the world."

Another American writer, Harry Elmer Barnes, said:

"Rightly or wrongly, the case of Sacco and Vanzetti did more to destroy abroad our ancient reputation of being a 'land of the free' than all of the other historical incidents of the last century * * *. It is scarcely impossible to exaggerate the unfortunate effect of the case upon foreign opinion of American justice."

The great French writer Romain Rolland said:

"I am not an American; but I love America. And I accuse of high treason against America (mind you, he says, against America, not against France) the men who have soiled her with this judicial crime before the eyes of the world. Their abominable parody on justice has destroyed the most sacred rights of humanity."

The time has come for us to rebuild what has been crippled but not entirely destroyed: overseas faith in America. Let us put life again into the words of Emma Lazarus at the foot of the Statue of Liberty:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free.
I lift my lamp beside the golden door."

That lamp guided my parents to these shores, as it perhaps guided the parents of some of the members of the Judiciary Committee. That same lamp was the beam of encouragement which brought Sacco and Vanzetti to Massachusetts, but there lived on these shores a few selfish and willful men who extracted the oil of the lamp so that it might not shine for the shoemaker and the fish peddler, and the countless millions who believed in their innocence. This committee may refuel that lamp so that the populations of the world may know that the golden door of freedom and justice in America has not been locked and sealed.

This committee has the power to take the initial step which will develop into an enormous stride toward achieving the heartfelt desire of all of us, the desire to restore once again to the peoples of all nations the faith which was once theirs—the faith that America truly is a land where the flag of freedom casts no shadow of injustice, and where no person is so slight or lowly that his cause will not be heard in the bright golden sunlight of impartiality and truth.

In the name of universal justice, in the name of all that we hold dear in America, in the name of all the glorious patriots who have made Massachusetts a name to cherish and revere, in the name of decency and honor, I ask this committee to take that action which will soon right a great injustice, correct a terrible wrong, and heal a grievous wound. That action can find its eloquent expression through approval of the Cella resolution.

The Fifty-two Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. MULTER. Mr. Speaker, I am pleased to again direct attention to the fine work being done by the dedicated men and women who have banded together under the banner of the 52 Association.

The following editorial from the New York Times of April 11, 1959, tells only a small part of the story:

THE FIFTY-TWO ASSOCIATION

The Fifty-two Association of New York, formed by 52 men in 1945 so that "The Wounded Shall Never Be Forgotten," is celebrating its 14th anniversary of providing personal morale and rehabilitation services to hospitalized and disabled veterans from Massachusetts to North Carolina. The 1,800 men and women members of Fifty-two of New York, with their associated chapters in Los Angeles, Chicago, and Miami Beach, have faithfully kept their founders' pledge. Fifty-two has entertained and, more important, helped to rehabilitate more than 300,000 sick and wounded men in uniform. The present plans for an outdoor recreation center for the wounded will give new significance to the organization's goals. Fifty-two's headquarters at 226 West 48th Street is an address many servicemen remember in New York. Inevitably, the good will of this organization is considered a part of the general hospitality of New York City itself.

Incidentally, Mr. Speaker, the editor has missed the point about the name of the organization. It has nothing to do with the number of members who started this fine work.

It is directly related to their slogan, "The Wounded Shall Never Be Forgotten." These inspired Americans resolved they would not only remember and help our wounded veterans on Veterans Day and on Independence Day and on other holidays. They decided they would devote their energies to doing the job every week—52 weeks a year. Hence the name and the slogan. And they live up to both.

Building Beyond the Rule of Terror to a Law-ful World

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention, and the attention of my other distinguished colleagues, to the very timely and informative speech made by the immediate past president of the American Bar Association, Mr. Charles S. Rhyne, of Washington, D.C.

BUILDING BEYOND THE RULE OF TERROR TO A LAW-FUL WORLD

(Address by Charles S. Rhyne, president, American Bar Association, 1957–58, before the Junior Chamber of Commerce, Washington, D.C., March 19, 1959)

Today Prime Minister Macmillan and President Eisenhower begin their talks on the Berlin crisis. This is merely another of the recurrent crises which almost paralyze the world with fear—fear of war and its horrors. The whole world knows that our failure to convince the Kremlin that our weapons of terror still outweigh theirs means the unleashing of Communist conquest. Men everywhere are asking, "Is there not some way to end this rule of terror?" Today I would like to convince you that there is—and spell it out to you.

I begin with the obvious, which is that men everywhere yearn for peace. On this Americans are agreed but so are other peoples. In Russia last summer the Russian people's desire for peace was the dominant, definable feeling we encountered. Russians cited the 17 million of their own people who died in World War II as their reason. Last January in India lawyers from Asian-African countries reported to us the same deep feeling among their people. They want rapid modernization and realize that peace is essential to the realization of that hope.

No one can deny that peace is what the peoples of the world want most today. Why is it that such an overwhelming desire cannot be translated into actual achievement?

My answer is that such a crystallized desire of mankind will control the actions of men and governments only when it is directed to a recognized, specific, clearly attainable plan which will bring about the desired result. So far no such peace plan has been advanced to the spotlight in the center of the stage of world attention. So far there is no well-defined plan upon which the universal desire for peace can focus. We have the United Nations, but it has not tranquilized world frictions and no one believes that it will ever be able to do so under its present framework. Berlin, Suez, Quemoy-Matsu and Korea are only a few illustrations of the U.N.'s inadequacy.

Peace in today's world is indeed maintained by "mutual terror," as Sir Winston Churchill has said. Actually, it is not peace we have but an armed truce—a truce that can explode at any moment through mistake or design.

Russia has a clearly stated plan for world peace. She undeviatingly and unceasingly works for it. She proudly and constantly presents it. Her peace plan is to make the world one hundred percent Communist. Concentrating on their goal of world domination with fanatic zeal, the Communists have so harnessed their resources as to smash through to great scientific and other achievements. Today Russia stands as the number-two military power of the world, and there is some fear that Russia may be number-one. But Russia's program of conquest goes beyond destructive weapons. She has sharpened the instruments of propaganda, subversion and manipulation of world opinion into devasting weapons for the advancement of her single-purpose aim. While some may not realize its danger, no one can doubt communism's ultimate goal. Certainly no secret is made of it.

In opposition to communism stand the nations of the free world. Meeting and defeating communism is to the general public the comprehensible part of the free world's cooperative program. Being free nations, they often disagree among themselves as to the best method of meeting the thrusts of the Kremlin. The free nations—chiefly through the efforts and accomplishments of the United States—have matched and exceeded Russia in the arms race. But they have not matched or exceeded Russia in the all-important other battle areas of the cold war—especially in the area of dynamic, positive, clearly expressed and clearly understandable ideas for world peace.

Beyond beating off Russian threats and thrusts, the free world does not yet offer a universally comprehended plan for world peace. We have not gone beyond defensive and destructive measures to constructive measures for peace. The free world has not stated or espoused a peace plan which it urges upon all men with fervent zeal. A great need exists for an affirmative peace plan which clearly states a theme, a goal, an idea, an objective, which will be a rallying point for all men who are free and all those

who cherish that precious status. My recent travels of over 200,000 miles at home and abroad convince me that men everywhere want such an objective to which they can devote the understanding of their minds, the dedication of their hearts, and the creativeness of their efforts. Something beyond defeating communism is called for to meet this need. A defensive battle is not an inspiring maneuver in any arena. The free world will never rally to its side the Indias, the neutrals and the uncommitted—or even hold all of our own people together—without some such ideal or plan which can command from our people the same obvious devotion that the leading adherents of communism have for their program. Vice President NIXON has said of U.S.S.R.'s Mikoyan:

"I was most impressed by his flaming conviction that his cause was right and will prevail."

To win any war people need inspiration. The cold war is no exception. In our war for independence Patrick Henry's "Give me liberty or give me death" fired the minds and imaginations of our people. In World War I our slogan was "to make the world safe for democracy." We fought World War II "to end all wars." While the Communists drive forward to win the cold war under Khrushchev's blunt "We will bury you," the free world has no clearly expressed battle cry, no clearly expressed ideal or ideas to fire the imagination and crystallize the minds of our people upon a great attainable goal of universal appeal. Sure, we are fighting off communism's slavery, but people like to get off the defensive and on the offensive. We must have a goal beyond building more deadly weapons and spell it out in simple language everyone can understand. We need the coining of a phrase which will capsule our objectives—a phrase which all can understand and applaud.

My message to you today is that while it has not hit with the impact of a thunderclap, there is slowly but surely beginning to crystallize an idea, a universal ideal, behind which we can concentrate our effort not only to defeat Communist slavery but to give mankind an attainable plan for achievement and maintenance of world peace.

The rule of law is the ideal of which I speak. I realize that as thus expressed it will not surprise you as something new or novel or immediately inspire you. The outlines of this plan are yet only faintly discernible. It is as yet recognized as a peace plan by only a few. But a realization of its tremendous potential even among a few is creating here and abroad an ever-rising tide of support and dedication.

We must capitalize upon this idea and state it in such a crystal clear way that all men will comprehend its value and strive to place themselves under the banner of the law. Law is one of the few terms all men fully comprehend. The one universal basic principle and idea which the free world has in common, despite many different forms of government, is the rule of law. The attainment of world peace through law is an objective which can be readily grasped by the citizens of every country.

Let me state my case for the rule of law. Let me explain how this idea can grow into successful, concentrated, concrete action which will both defeat communism and create a peaceful world.

In the beginning of time, back through the unnumbered centuries, there was no rule of law. Men settled their disputes through brute force. Evil men made weaker men their slaves. Killing and robbing were the order of the day. Those who killed, robbed and enslaved best became nobles and kings. Might made right and force was glorified. As civilization developed, men slowly realized that killing and robbing and slavery for human beings was not a desirable way of life. History then reveals a gradual development of rules of law growing chiefly out of the moral principles and ideals of the great religions. Courts presided over by nobles and kings decided the disputes of lesser men under the rule of reason, but for many centuries the nobles and kings still operated under the rule "the king can do no wrong." Subjection of individuals to compulsory jurisdiction of the courts was gradually accepted as essential for peace within nations. In still later developments the king, or government itself, was placed under law and subjected to compulsory court jurisdiction.

Today in all civilized nations disputes between man and government are now settled in courts under the rule of law. Within nations the rule of law achieves and maintains order and stability. But between nations the winner of most disputes is still the one who can kill the most men. Having proved what it can do within nations, surely the rule of law should be given a chance to operate between nations. No idea or concept developed by man since the dawn of civilization has greater promise or potential. Yet, the greatest gap in the growing structure of civilization today is still the lack of law in the world community.

President Eisenhower, in his state of the Union message, said:

"All peoples are sorely tired of the fear, destruction, and the waste of war. As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations.

"It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations. Measures toward this end will be proposed later, including a reexamination of our own relations to the International Court of Justice."

Earlier the President in his Law Day, U.S.A., message said:

"The world no longer has a choice between force and law; if civilization is to survive, it must choose the rule of law."

We must rally back of his leadership and achieve the goal he has set for us. Either we achieve a reign of law for the world or you and I and our loved ones may die under a rain of Communist nuclear bombs. Berlin merely underlines the urgency of action. We must build a "law-ful" world before the Kremlin builds a Communist world. If we build a "law-ful" world communism will disappear, for the rule of law and communism are antitheses. Communists are working day and night with fervent zeal to build their world of slavery. They have enslaved 1 billion people from 17 nations since World War II began—but we have scarcely begun our task of insuring freedom for men and freedom from war through the rule of law. Certain it is also that we are not working day and night with fervent zeal on this task as the Communists are on theirs.

We start, therefore, with the undoubted desire for peace, the dire need for something to replace weapons before the holocaust of war explodes, and the further fact that the rule of law has worked within nations and could do the job between nations. How can the idea be translated into political reality?

History teaches that within nations this job has been done by a gradual strengthening of legal procedures and institutions. In England, as the Kings' courts acquired prestige and public acceptance because of the fairness of their procedures and the impartiality of their judgments, barons and lords abandoned the private armies by which they had previously fought out their disputes on bloody battlefields and submitted their quarrels to these courts for decision. In the much glorified western part of the United States, as the strength of legal procedures and institutions grew, gunmen lost out as dispute deciders. A similar experience took place in most civilized nations.

The lesson is clear. We must so strengthen legal procedures and institutions in the shrunken world community that nations, too, will give up their war weapons and submit their disputes to courts for decision under the rule of law.

How do we start and where?

In the past 2 years, I have talked with lawyers of some 70 nations. The broad consensus is that the rule of law will never arrive in the world community until and unless we demonstrate beyond question that we have placed the Government of the United States under that rule internationally as we have nationally.

Foreign lawyers are often better students of history than American lawyers—especially the history of American actions that bear upon the issue of war or peace through law. Those who are frank say this: "Who destroyed the prestige and usefulness of the Permanent Court of Arbitration after it came into being with worldwide acclaim in 1899?" The answer: "Your U.S. Senate by its action requiring the submission of the final decision in every case involving the United States to it for its 'advice and consent'." The Court has been used only four times since 1931. "Who destroyed the prestige and usefulness of the Permanent Court of International Justice created by the League of Nations in 1920?" Answer: "Your U.S. Senate by its vote prohibiting your country from becoming a party to the Court." And finally "Who has destroyed the prestige and usefulness of the International Court of Justice created in 1945 by the United States?" Answer: "Your U.S. Senate by its Connally reservation which makes the United States the judge in each case filed against her of the jurisdictional question of whether the dispute is domestic or international in character." This Court has handed down only 10 decisions in 13 years.

Let us examine into the charge that our U.S. Senate is chiefly to blame for the empty courtroom of the International Court of Justice.

True it is that in accepting the Court's jurisdiction the Senate excepted disputes which are essentially within the domestic jurisdiction of the United States as determined by the United States. But no one has ever urged, or ever should urge, jurisdiction by the International Court of Justice over domestic questions. Under the terms of the U.N. Charter the Court has no jurisdiction over domestic matters. The Court itself must summarily decline jurisdiction over any domestic subject. It is the distrust of the Court implied in the U.S. Senate's words "as determined by the United States" which destroys the prestige of, and confidence in, that Court. There is an old maxim that no man should judge his own case. Surely we can trust the Court to decide what is domestic and what is international rather than ourselves judging each case to which we are a party. Even if the Court should make a mistake, its decisions can be reconsidered and reversed whereas millions of gravestones are mute testimony to the irreversibility of the results of war.

The International Court through its procedures and in its decisions compares most favorably with the best national courts. Its caseless docket is not due to a lack of an adequate and competent court, nor is it due to a lack of international disputes. Every day the page one headlines demonstrate the existence of the latter. Nations avoid the Court not because they really prefer war to resolution of disputes in that Court, but because they lack confidence in their ability to get a decision there even if they file a complaint. This brings me back to the Connally reservation.

Under the Court's statute the Connally reservation is reciprocal—a two-way street. Anytime the United States is sued all the defendant nation need to do is to notify the

Court that it considers the subject matter of the complaint to be within its domestic jurisdiction, and the Court must dismiss the complaint. The most recent illustration was the claim for $1,300,000 in damages filed by the United States against Russia for shooting down one of our unarmed airplanes over the Sea of Japan. Russia filed an answer saying this shooting was within her domestic jurisdiction. The U.S. complaint was then summarily dismissed by the Court. It is obvious that this boomerang effect of the Connally reservation is disastrous to the rule of law internationally. The crippling and blighting effect on use of the Court is clear.

Reports by many U.S. experts who have studied this situation agree that the Connally reservation has emasculated the usefulness of the Court and rendered it impotent as an instrument for world peace. Removal of this barrier to the usefulness of the Court has been recommended by the American Bar Association and the Attorney General of the United States. But this barrier was created by the U.S. Senate, is maintained by the U.S. Senate and can be removed only by the U.S. Senate—and the Senate has not recognized its responsibility.

The tremendous responsibility of the U.S. Senate for continuing through this reservation to stifle use of the Court is a most serious one when one considers the value of and need for any mechanism which can aid in preventing war under present world circumstances. The Connally reservation is unsound in principle and effect and should be eliminated by the Senate.

Removal of the Connally reservation is there the first step of leadership we in the United States must take on the road to world peace through law. The eyes of the world are upon us. An announcement of this step would receive much more acclaim abroad than the launching of a new ICBM or satellite. Once we take this meaningful step, law business for the International Court of Justice should show a dramatic increase. The free world will, at long last, begin using the Court to settle its disputes peacefully. The neutrals and uncommitted who desire peace so greatly will be drawn irresistibly to this substitution of law for weapons. The Court will become a focal point in international relations instead of a forgotten forum where 15 judges are paid $20,000 each per year to waste their time waiting to decide cases that are never filed.

But the building of a "law-ful" world requires more than this first step by our Senate. It requires a whole series of acts and actions to strengthen legal procedures and institutions in the world community. It requires also the creation of many new legal rules, procedures, and institutions.

The American Bar Association's Committee on World Peace Through Law recently asked more than 6,000 law leaders at home and abroad how a "law-ful" world can be brought about. The responses already received—and they are thoughtful responses—contain more than 100 different worthwhile suggestions of things which can be done to advance the rule of law internationally. These responses and a broad look at law in the world today make crystal clear that wherever the rule of law prevails order and stability prevail. In the absence of the rule of law fear and chaos generally prevail. That certainly is the picture within nations as well as in the world community as a whole.

But our study also makes one realize that the world community is not totally without law. We have some experience to build upon. The law of the sea is perhaps the best illustration of existing world-wide accepted law. The law of diplomatic immunity is another recognized legal concept on a worldwide scale. We have built up through custom and accepted conduct many other international law rules to which we add constantly by treaties and agreements. The trouble is that many of the world's problems growing out of trade, investment, contract and contact, are not yet covered by any accepted legal rules at all. The relations between nations and nationals of different nations are accelerating at an ever-increasing pace. What is needed is the development and worldwide acceptance of many rules of law applicable to the whole world community, covering new and old areas of contact, conduct, and conflict. This is not an easy task. It is not one that can be accomplished overnight.

Within nations we have literally thousands of legal rules and thousands of courts deciding millions of cases each year. These legal rules and these courts achieve and maintain the rule of law within nations. These legal rules, procedures and institutions did not come about in a day or a year, or even in a generation. But they have come about and they get the job done within nations. They can come about and they can do the job between nations.

Recognizing that building a "law-ful" world is peculiarly a task and responsibility in which lawyers should lead, the lawyers of the world in recent days have begun to explore how this job can be done and the ways and means to achieve it. Through correspondence, through meetings, through committees of the organized bar, and through individual efforts there is gradually coming about a concentration of the brain-power of the legal profession of the world upon this enormous, and, to some, impossible and hopeless task. Many of our 1,400 State and local bar associations and many of the foreign bar associations have special committees, or individual members searching constantly for the answer we must find here. With full realization of the enormity of the problem and full appreciation of the many stumbling blocks on the road to success, we of the legal profession have joined hands on an almost worldwide basis in this determined drive to prove that this goal can be accomplished.

A concentration of brain power and manpower brought the breakthrough which split the atom. The same concentration put a satellite aloft, developed a cure for polio, and in fact, is responsible for this age of miracles in which we live. While to the fainthearted the long, hard road toward placing nations under law internationally is unpromising and unprofitable, we of the law refuse to accept that verdict. We are going to do this job because it must be done.

Our world of today has outgrown many concepts of the past in the fields of science and technology, and so it is with law and court machinery. They too can grow and expand to new horizons to meet modern needs. We intend to prove that their usefulness is not confined to disputes and problems within nations. We will burst the bonds within which law has been applied in the past and thereby put bonds around war.

The movement toward a true international rule of law, like other movements, will realize its objective only through the pressure of public opinion. Just think of the possibilities for calm and considerate use of law in the United Nation's Court in disputes such as the Berlin crisis, the Suez crisis, the border incident between Spain and Morocco, the fishing rights controversy off Iceland, and similar differences now fought out in the arena of power politics and backstage diplomacy or by armed might. The focused power of world opinion which forced an end to the use of arms at Suez could—if properly and justifiably directed—so crystallize as to force reluctant nations to take their disagreements to the International Court of Justice for decision. The spotlight of public opinion must be cast upon the Court's potential so that people will cry out "Go to court, not to war," when war-causing disputes flare up. At present, the public at large does not even realize that the Court exists.

Few newspapers or commentators even mentioned President Eisenhower's plea for an international rule of law in his message to Congress. Thousands of words were devoted to ICBM's, summits, satellites, atom bombs, and war moves. This is especially true on the President's Berlin speech yet no newspaper account or newscast or editorial or comment has yet highlighted the President's call in that speech for an end to the rule of terrorism and the beginning of a rule of law and order although he said of the latter:

"Indeed, this is the peace policy which we are striving to carry out throughout the world. In that policy is found the world's best hope for peace."

Either they have missed the significance of that statement or they think it has no significance. If they think it has no significance let them say so and a debate can begin on whether the President has his teeth into something which is a dream or a possible reality. Peace through law is not dramatic news but it can become the most meaningful development in the history of mankind.

We pride ourselves in the United States on being a Nation which operates under the rule of law, a Nation where law is supreme over government. If the world is to move forward from operation under the rule of force to operation of governments of nations internationally under the rule of law, the United States must take the lead. If the United States is unwilling to operate under the rule of law internationally, how can we persuade others to do so? This era is often called the "age of the atom" or "age of the satellite." I say it must be the age when law came of age internationally or it may be the age of extinction for mankind.

Our promise of leadership for the future must not be that we will build the most dreadful weapons to destroy mankind. Our promise must be that we will develop the formula to save mankind by placing nations internationally under the rule of law.

This in broad outline is my argument for a peaceful world through the use of law. Let me conclude by stating why I believe the rule of law can help defeat communism.

Communism is a system built upon constant and continuous domestic and international conflict. The rule of law means individual freedom, order, peace, and stability for all men who live under it. Communism offers slavery and constant turmoil. More and more of the peoples of the world are realizing these facts. The rape of Hungary and the Kremlin's cold war moves fix them indelibly upon the minds of all men who think for themselves. Some lawyers from Asia and Africa told me recently they want order and stability which the rule of law brings, not communism. They realize that the stronger the law grows the stronger freedom grows. The stronger communism grows the weaker freedom becomes. As other people also correctly interpret the rule of law and communism, their choice can hardly be communism.

Russai's propaganda can be blunted and she can be stripped of friends by the powerful appeal of the rule of law nationally and internationally. The billion people who live in the rapidly awakening, underdeveloped, and largely uncommitted areas of the world must all be made to realize that this way of life—the way of the law—is the one by which they can attain their cherished aspirations of freedom, liberty, and dignity of man, along with the better livelihood, social change, and social justice they seek. The appeal of the rule of law might even shrink or make a few holes in the Iron Curtain itself. When in Yugoslavia last summer we were led to be-

lieve that lawyers there respect and want to expand the rule of law.

By snuffing out war-causing disputes among our friends and allies, by its pull on the neutrals and uncommitted, and by its undoubted adverse effect on the international Communist conspiracy, an expanded role for the rule of law would be a success despite the Kremlin's expected opposition. Birth of the rule of law, nationally or internationally, means death to communism. The Kremlin knows this.

It is always an inspiration to speak to young men about peace. You members of the junior board of trade are, or you should be deeply committed to work for the cause of peace, for you have been deeply involved in the results of war. You were babies when that reckless madman, Hitler, was at the height of his power, a time when the world tottered on the brink of war. You were still young children when World War II ended, but to some of you, I have no doubt, that war came very close. Your fathers may have fought in it; some of them may have died in it. You grew up in the era of the cold war; you were in your early teens when that war turned hot in Korea. Some of you already have seen military service; for many of you it is imminent.

To you, who have lived all your lives in the shadow of war or threatened war, there should be few things more important than the way to a permanent and lasting peace. No generation ever born had greater cause to hope and work for the universal establishment of the rule of law. Believe in it and work for it. The universal rule of law is the only way both to achieve and maintain peace. There is no truth I believe in more. There is no greater goal for any generation than to be dedicated to its attainment.

Supremacy of the rule of law within nations has created freedom for man. Supremacy of the rule of law between nations can mean freedom from the scourge of war. Let us hope and pray and work together for the arrival of a law day for the world—a day when law will replace weapons in the control of the fate of humanity.

Mrs. Clifford W. Bigelow Elected to Second 2-Year Term as President of the League of Women Voters of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of April 10, 1959:

HONOR FOR MRS. BIGELOW

Election of Mrs. Clifford W. Bigelow to a second 2-year term as president of the League of Women Voters of Wilkes-Barre is an impressive compliment as well as a public acknowledgment of her service to the organization and the community. This seems to be Bigelow year in Wilkes-Barre as her husband, who is secretary-manager of the Wyoming Valley Motor Club, was elected president of Wilkes-Barre Rotary Club just 2 weeks ago. Theirs is quite a record of public service in 7 years of residence. They live in Forty Fort.

The league of women voters in the city has been headed by such outstanding civic leaders as the late Mrs. Leroy Bugbee, Mrs. Charles Shafer and Mrs. Norman Patton who now heads the State organization. To follow in the footsteps of these women and others who have distinguished themselves in the service of the community is no small distinction in itself for Mrs. Bigelow. The fact that she was a unanmous choice enhances the honor.

The purpose of the league of women voters is to promote a political responsibility through informed and active participation of citizens in government. During the past year, officers and members of the organization have been working on issues at all levels including U.S. foreign policy, revision of the State constitution, absentee voting, water conservation, and public libraries. To furnish leadership for such group is a challenging assignment. Mrs. Bigelow has measured up to expectations as her retention demonstrates.

In the year ahead, the league will concentrate on county government and its subdivisions to determine how the public interest may be served most effectively. As president, Mrs. Bigelow again will have an opportunity for outstanding community service.

Less Foreign Oil

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. MULTER. Mr. Speaker, by my letter of February 27, 1959, I advised OCDM Director Leo A Hoegh that the case against limiting the importation of fuel oil appeared to be a good one and I asked for his comments.

In his reply of March 4, 1959, Mr. Hoegh was careful not to give me his views but remarked solely that, "My recommendations have been submitted to the President, and any comments or information must issue from the White House."

The only comment or information that issued from the White House was an Executive order limiting the import of oil and assigning quotas. That has resulted in the increase of the price of gasoline to consumers. It conserves nothing. It increases profits for those already being subsidized by unfair tax favors.

In this connection I commend to the attention of our colleagues an editorial which appeared in the New Republic of March 30, 1959, as follows:

LESS FOREIGN OIL

If a test of intelligence is the ability to see the relatedness of ideas, the President scored low indeed in signing an Executive order limiting and assigning quotas for the import of oil. For his action bumps head-on into his repeated homilies on freer trade, a sympathetic concern with the needs of our allies for foreign markets, and his almost mystical devotion to keeping domestic prices in check.

On the proclamation of the order, Standard Oil of Indiana raised the price of gasoline in the Middle West; and the Texas Railroad Commission cut the amount of oil that State could produce for the month of April by more than 100,000 barrels a day—thus preparing the way for new price increases on grounds of "scarcity." The consumer has no way of knowing from his fuel bill that foreign oil is $1 cheaper a barrel than domestic oil; nor that imports of oil have in the past served to keep the price of U.S. oil from increasing, except during the Suez crisis. Under the new program, the demand for domestic oil will rise, since the supply of imported oil will have decreased. High cost marginal wells in the United States will be utilized, thus further adding to costs. And there is no consolation for the consumer who heats his house with oil and drives his car with gasoline to be told by Mr. Seaton that oil prices will be held in check through competition with other fuels such as coal and natural gas.

What is the administration's explanation? According to Secretary of Interior Seaton, the order will "provide more oil to protect our national security." Mr. Seaton did not begin to explain (could he?) how the United States will have more oil by limiting imports from Canada and Venezuela and using up its own reserves more quickly.

Senator AIKEN, Republican of Vermont, admirably described the "classic contradictions" of the President's decision:

"You cannot control inflation and promote it at the same time. You cannot improve international relations by restricting the economy of friendly nations. You cannot insure national security by exhausting our vital national resources."

But the Executive order still stands.

Farm Journal Poll: Fact or Fancy?

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. McGOVERN. Mr. Speaker, on the eve of the 1936 presidential election, Literary Digest, a well-known, widely-read magazine, conducted a nationwide poll and came up with the conclusion that Governor Alfred Landon would defeat President Roosevelt in his bid for reelection. When the votes were actually counted, however, Roosevelt had won in a landslide and the Literary Digest poll faded into oblivion.

In its April 1959 issue, Farm Journal has come up with the results of a farm poll indicating that American farmers do not want a price-support program. The poll in effect is an endorsement of Secretary Benson's theory that farmers prefer to throw themselves on the mercy of a free market rather than particapating in a Government price-support program.

Recognizing that the Farm Journal poll was perfect grist for his propaganda drive against all Federal farm price-support programs, Secretary Benson lost no time in calling on the Congress to give heed to the poll.

A quick look at the Farm Journal poll and the method used to conduct it leaves no doubt that the deck was stacked to insure the results which the pollsters apparently wanted to get. Not since the ill-fated Literary Digest poll of 1936 has any poll been so obviously wide of the mark.

One sentence from the Journal article reads:

This poll reveals that the South's farmers are no longer the high price support and strict control advocates they once were assumed to be.

Yet, the poll had scarcely been printed when the results of the spring cotton referendum were announced showing that southern farmers had voted overwhelmingly in favor of plan A—the time-tested program of acreage allotments with a higher price support. Only 15 percent favored plan B which called for overplanting and almost no support price.

Wheat farmers have gone to the polls time after time in my area and voted 95 percent strong for price supports based on restricted production.

It is my own strong conviction that those farmers who told Farm Journal that they wanted no price support protection, were in many instances farmers who have become so disgusted with Secretary Benson's unbelievably bad management of the price-support program that they have lost confidence in all price-support operations. Considering the debacle that Mr. Benson has produced in his Department, it is a testament to the patience and wisdom of farmers that so many of them still realize that their long-range hopes for agricultural prosperity rest to a great extent on Federal agricultural programs.

Since the Farm Journal poll has been given such wide publicity, I ask unanimous consent to include at this point in the RECORD two articles which take issue with the reliability of the poll. The first article is the April 13, 1959, radio digest of the Grain Terminal Association, St. Paul, Minn.; the second is the March 26, 1959, Commodity Letter of the Daniel F. Rice & Co., of Chicago, Ill.:

GTA DAILY RADIO ROUNDUP, MONDAY, APRIL 13, 1959

One of the big national farm magazines blushed all over its editorial face the other day. It took an opinion poll of farmers and with great fanfare announced the results. But things didn't turn out the way the magazine said they would.

In its April issue this magazine said that its poll showed 55 percent of its 3.5 million farm readers want no controls, no floors, and no price supports. Instead, they want the Government to "clear out of farming."

To quote a sentence from the magazine: "This poll reveals that the South's farmers are no longer the high price support and strict control advocates they once were assumed to be."

But no sooner had the magazine hit the mailboxes than results of this spring cotton referendum came out. They tallied up just about opposite from the findings of the magazine poll. The overwhelming majority voted for plan A, the longstanding program of acreage allotments with a higher support. Only 15 percent voted for plan B, which called for overplanting with only a token price support.

So opinion polls have their hazards. Maybe people have a way of saying one thing and doing another. Or maybe the farmers were just poking fun at the opinion testers.

But we suspect that the cotton farmers were dead serious about the way they voted in their referendum—just like the wheat farmers who have always voted around 95 percent in this area to stick by their wheat program.

The Wall Street Journal, the eastern businessman's newspaper, was perplexed enough to send its reporters into the cotton areas to find out the "why and wherefore" of the vote. One Texas farmer said he voted for acreage allotments because "its the difference between making a little money and losing a lot." Another cotton farmer, in Arkansas, said he voted for plan A because it is "safer and saner." Overplanting just doesn't make sense, he told the Wall Street Journal reporter, "what with the extra expense for insecticides, fertilizer, and labor. I'd end up with less money than under the allotment plan. I'd be planting those extra acres just for fun."

A farm manager of 1,576 acres in south Texas said his operation would "go in the red" under plan B, even though it would let him plant 40 percent more acres to cotton. Plan B, incidentally, was highly favored by the administration and Secretary of Agriculture Benson. But the cotton farmers turned it down. They voted to hold back on production.

So this appears to be more evidence that farmers are willing and eager to abide by intelligent production controls. But in return they need a decent break on prices or price supports. And that's a reminder that farm prices are made in Washington and that in just about 1 month now Secretary Benson must announce the alternative plans he'll offer wheat farmers in the wheat referendum next June. That will decide what's going to happen on wheat in 1960. It will be another serious decision for farmers.

COMMODITY LETTER OF DANIEL F. RICE & CO.
MARCH 26, 1959.

What kind of a farm program do farmers want? A recent survey of farmers preferences by a farm magazine which is getting a lot of publicity, says that 78 percent favor low or no supports. Fifty-five percent of a cross section of farmers checked the square marked "No supports, no controls, no floors; free market prices; get the Government clear out," only 14 percent favored high-price supports and 8 percent production payments.

According to this article 78 percent of farmers want to eliminate the price and income programs of the USDA either immediately or gradually, and only 22 percent think the Government has a responsibility to secure a fair income for farmers. Frankly, we do not believe it. We do not question the good intentions of the publication and the author. Doubtless, the survey was made and reported in good faith. But, inherent bias shows through.

In order to get such a remarkable result, the game was played with loaded questions in a nonneutral area. There were five programs from which farmers were to choose one: (1) No supports, (2) emergency supports (so low as to have no supporting effect), (3) adjustment supports (a slow process of getting to no supports), (4) high price supports (90 to 100 percent of parity), (5) production payments.

In reality there were only three choices: (1) No supports in three forms, (2) high supports, (3) direct payments. Accordingly, the no supports had three chances to get voted while high supports had one.

There was no neutral ground. Farmers know that parity as a measure of a fair price has been outdated by new production technology. This poll gave farmers no choice other than all or nothing. There was no way in this poll for a farmer to say "I think the Government has a responsibility to see that farmers get a fair share of the national income; that the best way to get a fair income is to adjust production to the market size just as industry does." The way the alternatives were set up, the people who thought this way were disenfranchised; they had no vote.

With what is probably the vast majority of farmers silenced, the trick was to get them to go low instead of high. Accompanying the questionnaire was a long article deploring and condemning price programs. In the article the question was asked, "What do you think the country should do about it (1) let the law of supply and demand take its course, in the belief that while it may be rough on some people, it's the only real answer? or (2) have the Government step in and bail out—and then control—everyone who is in trouble, and do this at taxpayers' expense?" This is practically the same as asking, "Do you think we should have the democratic American economic system, or the state socialism of Communist Russia." We admire the wisdom and courage of the farmers who saw through this and came as close as they could to voting for a fair farm program.

The accompanying article went on to describe the failure of existing programs; the huge surplus; the high costs; the displeasure of an urban Congress. This was a shotgun poll.

We think that farmers want and deserve fair prices. In our market letter of February 18 we said a new farm program should: (1) Establish farm prices for the main agricultural products. A new system needs to be developed to take into account new technology and new methods. And (2) Establish production goals that will result in the desired prices. These goals should be established by a board of non-partisan experts and should be enforced.

Had this alternative been included in the choices given to the polled farmers, we believe it would have been the overwhelming choice.

More realistic appraisal of the farmers' attitude toward price supports and the farmers' needs and desires was provided on Tuesday of this week by the leading financial daily. This was the result of a careful and detailed field study among cotton farmers. Briefly, cotton farmers this year had a choice between fairly high price supports and rigidly controlled acreage and a lower price support with larger acreage. Cotton growers, by a huge majority, chose the higher price supports and the lower acreage, motivated mainly by the desire for the obvious higher net return. The main backers of the higher acreage and lower price supports were the Department of Agriculture and various commercial interests.

Here was a clear cut choice and the evidence is overwhelming. We submit that the case of cotton can be logically carried to the other major field crops. Assuming that the price support program is designed for the farmers, we would suggest that the financial needs and the true basic desires of the farmers be the overriding considerations.

New York Chamber of Commerce Week

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DORN of New York. Mr. Speaker Governor Rockefeller has proclaimed April 12–19 as Chamber of Commerce Week. Practically all chambers of commerce in the State will present programs designed to highlight the importance of the chamber in the community it serves.

The purpose of Chamber of Commerce Week is to: Create a greater public awareness and need for the chamber. Sometimes the chamber does its job so

well that it is taken for granted by both the members and the public.

Give recognition to the chamber's staff and volunteer leaders for constructive participation in community affairs.

Give emphasis to the changing character of the work performed by chamber of commerce managers who are striving to achieve professional stature.

Improve and strengthen relations between the chamber and other organizations and agencies in the community.

Stimulate pride of membership among curent supporters and encourage others to participate in financing the chamber.

Give credit for past achievements and highlight current activities.

In the spirit dictated by the proclamation, I want to congratulate our own Brooklyn Chamber of Commerce for the splendid work they have done and are doing for the citizens and business people of Brooklyn.

Retail Price Fixing

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in Chemical Week of April 11, 1959, entitled "Viewpoint—Retail Price Fixing."

The article follows:

VIEWPOINT—RETAIL PRICE FIXING

Retail price fixing is again in the news, as sponsors of fair trade laws try a new tack: Instead of asking Congress to pass a law that would authorize retail price maintenance on a state-by-state basis, they're pressing for an amendment to section 5 of the Federal Trade Commission Act that would put price maintenance on a Federal basis.

While the reasons for support of this move by retailers' organizations are obvious, we feel that support by manufacturers is generally a mistake—for these four reasons:

1. Discount prices and discount houses have become fashionable. The growth of the market for many of the lines of merchandise featured by discounters has been substantial; the discounters' realistic prices have meant more profits to manufacturers.

2. The setting of prices at a point high enough to keep the marginal retail establishment in business is just not good economic sense. It, in effect, penalizes the efficient retailer; it discourages consumption; it encourages private-branding.

3. The only area in which a case can be made for retail price maintenance is in prescription drugs. The need for quick availability of a broad range of prescription drugs justifies some sort of public utility treatment for pharmacists. But even here, a broad, any-item-at-all approach to retail price maintenance is not wise.

4. For the drug manufacturer specifically, support of retail prices is unwise. With their current public relations and legal problems over whether prices are too high, drugmakers' support of any measure that could be interpreted as a keep-prices-up move is not in their best interest.

And even if the bill under consideration is declared constitutional, we wonder whether retailers, wholesalers, and manufacturers realize the degree of Federal administrative control to which they would eventually subject themselves.

Only Hope of Saving Alaska's Fishery in Passage of Pelly-Bartlett Bill

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. PELLY. Mr. Speaker, during the congressional Easter recess, a subcommittee of the Senate Committee on Interstate and Foreign Commerce held a hearing in Seattle on various bills having to do with fisheries of interest to Alaska and the Pacific Northwest. In particular, testimony was received on the so-called Pelly-Bartlett bill to facilitate conservation of Alaska-spawned salmon. Senator MAGNUSON, chairman of this hearing, thoughtfully included two members of the House Fisheries Subcommittee, Mr. TOLLEFSON and myself, in order to facilitate necessary joint remedial action by both Houses.

Since that Seattle hearing, three witnesses who testified have submitted a brief giving supplemental information which strongly supports the widely held contention that immediate passage of H.R. 4293 is the only possible hope of saving Alaska's best fishery resource:

BRIEF TO COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, U.S. SENATE, AND SUBCOMMITTEE ON MERCHANT MARINE AND FISHERIES

A statement by Mr. Noel Hemmendinger on behalf of the United States-Japan Trade Council on North Pacific salmon fishing, dated April 3, 1959, was read by Mr. Hemmendinger at the hearing on that date. Due to the importance of the subject matter, we deem it necessary to comment briefly on that statement for the record.

It should be clearly understood that Mr. Hemmendinger is acting in the capacity of being an agent to a foreign nation. This certainly is not meant as a discredit to Mr. Hemmendinger as he did a creditable job in representing the Japanese Trade Council. However, we believe it is of some importance that the relationship should be established so that Congress can judge the statement on its merits.

The Japanese Trade Council expresses its understanding of the concern felt by the American packers and fishermen for a prosperous fishery in Bristol Bay which, in years past, has been extremely profitable. It is the hope of the Japanese Trade Council that the high runs of former years will again come into existence. In our opinion it will take more than just a hope to bring this about. It will take an understanding of the problem plus definite action relative to conservation, and the remarks contained in the Japanese brief will not provide a solution.

We cannot agree with the Japanese Trade Council that the problem raised before the committee is unconnected with the Japanese fisheries, and therefore the embargo, as they put it, of Japanese-caught salmon as provided in S. 502 would be a grave mistake. Mr. Hemmendinger stated that Secretary Seaton's order reflected that the Bristol Bay decline was one of natural causes and could not be attributed to the activities of the Japanese.

The fact is that Director of the Federal Bureau of Fisheries, Donald McKernan, has repeatedly stated that Bristol Bay would be open to commercial fishing by the Americans if an agreement could be reached between the United States and Japan as to the extent of the Japanese fishery for the 1959 season. Our fishery investigations have clearly shown that American fish are being caught in large numbers by the Japanese. We refer the claim of innocence in this matter by the Japanese to the U.S. Fish and Wildlife Service which will be able to furnish the Congress with a clear picture of the Japanese activities and how they influence the Bristol Bay fisheries.

Mr. Hemmendinger's statement points out that the Japanese are conducting their fisheries more than 600 miles from Bristol Bay. The Japanese Trade Council says it bespeaks a high degree of international cooperation and good will that Japan has ever considered such a request. In our opinion, the language used by Hemmendinger is ambiguous and evidently intended to advance the idea that they couldn't possibly be working on stocks of North American salmon that far from shore.

Our tagging program and other investigations prove American salmon to be present on the high oceans more than 1,200 miles from their native shores.

The Japanese Trade Council wishes to stress that Japan has no legal obligations with respect to their fishing west of the provisional line. However, there is no comment on the results of the fishery investigations which have been in progress for many years, and they have not commented on their failure to agree to follow recommendations based on fishery research made by the American section of the North Pacific Fishery Commission. They wish to see that the problem remains in the hands of the Commission because under the terms of the treaty which specifies unanimous agreement, the problem certainly could remain inactive if the Japanese chose not to agree to future recommendations which we might have on the subject.

The main trouble is that international law is many years behind technical advances made in high seas fishing. It is only in recent years that the science of harvesting the high seas has become efficient enough to deplete a resource on the high seas. We are not in agreement that historical rights to fish this particular area on the high seas have been too well established by the Japanese. Their right to fish these waters was granted under the terms of a treaty which has as its main object conservation of the resource. To say that the United States is trying to throw its weight around, and that the purpose of S. 502 is to turn the flow of imported canned salmon from Japan on or off like a spigot to compel compliance is not to state the issue on a fair basis, and is insulting to those who wrote the legislation so as to protect the legitimate interests of the Japanese. We believe the provisions found in the Pelly bill—which would render the legislation inoperative if there were compliance by the Japanese—are fair, and only show what we have consistently advocated, that the bill should not be construed as a ban on imports, but rather as a bill to provide compliance with conservation.

We may further remark that if the Japanese have strong markets as is claimed elsewhere for their salmon, they should not worry too much about the demand in this country, as that demand perhaps is most strong on the part of the importers who are making the profit from importing the product. We fail to see the concern of the Japanese Trade Council or the possible harm that could accrue to the trade if their state-

ment is correct that they can sell their fish elsewhere.

There are many things in Mr. Hemmendinger's statement which we consider to be unwarranted. For example, saying that the passage of S. 502 would hurt the good relationship between the United States and Japan is one argument we cannot buy, because the good relationship between our respective countries will be hurt far more if through the Japanese high seas fishing activities our Alaska salmon runs are completely destroyed.

Talking about trade, we readily admit that perhaps the balance is in the favor of the United States. We are advocates of free trade among free nations. We believe this to be in the best interests of our country, but we also believe that there are limits to what we can do with free trade. We are not in agreement that free trade should be allowed to destroy a specific domestic industry, and we are completely and unalterably opposed to any free trade which would destroy a great resource such as salmon.

The implications raised in the letter in regard to what Japan would or would not do if this legislation is not withdrawn by us is in bad taste, to say the least.

The United States has consistently rendered all possible assistance to the free nations of the world, Japan included. As a matter of fact, the United States, more than any other nation, has helped the Japanese to recover from World War II.

To say that our desire to protect our salmon resource is going to support anti-American interest is a refined method of suggesting we do it the Japanese way, or else. These remarks have nothing to do with the issue, which is whether or not the Japanese are fishing on American stocks of salmon. That it has been deemed necessary by the Japanese Trade Council to advance this kind of argument is an indication of the weakness of their case. Perhaps the most significant thing about the Japanese Trade Council's statement is the lack of understanding and the failure on the part of the Japanese to recognize that by opposing conservation and by depleting the resource, the salmon problem will be a continued source of friction, which like a cancer, will eat away at the good relationship existing between our two nations. We can see no lasting economic benefits for either the Japanese or the United States, if for the sake of temporary profits, we agree to close our eyes, by not demanding adequate protection and insisting on good conservation.

Respectfully submitted.

GEORGE JOHANSEN,
Secretary, Alaska Fishermen's Union.
MILO MOORE,
Director, Washington Department of Fisheries.
JOHN WEDIN,
Manager, Fishermen's Marketing Association of Washington, Inc., and Northwest Trawlers Association, Inc.

Resolution by the Holy Name Society

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DORN of New York. Mr. Speaker, I should like to call the attention of my colleagues to the resolution adopted by the Holy Name Society of St. Catherine of Genoa Roman Catholic Church, of Brooklyn, at the meeting of that society on March 8, 1959.

The resolution follows:

Whereas the Federal Bureau of Investigation of the Department of Justice has over the years compiled a magnificent record in protecting the security of our Nation, combating communism, and other un-Americanisms, and protecting the rights and liberties of all Americans; and

Whereas the Committee on Un-American Activities of the House of Representatives of the Congress of the United States had, during its entire existence, served a necessary and worthy purpose in unearthing and exposing the Communist conspiracy in this country and in laying the groundwork for corrective and protective legislation: Therefore be it

Resolved, That the society in meeting assembled this 8th day of March 1959, commend and support the work of the Federal Bureau of Investigation and the Committee on Un-American Activities of the House of Representatives; and be it further

Resolved, That this society enlist the support of all its representatives in Congress and the President of the United States in preserving our Republic from its enemies by the continuance of these two organizations without any further curtailment to their powers or investigative scope.

Monument to Extravagance

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. GROSS. Mr. Speaker, I am pleased to note that the Omaha World-Herald has given well deserved recognition to my colleague, the Honorable PHIL WEAVER, of Nebraska, who has called attention to the unbelievable extravagance at the Air Force Academy.

Representative WEAVER is one of the minority in Congress who has consistently fought to restore fiscal sanity in the operations of the Federal Government and it is good to know that his efforts are recognized and appreciated by one of the outstanding and conservative newspapers still published in this country.

The editorial from the Omaha World-Herald follows:

Representative PHIL WEAVER was shocked by his official look at the Air Force Academy near Colorado Springs.

"A monument to extravagance," said the Nebraska Congressman. "A very plush proposition which is not necessary to give the boys the education they require."

Mr. WEAVER'S estimate may be shared by taxpayers whose vacation trips take them past the miles of buildings and landscaped gardens, and by other taxpayers who simply read about the Academy in such articles as the one the Wall Street Journal published last Friday.

A few of the Academy's features were listed by the Journal as follows:

"A glass-walled dining room the size of a city block; a campus with 22 garden pools that will glow at night with underwater lighting; a giant gymnasium with two swimming pools, 18 basketball courts and a row of squash courts; an elegant officers' club; a $5,100,000 social center including two ballrooms and four gardens; a splendid 18-hole golf course with a builtin $118,600 irrigation system, and a dandy visitors' comfort station near the parade grounds that cost $53,642."

All this, and much more, amounts to a total investment of $153 million—so far.

But the Academy lacks one facility that might reasonably be expected at an Air Force Academy—namely, an air field.

The planners were coming to that $17 million item when Congress blew the whistle last year. This was after an investigating committee had reported that, if the excessive spending kept on, the final cost of the Academy would be more than $300 million.

In vain the Air Force protested that the total would be "only" $190 million. Congress said no more expansion. The proposed magnificent chapel will have to be refigured so as to come in at less than $3 million. The half-million-dollar club for noncommissioned officers will have to be delayed. Ditto for the $3 million sports field and for other odds and ends.

Air Force spokesmen are replying to the congressional fire, but some of their arguments make odd reading. For example, the officer in charge of construction says that if all the "gingerbread" had been eliminated the saving would be "only about 3 percent"—or approximately $4 million.

But since when has $4 million been a piddling sum?

It is conceivable that the Air Force extravagance in connection with the Academy may adversely affect America's defenses. And for this reason:

Congress has appropriated billions for planes and missiles because the Air Force generals and their civilian bosses have said the spending is essential. The lavish Academy spending raises doubts concerning the judgment of these people as to what is essential and what is not.

Unless the Air Force pulls in its horns on the Academy issue it may lose much of the respect and admiration with which Congress and the American people now regard it.

Shoe Labeling

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. REECE of Tennessee. Mr. Speaker, since I did introduce a bill back in 1924 with reference to the labeling of major parts of shoes, I now wish to insert in the RECORD a quotation from the National Shoe Manufacturers Association News Bulletin of March 31, 1959, with reference to a statement I recently made:

REPRESENTATIVE REECE, REPUBLICAN OF TENNESSEE, NOW AGAINST SHOE LABELING

In 1924, Representative REECE, Republican of Tennessee, authored a bill calling for labeling of major parts of shoes. He says now, "Thirty-five years ago, it occurred to me that there was a need for legislation along this line. But with the improvement in the industry and the keen observation which the Federal Trade Commission and the Department of Justice make of any deceptive materials or practices, I now see no reason for any such legislation. It would not protect, but would work to the disadvantage of, the consumer as well as the manufacturer of footwear." Congratulations, Congressman, for an informed point of view.

Red River Bank Stabilization Report

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, the problem of the wasting banks of Red River has been one which has troubled our people and our engineers for a long period of time. Since the end of the period of the great raft, the banks of the river have caved, sloughed off and wasted, at times changing the entire direction and location of the stream. As these banks have wasted away, they have consumed tens of thousands of acres of rich alluvial farmland, literally chewing up some of the finest land in the world and taking it out of agricultural use.

This process originally was bad enough. As time has moved on and rich alluvial farmland has become harder to obtain, this wasteful procedure of nature whereby millions of acres of our most fertile soil is lost in our alluvial valleys has reached the point where it cannot be tolerated. We believe now that appropriate action must be taken to stabilize the channels of streams like the Red, containing them within their alluvial banks, and preventing the continuation of the tragic and wasteful destruction of millions of acres of rich lands.

The director of the Louisiana Department of Public Works, the Honorable Lorris Wimberly, with offices located in Baton Rouge, La., has as his particular jurisdiction the study of river problems in Louisiana. He has directed his attention to the caving banks of Red River especially, and, Mr. Speaker, on April 6 he addressed a letter to Col. George M. Cookson, District Engineer, New Orleans District, Corps of Engineers, U.S. Army, Post Office Box 267, New Orleans, La., on this vital subject. This letter is well written, well thought out, and should consume the attention of those who, like myself, have for many years worked on flood control in our alluvial valleys. I therefore am placing in the CONGRESSIONAL RECORD a copy of this letter addressed to Colonel Cookson, district engineer, under whose office with the engineers this particular work falls, and I am asking that this letter be printed herein. It is as follows:

STATE OF LOUISIANA,
DEPARTMENT OF PUBLIC WORKS,
Baton Rouge, April 6, 1959.

Col. GEORGE M. COOKSON,
District Engineer,
New Orleans District,
Corps of Engineers, U.S. Army,
New Orleans, La.

DEAR COLONEL COOKSON: After considering the information on Red River Bank Stabilization report which you presented in Natchitoches on March 20, I find that I have serious doubts as to the propriety of requiring cash contributions from local interests because of land enhancement.

As you know, the Red River was formerly a navigable stream and considerable commerce moved upon its waters. This navigation was considerably hampered by the existence of a raft which extended from Natchitoches to a point considerably above Shreveport. In an attempt to improve navigation the Corps of Engineers, beginning in 1828 and ending in 1872 removed this raft. While allowing for the clear passage of navigation it also caused the lowering of stages in the river to such an extent that before many years navigation was not possible. It was only after the removal of the raft that the banks of Red River began to cave and the valuable farm lands lost. Since the removal of the raft was in the interest of navigation, I would rather think that the Federal Government has an obligation to the valley in protecting the banks of Red River from caving.

There are other results from the removal of the raft. Once the river was free to flow in its channel the river began to enlarge and shorten with each succeeding flood. There was a great flood in 1892 and again in 1908 which further shortened and enlarged the river. From 1892 to the present time the distance along Red River from Natchitoches to the Louisiana-Arkansas line has been shortened from 256 miles to 213 miles, a distance of 43 miles. You can easily see that a tremendous amount of loss of bank occurred during the previously described period when the river had enlarged itself and became shorter.

Because of the flood control needs of the Red River Basin it was necessary for Congress to authorize the construction of reservoirs for the valley. To date three reservoirs have been constructed. Denison was placed in operation in June 1944, Texarkana in January 1958, and Ferrels Bridge in partial operation in August 1957 and there are four other reservoirs, Millwood, Boswell, Hugo, and Mooringsport yet to be built. We can already see that even though necessary for flood control the existing reservoirs are prolonging the caving stages on Red River and causing increased bank caving.

The loss of bank on the Red River from Shreveport to the Louisiana-Arkansas line increased from 2,408 acres between 1930 and 1944 (Denison Dam was placed in operation) to 6,598 acres from 1944 through 1958. This shows conclusively the tremendous increase in the rate of caving due to the prolonging of caving stages on the river by reservoirs.

The Red River levee boards and the State of Louisiana have already made great local expenditures on flood control, bank stabilization, and drainage. For levees alone $8 million has been expended by the Red River levee boards and the State of Louisiana. This does not include any expenditures for levee maintenance, flood fighting, bank stabilization, drainage and drainage maintenance. It is herein evident that the contribtuion already made is much greater than the amount ordinarily required from local interests on projects of this nature. It should be noted that the expenditures given are actual and if brought to present prices would be about four times as great.

When the Congress of the United States authorized the flood-control plan on the Mississippi River for the lower Mississippi River Valley, it established the precedent that flood control on interstate rivers was a Federal responsibility. If local interests are required to pay a part of the cost this would constitute a change in the policy as set forth by Congress in 1928 which we believe would be detrimental to all of our interests.

Since the increased caving on the Red River is due to the results of works undertaken in the interest of navigation and flood control, we do not believe that local interests should be required to contribute toward the cost of the bank stabilization project.

Your careful consideration and cooperation will be greatly appreciated by the Department of Public Works and the people we represent.

Yours very truly,
LORRIS M. WIMBERLY,
Director.

Don't Kid Public That They're Safe From Foreign Diseases

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of my colleagues to a very thought-provoking editorial from the March 1959 issue of the Maritime Register.

The editorial follows:

DON'T KID PUBLIC THAT THEY'RE SAFE FROM FOREIGN DISEASES

Most U.S. citizens believe they are protected by reasonable Government safeguards against the possibility of communicable diseases being brought into this country.

They certainly have the right to such protection.

Public Law 410, 78th Congress, section 361(a) (42 U.S.C. 264), authorizes the Surgeon General of the U.S. Public Health Service to make and enforce regulations to prevent the spread of communicable diseases from foreign countries into this Nation and its possessions, and from one State or possession to another.

The interstate carrier general sanitation program has been established to provide this protection prescribed by the law. Under the program, the Public Health Service is obliged to inspect all American vessels in the coastwise, coastal and foreign trades; all dining cars and related railroad facilities; all airline feeding and related facilities, and all interstate bus feeding and related activities. The program affects passengers and crews.

Obviously, this is an inspection program of overwhelming proportions. At least, it should be.

ONLY 20 INSPECTORS

But many Americans would be shocked to learn that to carry out this vast program of health protection, Public Health Service has only 20 inspectors and 18 engineering employees.

State and municipal sanitation inspectors think it is good practice to make health checks at least quarterly; monthly inspections are regarded as most desirable.

But due to the small number of Public Health Service inspectors, who must examine ships under construction and those in operation, inspections of ships under the Interstate Carrier General Sanitation Program can be made only once in every 3 years. A dining car can be inspected only once every 2 years.

To attempt to prevent spread of communicable diseases by an inspection of ships once every 3 years is ridiculous.

It is no secret that sanitary conditions aboard many American-flag ships are intolerable. This applies not only to small tramp vessels, but also to large passenger lines and cargo ships operated by some of our wealthiest companies.

As a result of those conditions, passengers, and crews often are subjected to shocking sanitary hazards, though unknown to them. It is not difficult to imagine the dangers

created when passengers and crews subjected to such conditions reenter this country.

Here is one way to gage the total inadequacy of the present ship sanitation inspection program:

American-flag ships now subject to the program total 2,094, of which 1,024 are engaged exclusively in interstate commerce. Subject to inspection on each of these ships are—potable water systems, stored water, water in galleys and medical care spaces, water for making ice, drinking fountains, and coolers, wash water, swimming pools, toilets, and lavatories, discharge of wastes, insect control and rodent control. The inspection of a passenger ship requires an average of 3 man-days; inspection of a cargo vessel an average of 1 man-day.

With the skeleton inspection force now available to Public Health Service, how can passenger or crews be sure the facilities above are meeting health standards?

Because of the present addiction to penny-pinching in the Administration, Public Health Service's inadequate appropriations will force the Service to abandon inspection of interstate cargo vessels. Also headed for probable abandonment is the Public Health Service's "citation program." This program called for citations to companies operating ships with good sanitation conditions and served to encourage competing operators to bring sanitary conditions up to satisfactory levels.

What this means is that we're moving backward from an already sorely inadequate program.

People to People

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 17, 1959

Mr. QUIGLEY. Mr. Speaker, on March 16–17 here in our Nation's Capital a conference was held on the nationwide people-to-people program, sponsored by the American Municipal Association. The purpose of the meeting was to discuss the role American cities can and have played in the people-to-people program. Under this program, a community in the United States "twins" with a "sister" city in Europe and South America. This program is carried on at the grass roots level, having no connection with the Federal Government, although it does have the blessing and encouragement of our national administration.

I am proud that the city of York, in the 19th Pennsylvania Congressional District, was the pioneer in undertaking a "twinning" program with the city of Arles, France. This was several years ago. Since that time, York has continued its efforts in the field of increasing international understanding through exchange of teachers, students, cultural material and the encouragement of travel, by twinning with the community of Asuncion, Paraguay.

During the Washington Conference, Rabbi Moses N. Friedman, of York, who has been very active in the setting up of close relationships between Arles and Asuncion, enumerated some of the results of York's "twinning" program. Rabbi Friedman's "Didactic Reflections" are included as recommended reading for the Members of Congress. The report follows:

DIDACTIC REFLECTIONS

(By Moses N. Friedman)

PEACE—ACTIVE OR PASSIVE?

"The most worthwhile purpose there is in the world today," stated President Eisenhower, "is to help build the road to peace." To achieve this banner purpose the President initiated the people-to-people program which "marshals the forces of initiative, independent action, and independent thinking of 168 million people."

Independent action and thinking, however, does not exclude unanimity in concept of peace. Whether the joint approach toward its achievement is to be of an active or a passive nature greatly depends upon agreement on the import of peace—positive or negative.

In its negative sense—freedom from war—peace might be purchased for the price of the socially repugnant aberration of keeping away from other people; in its positive sense—harmonious relations and mutual concord—peace demands close association with fellow men and united effort to seek peace and pursue it.

Obviously, by calling upon the American people to act, the people-to-people movement gives thought to the approach suggested by the Psalmist of yore and concentrates on the positive meaning of peace which requires action on the part of individual and community.

IDEALISTIC BUT NOT IMPRACTICABLE

On the surface promoting international amity by means of people-to-people contact appears to belong to the realm of pure idealism. Nevertheless, this idea need not be discharged as a mere visionary scheme. Throughout history many a single pebble created the ripples responsible for the waves that veered completely the destiny of peoples and nations. Every action strikes a chord which vibrates far beyond its source of contact and reverberates some reciprocal effect. One deed leads to another and, if this be an act of friendliness, to a whole circle of reciprocating friends each of whom is a potential link in the chain of amity and concord aimed for by the people-to-people program.

Every community in the town affiliation program can attest to some gratifying results of its efforts, to some favorable reaction to its activities, and to some rewarding effects of its endeavors to project the true picture of American friendliness.

SOME VERIFYING STATEMENTS

"It is undoubtedly due in large part to the twinning that the town officials of Arles unfailingly accord the most extensive cooperation possible to any project proposed by USIS. * * * The people of Arles in turn evidence respect and sympathy, engendered certainly in part by the conditioning toward pro-Americanism inherent in their acceptance by the people of York" (USIS, Paris).

"Mayor Charles Privat of Arles, France, defeats Reds for French Chamber of Deputies in recent election. Congressman JAMES QUIGLEY extends cordial felicitations to Mayor Privat and to his wife, the former exchange teacher from York" (York Dispatch).

"Upon his return from York, M. Jean Laurain, exchange teacher from Arles, gave lectures on the American way of life and the friendly people of York which brought favorable press reviews even in the Communist newspapers" (Richard M. Brigstocke, exchange employee from York).

"When I left France, though I didn't have any precise idea about the United States, I though that I would find a country where * * * people don't care about other people, but it didn't take very long before I realized I was wrong. I found people * * * ready to share the advantages of this beautiful country with anyone who is ready to enjoy them. I found a friendly nation where I feel at home. And now, when I'll meet an American in France, I won't have the feeling that I meet a stranger but a fellow countryman" (Edmond Venzin, exchange employee from Arles).

VIBRATING CHORDS AT SOURCE OF CONTRACT

York mayor and city council

Much credit for York's success in its people-to-people program goes to the Honorable Fred A. Schiding, Mayor of York, Pa., and to his city council.

Timely felicitations: On every occasion the York city government extends greeting to the mayor and people of Arles. On the marriage of the York exchange teacher, Miss Margaret Boltz, to the mayor of Arles, Mayor Schiding and the city council conveyed the cordial felicitations of the citizens of York in the form of a beautiful sterling tray.

Bastille Day resolution: In tribute to the French national independence day, the city council adopted a resolution to display the Tricolor in the city hall and to express warm sentiments to the people of the sister city of York, Arles.

This resolution incorporated the aims and objectives of the President's people-to-people program, those of the American Municipal Association International Cooperation Committee of which Mayor Schiding is a member, and well deserving plaudits to Mr. Mark Bortman, chairman of the civic committee.

Holiday greetings: A beautiful car especially designed by Mr. Cole Atwood, former clerk of the mayor, extended holiday greetings to the people of Arles in their native tongue on behalf of the mayor and city council, school board, superintendent of schools and the York-Arles Twining Committee.

Farewell mementos: In addition to the fine reception on their arrival to York, upon the departure of all Arlesian visitors, exchange teachers, factory workers, and students, Mayor and Mrs. Schiding are there to present them with a personal memento from York.

Special courtesies: Realizing the inconvenience of other means of travel for the Arlesian exchange teacher, his wife and baby, Mayor Schiding made his private car and a driver available to drive them to New York (a distance of 200 miles) where they boarded their plane for France.

Additional affiliation: In his desire to widen the circle of friends overseas, Mayor Schiding appointed a committee, headed by Mr. Joseph Garrety, director, York City Civil Defense, to promote affiliation with the city of Asuncion in Paraguay.

York City Schools

The York city schools, which gave birth to the York-Arles twins, continues to lead in the twinning activities in addition to its active participation in other international projects, and deservingly rejoices in its gratifying results.

Teachers' exchange: Under the administration of the distinguished educator, Dr. John C. Albohm, superintentent of schools, one teacher from York has been sent to teach English in Arles and two from Arles have been teaching French in York. (One of the French teachers, Mlle. Gilles, was instrumental in adding one more teacher from York, Mrs. Jocelyn Brysselbout, to the Arles school faculty).

Many study French: Over 4,500 pupils of the public elementary and high school grades and an undetermined number of the private and parochial schools study French in York.

Penpals: About 2,000 letters are exchanged annually between the children of York and Arles. Most of these children exchange

also photographs, books, stamps, dolls, and cordial invitations to visit each other.

Adult classes: Since its inception about 200 adults have been taking advantage of the French classes for adults offered by the York city schools under its adult education program. Many of these adults have utilized their knowledge of French to make and correspond with friends in Arles.

Additional exchanges: The York city schools have long established an enviable record of cooperation with the U.S. Office of Education in according a most cordial welcome to every foreign teacher and educator assigned—and maximum number allotted—them by the Office.

Students exchange: Under the direction of Miss Anne Finkbinder, the student council of the William Penn Senior High School assumes the responsibilities of the foreign exchange students program. The council provides hospitality and entertainment for the visiting students and arranges for the trip and stay overseas for the York students.

Host city: York also serves as host city for the Pennsylvania State University under the Federal vocational education program. The visitors—10 to 12 in number at a time—are the guests of the school board through the duration of their visits.

Attracts visitors: Thanks to its admirable exchange program and vocational education facilities the York schools have been attracting educators from most parts of the world. The visitors return to their native lands with cherished memories of happy associations and indelible impressions of the American way of life and of the neighborliness and unfeigned friendliness of the people of York.

York industry and its manufacturers' association

The organizers of the local adventure in international friendship, the York-Arles Twinning Committee, sincerely appreciated the encouragement York industry accorded them at its inception, and feel equally as grateful for its continued support.

Activated program: Utilizing their manufacturers' association and its energetic director of public relations, Mr. Edmond P. Reiley, as the principal liaison with the York-Arles Twinning Committee, the York industry leaders made a generous basic contribution to get the twinning program activated.

Enhanced reception: The twinning celebration was greatly enhanced by the part York industry played in the reception of the French delegation, headed by Mayor Charles Privat of Arles. The mayor and his party were deeply moved by the honors bestowed upon them by the association that of leading the parade to the industrial exposition at the York Interstate Fair where Mayor Privat crowned the Queen of Industry. The association also entertained the French guests at a luncheon in the Country Club of York and arranged for their tour to different plants.

York-Arles display: In succeeding years the association reserved space at its annual exhibition for a display of the York-Arles twinning activities. A picture of one display attracted the attention of the editors of the booklet "Your Community in World Affairs—Town Affiliations" published by the American Municipal Association. This picture appears on page 9 of its recently revised edition.

Meeting facilities: In consonance with its fine cooperating spirit the Manufacturers' Association of York continues to provide meeting facilities for the meetings of the board of the York-Arles Twinning Committee, Inc.

Industrial trainees: Upon his return from Arles, Mr. Bruno B. Weill, president of the Home Furniture Co., one of the delegates to Arles, conceived the idea of offering employment to an Arlesian for a specified period of time in order that he may learn first hand the true picture of America and its friendly people. Mr. Weill soon materialized his idea with Edmond Venzin, whom he had employed for 2 years; and upon his return to Arles this industrialist has started negotiations for a replacement.

Mr. Burwell B. Smith, another delegate to Arles, has employed an Arlesian draftsman for 1 year in his plant of the S. Morgan Smith Co. Upon request of M. Grossas, one of the new friends he had made on his visit there, Mr. Smith provided employment for two young ladies from Paris for the summer of 1957.

Other possibilities: Negotiations are now underway for the employment of other Arlesians in York for a limited period of time.

York labor

Collectively and individually York labor has been contributing much to the success of the York-Arles twinning program. Its financial support at its inception, its active participation and representation on the committee are, of course, a matter of record.

Dispel doubts: Labor's most valuable contribution to the objectives of the twinning program became evident when it succeeded in distorting the erroneous preconception of the French visitors who were surprised by the revelation of the workman's freedom in America and by his high standard of living.

Inefaceable helpfulness: Working daily side by side, the Arlesians-York factory workers projected an indelible picture of American friendliness and sincere desire to be helpful in every possible way. The Frenchman, unable to express himself in English, deeply appreciated the efforts exerted by his fellow York worker in making conversation with him to make him feel at home and help him increase his vocabulary. Edmond's gratifying sentiments are clearly expressed in his farewell statement:

"Actually, it sems to me that there hasn't been a time we couldn't understand each other. The welcome was exactly the same in the rest of the factory. Though I couldn't speak English, everybody tried to make conversation with me—to make me feel at home. Now we reached a point that when it takes only 2 minutes for everybody to go through the factory, it takes me 4 or 5 minutes because of the men who stop me on my way to ask how things are."

York Chamber of Commerce

In addition to its generous financial and moral support at the start of the twinning activities the York Chamber of Commerce has been in direct contact with its counterpart in Arles.

Chain of reaction: Thanks to the exchange of information literature and correspondence between the York and Arles organizations, M. Jean Serris later sent his son to spend 5 months in York as the guest of the chamber. In appreciation for the chamber's cordial hospitality, M. Serris offered to employ a young man from York in his maritime business at Port St. Louis-du-Rhone. This gracious offer was later accepted by Mr. Richard M. Brigstocke of Dover, Pa.

Continue participation: The York Chamber of Commerce has been participating also in the annual Bastille Day celebrations and it has been supplying their fine publication "York, Pennsylvania—A Dynamic Community Forges Ahead" for presentation to the Arlesians as a memento from York.

Junior chamber of commerce: This organization of energetic young men has continued to promote international friendship through its national headquarters. Every year the members of the local junior chamber assume the role of hosts to visiting foreign students. Their cordial hospitality gives testimony to a vital contribution to the aims and objectives of the people-to-people program.

York Rotary Club

The York Rotary Club, in addition to its fine international relations program, at the organization of the York-Arles Twinning Committee, made first contact with the Arles Rotarians which led them to consider York an ideal place for the summer vacation of some of their children.

West York Rotary Club: This idea was later utilized by M. Maurice F. Grossas when his daughter came to York as the guest of West York Rotary Club. Fifteen member families—each for 1 week at a time—made Mlle. Grossas' visit and tours of the country most pleasant. Her father expressed his gratefulness with an offer to reciprocate hospitality to the first student from York to study in Arles.

York Optimists' Club

Utilizing M. Grossas' generous offer the Optimists' Club of York, Inc., has sponsored a scholarship for a high school student to study 3 months in Arles.

Student chosen: A committee of judges decided in favor of David Stephenson who is a student of the William Penn Senior High School.

Forty-three percent of the total cost of the scholarship has been covered by donations (solicited by past President Hardinge on his own) from members of the York-Arles Twinning Committee, Inc.

York-Arles Twinning Committee

No single annual report presents a complete picture of achievements from conceptions to materialization. Every accomplishment traces its origin to previous planning most of which go back to former workers and administrations. The plaudits enjoyed by the committee deservingly belongs to every member and to every administration of its history. A brief recap of its activities by administration will substantiate the contention that one deed leads to another; and thus help communities, still hesitant in embarking upon a town affiliation program, to enjoy the rewarding experience now shared by the fine people of York, Pa.

Krone-Friedman administration succeeded in gaining the wholehearted cooperation of the community in giving birth and maturity to the York-Arles Twinning program. It entertained a delegation from Arles and Paris at a 10-day celebration at a cost of about $5,500; initiated contacts between people and organizations of York and Arles, and became the source of twinning information to many other American communities.

Albohm-Hertzler-Friedman administration continued to further its cause and added the following to its progress:

Published "The Story of the Twinning of York, Pa., and Arles, France" which served as a guide to other cities.

Appointed Mr. Frank Ashbrook as ambassador to Arles.

Delegated a group of York tourists to represent York at the 2001st anniversary celebration in Arles. As a result of their visit the industrialists on the delegation returned home with the idea of employing Arlesians in York plants for a limited period of time.

Dedicated the continental room in the Yorktowne Hotel which the management had redecorated with an Arlesian motif.

Initiated the annual Bastille Day celebration with appropriate ceremonies, presentation of the French flag by Air France for permanent display in the continental room, and orations by French Government dignitaries and Adm. Ellis M. Zacharias who represented the people-to-people program.

Helped produce French film on York-Arles twinning activities, narrated by the French commentator, M. Pierre Crenesse, which was later televised throughout France by Radio Diffusion Francaise.

Adopted constitution and filed petitions for corporation and charter.

Effected first teacher exchange between York and Arles.

Arranged for tape recorded holiday message from representatives of all walks of life and schoolchildren to the people of Arles. This message was recorded by the personnel and through the facilities of the audiovisual department of the York City schools.

Became instrumental in helping other American communities in the twinning program.

Received favorable comments and commendations from leading Americans and Frenchmen.

Saw six French persons employed in York schools and industry and one visitor spend his summer vacation here.

Hardinge-Albohm-Friedman-Hennessey administration has reached the goals of its predecessors when it received the charter, concentrated on the three types of memberships specified in the constitution—individual, organizational, and student—and utilized the previous invitations from Arles for employment and hospitality for a Yorker.

Bastille Day was celebrated with a dinner given by Mayor and Mrs. Schiding, the York-Arles Twinning Committee and friends in honor of the Arlesian guests. A public reception, which followed at the Jewish Community Center, under the cochairmanship of Mr. Edwin Gentzler and Mrs. John Hennessey, was televised over WGAL-TV.

Farewell party at the home of Miss Marguerite Eriksson was given in honor of Mlle. Grossas by the officers of the York-Arles Twinning Committee and friends. Mayor and Mrs. Schiding presented her with a gold charm and the committee with an album of photographs—appropriately inscribed—as mementoes from York.

Mr. Richard M. Brigstocke accepted the previous invitation of M. Serris for employment in his maritime office and spent 6 months there.

On his way to Arles Mr. Brigstocke took along a collection of paintings from the York Art Club and photographs from the York Camera Club to be exhibited in Arles. M. Jean Laurain, former exchange teacher from Arles, was in charge of the art exhibition there which together with his lectures attracted much attention and favorable comments.

Langston-Friedman-Albohm-Eriksson administration, which has recently taken office, is presently concentrating on the organization of the student membership provided for in the constitution which appears to meet with favorable results.

U.S. Information Agency

Those of the York-Arles Twinning Committee, who helped to found it and continue to be active in its administration, feel most grateful to the Office of Private Cooperation of the U.S. Information Agency and particularly to its program executive, Mr. E. Snowden Chambers, for the invaluable cooperation accorded them, the inspiring manifestations of continued moral help and encouraging spirit which in great measure is responsible for their success.

Civic Committee

Since the inception of the Civic Committee of President Eisenhower's people-to-people program, its energetic chairman, Mr. Mark Bortman, has manifested great interest in the progress of the York-Arles twinning program. Mr. Bortman has been in constant touch with some of its leaders who kept him informed on every new idea which they conceived and put into practice. His enthusiastic comments and sincere approbations proved a source of encouragement to the workers in York. Apparently, President Eisenhower manifested keen judgment in his selection of Mr. Bortman as chairman of this vital committee.

American Municipal Association

It is most gratifying to know of the sincere desire of Mr. Alan Beals, director of town affiliations of the American Municipal Association, to accord every possible assistance to the "twinners" of York. When the York-Asuncion affiliation will be effected, it will be due to a great extent to Mr. Beals' as well as Mr. Chambers' personal desire to help York in its town affiliations adventure.

STEP BY STEP

These reflections, of course, do not present a detailed acount of York-Arles twinning activities, and certainly not a complete picture of York's part in the people-to-people movement, its friendly cooperating people and their readiness to help build the road to peace. It sufficiently helps to refute, however, the argument frequently heard by the proponents of this program that it couldn't be done. York, Pa., and Arles, in France, through their own experience, have reason to maintain that even an objective which requires personal contact with a whole community, needs only one step at the time.

The cadence of marching feet on the highway of life is produced by a series of single steps, one step normally leads to another and finally to a destintion. The basic human urge for self-preservation dictates that this destination be one of peace and security.

Today, in face of the Communist carefully designed "protracted conflict" aimed at the heart of the free world, America stands to lose much by the venomous fangs of Communist propaganda. Consequently, there is more than pure idealism to the town affiliation movement, to the endeavors of the Civic Committee and to the whole people-to-people program. It is a practical investment in helping thwart the propaganda of falsehood and prejudice designed to distort the true picture of the American way of life.

York, Pa., among other American communities, therefore, finds the aims and objectives of the people-to-people program worth working for, its step-by-step experience inspiring, and its reciprocating effects most rewarding.

Fair Trade

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. DINGELL. Mr. Speaker, among the other vicious results of fair trade legislation, we read in the Wall Street Journal of Wednesday, April 15, 1959, where a westerner has gone to jail for selling 25-tablet bottles of Alka-Seltzer for 44 cents each. That is 14 cents below the "fair trade" price established by Miles California Co., Inc., the marketing subsidiary of Miles Laboratories, Inc., under that State's fair trade statute.

We can assume that if a nationwide fair trade law goes into effect other citizens will find themselves in a similar position of distress. I have no doubt that those who favor fair trade over the free marketing enterprise system would see that this man, Charles Hawkins, was committed to the calaboose for any such violation.

In this case the effects of fair trade are plain. Charles Hawkins is deprived of his freedom, the citizens of California are denied the right to purchase commodities at a low price consistent with free economic competition, and the small businessmen of the State see what happens to one who wishes to run his own small business in his own way.

This happening should be a warning to all small merchants.

The article from the Wall Street Journal follows:

CHARLIE HAWKINS TILTS AT "FAIR TRADE"—ENDS UP BEHIND BARS—HE'S OVERWHELMED BY GE, WESTINGHOUSE, GOES TO JAIL OVER ALKA-SELTZER

(By Charles H. Peterson)

FRENCH CAMP, CALIF.—Charles Hawkins peers through the wire-reinforced pane of glass which separates him from a visitor here in the brand-new San Joaquin County Jail, and remarks with a wan smile, "It looks like I'll be here for the full 20 days."

Charlie Hawkins' crime: In his general store in nearby Stockton, he sold 25-tablet bottles of Alka-Seltzer for 44 cents each. That's 14 cents below the California fair trade price established by Miles California Co., Inc., marketing subsidiary of Elkhart, Indiana's big Miles Laboratories, Inc.

San Joaquin County Superior Court Judge George Buck sentenced the stubborn 46-year-old general store proprietor on seven counts of contempt in violating a 1957 injunction restraining him from shaving Alka-Seltzer prices below fair trade minimums. He parceled out 5-day sentences on each count, four to run consecutively and three concurrently, and tacked on a $1,400 fine to boot.

THE BITTEREST FOE

According to S. G. Clancy, vice president of Miles California Co., Mr. Hawkins thus becomes the first individual to go to jail for flouting fair trade laws. Mr. Clancy terms Mr. Hawkins "the bitterest foe of fair trade that I've ever seen."

Edward Wimmer, vice president of the National Federation of Independent Business, Inc., an association which ardently supports the fair trade principle, states, "So far as I know, no judge has ever before sent anyone to jail for violating a fair trade law."

For tall, lanky Charlie Hawkins—who sits on the San Joaquin County Board of Supervisors when not tending his $700,000-a-year store—this latest tiff is just one more incident in a running feud over regulated prices which he's been waging for more than a decade. His victories are conspicuous by their absence.

At one time or another, according to his attorney, the sandy-haired retailer has taken on General Electric; Westinghouse; Kimberly-Clark, maker of Kleenex; the California Board of Equalization; a couple of beer companies; the State's Franchise Tax Board, and the California Bureau of Milk Control—and lost to all.

In his scuffle with General Electric, for instance, Mr. Hawkins was hauled into court in 1955 for chopping the price on a portable mixer from $19.95 to $14.28 and for reducing a coffeemaker from $29.95 to $22.95, his lawyer recalls. In the Kimberly-Clark dispute, Mr. Hawkins says he put the torch to 10 cases of pocket-size packs of Kleenex when restrained from selling it at less than "fair trade" prices. Only one suit resulted in a fine, the attorney says—a $200 penalty in connection with one of the General Electric cases.

As far as Mr. Hawkins is concerned, the issues always have been uncomplicated.

"I SHOULDN'T BE BOUND"

"I believe in the right of free enterprise, which among other things means the right of a retailer to establish his prices as he sees fit," he explains via a telephone-like amplifying gadget. "I believe that unless I sign a contract to sell an item at a certain price I

shouldn't be bound by somebody else's agreement."

California's fair trade law, most recently upheld by the State supreme court in 1955, permits a manufacturer or wholesaler to establish a product's minimum retail price by signing a contract with a single retailer. The price becomes the "fair trade" price for all retailers in the State, so long as they have knowledge of the agreement.

Until the series of violations of Alka-Seltzer fair trade prices which led to his current incarceration, Mr. Hawkins' most memorable skirmish over price regulation was fought in 1950. He then was operating a supermarket in the same lower-middle-class neighborhood in nearby Stockton where his present Tinker's Bigg & Littel store is located.

At that time, Mr. Hawkins recalls, he sold a popular brand of beer below the fair-trade price set by the brewer and policed by a State agency. When he was challenged, he responded by giving away the malty brew, two bottles to a customer.

The State responded by revoking his liquor license, but Mr. Hawkins nailed the document high on the wall to prevent Alcoholic Beverage Control agents from retriving it. And when authorities tried to take him into custody, Mr. Hawkins resisted until he was dragged kicking from his store. He was arrested on two charges, his attorneys says, resisting an officer and selling liquor after his license had been revoked, and was found not guilty on one charge, while the other resulted in a hung jury.

Mr. Hawkins still insists that the State owes him money for the liquor its agents confiscated that day. He says it was worth $5,700, and claims that the tax-collecting board of equalization only gave him an offset against sales taxes of about $3,800 as a reimbursement.

"I tried to collect the rest, but didn't have any luck," he mourns. "So every year for the past several when I complete my State income tax, I just write across the front, 'Please deduct this from the amount you stole from me in 1950.' "

To this gambit, the State counters with one of its own. It simply attaches Mr. Hawkins' $500-a-month county supervisor's salary.

On two occasions since, Mr. Hawkins says, he has tried to obtain another liquor license, but to no avail.

"They say I'm immoral," he snorts. "Why, I've never broken a law in my life, except for a couple of traffic violations." Needless to say, he doesn't consider his nonchalant attitude toward fair-trade prices as law-breaking.

To publicize his struggle to win back his liquor license, Mr. Hawkins bought a "couple of cases" of bourbon at retail a few days before last Christmas, then sold each bottle for 50 cents less than it cost him. When the supply was gone, he passed out 50-cent pieces to customers so they could get the same saving at a next-door liquor store.

Such antics have led many Stocktonians to regard Mr. Hawkins as a publicity hungry posturer, less concerned over the rights or wrongs of "fair trade" than he is in getting his name into the newspapers.

"He couldn't begin to afford the publicity that he has gotten for nothing in all these controversies," says J. C. Sommers, an official in the Greater Stockton Chamber of Commerce.

A Stockton doctor notes: "I'd be more impressed if he'd gotten involved over something besides beer, Kleenex, and Alka-Seltzer."

Mr. Hawkins concedes that his impromptu Yuletide whisky sale was an effort to call attention to his fruitless bid for a liquor license. But, he adds, "all in all, this whole fight has done me more harm than good. I was doing very nicely in the grocery business until I had to get rid of my grocery stores [he had two] because I couldn't handle liquor. I could do a lot better business than I'm doing if they'd just let me alone."

And his attorney, E. R. Williams, declares: "Charlie is the sort of guy who believes he has to raise issues. His theory about 'fair trade' is that the law is unpopular; and that if they'd give him a jury trial, the jurors wouldn't uphold it."

Has Mr. Hawkins learned any lessons in his latest losing joust with the law?

"I don't know if I want to come back to jail over this issue right away," he muses. "Maybe I can give it [Alka-Seltzer] away. I'll have to ask my attorney about that. Still it's worth being cooped up to believe in those things you've always believed in. It gives me a certain nice sense of the right of rebellion."

Gettysburg's Second Battle

EXTENSION OF REMARKS
OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. QUIGLEY. Mr. Speaker, I would like to call to the attention of the Members an editorial from the excellent Harrisburg Patriot and some remarks by the Adams County Commissioners anent that editorial. I think if every Representative and every Senator would read these two pieces of information they would have an insight as to why I am so upset over the situation. For, by law, a large portion of the ground upon which the first day's battle at Gettysburg is fought must be sold in effect to the highest bidder if the Federal Government is unable to make an offer. This land is now what is called an inholding—that is land almost completely surrounded by the national park at present. The choice is between a fitting monument for our rich heritage or a monstrous monument to commercialism. The choice, gentlemen, is up to you. The editorial and comment follow:

GETTYSBURG'S SECOND BATTLE—DOLLAR SIGNS VERSUS A SHRINE: LET'S END THE RUNAROUND

Congressman QUIGLEY calls it the Second Battle of Gettysburg. It is an old battle.

The first battle, marking the turning point in the Civil War, lasted 4 days.

This one has been going on for 64 years, off and on. Congress first authorized the acquisition of land adjacent to the Gettysburg National Park away back in 1895.

Those years, when the land could have been added to this national shrine for a comparative song, were frittered away. Worse than that, some of the land was lost forever. Go to Gettysburg and you can see it. There is the automobile junkyard on a site where nearly a century ago the Blue and Gray were locked in deadly embrace. Other flotsam and jetsam of neon-light and billboard commercialization stand in all their ugliness on the very approaches to the "hallowed ground" President Abraham Lincoln dedicated to the dead in one of the most famous speeches of all civilized history.

Nothing can be done about this now.

It is too late.

But it is not too late to keep this commercialization from flowing, in all of its dollar-sign flamboyance, over other privately-owned ground that is pock-marked in or on the border of the national park.

Congress authorized its purchase just 2 years ago, when it approved the Mission 66 program for the National Park Service.

But it hasn't appropriated the money to back up the authorization.

The House has just refused to approve the $750,000 appropriation which would add 600 acres to the 2,700-acre national park.

This land is up for grabs.

You can't especially blame the private owners for putting up the "For sale" sign. A succession of Congresses has been stalling for 64 years, and there has been an outright congressional runaround since the 1957 action.

Not only that; the private owners are following an official governmental example. A 150-acre chunk of the battlefield that soon can be lost forever to the park—and the American people—is owned by Adams County.

It's valuable real estate like all the rest, and the three Adams County commissioners have their eyes, too, on the fast buck. So they've put this county-owned ground up for sale. If Congress doesn't make the money available to bid on it, too bad.

Here is county government unimpressed by the national shrine argument. Even from the standpoint of self-interest, the Gettysburg Park is, after all, the biggest "industry" there with its 750,000 tourists every year. They aren't attracted to Gettysburg by honky-tonk commercialism.

What is the county commissioners' policy? "You shouldn't be asking all of these questions," their chairman argues.

But all of these questions must be asked if the national shrine at Gettysburg is to be saved. Once enough Americans hear the questions and understand the answers, an aroused public opinion will force Government at Washington—and perhaps even in the Adams County courthouse—to put this hallowed ground ahead of the almighty dollar.

Congressman QUIGLEY and Senator CLARK have been able to force all of these questions out into the open. Full-scale Senate hearings will be held. It is here and on the Senate floor that "the Second Battle of Gettysburg" can be won. But it will take the outspoken support of aroused Americans to win it. When enough Americans speak up, Congress listens.

COMMISSIONERS' VIEWS ON GETTYSBURG FIGHT

(EDITOR'S NOTE.—The three Adams County commissioners have issued a statement on their decision to put up for sale to the highest bidder county home land which the National Park Service seeks to add to the Gettysburg Battlefield Park. The commissioners, E. Donald Scott, J. Blaine Bushey, and George E. Kane, say they were "presented in a rather unjust position" in both a news report in the Sunday Patriot-News April 5 and a Patriot editorial on April 8. Patriot-News Reporter Hans Knight attempted, unsuccessfully, in an interview to get the commissioners' views. The three commissioners refused to answer an array of questions at that time. Chairman Scott's reply to one of the questions summed up all of their answers. Said Commissioner Scott then: "I wouldn't say. You shouldn't be asking these questions." The Patriot is happy that the commissioners now have decided to state their side of the argument. Their statement follows.)

The Adams County commissioners have determined, after thorough study and a special report on the problem, that it is no longer profitable to operate the Adams County Farm; and with the approval of the court of quarter sessions of Adams County, the county has ceased operation of the county home land as a farm and has disposed of all livestock and farming equipment.

This makes necessary some disposition of the land which for more than a century has been operated as a farm. The County In-

stitution District may own land and buildings for the care of dependents of the county, but when such land is no longer useful for such purposes it must be disposed of.

Because of the condition of some of the buildings at the Adams County Home, and to provide better care for the guests, the Commissioners have decided to construct a new county home. This new county home will be located on county land some distance from the present buildings. It is hoped that construction can begin soon. The cost of construction must be raised, in large part, from sale of the no longer useful portions of the county farm.

The Adams County commissioners are well aware of the historic importance of the County Home Farm land. Possibly the best known of the many men who fought over that land during the Battle of Gettysburg was General Barlow, who was wounded in the fighting on the county home land and who was carried to the County Home buildings along with other injured and hospitalized there.

Historic considerations would lead to the conclusion that the farm land should be retained as part of the battlefield, but what ever feelings the commissioners might have in the matter are irrelevant. Their actions in this regard are regulated by law.

The commissioners must operate in a manner prescribed by the relevant acts of the legislature of this Commonwealth. The same laws also pertain to all other counties in the Commonwealth of Pennsylvania for the protection of their citizens. The relevant act in this instance is the county institution district law adopted and approved by the legislature at Harrisburg in 1937.

Under this act, the sale of any land owned by an institution district can be made only with approval of the Court of Quarter Sessions of the Peace, which requires that it be made only to the highest bidder. A public sale of the land could be held. The law also permits a private sale but the requirement of court approval assures that the price must be as good or better than that which could be obtained at public sale. The decision that an amount offered by private bidder is higher than an amount that could be obtained at public sale, is not an arbitrary one. The whole matter must go before the court which will fix a day for a hearing of which public notice must be given. At this hearing qualified appraisers are called to estimate the value of the land proposed to be sold. Any person is free to appear at the hearing and object if they wish to do so. By the same token anyone is free to make a higher offer.

Thus it is legally impossible for the commissioners to sell any county land to any purchaser without complying with the legislature's enactment, and without approval by the court, and without the general public being aware of the sale, and without the sale being in actual effect to the highest bidder.

The commissioners legally have no discretion in the connection. If the Federal Government can obtain the funds with which to purchase the land, and if its offer is reasonable and no other purchaser offers more, then the land will become part of the Gettysburg National Park. If, on the other hand, the Park Service cannot obtain the funds, or if some other buyer is willing to pay more, then the land will not become part of the park. The commissioners have no authority to appropriate either county funds or county property for National Park purposes.

For these reasons the commissioners, while they may wish the situation were otherwise, can only operate within the laws and confines of the above mentioned legislative enactments and the requirements of the court. They must and intend to comply with the law.

Welfare and Pension Funds Legislation Needs Clarification

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 18, 1959

Mr. BOSCH. Mr. Speaker, I have just read with a great deal of interest that the Department of Labor's 1960 budget request to handle welfare and pension plan reports under the 1958 Welfare and Pension Plans Disclosure Act is almost $1 million—$938,000. This is based on the rather shaky grounds that only 250,000 reports will be filed—the minimum estimate of the Secretary's range of estimates, from 250,000 to one and a quarter million plans.

I should like to bring to the attention of my colleagues that during congressional debate on this act last year, I protested that the Department of Labor's estimate of $1.3 million in annual costs to administer the far more detailed Senate bill (S. 2888) was too low—CONGRESSIONAL RECORD of August 6, 1958 at page 15055. Further, during this debate, the following colloquy took place between the distinguished chairman of the Committee on Education and Labor and myself:

Mr. BARDEN. Let me go a little further with this. As far as we are able to figure, there is no expenditure of Federal money involved, except possibly space for two copies of the summary.

Mr. BOSCH. Will the gentleman yield?

Mr. BARDEN. I yield.

Mr. BOSCH. Will the gentleman agree with me that it would be quite some space with an estimate of 1,250,000 plans? Two times that is 2,500,000 copies which would have to go to the Secretary of Labor, and I think there will be a tremendous cost to the Government in cataloging and indexing these plans.

Mr. BARDEN. Mr. Chairman, I yield myself 2 additional minutes.

Let me say to the gentleman: Let us not go off the deep end. Here, after all, I think the filing of those copies with the Secretary of Labor—and I am not so sure that the distinguished gentleman does not agree—is another safeguard to make them available for an employee.

Mr. BOSCH. I agree wholeheartedly with the gentleman. What I was trying to point out was that he said there would be no cost to the Government.

Now, here we have it—S. 2888 would have required the Department to check, investigate, and enforce. The current act gives the Secretary no investigating or enforcement powers yet it is costing approximately $1 million annually.

Today, the Welfare and Pension Plans Disclosure Act, which states that those plans are exempt which cover "not more than 25 employees" and defines "employee" to mean any individual employed by an employer, is being interpreted unofficially byt the Department of Labor in a series of "interim" memorandums to include in the "25" figure retired employees as well as current employees and to include even former employees who "may become" eligible to receive a welfare plan benefit. To support these interpretations the Department of Labor cites not the definitional sections of the Act but those sections which deal with the financial details of the plans to be reported and to the usage in these sections of the terms "participants" and "retired employees."

If the terms "participant" or "retired employees" were intended to be used in the exemption provision, it would have been a simple matter to have used them instead of the word "employees." How under such "unofficial, interim" interpretations the Department of Labor hopes to receive only 250,000 reports, on which their $1 million annual costs are based, is a mystery. And exactly how future court interpretations of the act will be affected by "unofficial interim"—and I might ask "interim to what"—memorandums remains to be seen.

Obviously, Mr. Speaker, there is much in the field of pension and welfare funds legislation which needs further study and clarification.

Resolution Pertaining to House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DORN of New York. Mr. Speaker, I should like to call the attention of my colleagues to the resolution adopted by the Holy Name Society of the Church of Mary Queen of Heaven of Brooklyn at a recent meeting of that society.

The resolution follows:

Whereas a bill has been introduced—similar to proposals made in previous Congresses—to abolish the House Un-American Activities Committee; and

Whereas it is suggested that situations now dealt with by that committee be dealt with by the Judiciary Committee of the House; and

Whereas the obvious intent of these proposals is to discredit the functions of the House Un-American Activities Committee which has performed with distinction a service of vital benefit to our Nation, and done work often disagreeable, which the Judiciary Committee is not constituted to do; Therefore be it

Resolved, That the Holy Name Society of the Church of Mary Queen of Heaven strongly condemns the objectives of the proposed bill and all similar moves to weaken the surveillance of subversive activities by the House Un-American Activities Committee and representatives in Congress to reject all such moves.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Daily Digest

HIGHLIGHTS

Senate began consideration of labor-management reform bill, cleared for President bills on appropriations for unemployment compensation and space appropriations authorizations, and passed bill on cotton acreage leases.

House passed REA authority transfer and U.S.-Canadian parliamentary conference bills.

House Rules Committee cleared military construction bill for floor action.

Senate

Chamber Action

Routine Proceedings, pages 5255–5318

Bills Introduced: 27 bills and 5 resolutions were introduced, as follows: S. 1672–1698; S. Con. Res. 22; and S. Res. 101–104. **Pages 5263–5264**

Bills Reported: Reports were made as follows:

S. 1555, Labor-Management Reporting and Disclosure Act of 1959, together with minority, supplemental, and individual views (S. Rept. 187)—reported during adjournment April 14 under prior authorization;

S. 455, to provide for appointment of an assistant to the Secretary of State to assure joint policy and planning and equitable budgeting of exchange-of-persons programs (S. Rept. 188);

H. Con. Res. 34, favoring the meeting of the North Atlantic Treaty Parliamentary Conference for 1959 in Washington, D.C. (S. Rept. 189);

S. Res. 48, establishing committee to study development and coordination of water resources ($175,000), with additional amendments (S. Rept. 190);

S. Res. 104, gratuity to survivor of deceased Senate employee (no written report);

S. Con. Res. 22, to print additional copies of certain hearings on transportation problems in Maryland, Virginia, and the Washington metropolitan area (no written report); and

S. Res. 100, extend from April 2 to June 30, 1959, time for filing report pursuant to S. Res. 318, of the 85th Congress, to establish a special committee to consider the matter of preserving historical documents of the Senate (no written report). **Pages 5253, 5259–5260**

Bill Referred: Three House-passed bills were referred to appropriate committees. **Page 5253**

Bill Placed on Calendar: H.R. 4601, forfeiture of Federal retirement benefits in cases of offenses involving national security, was ordered to be placed on calendar. **Page 5253**

Supplemental Labor Appropriations: Senate took from desk, passed without amendment and cleared for President H.J. Res. 336, making supplemental appropriations of $40 million for the Department of Labor for fiscal year 1959. This appropriation provides for the unemployment compensation payments carried in H.R. 5916, second supplemental appropriations for fiscal year 1959, now awaiting report by Committee on Appropriations. **Page 5255**

Appropriations Authorizations—Space: Senate concurred in House amendment to and cleared for President S. 1096, fiscal 1959 supplemental authorizations of appropriations for the National Aeronautics and Space Administration. **Page 5283**

Naval Vessel Construction: The hour of 2 p.m. having arrived at the conclusion of morning business, Senate's unfinished business, H.R. 3293, to authorize construction of modern naval vessels, was laid down but was then temporarily put aside for consideration of other matters. **Page 5325**

Cotton: Senate considered and passed without amendment S. 1455, authorizing the leasing of cotton acreage allotments during the crop years of 1959 through 1961. **Pages 5340–5347**

Labor-Management Reform: Senate took up S. 1555, Labor-Management Reporting and Disclosure Act of 1959, and agreed to all committee amendments en bloc, which were thereafter considered as original text for purpose of further amendment.

Appendix

Pledge of Allegiance to the Flag of the United States

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 16, 1959

Mr. THURMOND. Mr. President, Walter A. Wentworth, president general of the National Society of the Sons of the American Revolution, delivered an inspiring address entitled "I Pledge Allegiance," before the South Carolina Society, in Greenwood, S.C., on April 11. Everyone who has ever pledged allegiance to the flag of the United States should read Mr. Wentworth's address, for his words give a clearer meaning to this pledge.

I ask unanimous consent that Mr. Wentworth's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I PLEDGE ALLEGIANCE

One of the objects of the Sons of the American Revolution is to perpetuate the memory of those men, who, by their services and sacrifices during the War of the Revolution, achieved the independence of the American people.

Pericles, the Greek political leader, early in the fourth century, B.C., said:

"I would have you day by day fix your eyes upon the greatness of your country, until you are filled with the love of her; and when you are impressed by the spectacle of her glory, reflect that it has been acquired by men who knew their duty and had the courage to do it."

I pledge allegiance to those men who achieved for us the independence of the American people.

As the years have passed, some of our citizens have lost their appreciation, or become negligent of it, for those men and the liberties and rights written into our form of government by them. Some have lost a realization of the value of the outward expression of the loyalty which is owed to our Nation that was built from the sacrifices of our Founding Fathers.

A short time ago, at home, we were listening to Lowell Thomas over the radio. We heard him say, in effect, that he feels that we sing "The Star-Spangled Banner" too much. He had been telling of adverse reactions by Britishers to standing and singing "God Save Our Gracious Queen." Aroused by this comment, I immediately wrote to him saying in part:

"It is surprising to hear one of your stature make such a comment with regard to the national anthem of the United States. Flying the flag, the pledge of allegiance, and joining in the national anthem are outward demonstrations of loyalty and patriotism. We need demonstrations of patriotism every day of every year to maintain and promote the institutions of American freedom. Any depreciation tends to minimize their importance."

Twelve days later he wrote me saying:

"Many thanks for your splendid letter. Alas, I didn't intend the meaning that you suggest."

Three days after we had heard the comment of Lowell Thomas, Mrs. Wentworth brought home a book to which the speaker at the DAR meeting that afternoon had made reference. The speaker had read from it a much better expression of what these demonstrations of patriotism mean, than had been said in my letter to Mr. Thomas.

The book is "Serenade to the Big Bird," written by Bert Stiles. He was commissioned by the Air Force in November 1943, and went over to Great Britain the following March. After making 35 bomber missions, he requested to be transferred to fighters, instead of returning to the United States as he was entitled to do. He was killed in November of that year. The book tells of what happened to him and others before and during the intensive war service which he saw.

In one part he relates his experiences in the Denver (Colo.) public schools. Let me quote a little from it.

"They taught their kids to read and write, to honor their fathers and mothers, to salute the flag, and brush their teeth. They vaccinated everybody, and the scrawny ones got milk and graham crackers at 10 in the morning, and there was a play festival in the spring where all the schools danced, and we always sang carols at Christmas time.

"They did their best, all the way around, at Washington Park School. After fire drills, when everyone was safely out in the sun, we never went back in again without pledging allegiance to the flag and to the country for which it stands—one Nation indivisible—with liberty and justice for all.

"Maybe they were just words then, but there was a quiet sort of majestic feeling that went with them, like we were part of something big and good that would last forever."

Those words—a majestic feeling that we are a part of something big and good that will last forever—expressed the sentiment of a school child, in retrospect and while engaged in the defense of his country that it might last forever.

As the title of what I might say here, I chose "I Pledge Allegiance." Of course it is taken from the pledge to the flag.

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one Nation under God, indivisible, with liberty and justice for all."

The original wording of this pledge was suggested by one of the partner-publishers of the Youth's Companion in 1892. Many of you will recall that magazine which played a large role in the lives of children a half a century ago. The pledge was given national circulation by Francis Bellamy, who promoted patriotic activities among the readers of the Companion. It was first used in public exercises in Boston on Columbus Day, October 12, 1892.

Two additions to the original wording have been made. The phrase, "of the United States of America," was added some time ago to particularize this country for naturalized citizens and immigrant children. The words "under God" were added by act of Congress in 1954.

When President Eisenhower signed that act he said, "in this way we are reaffirming the transcendence of religious faith in America's heritage and future, in this way we shall constantly strengthen those spirtual weapons which forever will be our country's most powerful resources in peace and in war."

This recognition of the transcendence of religious faith is firmly implanted in the traditions of our Nation. Benjamin Franklin said:

"I have lived, sir, a long time. And the longer I live, the more convincing proofs I see of this truth—that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid?

"We have been assured, sir, in the sacred writings that except the Lord build the house, they labor in vain who build it. I firmly believe this. And I also believe that without His concurring aid, we shall succeed in this political building no better than the builders of Babel; our projects will be confounded, and we ourselves shall become a reproach and a byword down to future ages."

On November 13, 1861, when the Civil War was but 6 months along, the Reverend N. R. Watkinson of Readyville, Pa., wrote to Salmon P. Chase, then Secretary of the Treasury, in which he said, "One fact touching our currency has hitherto been seriously overlooked. I mean the recognition of The Almighty God in some form on our coin." He went on to say that antiquaries of suceeding centuries would rightly reason that we were a heathen nation. He then made suggestions of form and wording.

One week later, Secretary Chase wrote to the Director of the U.S. Mint at Philadelphia saying, "No nation can be strong except in the strength of God, or safe in his defense. The trust of our people in God should be declared on our national coins." The Congress passed the necessary law in 1864, but the motto was placed only on some of the coins. On July 11, 1955, an act was adopted making "In God We Trust" mandatory on all currency.

This recognition "one nation under God" in our pledge of allegiance and "In God We Trust" on our currency, expresses the beliefs of our Nation's founders and the continuing beliefs of our loyal citizenry. It marks the greatest distinction between our Nation, with its liberties and freedoms, and the Communist nations, with their aetheistic ideology, tyranny and oppression.

It also marks the distinction between the Western Nations, Christian Nations, which abide by their agreements and the Communists, aetheists, which since Teheran in 1943 through Yalta and Pottsdam in 1945 and Geneva in 1955, have violated all but two of their important commitments. Those which have been honored are: (1) To enter the war against Japan, which they did after that war was won; and (2) to neutralize Austria. Among the broken promises are: (1) To assist Nationalist China; (2) to treat all of Germany as an economic unit; (3) to allow the Western Allies free access to Berlin; and (4) to permit reunification of Germany under a democratic government, chosen in free elections.

So, when with hand over heart or at military salute we make our pledge of allegiance to the flag of the United States of America and to the Republic for which it stands, what is the meaning of it to each of us?

What duties do we see which will carry out that pledge to this Nation under God?

A Catholic priest and a Jewish rabbi, who were fast friends, went to see a prizefight one evening. After the preliminary bouts were over, the two big fighters gathered with the referee in the center of the ring to receive instructions on the rules of the game. That finished, they returned to their respective corners. The rabbi noticed that one of them crossed himself as he approached his corner and asked the priest what that might mean. The reply came, "Nothing, unless he is willing to fight."

That, too, is the case with our pledge of allegiance. It means nothing unless we are ready and willing to stand up in defense of our liberties and the preservation of the Republic for which the flag that we salute stands.

Is that Republic and are those liberties for which this Nation was founded and for which our forefathers pledged their lives, their fortunes and their sacred honor in danger of being lost to us and to future generations? History shows that liberty is easy to loose, and once lost hard to regain.

John Philpot Curran, Irish leader in the resistance to the repressive policies of the British Government in 1790, said "It is the fate of the indolent to see their rights become prey to the active. The condition under which God hath given liberty to man is eternal vigilance; which condition if he break, servitude is the consequence of his crime and the punishment of his guilt." Generally paraphrased as "Eternal vigilance is the price of liberty," this maxim is as true today as when spoken nearly 170 years ago.

Benjamin Franklin, when he emerged from the last secret session of the Constitutional Congress, was asked by a passerby, "And what kind of a government have you devised, Doctor?" His quick reply was, "A Republic, my friend, if we can keep it." And what is a republic? It is a state in which the sovereign power resides in a certain body of the people, and is exercised by representatives elected by them.

Eternal vigilance, the price of liberty, is needed now if, as Benjamin Franklin put it, we are to keep the Republic, the form of government established for us by the Founding Fathers.

Eternal vigilance is needed now if we are to guard against and prevent usurpation, such as George Washington charged us with in his farewell address to the American people. There, after expressing concern over attempts to evade provisions of the Federal Constitution, he said, "But let there be no change by usurptation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

Those who builded the foundations of this Nation knew well the need for protecting the rights of individuals, for safeguarding the form of government and for preventing a strong Central Government. History had taught them, and it should teach us, that autocracy, dictatorship, can and does develop easily when great power rests in a central government.

The first 10 amendments to the Constitution of the United States, which are known as the Bill of Rights, were insisted upon by several of the original States and they were assured of the submittal of those safeguards before those States adopted the Constitution as it had been drafted. These amendments were demanded to preserve the right of individuals and of the States which comprise the Nation.

You are familiar with the 10th, the States rights, amendment. It provided that "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." This basic principle of our Federal structure has been pushed aside by decisions of the Supreme Court. They, the Justices of the Supreme Court, have relied upon other provisions which are not so clear in their meaning.

One of those others which provide for greater centralization of authority of government, to those who seek the form of control, is the 14th amendment. It reads in part, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; * * *." Under recent interpretations States rights have been relegated to impotency. When the will to build stronger central control dominates, then our freedoms and our liberties are at stake.

And what are some of the decisions of the present Supreme Court of the United States which have depreciated or even discarded the rights of the States, which has been for so long the bulwark of our liberty and our growth as a Nation?

The Court has denied the States the right to enforce antisedition laws; investigate subversion within its borders; dismiss employees who refuse to testify on the ground of self-incrimination; operate public schools in a manner consonant with local needs or desires.

In some of the first of these cases the decision of the Court has stated that the Federal law transcends the authority of the States, unless the Congress provides otherwise. In the latter case, regarding schools, Congress has provided otherwise. Since the adoption of the 14th amendment, in 1868, which is the basis of the school integration decision, 13 States have been admitted to the Union. In 11 of these, including both Alaska and Hawaii, the enabling acts adopted by Congress provide that the public schools, colleges or other educational institutions authorized are forever to remain under the exclusive control of those respective States.

But, what is perhaps more significant is that the 14th amendment—like the 13th (abolition of slavery), the 15 (right to vote), the 19th (woman suffrage)—specifies that "The Congress shall have the power to enforce, by appropriate legislation, the provisions of this article." These four amendments dealing with civil rights are the only amendments which contain this particular provision, except the prohibition amendment which is now repealed. The Congress has not acted on the school integration question, but the judiciary has.

Recently the House of Delegates of the American Bar Association cited 24 decisions of the U.S. Supreme Court which cripple national and State security, with particular reference to Communist activities. The report states that recent decisions have been severely criticised and deemed unsound by many responsible authorities. Remedial legislation will be sought from the Congress. One would restore the authority of the States to enforce laws against sedition. Another would clarify the powers of the Un-American Activities Committee of the U.S. House of Representatives.

You are, of course, familiar with the admonition of the conference of Chief Justices of State Courts of Appeal, meeting in California last fall. They said in part:

"The overall tendency of its (the Supreme Couft of the United States) decisions during the last 25 years has been to press the extension of Federal powers and to press it rapidly. * * *

"This conference respectfully urges that the Supreme Court of the United States—exercise one of the greatest of all judicial powers—the power of judicial self-restraint."

That conference has now established a committee for the purpose of "achieving a sound and appropriate distribution of judicial power between the Nation and the States."

Later last fall, Chief Justice Warren of the U.S. Supreme Court, spoke in California where the conference of State Chief Justices had directed criticism at the U.S. Court's decisions. Apparently in reply to those criticisms, he said that if the Federal Government has infringed on States rights it was generally "only when the States themselves have failed to meet the needs of the people."

I ask you, whose function it is to determine the needs of the people—the legislative or the judicial branch of the Government? When the Court decides what the needs of the people may be, is that anything but usurpation? Let us quote George Washington again. "But let there be no change by usurpation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

At its October meeting, the board of trustees of the National Society of the Sons of the American Revolution recognized the seriousness of this situation which has been created by the acts and the decisions of the Supreme Court. The trustees accordingly adopted a statement and resolution entitled "Acts of Usurpation by the Justices of the Supreme Court of the United States." In it the State Chief Justices are commended for their admonition to the U.S. Court that has been mentioned here previously. The SAR resolution then exercises the right of petition by criticizing the U.S. Justices for usurpations committed in cases involving subversion, for interference with the investigating and lawmaking powers of the Congress and of the States in the anti-subversive field, and for its course of action in the integration cases. It further declared that replacement of the present Justices may be the only way of correcting the present situation, which has become intolerable.

Lest there be any misunderstanding, let me say that these criticisms of the acts and decisions of the U.S. Supreme Court are not directed at the institution of the Court, but rather at the performance of the Justices who now comprise it. Like we often criticize the acts of a President or a Senator without any desire but to uphold the office of the Presidency or the institution of the Senate, just so it is the desire to uphold the Court while attempting to guard against and correct the acts of the Justices who now comprise it.

John Marshall, the fourth Chief Justice of the U.S. Supreme Court and who served in that capacity from 1801 to 1835, is often called the Great Chief Justice. His tenure as such covered a period in the history of this Nation when constitutional questions and division of powers were being decided in that Court. He interpreted the Constitution broadly, so as to give the Federal Government the means to act effectively within its limited sphere. But it was he who said, "No political dreamer was ever wild enough to think of breaking down the lines which separate the States and compounding the American people into one common mass."

Walt Whitman states it well in his epigram to the States:

"To the States, or any of them, or any city of the States,
Resist much, obey little,
Once unquestioning obedience, once fully enslaved,
Once fully enslaved, no nation, state, city of this earth ever afterward resumed its liberty."

As one born of New England parentage and reared in the State of Iowa, whose motto is "Our liberties we prize and our rights we will maintain," this encroachment upon the basic principles of the rights of the States and the liberties of individuals is intolerable.

I know that it is repugnant to you, compatriots of the Sons of the American Revolution. It is up to us and other like minded patriotic citizens to resist much, as Walt Whitman so well put it. We have a duty to ourselves, to our forebears, to our children and to all posterity to guard the principles upon which this Nation was founded.

The invasion of States rights is one of the present day challenges against our form of government. It, States rights, has been the bulwark against control, centralized and magnified, by which it has been customary in history for people to lose their hard gained liberty.

Then, too, there are many who seek panaceas, unsuspectingly, which in the end only lead to the loss of all that is dear to freedom loving people.

Last fall I ran across a poem in the Chicago Tribune, which bears on this. It was written by Ellis O. Jones, under the title of "The Light-Head Brigade," and is a parody on Alfred Tennyson's "Charge of the Light Brigade." It goes as follows:

"Half a step, half a step,
Half a step backward,
Back to the fatal edge
Inched and bewildered.

"Back to the yawning brink,
Never a halt to think,
Cheered by the parlor pink
Bumbling and stumbling.

"Theirs not to see behind,
Like the blind leading the blind,
As if bereft of mind
Crazily mumbling?

"Reason to right of them,
Reason to left of them,
Reason in front of them
Volleyed and thundered.

"Theirs not to make reply,
Theirs not to tell us why,
Theirs but to fate defy
As backward they blundered."

We of this patriotic society have the heritage and possess the fabric, if we will but apply the stamina, to take the lead in the preservation of those things which are fundamental to the rights and liberties for which this Nation was founded. Let every one of us seek ways to enlighten other Americans to what they have and enliven them with a will to hold fast to those basic principles.

Can we, who revere our Constitution and the form of government of which it is the foundation, who honor the men who framed that document and put the breath of life into it, can we do anything other than to exert our every energy and all our talents to inculcate into the heart of America a belief in those constitutional principles and a deep desire to keep them unsullied?

That is a field in which we can work. Call it propaganda, if you will. It is basic, it is deserving, it is for the preservation of the institutions of American freedom, which is one of the great purposes and objects that was written into our charter by the Congress of the United States, 53 years ago.

At the time of our struggle for independence, followed by the drafting of our Constitution and the establishment of our form of government, God gave us a group of men, our Founding Fathers, who for courage, intelligence, wisdom, and honor has never been equalled in any nation at any time.

So, when we make our pledge of allegiance let us with the spirit of those who gave us our freedoms resolve that those freedoms shall be perpetuated. That, in the words of Bert Stiles, let us resolve to appreciate that we are a "part of something big and good that would last forever." That, in our prayers in this one Nation under God, we seek that He, in whom we trust, will give us the men and women who can illumine the mind and heart of America so that the heritage which we have shall not perish from the earth.

Why Cities Are Changing

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. WILLIAMS of New Jersey. Mr. President, in the last decade or so our metropolitan cities have been undergoing a tremendous change. While much of the change must be accepted as inevitable, there is much that the cities themselves can do not only in promoting the advantages of city as against those of the suburb, but in developing new ideas to meet the challenge of our changing times. In my own State of New Jersey, the city of Paterson has not only come to grips with the problem, but has set out in a vigorous fashion to overcome it.

To give Senators the benefit of some pertinent information on this whole subject, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking editorial published in the Paterson News of April 3. I think it is of considerable interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY CITIES ARE CHANGING

The typical U.S. large city is far from dying or even becoming moribund as a whole, despite the shift of many of its people and some of its business to outlying areas. What may be decaying as a result of the "flight to the suburbs" are the sections lying between the central core of a large city and its outer rim.

This is one deduction from a recently published study by the Committee for Economic Development. The study lists various economic factors keeping certain businesses in the central city and is of interest to cities like Paterson where intensive activities are on to meet the changes.

For instance, some establishments need large-scale low-cost labor (e.g., Puerto Rican and Negro women in New York) that can be mobilized more readily in the city than in most suburban areas. Others need much young female help, especially clerical.

Printers of legal briefs and advertising brochures must be able to get their material and deliver it quickly. Garment manufacturers must be concentrated so that buyers lose little time in visiting each. There's need to find technicians, such as electricians or machinists, in a hurry to minimize work stoppages.

These considerations apply chiefly to small businesses. It is largely big establishments which leave the central city. In eight widespread metropolitan areas studied, almost three-fourths of small business units were in the city, over half the large ones in outlying districts.

Retail trade, like large-scale manufacturing, has shown a shift away from the central city as the population has changed. This population shift to suburbia has been indeed stupendous all over the country.

Whereas the central cities in metropolitan areas grew nine times faster than their suburbs from 1890 to 1900, today suburban population is growing six times faster than central city population. Even in 1954, central cities showed less than three-fourths of the employment in general merchandise stores of 13 metropolitan areas.

(The Census Bureau classifies as a metropolitan area any county containing a city of at least 50,000. Adjacent counties are included if nonagricultural and tied in economically and socially with the central city.)

With more reliance now on trucks and less on railroads to bring in and ship out goods, wholesale establishments move to the city perimeter. This is especially true of those that handle goods more efficiently in low wide buildings than in high narrow ones.

"As central cities decline in population," says the Committee for Economic Development, "Negroes and other groups with more restricted job opportunities constitute a larger proportion of the population that remains."

Certain Federal-aid programs, such as those for housing and urban renewal, aim primarily at central cities, small as well as large, rather than metropolitan areas. However, Congress, which legislates for the District of Columbia, has set up a joint committee to consider problems of the Washington metropolitan area as a whole.

In a report made for this committee, City Planner Frederick Gutheim finds the Washington area population growth since 1930 (198 percent) second only to that of Houston, Tex. Sixty percent of the area's inhabitants live outside the District in adjacent Maryland or Virginia.

These changing conditions are inevitable, and the problem is to face up to them with daring, imagination, and determination, which Paterson is doing.

Protection for Migratory Fish Runs

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. NEUBERGER. Mr. President, convincing and effective arguments for adoption of my bill, S. 1420, to afford protection for migratory fisheries, are advanced in an editorial published by the Oregonian, of Portland, under the title "Equal Status for Fish." The editorial appeared in the Oregonian of March 27, 1959.

I ask unanimous consent, Mr. President, that the editorial be printed in the Appendix of the RECORD so my colleagues may be informed of these impressive reasons for providing some reasonable statutory safeguards for anadromous salmon and trout when the Federal Power Commission licenses structures on our rivers and streams.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EQUAL STATUS FOR FISH

A bill to give the Secretary of Interior, after consultation with the Fish and Wildlife Service, the right to prevent issuance of a Federal Power Commission license for a dam unless fish-passage facilities are acceptable to the Service's experts has been reintroduced by Senator RICHARD L. NEUBERGER in amended form.

The bill he introduced in Congress last session gave Interior equal authority with the Secretary of the Army and the Army Engineers, who have the veto power to protect navigation, to protect anadromous fish runs of the Columbia and other rivers. The new bill, S. 1420, has been modified. A rejection of fish plans by Interior would go to both Houses of Congress. If not overruled by Congress within 60 days, the denial would stand.

The salmon and steelhead of the Columbia River system are of great value to recreational and commercial fishermen and deserve equal protection with navigation. This measure would be a step in that direction. The Federal Power Commission has taken the falsely optimistic view in licensing dams on the Cowlitz and Deschutes and proposing construction of Nez Perce Dam on the Snake River that enough progress has been made in fish passage to assure protection of the runs. This simply is not true. No "skimmer" or other device has yet been proved in practice, and tentative results to date are not encouraging.

Adoption of the Neuberger bill might save the great Salmon River spring Chinook and steelhead runs now threatened by dam proposals at Nez Perce and Lower Canyon sites. Conservationists should unite behind this measure, while also pressing for fishery research funds from Congress and the States to make intensive additional studies of the fish-passage problem.

J. Edgar Hoover and the Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. THURMOND. Mr. President, I ask that a very well-expressed article entitled, "A Larger Embezzlement," issued by the executive committee of the National Association of Bankers, Accountants, and Comptrollers, paying tribute to the Federal Bureau of Investigation and its renowned Director, J. Edgar Hoover, be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LARGER EMBEZZLEMENT

Most of us think only in financial terms when we speak of robberies, burglaries, and embezzlements. Banks have been victimized in unprecedented numbers in years past.

In these years the Federal Bureau of Investigation, under its renowned Director, J. Edgar Hoover, has handled such cases in its jurisdiction in a prompt, impartial, and efficient manner. Evidence of this is found in the nearly 97 percent convictions obtained in Federal courts of persons prosecuted in FBI bank cases.

But embezzlements and robberies are not restricted to money. There are those who embezzle the rights and privileges of U.S. citizenship and would rob others of their good name. The Communists are actively engaged in just this type of activity.

For years the Communists have had as a basic goal the destruction of the FBI and the discrediting of Mr. Hoover. A vicious smear campaign of innuendos, misinterpretations, and falsehoods is being conducted.

The Communist press is being joined by others not so readily recognized as subverters or embezzlers of our democratic processes. They are attempting to perpetuate a fraud on the American people.

Every banker must be made aware of what is going on. We must develop our diligence to prevent this broader type of embezzlement to the same degree as in our own institutions. Furthermore, we must become vocal and active in our defense of the FBI and J. Edgar Hoover, its Director. The Bureau with its outstanding record has contributed much in protecting the democratic way of life without which private banking cannot exist.

We in National Association of Bankers, Accountants, and Comptrollers are proud and appreciative of all the splendid efforts the FBI has expended toward helping to curtail bank robberies and embezzlements. The FBI and National Association of Bankers, Accountants, and Comptrollers are both interested in the protection of banks and our way of life, and it is our strong feeling that the Bureau's efforts and services, in all its activities, should in no way be curtailed.

Remember, private banking cannot exist in a Communist state.

Urban Renewal

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. WILLIAMS of New Jersey. Mr. President, urban renewal grants have already helped to transform large areas of many American cities. Plans now on the drawing boards would, with the grants of the future, make even greater transformations possible. Millions of dollars have been spent, and for very good purposes.

Today, however, I wish to draw attention to a more modest sum, a $130,106 grant made last week. The New Jersey State Department of Conservation and Economic Development has geen granted this sum for a pilot study of the regional needs of a large area in New Jersey. An editorial published in the Bergen Evening Record of April 14 well explains, I believe, the significance of this grant. The project is, in my opinion, an imaginative and very worthy use of urban renewel funds.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SEED MONEY FOR URBAN STUDY

It is constructive, not cynical, to ask what difference can be made by the $130,106 Federal grant to the State department of conservation and economic development for a study in the nine north Jersey counties of the present extent of urban blight. What shall we do after we know the truth, which is sobering and humbling, that we can't do now? Doesn't everybody know we need urban renewal?

The answer appears to be that we don't know it in a way which compels us to take action against blight and slum and social rot. We don't know for instance, what Claire R. Hancock found in a study of 112 shattered families and has reported in the April issue of the Welfare Reporter of the department of institutions and agencies:

"The second major problem is grossly inadequate housing. It was a serious problem to 65 percent of the families. * * * They felt like outcasts. * * * It would seem that the community which fails to provide decent housing and exercise adequate control for protection of its families from exploitation * * * runs the risk of increasing the neglect problem."

In Hackensack it was found that careful determination of the facts respecting blight did lead to Government action with decisive popular consent to sweep clean the blighted areas and rebuild them. When we are made aware of the extent and intensity of physical deterioration and human depletion and waste in a town, when we come to understand its cost in squandered life, frustration, problem solving in the form of delinquency and crime and sullen existence on relief-roll almsgiving—when we know the state we're in we tend to see that it's changed. This is the difference it makes.

The Idaho State College Theater Tour

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. CHURCH. Mr. President, the Idaho State College Theater was selected by the American Educational Theater Association and the USO to tour American military bases in the Far East with its production of "Bus Stop" for 7 weeks beginning in March of this year.

Last August, the group received an invitation to extend its tour in order to participate in the New Zealand birthday festivals in February. I was confident that these young people from Idaho would be wonderful ambassadors to our friends in New Zealand, and I was happy to be of some assistance to them in arranging for their transportation from San Francisco to New Zealand in Operation Deepfreeze planes which would otherwise have made the southbound flight with unused space. The tour has now been completed, and its success is attested by a letter I have received from the public relations officer in New Plymouth.

I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW PLYMOUTH PUBLIC
RELATIONS OFFICE,
April 2, 1959.

Senator FRANK CHURCH,
Senate Office Building,
Washington, D.C.

DEAR SIR: The citizens of New Plymouth have recently been favored with a visit from the Idaho State College theatrical group. Two plays were presented, "The Miser" and "Bus Stop," and played at the Bowl of Brooklands open-air amphitheater in New Plymouth.

We understand that you yourself were in many ways responsible for the opportunities that allowed the Idaho State College players a visit to New Zealand. Because of this, we would like to say that we are indebted to you for your part in this visit.

The players themselves have acted as splended ambassadors for your country, and the plays that they had chosen to present were very much appreciated by the audience who attended in this city.

The idea itself is an excellent one, and we hope, sincerely hope, that the possibilities of such theatrical interchange will continue. In a country like New Zealand, that is to some extent cut off from the larger, more developed countries, there are wonderful results to be gained from such enterprise, enterprise that can gain a closer cooperation and understanding between our two countries.

As an aside to my letter, I must say that I feel the American Embassy in this country could have been a little more helpful to this company, particularly in regard to prepublicity in our New Zealand centers.

I understand, too, that it was found necessary for the company to travel by commercial aircraft to take up their contracts with the Far Eastern authorities in Honolulu. I can only hope that no great expense will be incurred the players in view of this.

They have made a very good impression in this country and have brought American amateur theater to this city.

We are grateful, sir, for your efforts, and hope that you might find it possible to organize such another tour.

Yours faithfully,

E. HANDBURY,
Public Relations Officer.

Mr. CHURCH. Mr. President, the students who made the trip to New Zealand were Robert Cornwall, Dennis Goodenough, Theron Pollard, Alan Nash, David Rayborn, Roy Zitting, Susanne Holman, Beverly Redman, Carene Clarke, and Alice Marie Jackson. Their director is Dr. Hal Todd. Idaho is proud of them.

The Premium Iron Ore Case

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram I received from Cyrus Eaton, and an editorial from the Toronto Telegram of April 11, 1959, entitled "U.S. Tax Attempt Tossed Out."

There being no objection, the telegram and editorial were ordered to be printed in the RECORD, as follows:

CLEVELAND, OHIO, *April 10, 1959.*

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D.C.:

Federal Court of Appeals in Cincinnati has just handed down a unanimous and sweeping decision in favor of Premium Iron Ores, Ltd., of Canada, and its American stockholders. This constitutes a sharp rebuke to the Treasury Department, the Internal Revenue Service, the Attorney General, and the State Department for their 17-year attempt to impose punitive income taxes on Premium and stockholders, and especially for their ill-starred appeal of the original U.S. Tax Court decision, against the advice of some of their own experts and over the official protest of both the Liberal St. Laurent government of Canada and the subsequent Conservative Diefenbaker government, as well as the editorial objection of every important newspaper across Canada. What good does it do the United States to spend billions of dollars for foreign aid for the express purpose of making friends while at the same time conducting an income tax vendetta with Canada, our nearest neighbor and best customer?

CYRUS EATON.

U.S. TAX ATTEMPT TOSSED OUT

Rarely have tax officials suffered a more decisive defeat than has the U.S. Internal Revenue Service in the courts in Cincinnati, in the case in which the service has tried to tax a Canadian company.

Consolidated Premium Iron Ores, Ltd., a Toronto company whose business is marketing the output of Steep Rock Iron Mines, Ltd., has won a clear verdict in the Federal U.S. Court of Appeals against U.S. Government tax officials who assessed it for $4,599,418 in back taxes. In this verdict, the American court has shown more sense than the tax branch of the American Government.

This is a case that has not only ruffled Canadian feelings, but threatened to upset harmonious relations under the Canada-United States tax treaty that provides orderly procedure for avoidance of double taxation.

This is, moreover, the case which would have jeopardized the position of hundreds of U.S. controlled firms in Canada and, if U.S. tax officials had had their way, delivered a severe blow to Canadian economic development to the extent that it has been based on U.S. capital investment here.

The basic doctrine of tax reciprocity, as it prevails between Canada and the United States, is that U.S. investment in Canada operates under Canadian law as to taxes and other administrative matters. Similarly, Canadian investment in the United States operates under U.S. law, with no duplication of taxes or interference from Canadian authorities.

As the Premium Iron Ore case has demonstrated, this is not good enough for U.S. Federal tax officials. Back in 1956, acting on a tax informer tip, they assessed this company, which is wholly subject to Canadian law, for back taxes in the war years when Canada allowed it tax exemption as a development incentive.

The claim rested on the contention that since Premium Iron Ore is financed by the Cyrus Eaton interests, and Mr. Eaton resides in the United States, the company was subject to U.S. tax. Not overlooked is the fact that Mr. Eaton is a sharp critic of some U.S. policies, notably in foreign affairs, and the U.S. attempt to collect taxes from a Canadian property of his has a bad odor of political motive, repugnant to Canadian thought.

The Canadian Government protested formally against this claim, both under the St. Laurent and the Diefenbaker regimes. The U.S. Tax Court described the claim as inconsistent and ruled against it. Now the U. S. Court of Appeals in Cincinnati has upheld this finding.

It's to be hoped that U.S. tax officials will be content with the verdict. Reportedly, they may still appeal to the U.S. Supreme Court. But two clear verdicts are enough to remove any legitimate doubt that the U.S. tax attempt was unfounded. In view of the impact upon Canadian-United States relations, it was unwise in the first place.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. THURMOND. Mr. President, one of the most able and perceptive editors in our country today is Tom Anderson, editor of the Farm and Ranch magazine. In his column entitled, "Straight Talk," Mr. Anderson does not confine himself to the discussion of agricultural questions alone, but when he does discuss agriculture, his thoughts are beneficial to everyone interested in this question.

I ask unanimous consent that Mr. Anderson's editorial entitled "Straight Talk," from the January 1959 edition Farm and Ranch, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRAIGHT TALK

(By Tom Anderson)

Ever since there's been a farm program the rich have gotten the gravy—because when the Government gravy bowl runs over the rich have spoons and the poor have forks. The farm program is for everybody except the little family farmer it ought to be for.

Many people have written me proposing plans which would pay heavier proportionate subsidies to the little fellows than to the big. That's socialistic—like free medicine for everybody, rich and poor. I'm for giving the rich nothing—except freedom to farm, without Government help or interference, and the right to sell all they can produce to anybody they can—except the Government.

Dividing the right to produce on an equal-share basis will socialize and pauperize American agriculture.

During the past several years, I've advocated a farm program which would:

1. Make corporation farmers, tax-deduction farmers, absentee landlords, and urbanites ineligible for any Government assistance. No Government agricultural services and subsidies to any but the family farm; the farm in which the family has management control of the operation, whose main business is farming, who are dependent on it for their living, and who actually work their land. All others should furnish their own county agents, financing, drought relief, conservation, and price supports. Many of the big absentee farmers don't cultivate anything but the ASC offices.

The soil bank is a ridiculous bipartisan monstrosity which pays farmers and nonfarmers for not farming. Thousands upon thousands of lawyers, doctors, real estate men, and speculators are getting a $5,000 annual gift from the soil bank for owning land. Thousands of other nonfarmers have tobacco allotments in their backyards.

2. Make every farm stand on its own legs, taxwise. No more rich men farming for a loss instead of a living, at taxpayers' expense.

3. Make all subsidies temporary—no permanent dole.

4. Subsidize hopeless farmers to leave the farm and go into industry.

5. Expand markets, domestic, and foreign, through research and competition.

SOCIOLOGICAL OR FARM PROGRAM?

Much of the so-called farm problem is not a farm problem but a sociological problem.

A man who exists in the country on a little piece of ground which couldn't support a family even if he knew how to farm, ought to come under the welfare program instead of the farm program.

To a large extent the farm problem is manufactured by politicians buying votes and by Government workers deliberately expanding and perpetuating useless departments and jobs. Many self-appointed apologists for agriculture blame "poor public relations" for the fact that agriculture has become a whipping boy. The public "just doesn't understand," they say. That's right. If the public did understand, there'd be a lot of Congressmen plowed under. The best way to develop better city-farm relations is to develop a farm program which makes sense.

The expense of giveaways to foreign nations, disaster relief, school lunch programs, etc., should be shared by other departments of Government and not charged entirely to Agriculture. The extent of the giveaways, of course, is dictated by the fact that we already have unmanageable surpluses, which are better used in hungry stomachs than in ocean bottoms.

A while back I was at a national meeting of extension editors. One of the problems which came up was what to do in counties where subdivisions had devoured practically all the farmland. One editor moaned that he couldn't even get the newspaper to carry his farm stories any more. The ingenuous solution offered was to "quit telling how to treat mastitis and tell how to take care of parakeets." In other words, when there is no more job to do, create one.

FEWER THE FARMERS, THE BIGGER THE USDA

The fewer the farmers there are to serve, the more money and people it takes to do it. The fewer the chicks the bigger the Government brooder.

In the 17-State farm and ranch territory last year, 7,273 county agents served 2,165,470 farm families, 953,867 rural nonfarm families and 1,348,876 urban families. Since more than half the families served were nonfarm families, why not charge that part to welfare? Or maybe there should be a new department to take over that work: The U.S. Department of Socialism. Maybe the Agricultural Extension Service should be renamed the People's Extension Service and be put under the Department of Health, Education, and Welfare.

In 1950, 16.6 percent of Americans lived on farms. In 1958 only 12 percent did. Soon there may be more people in the USDA than there are living on farms—more people farming the farmers than there are farming the land.

If you're a lower half farmer, the agricultural bureaucracy is spending more money on you than you make farming. In other words, it costs government more to keep farmers farming than most farmers make out of farming.

Certainly, all Government agricultural effort is not bad. The consumer benefits greatly from Government research and educational and marketing programs.

Hundred percent parity won't provide a decent living for a family with a cotton allotment of 5 acres or a tobacco allotment of nine-tenths of an acre. No farm program can solve the farm problem unless it's accompanied by a labor program, a tax program, an anti-inflation program, and a foreign trade program, which release the farmer from his cost-price squeeze, improve his competitive position and broaden his markets.

The farmer needs an end to labor racketeering, not unionization of farming. The farmer needs lower prices for the things he buys, not artificially higher prices for his Government controlled production. The farmer needs a balanced budget, not more billions of dollars spent on a sprawling Government bureaucracy from which he may get no visible benefits. The farmer needs less nonfarmer subsidies, not more farmer subsidies. The farmer needs the right to produce, not more curbs; more markets, not less—and less government, not more.

Farmers Should Beware of Grain Gypsies

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 16, 1959

Mr. MUNDT. Mr. President, the Pennsylvania Farmer, in the March 14 issue, has published an article entitled "Beware of Grain Gypsies," written by Armand Gladfelter. The article details the activities of certain individuals who are fast talking some American farmers out of a fair price for their corn crop.

The writer makes several recommendations which every farmer should follow in marketing his corn so as to bring to the farmer the full market price.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEWARE OF GRAIN GYPSIES

(By Armand Gladfelter)

"How much did you get for your corn, Jim?"—"Oh, I got 4 cents over market price and they shelled it for nothing," chuckles Jim, looking like the cat that swallowed the proverbial canary. When you hear this type of conversation where farmers gather together you know that the gypsies have taken over the marketing of grain.

During the past decade the gypsy system of marketing grain has grown into a multimillion dollar operation, diverting the normal movement of grain from farm to market through the slightly unorthodox middleman known as the gypsy grain buyer, who amazingly makes a profit where seemingly there is not profit to be made.

The requirements for a grain gypsy operation are fairly simple—a truck, a corn sheller and a gift of gab.

By giving the farmer the impression that the legitimate grain and feed merchant has been taking advantage of him for years, he tops it off with an offer of 4 to 5 cents above the prevailing market price for his grain and in the instance of corn offers to shell it at no charge. To the farmer this story seems reasonable and he makes a deal with the gypsy to sell him his corn crop.

MARKET PRICE OF GRAIN

Now the reader must be reminded that the market price of grain is controlled mainly by the large grain pit auctions. To the auction price is added freight and commissions. This determines the actual market price for any given area in the United States. It is usually accurately reflected in local market quotations, and the price quoted in local papers is the price a legitimate dealer will pay for grains on the farm. When the grain is delivered to a mill in the area the farmer will receive from 4 to 8 cents above the quoted market price. This sum total compares with the pit prices after all deductions have been made, making the local and transit grains about the same price.

Now the legitimate feed dealer as well as the gypsy works inside these two figures, the price on the farm and the price at the mill. As all grains finally end up at a legitimate feed manufacturer's mill, the grain gypsy must sell to this market if he wishes to sell at all. There is no other final market.

There is an 8-cent spread at the outside between the farm price and the mill price, and it is a reasonable spread in which either the gypsy or the legitimate dealer can make a normal and reasonable profit.

The farmer who wishes to sell his corn to a legitimate feed dealer will be given market price at the farm for his shelled corn. The dealer will shell it for the farmer for 4 to 5 cents per bushel. If the farmer wishes to shell it and deliver it to the mill he will be paid 8 cents over market price.

But now the grain gypsy enters the picture. He will offer the farmer 4 to 5 cents over market price and will shell it at no charge. This actually gives the farmer an 8- to 9-cent advance over the prevailing market prices, and he does not have to touch the corn.

What manner of magic must the gypsy now perform in order to give the farmer 8 to 9 cents over market price for his corn and then sell it to a legitimate feed dealer for 8 cents over market price?

As there is no possible way for the gypsy to make a legitimate profit on this type of transaction, he must then make an illegitimate one, and the only possibility left to him is to short weight the farmer. A 10-bushel shortage cannot readily be detected in a 250-bushel load of bulk grain and at $1.50 per bushel the shortage will show him a neat profit of $15 per load, and at 3 to 4 loads per day the gypsy may well realize $60 profit for the day's work.

The motto of the short weight artist is "cheat them the very first time and you will never have any trouble cheating them all the time."

NO PREMIUM PRICE

The reason for the continuing existence of this type of gypsy operation is the great desire of the farmer to get more than market price for his grain, and he is prone to sell to any one who will give him a little premium. Little does he realize that there is nothing like a premium price for No. 2 yellow corn as far as the feed manufacturers is concerned, and a little straight thinking will reveal that no man in his right mind will pay a premium when he can always get grain at prevailing market prices.

Nevertheless the gypsy trucker continues to pay premiums when he cannot sell at premium, and the farmer continues to be hoodwinked into believing that he is actually selling at premium prices.

In reality he is supporting gypsy operations to his own detriment and to the detriment of the legitimate grain and feed dealer.

Here are a few simple rules to follow when marketing any grain.

1. Beware of anyone who will pay you a premium for your grain.

2. Insist that you get an official weight slip, or better yet insist that you see the grain being weighed.

3. Insist that both gross and tare be weighed for every load. Many truckers, use a standard tare even when using a public scales.

4. Insist that all weight slips be signed by the weighmaster; you can later check on his duplicates.

5. Insist that you receive weight slips from the mill to which the trucker sells.

6. Never sell corn by measure.

7. Remember that the legitimate dealers can also be gypsies.

Another Side to the Berlin Situation

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. YARBOROUGH. Mr. President, in a recent statement on the floor of the Senate I told of the many thousands of refugees who were going from behind the Iron Curtain and from East Germany through free Berlin, the gateway to the West, to a new life of freedom in the West, there being some 4,000 a week, or about a quarter million a year, who have found refuge in the Western democracies from the terror behind the Iron Curtain.

But, Mr. President, there is another side to this picture—what happens to these refugees once they are on the free side of the Iron Curtain?

In the April 4, 1959, issue of the Army, Navy, and Air Force Journal, Mrs. Barksdale Hamlett, wife of the U.S. commander in Berlin, tells of some of the activities being conducted by the wives of American servicemen to help refugees and students in West Berlin.

Mr. President, I hope the Senate will pardon my pride in the fact that Mrs. Hamlett is from my State of Texas.

Recently there have been many unflattering statements made about Americans abroad. Therefore, I feel the activity of these women is especially commendable because it shows the real feelings of Americans toward people everywhere. This is practicing as well as preaching democracy.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article by Mrs. Barksdale Hamlett, published in the April 4, 1959, issue of the Army, Navy, and Air Force Journal under the heading "Service Wives in Berlin Busy With People of Service Projects Behind Iron Curtain."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SERVICE WIVES IN BERLIN BUSY WITH PEOPLE OF SERVICE PROJECTS BEHIND IRON CURTAIN

(By Mrs. Barksdale Hamlett)

Most of the Army women I have known have had the feeling that official matters and comments relating thereto are best left in the hands of their husbands. Today, in Berlin, we feel the same.

It is true that there is a great deal going on in the world today about which we would like to know more. There are a thousand questions we would like to have answered. We know, however, that asking would be a waste of time, so we go along, taking each day as it comes.

Our life, in this divided and isolated city, is full. One of our main problems is that there are only 24 hours in each day. There is so much to do, so many people to help, worthy projects to support, so much to see and to learn.

There are our students, boys and girls who have taken their courage and lives in their hands and fled the East Zone in order to seek asylum in this shining city which is symbolic of freedom. These young people, in attempting to prepare themselves for a bright future, attend the free University of Berlin. The school is not free in the monetary sense, but in that it exists in free Berlin and operates free of thought control. As may be imagined, very few of these refugee students have the financial backing which would ensure completion of their courses of study. The Berlin Senate underwrites students, but only for a given number of semesters. This then is where we, of the American Women's Club of Berlin, come into the picture.

VARIED MEMBERSHIP

In passing, it would be proper to describe our membership. Unlike most service women's clubs, this has a Catholic membership—wives of men in the Foreign Service, Navy, Air Force, and civilian positions, as well as of news correspondents, Corps Diplomatique, business and Army men. The latter includes commissioned and noncommissioned officers' wives.

It would be impossible for the club to help all the students worthy of aid. Therefore, through a series of interviews, first established under the direction of Mrs. James B. Conant in 1955, a club committee, headed by Mrs. Bernard Gufler, wife of the Honorable Bernard Gufler, Foreign Service Minister here, selects 10 or more students. Through club aid these collegians are able to continue their work.

This year, led by the president, Mrs. R. J. Lawlor, and through prodigious efforts on the part of the thrift shop workers and other club activities, we were not only able to provide for our usual number of students but to establish several scholarships at our other Berlin University, the Technical.

As everyone who reads the papers knows, there are tens of thousands of refugees who flee to West Berlin from the East. These people arrive without worldly goods, and are taken in by the city government and housed in refugee camps. In addition they must be clothed and given something to do while awaiting emigration to other regions. The flood of refugees sometimes is so great that serious problems exist, making it difficult to know what to do in order to help them. Many organizations help in this field and the American Women's Club plays only a small role.

However, we cast about and someone came up with the idea of supplying the women with yarns and knitting needles. This accomplished two missions at once. Not only would the women have something to do during the long, weary hours of waiting, but ultimately would have new garments for themselves or their children. Recently some of the refugees held a style show and it was amazing and heartwarming to see the clothes which had been fashioned.

ENLISTED WIVES AID PROJECTS

We of the American Women's Club do not stand nor operate alone. The Enlisted Men's Wives Club, headed by Mrs. C. O. Jowers, wife of Master Sergeant Jowers of Berlin Command, is a most active and enterprising group. The principal interest of this group lies in their work with the crippled children of the paraplegic wards in the Oskar-Helene Heim. This hospital is located within a block of the U.S. Army installations.

Of the more than 100 patients in this particular ward, approximately 25 percent are orphans or come from the East Sector of Berlin. Because of these circumstances these young patients are without financial backing. The city of Berlin underwrites the hospitalization, treatment and medical expenses, but someone must clothe these children and furnish a bit of entertainment. The Enlisted Men's Wives Club steps into the breach and supplies each needy child with three complete sets of clothing. In addition, games, books, and recently a radio-victrola, have been provided.

In addition to the above-described work, Mrs. Jowers and her club provide information and guidance to the young wives who come into Berlin; aid them in getting settled and lend needed supplies and equipment until such time as their household goods arrive.

REFUGEE AID PARAMOUNT

Refugees are of paramount interest to the 6th Infantry Wives Club, whose president is Mrs. Keith Stewart. The efforts of these young women are directed toward alleviating hardship in some of the local refugee camps. Since the first of the year, more than 100 pairs of shoes and 20 large sacks of clothing have been collected, refurbished and distributed.

Easter was gay for some of the children in the camps because members of the 6th dyed, decorated and donated hundreds of eggs. Our own Army children have not been forgotten. Through courtesy of the Infantry wives, each child subjected to an immunization "shot," at the local Army hospital, receives a lollipop. Eight hundred were distributed within the last 3 weeks.

Favorite flavor?—raspberry.

Turning from frivolity, some of the younger service people occasionally find themselves in distressing circumstances, in which cases the Sixth takes care of its own, providing whatever aid is necessary in some family crises.

AF WIVES HELP ORPHANS

The Tempelhof Air Force Wives' Club has a delightful means for raising funds to be spent on their favorite orphanage. Each year these women design and make the most fantastically complete doll's wardrobe that ever set a child's eyes sparkling. A contest is held and the proceeds—usually in the neighborhood of four hundred dollars—are used to supply clothing, fruit and needed equipment for an orphanage of 18 children.

The interest of the dependents in Berlin do not entirely lie away from the American community. There are dozens of wives and daughters who work in the Army hospital, putting in hundreds of hours as Gray Ladies, staff asistants and nurses' aids. The Girl and Boy Scout programs as well as the American Youth Activities are strongly supported and subsidized by our community.

Many of us have spent long hours studying the German language. These efforts have been well rewarded. Not only are we able to shop, sightsee, etc., auf Deutsch, but social intercourse with our German neighbors has been facilitated. Recently at an international woman's group meeting (these are held monthly) a Yugoslavian, a German, an Armenian, a French woman and an American were seated at a tea table. The conversation was spirited, general, and all in German.

WHAT ABOUT FREE TIME

What do we do for fun and in our free time? We shop—oh those delightful antique shops on Keithstrasse—the gorgeous clothes to be seen along the "Ku-damm." We golf, swim and sail on the Wannsee when weather permits, and attend the opera. Wouldn't Verdi die to hear his arias sung in German? Berlin boasts one of the finest museums in Europe, one always encounters friends browsing through the exhibits. We play bridge, attend the local outpost theater, listen to lectures, and generally do those things women do all over the world.

We go along day by day, doing that which needs doing. Sometimes this includes taking visitors to the East Sector of Berlin. There, one is brought face to face with our Communist neighbors. A trip to East Berlin is a most impressive experience. There is the great tile facade of Stalinallee—built to show the West what the Red regime can do. It features enormous balconied buildings, one or two rooms deep, with rubble and ruin to the rear.

The few people one sees along the streets are warmly but unstylishly dressed. They do not look happy. Seldom does one see a smile. There is no ring of children's laughter while at play. It is a relief to get back to our side of the Brandenburg Gate. Here, the Berlin Bear is a benign sort of fellow who waves a friendly paw in welcome.

Life in Berlin is interesting, our husbands go about their duties, and we, the women, face each day with confidence and willing hearts.

Mr. YARBOROUGH. Mr. President, the article goes on at length to tell of the many hours of the day these wives of American servicemen in West Berlin have devoted to helping the refugees from behind the Iron Curtain as they start to build new lives of freedom.

Importance of a Study of History: William Albaugh, Specialist in Confederate Arms

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. YARBOROUGH. Mr. President, the study of history is an engaging and rewarding pastime. Bill Albaugh III, of Arlington, Va., has expressed one reason best when he said of his collection of Civil War objects:

To the collector who's not just interested in dollars and cents, every item holds a story of courage under fire, of long marches on empty stomachs, of victory or defeat.

Mr. Albaugh is a recognized authority in this field and is the author of six books: "The Handbook of Confederate Swords," "The Original Confederate Colt," "Confederate Brass-Framed Colt and Whitney," "Confederate Arms," "Here Is the Confederacy"—to be published this fall—and "Tyler, Tex.—CSA."

In his interesting "Tyler, Tex.—CSA," Mr. Albaugh has used the records of the Confederate ordnance works at Tyler, Tex., which he located in the National Archives, to write a historically accurate and readable account of ordnance problems at this major gun and ammunition producing effort of the Confederacy in the Trans-Mississippi Department.

This volume holds special interest for me because Tyler, Tex., is in my family's home area.

While Mr. Albaugh has burnished the arms of another era, he has also made a real contribution to the history of the Tyler, Tex., area.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on Mr. Albaugh, written by M. D. Rosenberg, which appeared in the Washington Post and Times Herald for Monday, April 13, 1959, under the heading "Civil War Mementoes Inspire Owners' Books."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL WAR MEMENTOS INSPIRE OWNER'S BOOKS

(By M. D. Rosenberg)

The Union soldiers marched up to the column-lined entrance of the stately Virginia plantation house and smashed in the door.

That day in 1864 marked the beginning of the double life of Bill Albaugh III of 431 Lincoln Avenue, Falls Church.

Albaugh, a 50-year-old civil service investigator, had not been born when the Yankees paid their unwelcome call in Hanover County. But he remembers the day.

Seated in his pine-paneled hobby den containing some $25,000 worth of curios, Albaugh fed General Beauregard, a pet falcon perched on his hand, and watched the flames dart about the fireplace.

INSPIRED BY GRANDMOTHER

"Grandmother never would allow anyone to repair the manor door," Albaugh recalled. The falcon grabbed a piece of meat with its bill and flew to the top of the bookcase filled with Civil War reference books. "Grandmother said she wanted to make sure her children didn't forget what happened. The impressions I received from her left me with a desire to acquire and examine mementos from the War Between the States. But I want it understood that I don't sit down here re-living the war."

Albaugh's soft-spoken manner becomes increasingly respectful as he talks of the Blue and the Gray.

"By the beginning of World War II, I had built up a small collection of revolvers, rifles, swords, and other reminders of bitter battles. To the collector who's not just interested in dollars and cents, every item holds a story of courage under fire, of long marches on empty stomachs, of victory or defeat. We can't always learn the story, but we know it's there."

Albaugh closed his eyes for a moment and worried his mustache as firelight played across his face. Then he looked up and pointed to a Virginia State flag in one corner of the room.

A FLAG OF MEMORY

"That flag's had quite a history. It became a part of Albaugh tradition when they brought my grandfather's body home in a wagon after he was killed in a battle near Winchester. He was a lieutenant. The flag covered his body. It was handed down and finally came to me."

Then a quick smile erased his serious look.

"But that old flag was destined to fly in another war. See those names inscribed on the edges? U.S. Marines. A group of southern boys in Korea wrote Governor Battle they'd like to have a Virginia flag to fight under. The Governor referred their letter to me. I sent the flag to them—told them it had never been dishonored. I asked them to treat it well and bring it back to me when they got discharged. Never really expected to see it again. Then one day some of the boys knocked on my door and there it was."

Albaugh leaned back in his chair and looked around the room. "I've got Gen. Stonewall Jackson's last general order issued just before the battle of Chancellorsville. You know he was killed in error by his own men shortly afterward. I also have one of the original signed copies of Robert E. Lee's last general order after Appomattox. It's a very moving farewell to his troops. From a money standpoint, it's only worth about $100. But when you talk about feeling. * * *

BEGAN BUYING BACK

"Of course, very few of these things were in my first collection. When I joined Naval Intelligence—that's World War II, not World War I—I sold what I had at prices averaging $5 each. After I returned from the Pacific, I began buying back some of the pieces and discovered prices had skyrocketed with increased popularity. Well, I figured, why not start using my knowledge based on more than 40 years of study. So I set up my typewriter under that portrait of Stonewall—incidentally, it was painted by William Garl Brown in 1862, apparently from life—and wrote my first book, "Handbook on Confederate Swords."

Five other books followed from this man who had never before written for publication and who still refuses to think of himself as a real writer. Although the books are designed for a limited audience, the royalties have enabled Albaugh to decorate his history-filled basement with more flags, revolvers, spurs, bugles, bowie knives, portraits of relatives in the Confederate Army, uniforms and items like Gen. George E. Pickett's field desk.

Albaugh got up and walked around the room, pointing to the guns mounted on the walls. They were obviously old friends, although his collection of arms and accoutrements has a high turnover rate because he's more interested in learning than in mere possession.

A GOOD GUN TRADER TOO

"My most valuable item was a Dance Bros. revolver made in Texas in 1863 and used by the Confederates and Indians. A friend of mine bought it out West for about $3. He traded it to me. The gun later sold for about $2,500—a good tidy sum."

Albaugh is quick to point out that "this would all be impossible without the cooperation of my wife, Lucille. She has helped me entertain collectors; put up with my trips around the country, and kept the place quiet during the long evenings I have spent writing down here."

He paused to dust off a belt buckle which belonged to the executive officer of the *Alabama*, sunk by the *Kearsarge* off Cherbourg, France, in 1864. "My books have made me good friends among Congressmen and business leaders, but my top fans are my wife and our sons, Bill, 13, and Chris, 14."

Despite weapons and military atmosphere, Albaugh never goes hunting. The falcon, its meal finished, flew gracefully across the room and alighted on its owner's shoulder. "After World War II, I vowed I'd never shoot at any person or animal again."

General Beauregard will have to be content with raw beef from the grocery store.

Improved Economic Outlook

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. WILEY. Mr. President, we recognize that among our domestic problems a major challenge is that of full recovery from the economic setback suffered by the Nation.

Fortunately, current signs on the horizon justify real optimism. During March, for example, improvements in the economy included: advances in industrial production, housing starts, employment, income, and retail sales.

Too, unemployment declined more than seasonally. However, we recognize that 4.3 million jobless are still far too many.

Unemployment, also, was reduced by 7,800 in my own State of Wisconsin.

Unhappily, there are still an estimated 76,000 workers out of jobs.

We recall that Congress recently enacted legislation to provide extended unemployment compensation benefits to a number of those who are still out of work. While this is of assistance to a limited number of workers, we realize that it does not cope with the basic problem of creating more jobs.

As I understand it, S. 1631, to establish a Commission on Unemployment Problems, is now on the Speaker's table in the House of Representatives. I hope that our colleagues on the other side of the Capitol will find it possible to act expeditiously on this proposed legislation, as did the Senate.

This is particularly important in view of the fact that the return back to work has been disproportionately slow in relation to our economic comeback. The task, of course, is a speedy reexamination of this critical unemployment situation—particularly in hard-hit areas—followed by constructive recommendations as to just how additional jobs can be created for the unemployed.

Recognizing, however, that evidence of upturns in the economy is always good news, I request unanimous consent to have an article from today's Washington Post and Times Herald, on a report by the Federal Reserve Board, indicating recent upturns in economic activity throughout the country, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. OUTPUT UP 2 POINTS FOR RECORD

Output of the Nation's factories and mines rose to a record peak last month, the Federal Reserve Board reported yesterday.

The Board's seasonally adjusted index of industrial production advanced 2 points to 147 percent of the 1947–49 average.

This topped by 1 point the previous record set in February 1957. It compares with a recession low of 126 percent in April 1958.

In summarizing March developments, the Board said:

"Industrial production and prices, housing starts, employment, income, retail sales and bank loans to business advanced and unemployment declined more than seasonally."

Most economic indicators now have made up all the ground lost during the recession. The most notable exception is the unemployment report.

(Some economists pointed out that the "record" output level is more apparent than real. They figure that at least 1.5 points of the index represents steel produced in response to strike fears. Thus, they estimate the "true" index at 145.5.)

The Reserve Board said production of soft goods in March was 6 percent above the prerecession peak. The output of durables, while increasing substantially during the month, still was 3 percent below the high recorded in December 1956.

Originally the Board had calculated that industrial products rose 1 point in February to 144 percent of the base period. However, it has since revised the February figure upward to 145 percent.

The Board said output gains in both February and March were widespread. It mentioned sizable advances in the production of steel, construction materials, farm machinery and most other equipment and household durables.

"Auto assemblies recovered from the reduced February rate," it said, "and were maintained in early April."

It said mineral output held steady in March as a decline in crude oil production was offset by increases in other lines.

Padre Island Can Become a "Ghost of Departed Opportunities" if Not Made a National Park

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. YARBOROUGH. Mr. President, a report of a survey made by the National Park Service of Atlantic and gulf coasts includes the statement:

The seashore is a priceless resource for which there is no substitute. Once subdivided and developed, it is lost forever.

Mr. President, the Atlantic and gulf coastline is 3,700 miles from the easternmost part of Maine to Brownsville, Tex., yet there are only approximately 247 of those miles in public ownership. The portions of the coast which are feasible for development as park sites are very limited and are fast passing into private ownership for development.

Mr. President, Padre Island is one of the few areas remaining which are feasible for public park development. Padre Island stretches roughly from Corpus Christi, Tex., to Brownsville, Tex., offshore from the Texas coast in the Gulf of Mexico, a distance of about 117 miles. The island width is from one-half mile to 1 mile, and it is offshore about 10 miles. It is unsettled and uninhabited, except for a tourist development at each end.

In another part of the report, the National Park Service said of Padre Island in Texas:

It should be given the highest priority. Padre Island presents an opportunity for beach recreation of a type unmatched by any other area along the Atlantic or gulf coasts.

Its great size, remote character, endless sweep of broad beach, grass-topped dunes and windswept sand formations have great appeal. Its natural resources, historical and biological values should be preserved.

Mr. President, this great windswept waste, with sea, sand, and scrub timber was the last refuge of the Karankawa Indians, who were cannibals, and who therefore were detested by the Spanish settlers of Mexico and the Anglo-American colonists from the north, as well as the other tribes of Indians. The last legend is that as these Indians were hard pressed by the Mexican troops and by the colonists, they launched themselves in their great war canoes from Padre Island into the Gulf of Mexico off the coast and vanished from the sight of men forever.

This summer pirate's hangout—this place of treasure—is now one of the finest fishing spots in the world, and will soon fall into private development and be lost forever as a great winter tourist resort for the American people unless prompt action is taken.

I introduced a bill in this regard last year, Mr. President, and I have reintroduced it this year. The bill would create a national park of Padre Island. This is not something we should simply consider from year to year, for we are in a race against time, since private interests are now seeking to go in and develop the area. If we acquire the area as a national park, it will become equal to Yellowstone National Park for the people of America. It is a priceless treasure for the whole American people, but once it is subdivided—and there are plans to subdivide it as much as Florida is being subdivided—it will be lost forever to our people.

Mr. President, many garden clubs, many civic clubs, and virtually all organizations in our part of the country interested in wildlife conservation, plant conservation, and recreational facilities for the American people, are supporting the bill.

Mr. President, in support of the National Park Service recommendations and my own bill to establish a national park on Padre Island before this fine beach area is cut up into private ownership, I request unanimous consent to have printed in the Appendix of the RECORD an editorial from the Houston (Tex.) Press of Wednesday, April 8, 1959, under the heading " 'Ghosts of Departed Opportuniites,' an Editorial—Why Padre Island Should Be a National Park."

In addition, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter resolution of the Travis Audubon Society dated April 7, 1959.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

"GHOSTS OF DEPARTED OPPORTUNITIES," AN EDITORIAL—WHY PADRE ISLAND SHOULD BE A NATIONAL PARK

The strongest possible editorial favoring a national park on Padre Island was not written as an editorial at all.

It is a single sentence, easily overlooked, in a report by the National Park Service after an 18-month study of the Atlantic and gulf coasts from the top of Maine to the tip of Texas.

This report notes comparisons with the result of a similar survey 20 years earlier, and of the previous report it says:

"For the most part it represented the ghosts of departed opportunities."

The men who made that comment had nothing to sell. They were experts in their field, making a factual report of a careful survey.

They were not beating the drums for Padre Island.

But of Padre, they said:

"It should be given highest priority. * * *

"Padre Island presents an opportunity for beach recreation of a type unmatched by any other area along the Atlantic or gulf coasts.

"Its great size, remote character, endless sweep of broad beach, grass-topped dunes, and windswept sand formations have great appeal. Its natural resources, historical and biological values should be preserved.

Unfortunately, this report was made more than 5 years ago.

During those years, more of the beach areas the experts found still suitable for public recreation have become unsuitable—cut up by commercial development.

Such development by private owners is underway on Padre now. Its tempo will increase and values will increase.

The price of delay is in another paragraph of the same report:

"The seashore is a priceless resource for which there is no substitute. Once subdivided and developed, it is lost forever."

How could it be put more plainly that we must act, and act now, if Padre Island is to be preserved for all the people?

We must not let that magnificent island become the ghost of a departed opportunity.

TRAVIS AUDUBON SOCIETY,
Austin, Tex., April 7, 1959.

Hon. R. H. CORY,
Chairman, State Affairs Committee,
Texas House of Representatives.

DEAR MR. CORY: This is to state that Travis Audubon Society, with a membership of over 200 in Travis and adjacent counties, gives wholehearted endorsement to House bill 469, the Padre Island Park bill.

As an organization dedicated to conservation of all natural resources, we recognize the need for immediate action in preserving Padre Island for use as public park area. In no other way can Texans be assured of retaining the natural beauty of the longest unspoiled stretch of beach remaining in the United States, of enjoying the sport of fishing where fish abound, and of providing sanctuary for countless wild birds.

With the population of Texas increasing at an astounding rate, the need of providing wholesome recreation for coming generations becomes a matter of grave public concern. How better can this need be met than by assuring future public access to the wonderful beach on Padre Island.

We feel that to defer action on this matter is to invite further commercial inroads on Padre Island, and will result in permanent closing of beach areas to the public. On the other hand, with Padre Island under supervision of the National Park Service, Texans would be assured of impartial operation of recreational facilities for the benefit of the general public, and attraction of only the most desirable type of out-of-State visitors.

Believing that the Texas Legislature has within its hands the tool for creating a lasting monument to a vanishing wilderness, and to perpetuate a much-needed seashore area where Texans can find wholesome recreation and inspiration, the Board of Travis Audubon Society, speaking for the membership, pledges support to H.B. 469.

Respectfully yours,

FRED S. WEBSTER, Jr.,
Chairman, Board of Directors.
Mrs. MAGNOLIA N. GREENE,
President.

Mr. YARBOROUGH. Mr. President, if favorable action is taken upon the bill Padre Island will take its place with Yellowstone, Grand Canyon, Yosemite, Glacier, and many other national parks which are now principally summer national parks, though Padre Island will be a winter national park.

Status of the Democratic Program

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, the majority leader of the other body is certainly correct when he states that the 86th Congress has a man-sized job cut out for it.

In his speech at Big Spring, Tex., of November 7, 1958, Senator JOHNSON listed 12 objectives.

How are we doing with respect to these objectives? Where do we stand as of April 10, 1959? At my request the Legislative Reference Service prepared for me a brief summary and status of the Democratic legislative program as set forth in the 12 items which Senator JOHNSON listed in his address, plus a 13th having to do with education, which I have taken the liberty of adding to the list.

It is plain from looking at these data, which are set out below, that leadership will have to select particular bills in some instances and in other instances will have to see that further legislation is filed.

The following program as outlined is taken primarily from legislation which has been introduced in the Senate. Certain companion bills introduced in both Houses have been noted. In most cases similar legislation has been introduced in the House and referred to the appropriate committee.

Committee action, not indicated, has already been initiated by most of the committees responsible for such legislation. The enactment of the outlined Democratic program appears to be well ahead of schedule.

Here is the information:

First. We need to breathe life into the newly created space agency and launch a program to explore outer space:

S. 586, Mr. KEFAUVER, January 20, 1959 (Aeronautical and Space Sciences): Department of Science Act of 1959 establishes a Department of Science to carry out programs for developing missiles, rockets, etc., and other programs of research with respect to outer space. Transfers to such agency the National Science Foundation, the Atomic Energy Commission, and similar functions of the Defense Department.

S. 676, Mr. HUMPHREY and others; January 23, 1959 (Government Operations): Department of Science and Technology Act of 1959 establishes a Department of Science and Technology and transfers to such department (1) the National Science Foundation; (2) the Atomic Energy Commission; (3) the National Aeronautics and Space Administration; (4) the National Bureau of Standards; and (5) certain functions now being administered by the Smithsonian Institute.

S. 1096, Mr. JOHNSON of Texas and Mr. BRIDGES; February 17, 1959 (Aeronautical and Space Sciences): Authorizes an additional $48,354,000 for fiscal 1959 for the National Aeronautics and Space Administration as follows: (1) salaries and expenses, $3,354,000; (2) research and development, $20,750,000; (3) construction and equipment, $24,250,000. Passed Senate March 10, 1959; reported in House March 18, 1959.

H.R. 2971, Mr. BROOKS of Louisiana; January 21, 1959 (Science and Astronautics): Authorizes $82,050,000 for the acquisition of property; plant construction, etc.; for the National Aeronautics and Space Administration.

Second. We need a program to develop the peaceful uses of the atom—with emphasis on an atomic merchant marine.

S. 683, Mr. GORE; January 27, 1959 (Atomic Energy): Atomic energy amendments of 1959 authorizes $1 billion for the Atomic Energy Commission (1) to construct a large-scale prototype power reactor; (2) to construct power reactor facilities at major production facilities of the Commission to supply the electrical energy needed by such facilities; (3) to develop reactor designs, etc., capable of a maximum production of not more than 50,000 kilowatts of electricity; and (4) to initiate a program for the development of civilian power reactors of from 10,000 to 50,000 kilowatt capacity.

Directs the Commission to conduct a vigorous program of international cooperation and assistance in the development of power reactors, and to accelerate existing programs for the development of nuclear rocket propulsion and to proceed with the development of a manned vehicle powered by nuclear propulsion.

H.R. 4822, Mr. TOLLEFSON; February 19, 1959 (Merchant Marine and Fisheries): Authorizes the construction of a nuclear-powered tanker for operation by the Maritime Administration.

Third. We need a program to step up the supply and conservation of water for the West.

S. 13, Messrs. ENGLE and KUCHEL; January 9, 1959 (Public Works): Provides Federal assistance, loans for up to 50 years and grants, to encourage the planning and construction of non-Federal municipal and industrial water development projects on a multiple purpose, comprehensive basis.

S. 943, Mr. ENGLE and others; February 5, 1959 (Interstate and Foreign Commerce): Authorizes $10 million over a 10-year period for a program of weather modification directed at increasing the annual average usable supply of water in the Colorado River Basin.

Senate Resolution 48, Messrs. MANSFIELD and MURRAY; January 27, 1959 (Interior and Insular Affairs): Establishes a select committee to make studies of water resources and future needs thereof.

H.R. 8, Mr. TRIMBLE; January 5, 1959 (Public Works): Water Conservation Act of 1959 establishes a national policy and procedure for the development of water resources on a comprehensive multiple-purpose basis.

H.R. 289, Mr. TRIMBLE; January 7, 1959 (Interior and Insular Affairs): Establishes criteria for the utilization by the Secretary of the Interior in the determination of the feasibility of constructing or modifying any reclamation project.

H.R. 1863, Mr. CLEMENT W. MILLER; January 9, 1959 (Public Works): Authorizes loans and grants to provide Federal cooperation in non-Federal municipal and industrial water development projects.

H.R. 2145, Mr. BECKWORTH; January 12, 1959 (Interior and Insular Affairs): Authorizes $200 million annually for Federal aid, on a 50–50 basis, to assist States and local governments to plan, construct, operate, and maintain projects for water conservation and storage.

Fourth. We need to review our foreign policy so that bold, new, imaginative programs can be recommended to responsible officials.

S. 1094 (H.R. 4452), Mr. FULBRIGHT (by request); February 17, 1959 (Foreign Relations): Authorizes the U.S. Governor of the International Monetary Fund to request and consent to an increase of $1,375 million in the U.S. quota for such fund, to vote for increases in the capital stock of the International Bank for Reconstruction and Development and, if such increase becomes effective, to subscribe to 31,750 additional shares of stock. (Passed House, amended, March 25, 1959.)

H.R. 2159, Mr. CURTIS of Missouri; January 12, 1959 (Foreign Affairs): U.S. Trading Corporation Act establishes the U.S. Trading Corporation to undertake such measures as will effectively meet the threat to the free world of long-range economic penetration of world markets by the Soviet bloc.

H.R. 4452 (S. 1094), Mr. SPENCE; February 12, 1959 (Banking and Currency): Laid on table March 25, 1959; S. 1094 passed in lieu.

House Resolution 113, Mr. MORGAN; January 15, 1959 (Rules): Authorizes the Committee on Foreign Affairs to conduct an investigation of policies, etc., of the State Department and other departments and agencies engaged primarily in the implementation of our foreign policy. (Passed by House January 29, 1959.)

House Resolution 114, Mr. MORGAN; January 15, 1959 (House Administration): Provides for expenses of conducting investigations under House Resolution 113. (Passed by House February 24, 1959.)

Fifth. We need a consistent policy for Latin America which will help our neighbors to help themselves.

Senate Resolution 17, Mr. SMATHERS; January 12, 1959 (Foreign Relations): Favors the establishment of an inter-American regional development bank.

Senate Resolution 31, Mr. GREEN; January 20, 1959 (Rules and Administration): Authorizes a study of U.S. foreign policy, with special reference to Latin American and Canadian Affairs. (Passed by Senate February 2, 1959.)

House Resolution 49, Mr. O'HARA of Illinois; January 7, 1959 (Rules): Creates a select committee composed of members of the Committee on Foreign Affairs to make an investigation of our affairs with the Latin American countries.

Sixth. We need a new farm program because there is something wrong when the Government must spend 53 cents for every net dollar the farmer takes in.

S. 1211, Mr. HUMPHREY and others; March 3, 1959 (Agriculture and Forestry): Family Farm Yardstick Credit Act of 1959 provides for the reactivation of the program of assisting farmers and creditors with voluntary farm debt-adjustment procedures and the policy of adjusting repayment schedules to the net earnings of borrowers from year to year. Provides for long-term, low-interest loans to farmers.

Authorizes $200 million annually for loans and an additional $35 million for the guaranty fund for insurance of loans.

Family Farm Development Act of 1959 provides for the determination of counties, up to 500, having the largest low-income farm population and the assistance of families therein with low-interest, long-term loans for the enlargement and/or development of such owner-operated family-type farms.

H.R. 838, Mr. MARSHALL; January 7, 1959 (Agriculture): Agricultural Relations Act of 1959 creates an Agricultural Elections Committee to establish regulations and practices for the election of community, county, and State agricultural committees. Provides for a National Agricultural Board to establish national production and marketing goals and to allot such goals to farmers.

Provides for referendums to be held on programs proposed by the Board and, if not opposed by a majority of the producers, then provides for such programs to become effective.

Seventh. We need a program to help the people in those areas which are economically depressed to help themselves in restoring their region to prosperity.

S. 1631, Mr. JOHNSON of Texas and others; April 8, 1959 (Labor and Public Welfare): Establishes a Commission on Unemployment Problems. (Passed by Senate April 10, 1959.)

S. 722, Mr. DOUGLAS and others; January 27, 1959 (Banking and Currency): Area Redevelopment Act creates an Area Redevelopment Administration, an Area Redevelopment Advisory Board, and a National Public Advisory Committee on Area Redevelopment. Provides for the designation of redevelopment areas those areas having certain levels of unemployment. Authorizes $300 million for revolving funds to provide aid in industrial redevelopment areas, rural redevelopment areas, and for public facilities. Authorizes $75 million for grants for public facilities under certain conditions; $4,500,000 annually for technical assistance; $10 million for retaining subsistence grants. (Passed Senate March 23, 1959.)

(NOTE.—In the House over 45 bills providing assistance in depressed areas have been introduced, most of which are similar to S. 722.)

Eighth. We need to face up to the high interest rates which are slowing the needed growth of our economy.

S. 860, Mr. PROXMIRE; February 2, 1959 (Banking and Currency): Authorizes member banks to count currency and coinage as reserves.

S. 1120, Messrs. ROBERTSON, FULBRIGHT, and CAPEHART; February 19, 1959 (Banking and Currency): Authorizes member banks to count currency and coinage as reserves. Reduces to 10 percent (now 13) the minimum aggregate amount of demand deposits required to be kept on hand by reserve banks.

S. 1560, Mr. HUMPHREY; March 25, 1959 (Government Operations): Capital Budget Act of 1959 provides for the separation of operating and capital expenditures in the Presidential budget.

Ninth. We need a labor bill to protect honest, constructive labor from the selfish schemes of the racketeers.

S. 1555, Mr. KENNEDY and others; March 25, 1959 (Labor and Public Welfare): Labor-Management Reporting and Disclosure Act of 1959, this is a committee version of legislation designed to control and prevent abuses by labor organizations). Sets forth certain findings of fact; requires full and complete disclosure of financial affairs of labor unions and transactions by unions, union officials, and other parties which might give rise to conflicts of interest; sets limits on the establishment of and periods during which trusteeships may be maintained; requires democratic methods for the election of union officials; and establishes an Advisory Committee on Ethical Practices to advise the Secretary of Labor with respect to the administration of the act. (Scheduled to be reported April 13, 1959.)

WAGES

S. 1046, Mr. KENNEDY and others; February 16, 1959 (Labor and Public Welfare): Extends coverage of the Fair Labor Standards Act of 1938 to employees of large enterprises engaged in retail trades or services and other activities affecting commerce. Increases the minimum wage to $1.25 an hour.

UNEMPLOYMENT

S. 791, Mr. KENNEDY and others; January 29, 1959 (Finance): Unemployment Compensation Act of 1959 provides for unemployment reinsurance grants to the States. Revises, extends, and improves the unemployment program. Sets forth certain standards which States plans must meet.

Tenth. We need a bold housing program which will set as its goal a home for every American family.

HOUSING

S. 57, Mr. SPARKMAN and others; January 9, 1959 (Banking and Currency): Housing Act of 1959, omnibus housing bill, extends the home improvement programs; increases maximum mortgage amounts; increases dollar limitations on rental housing; increases maximum loan-to-value ratio; increases by $4 billion annually for each year 1959 and 1960 the FHA's general mortgage insurance authorization; extends benefits for displaced families; establishes a new program of housing for elderly persons; provides a 6-year $2.1 billion slums clearance and urban renewal program; permits local agencies to set rents, etc., for low-rent projects; increases funds available for college housing; extends military housing program and provides additional funds for VA direct loans. (Reported in House Feb. 27, 1959; scheduled to be brought before Rules Committee Apr. 13, 1959.)

H.R. 2357, Mr. RAINS; January 15, 1959 (Banking and Currency): Housing Act of 1959, omnibus housing bill similar in many respects to S. 57.

(NOTE: S. 57 was passed by the Senate on Feb. 5, 1959, with an amendment. The act was reported in the House on Feb. 27, 1959 with an amendment. The Rains bill with minor amendments was substituted by the House committee for S. 57 as passed by the Senate. As now before the House the bill provides for (1) lower FHA downpayments; (2) larger FHA repayment periods; (3) reduction (authorized) in FHA insurance premiums, (4) a $500 million yearly (for 3 years) program of slum clearance; (5) an extended low-rent public housing program; (6) a $400 million additional loan authority for college housing; (7) a new program for housing for the elderly; and (8) an extension of the military housing program.)

Eleventh. We need to reexamine our airport program because we are entering a jet age of transportation and present facilities are totally inadequate.

S. 1., Mr. MONRONEY and others; January 9, 1959 (Interstate and Foreign Commerce): Extends the Federal aid program for the development of airports through fiscal 1963 and authorizes $95 million each year for fiscal 1960, 1961, 1962, and 1963. Authorizes additional amounts for projects in Alaska, Hawaii, Puerto Rico, and the Virgin Islands. Authorizes an additional $75 million for a discretionary fund for such aid. Disallows as project costs the construction of parking areas, bars, cafes, etc. (Passed House, amended, Mar. 19, 1959.)

H.R. 1011, Mr. HARRIS; January 7, 1959 (Interstate and Foreign Commerce): Similar to S. 1.

Twelfth. We need a courageous urban renewal program to bring new health and vitality to our cities.

S. 57, as summarized above, contains certain provisions dealing with urban renewal. In general, urban renewal programs may be found in the major housing bills.

Thirteenth. We need a liberal new Federal program of aid to education—aid in loans and scholarships, aid in classroom construction and teachers' compensation.

EDUCATION

S. 2, Mr. MURRAY and others; January 9, 1959 (Labor and Public Welfare): School Support Act of 1959 provides Federal aid for the construction of classrooms, etc., and compensation of teachers.

S. 8, Messrs. MCNAMARA and HART; January 9, 1959 (Labor and Public Welfare): School Construction Assistance Act of 1959 sets forth a $1 billion annual program for Federal aid for the construction of school facilities.

S. 57, as summarized above, contains a program providing aid for the construction of college housing.

S. 234, Mr. LANGER; January 12, 1959 (Labor and Public Welfare): Sets forth a program of loans for students desiring to continue their education beyond the high school level.

H.R. 22, Mr. METCALF; January 7, 1959 (Education and Labor): Identical to S. 2.

We have a lot of work to do before adjournment. With this formidable program in our sights, it is necessary that we assess our progress from time to time.

Hiring the Handicapped in Our Town

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include a copy of an essay entitled "Hiring the Handicapped in Our Town."

This essay was written by Mr. Brian O'Leary, an 11th-grade student of Thomas Jefferson High School, San Antonio, Tex., and was awarded one of the two third-place designations in the 1959 national essay contest.

I commend this excellent essay by Mr. O'Leary to the attention of the membership:

HIRING THE HANDICAPPED IN OUR TOWN
(By Brian O'Leary)

Since 1941 San Antonio has made great strides in the field of hiring the handicapped. Before that time very few disabled people were hired, but today thousands are employed in private industry, sheltered workshops, and military installations. These employers cooperate with the San Antonio branch of the Texas Education Agency, Vocational Rehabilitation Division, the Texas Employment Commission, and the Civil Service Commission. Before discussing the operation of these agencies, it would be appropriate to state exactly who may be considered handicapped. Physically handicapped persons include amputees, cardiacs, diabetics, spastics, deaf persons, deaf-mutes, those with arthritis, arrested tuberculosis, muscular dystrophy, and polio.

Among governmental agencies working for the advancement of the handicapped, the San Antonio branch of the Texas Education Agency, Vocation Rehabilitation Division is outstanding. It was founded 17 years ago with Warner Rasco, Sr., its present counselor, at its head. The purposes of this organization are: To equalize employment opportunities for the physically and mentally handicapped; to attempt to remove or reduce the handicap; and to provide the individual concerned with skills and equipment to enable him to compete in business. The agency provides training through colleges, universities, business colleges, and trade schools—but mainly on the job at its own expense. During the training period, the agency pays the employer a tuition of $30 to $40 a month, and maintenance and transportation fees of the employee.

Other governmental agencies coordinate the efforts of private industry. The local office of the Texas Employment Commission locates suitable jobs and willing employers. It is estimated that there are from 500 to 800 handicapped people in San Antonio seeking employment through the commission. The San Antonio Committee of the National Employment for the Physically Handicapped is a group of civic leaders and businessmen interested in furthering the welfare of the handicapped. The San Antonio branch is especially enthusiastic: At the last statewide meeting in Austin it had the largest representation. These groups endeavor to present the problem of the handicapped to the public. They provide speakers at social affairs and meetings and distribute films. Posters, calendars, blotters, and pamphlets were distributed by the Boys' Clubs.

There are several nonprofit organizations devoted to the betterment of the handicapped. The Lighthouse for the Blind, established in 1931 and operated by the San Antonio Association for the Blind, is a sheltered workshop to provide training, work experience, and employment for the blind and those with serious visual impairments. Physically handicapped employees supervise the trainees. The objective of the Lighthouse is to prepare trainees for normal employment. It is financed through the sale of brooms, mops, and other household items manufactured there. The United Fund provides for the supervisors and covers loss of materials. The workers are paid reasonable wages—a total of $36,782 last year. The association also distributes talking books, teaches Braille, and provides other benefits.

Goodwill Industries, founded in 1945, is another sheltered workshop. Its purpose is to provide training and employment for the physically handicapped and to prepare them for normal employment. It is affiliated with the Texas Social Welfare Association, the National Rehabilitation Association, and the Goodwill Industries of America. It is financed through the collection, repair, and sale of discarded household items through three outlet stores. Last year $135,000 was paid in wages from a gross income of $250,860. The United Fund provides $6,760 for essential supervisors. Last year 181 trainees were hired and 14 were placed in private industry. Goodwill also provides many free welfare services to the employees.

Other nonprofit groups are operating in San Antonio. The San Antonio Disabled American Veterans provides counsel and placement for handicapped members. Its functions include the promotion of equal employment opportunities, finding of suitable jobs, and an educational program for employers. The Salvation Army Men's Social Center works for indigent, homeless, and handicapped men. It is financed through the repair and sale of discarded household items. Its program includes food, lodging, living necessities, spiritual guidance, and employment.

The military installations in the San Antonio area hire large numbers of handicapped civilians. Kelly Air Force Base, with 1,300 handicapped civilians, is the largest employer of the physically handicapped in the Southwest. Walter D. Downing, Chief of the Placement and Employee Relations Branch reports that disabled workers work harder and take one-third the sick leave of normal workers. Fort Sam Houston hires over a thousand handicapped civilians, many members of the Disabled American Veterans. They are paid normal wages and are placed in jobs suited to their abilities. Lackland Air Force Base hires handicapped civilians on the basis of their limitations and abilities. They are also paid normal wages.

Private industry provides work for many handicapped people. Joske's of Texas and Sears, Roebuck & Co. are two department stores that are noted for hiring them. Also outstanding are Howard Aero, Inc., and Handy-Andy Supermarkets. Joske's has been hiring handicapped people since 1940. Eleven have been hired in the last 2 years. Howard Aero was named "Employer of Disabled Veterans in Texas in 1958" by the American Legion. Representatives of the Texas Employment Commission and other placement agencies survey openings in these and other companies for positions with suitable working conditions and within the limitations of a certain type of handicapped persons.

A study of some handicapped employees of Joske's of Texas will exemplify the suitability of handicapped people on certain jobs. There is a deaf and dumb lady who prints names on pencils, another who prints names on personal Christmas cards and several deaf cashiers. They perform exceptionally well on their jobs because they are not distracted by loud noises and can devote their full attention to their jobs. A mentally retarded girl makes bows for gift wrapping. A person of normal intelligence on the same job might become bored to such an extent that he would not perform at optimum efficiency. Because of the fear of the results of their handicap, many blind people exert such efforts toward becoming proficient at a certain job that they ultimately become more skillful than their sighted counterparts. Thus we find blind price markers and furniture assemblers.

The reason that so many handicapped people are working in San Antonio is that employers have come to realize that it is good business to hire the handicapped. Employers are not asked to accept these workers simply because they are handicapped; they are recommended because they can do the job as good if not better than normal employees. Lackland Air Force Base reports that handicapped workers have better conduct and efficiency but about the same absenteeism as other workers. Other sources report that handicapped workers have fewer major accidents and slightly higher productivity. Skills, abilities, minor accidents, and quit rate are about the same in both groups. Furthermore, governmental agencies have found that the cost of rehabilitation is repaid in a few years through income tax on increased wages. Consequently, the progress of the handicapped in San Antonio proves that it is one thing to have disabilities but quite another to remind handicapped by them.

"California: The Golden State"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 17, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am very pleased and, naturally, proud to place before you some of the text of a very informative and, to me, as a native son of California, inspiring booklet just issued by the Honorable Frank M. Jordan, secretary of the State of California. Said booklet is printed in blue and gold, the California State colors, and is entitled "California: The Golden State."

Since I am a native son of the Golden State, I, naturally, take great pride in being a Member of this great legislative body these more than a dozen years from this magnificent State, the history of which has already been of such great significance to the development of our beloved Nation. Since the present estimate of the U.S. census is that California will be entitled to seven additional

Representatives in this great legislative body upon the final tabulation of the 1960 census it would appear that my native State will achieve even greater importance to the ultimate destiny of our beloved Nation in the family of States.

At this time I only offer the text of a very few of the pages of the abovementioned booklet, as follows:

CALIFORNIA: THE GOLDEN STATE

From the time of the discovery of the present Lower California by Ortuno Ximenez in 1533, until 1862, the origin and meaning of California was a topic of vast speculation. The Jesuit missonary historians of the region, Miguel Venegas, in 1757, and Francisco Clavijero in 1789, discussed it inconclusively and at some length. Capt. Frederick William Beechey, English explorer, who visited San Francisco and Monterey in 1826–27, was the first to record the belief that the name originated with the Latin words calida and fornax, "signifying heat and furnace." Many students concurred in this opinion.

But Mariano G. Vallejo and Juan B. Alvarado dissented, maintaining the word stemmed from the Lower California Indian term kali forno, translated both as "high hill" and "native land." Other possible derivations from Latin and Greek roots were widely debated, including calidus fornus, caliente fornalia, caliente horno, kala phor nea, kala chora nea, etc.

In April 1862, the noted American antiquarian, Edward Everett Hale, solved the origin of the name to the satisfaction of all. in the "Proceedings of the American Antiquarian Society" for that date he reported that the name was contained in the romantic novel, Las Sergas de Esplandian (the deed of Esplandian), which comprised the fifth book of the omnibus novel, Amadis de Gaula. Las Sergas was an example of the humorous fantastic fifteenth century tale, the literature that Cervantes satirically blamed for addling the brain of his wandering knight, Don Quixote.

The author of Las Sergas de Esplandian was Garcia Ordonez de Montalvo and the book was first printed in Seville, Spain, in 1510. It went through a number of editions and was widely translated. In it occurs this passage—the first known use of the word "California."

"Know y that at the right hand of the Indies there is an island called California, very close to that part of the terrestrial paradise, which was inhabited by black women without a single man among them, and they lived in the manner of Amazons."

The majestic Queen Calafia was the monarch of this fabulous land. There is some evidence that Hernando Cortes and other Spanish conquerors of Mexico were familiar with Montalvo's romance.

The name California first appeared officially in a Spanish document, under date of July 2, 1542, in the diary of the expedition of Juan Rodriguez Cabrillo, who was then off the tip of Lower California.

California lies along the Pacific Ocean for a distance of 1,000 miles from Mexico to the Oregon boundary. It is the second largest State of the Union, both in area and in population. It is a State of contrasts. It contains within its boundaries both the highest and lowest points in the United States. Its climate in general is temperate, but it has both hot, dry deserts and high, mountainous areas of perpetual snow and ice. Not only is it the leading State of the Union in the value of its agricultural production, but it is also in the forefront of the Nation in industrial output.

GOLD DISCOVERED

The period of California's great development started on January 24, 1848, with the discovery of gold in the tail race of Sutter's lumber mill at Coloma. At that time the total number of persons of European blood in California was estimated at 13,000; 7,000 of them Spanish speaking, the rest of various nationalities. With the famed gold rush, Spanish predominance quickly vanished and by 1850 there were 100,000 people in the territory, with Anglo-Americans forming the substantial majority.

POPULATION CLIMBS

California has experienced an extremely rapid growth, and in the 1950 census became the second ranking State with a population of 10,586,223. By 1959 the population was estimated at around 16 million. It has gained more than 9 million people in the last 19 years as compared to the 1940 census of 6,907,387.

ADMITTED TO UNION

California was admitted to the Union as the 31st State on September 9, 1850, after the territory of which it was a part had been relinquished to the United States by Mexico in February of 1848 as the result of the Treaty of Guadalupe Hidalgo.

The first California Legislature was assembled at San Jose in December of 1849, shortly after a constitutional convention, called by the military governor, Gen. Bennett Riley, in June, had completed its work at Monterey.

MISSIONS ESTABLISHED

Before the English colonists on the Atlantic coast started the American Revolution, the Spaniards had already established Franciscan missions along the California coast. The pastoral civilization, however, which developed in California remained isolated from both the Old and the New Worlds for more than 50 years, except for the occasional visits of foreign vessels, chiefly engaged in the sea otter trade.

COVERS LARGE AREA

The State of California embraces three-fifths of the western coastline of the United States and if transposed to comparable latitudes along the Atlantic coast, its shoreline would extend from Boston, Mass., to approximately Charleston, S.C. The width of the State varies from 150 to 365 miles.

The land area of the State is 156,803 square miles, and therein exist nearly every combination and every contrasting extreme of topography, climate, soil and mineral, plant and animal life which can be found in the United States, as well as some which are unique to California.

BRITISH ISLES SMALLER

California is larger in area and has a greater diversity of natural economic resources than some of the principal European nations. Its land area is larger than the British Isles.

About one-fourth of this land area is level and most of the valley lands are between sea level and 500 feet in elevation. They compromise the principal agricultural areas of the State. The warm belts—most characteristic of California, and where most of her people reside—are below the 2,000-foot elevation.

MOUNT WHITNEY HIGHEST

Three-quarters of California's area is in rolling hills, foothills, and rugged mountain areas which range in elevation from 500 feet to over 14,000 feet. Mount Whitney, in California, and the highest peak in the United States, outside of Alaska, reaches an elevation of 14,496 feet. Death Valley, 60 miles east of Mount Whitney in the Sierra, is 282 feet below sea level. This is not only the lowest spot in the United States, but also the hottest.

Approximately one-half of California's land area, or 49,897,574 acres, is publicly owned, of which 23,822,359 acres are in national forests and national parks and monuments.

CALIFORNIA'S CAPITAL

After meeting in San Jose and for brief periods at Vallejo and Benicia, the legislature moved to Sacramento which was established as the State capital in 1854.

However, the recorded history of California goes back 400 years to September 28, 1542, when Cabrillo discovered San Diego Bay and explored the coast as far north as Point Reyes. In 1579 Sir Francis Drake landed probably at Drakes Bay, naming the territory New Albion, and claiming it for England. In 1602 Sebastian Vizcaino again explored the coast but it was not until 1769 that Spanish colonization started with the arrival at San Diego of the expeditions led by Gaspar de Portola.

STATE MOTTO

The State motto, "Eureka," appears on the State seal. It is a Greek word meaning "I have found it."

Historical sites of special note are the Gold Discovery locale, Donner Monument, Columbia, Pueblo de los Angeles in downtown Los Angeles, Sutter's Fort in Sacramento, and the Hearst-San Simeon area in San Luis Obispo County.

Recreational facilities of statewide attraction include many ocean beach areas as well as reservoir sites in the interior.

ANNUAL RAINFALL

Annual average rainfall varies from three inches or less in the southeast corner of the State to over 100 inches in the northwestern section. In most of the highly developed agricultural sections of the State the precipitation varies from 5 to 30 inches yearly, and it is largely concentrated in the winter months from November to March. Consequently supplemental irrigation during the summer months is necessary for most vegetable and fruit crops.

DIVERSITY

California has a sufficient diversity of the great natural economic resources to enable its people to sustain themselves as an isolated empire if necessary, but, without trade, it would be on a lower scale than now enjoyed.

Every agricultural product of the temperate zone is produced in California, as well as many subtropical crops not grown elsewhere in the United States.

All staple foods and textile materials from cotton to wool are produced. Although silk is not produced commercially, experiments have demonstrated its possibility.

FARMING AND TIMBER

California has some 123,000 farms that include an area of 37.8 million acres of which 13.2 million acres are used or available for crop production and 7.0 million acres are under irrigation.

Commercial timber resources of California include 36.1 billion board feet of redwood and 323.9 billion board feet of all other species.

Mineral resources include nearly all the basic materials used in the chemical, structural materials, and metal working industries. Some of these, such as iron ore, chromite, and managanese, are now being developed for expansion of the iron and steel industries.

GOLD STARTED IT

Gold was the economic resource that led to California's first development. From 1848 to 1957, inclusive, California's gold mines have yielded $2,386 million in treasure.

Petroleum has far outstripped gold as a source of new wealth from mineral production in California. From the time oil was discovered in this State, about 1861, through 1957, total oil production is estimated at 11,157 million barrels having long-term average value of $1 a barrel.

MISCELLANEOUS

San Bernardino County is the largest county in the United States, San Francisco Bay is the largest land-locked harbor in the world, and Los Angeles has the largest area of any city in the world. Mount Lassen is the only recently active volcano in the United States, and the California Redwoods are among the largest and oldest living things to be found anywhere.

California leads the world in the production of motion pictures.

During 1957, cash farm income in California was about $2.8 billion, highest among the States for that year.

Cotton is king in California as this State receives more farm income from this source than from any other crop, about $268 million in 1957. California is second among the States in average yield of cotton per acre—1,035 pounds in 1957.

Following cotton as important farm crops in 1957 were grapes, tomatoes, lettuce, oranges, hay, peaches, barley, prunes and plums, rice, melons, sugar beets, potatoes, lemons, celery, strawberries, dry beans, and cottonseed.

Principal livestock products were milk and other dairy products, beef cattle, poultry and eggs, sheep and wool, and hogs.

California furnished nearly half of the Nation's commercial supply of fruits and nuts, and one-fourth of the vegetables sold.

Mineral products sold in 1957 were valued at $1.65 billion and included petroleum, natural gas, cement, sand and gravel, building stone, borates, tungsten, gold, lead, zinc, mercury, iron ore, and many other industrial minerals.

THE LEGISLATURE

California's State Legislature is composed of 120 members. The assembly, or lower house, has 80 members elected every 2 years in even numbered years. The senate is composed of 40 members. One-half of this number, or 20 members, is elected every two years for terms of four years each.

The legislature meets annually. In odd numbered years the "regular" session meets the first Monday in January after the first day of January.

At the end of January, a recess of 30 days or more sends members home to discuss bills already introduced, after which they reconvene for the balance of the session. The total length of the session is limited to 120 calendar days.

In even numbered years, budget sessions are held starting the first Monday in February. These sessions are limited to 30 calendar days. Following introduction of the budget the legislature is permitted to recess for a period up to 30 days.

The Federal plan of representation has prevailed in California since 1928. It is the same plan as that practiced in the U.S. Congress wherein the House of Representatives is composed of members elected on a basis of population, while the Senate is composed of two Senators from each State. In the California Legislature the 80 members of the assembly each represent one-eightieth of the State's population, while the members of the senate are elected from counties or combinations of counties, no county having more than one senator and no senatorial district containing more than three counties.

The most populous county in the State has only one senator, but has 31 assemblymen. The county of least population shares its senator with two other counties, while its assemblyman represents nine other counties; so it might be said to have one-third of a senator, but only one-tenth of an assemblyman. Thus a balance is maintained between urban and rural areas.

THE CONGRESS

Because of its intense growth in poulation California was reapportioned in 1951 on the basis of the 1950 census. As a result, seven new Congressmen were added in 1953 bringing the total number of Representatives to 30.

As in other States California has two U.S. Senators.

Truth as an Instrument of National Policy

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, I should like to insert in the RECORD an article published in the Friends Journal of March 28, 1959, summarizing the great importance of truth even in international policies. This was written by an attorney, Lawrence S. Apsey, now head of the legal department of the Celanese Corp. of America, and formerly an attorney in the Department of Justice:

History teaches us that truth is the most potent weapon in the battle of ideas. A telling example was the Soviet contention that the United States was fomenting an attack by Turkey against Syria. When this charge was aired in the United Nations, it could not withstand the light of truth and promptly collapsed.

That truth is the only certain instrument for overcoming error is proven by its very nature. Jesus recognized this as the basis of His ministry when He said, "I have come into the world to bear witness to the truth." He defined its power when He said, "The truth shall make you free." The struggle to perceive and remain loyal to the truth is the struggle of human life itself.

A SYNONYM FOR REALITY

Truth is imperishable because it is a synonym for reality. As experience teaches us to distinguish between reality and fantasy, we gain freedom.

Many instances could be cited in which truths, at first universally rejected, were ultimately accepted because it was found that no other hypothesis would work. Galileo was forced by the Inquisition to recant his support of the Copernican theory that the earth travels round the sun; but in the end all the power of the church proved inadequate to suppress this truth. Similarly, the theory that the world is round had to be accepted after the voyages of Columbus and Magellan, although at first this truth was universally rejected. The ideas of Jules Verne that man could build a submarine to travel under the sea or a spaceship to travel to the moon were regarded for decades as the wildest fiction. Yet as men played with these fascinating ideas, they found them, step by step, to be true, until now what was formerly regarded as fantastic is generally accepted.

In the political field no one any longer seriously advances the theory of the divine right of kings. Quakers played a part with others in discrediting human slavery, until today virtually no one is heard to defend it. Quakers and others for many years have been reiterating the truth that war is not the way to settle international disputes. As wars persist, we tend to feel that this truth is making little progress toward acceptance; but certainly the general attitude toward war has greatly improved over that which existed before World War I, when it was regarded as a glorious expression of patriotism. Now humanity throughout the world yearns for peace. Even governments give at least lipservice to this desire, and the glories of war are no longer extolled in song and story. For those who still believe in it, war has become a grim and terrible necessity, to be abolished if possible.

Since a factually correct course is by nature the only one which can work successfully, truth is the most realistic, and therefore the most practical policy. Nothing but ruthless realism can prevail against the militant propaganda of our day. One reason we have found the Soviet Government so difficult to deal with over the years is that it has used Marxist propaganda to create a national psychosis which accepts reasoning and action based on certain mistaken concepts as real.

A GRIEVOUS BLUNDER

Permitting the seeming successes of this propaganda to lead us into believing that it can be overcome by the use of untrue counter-propaganda is the grievous blunder into which the West is falling. Untrue propaganda, whether in the East or in the West, leads people down the road of fantasy and tends to undermine their ability to recognize reality. This psychologically dangerous course incapacitates people from making their actions conform to the facts of their environment.

The scientific achievements of the Soviet Union are testimony to the fact that its scientists and educators in their approach to nature and education have been sufficiently governed by reality to discover and follow some important truths. The same can be said of other achievements of the Soviet Union, such as its rapid economic growth and its overcoming of the language barrier separating the many peoples in its vast territory.

If any government, however, uses its discoveries and achievements to threaten the destruction of other nations with which it disagrees, instead of using the truth to destroy the false ideas underlying the disagreements, a wrong course is being followed, which can lead only to catastrophe.

THE POWER OF TRUTH

If any government, however, uses its disoperate long enough in their own sphere, the inevitable failure of their false ideas will ultimately force them to the truth. Continual, persistent statement and restatement of the truth by the Western governments, in and out of the United Nations, will gain the support of the neutral world and undermine the support of the false premises of communism by its own people, provided the West lives by the truths which it professes.

To do this, a good may of our practices will have to be changed. When we give technical aid to less developed countries, for example, we must not compromise our motives by attaching political conditions which make it only too clear that we are not seeking their welfare but merely trying to buy their support. We must definitely avoid the fallacy that the threat of force can be substituted for the truth as a means of defeating error. We certainly cannot hope to strengthen our position by boasting that we have enough bombers and nuclear bombs to annihilate the Soviet Union. Such an attitude is in direct conflict with the truth which our words and actions should convey to the world; namely, that we have an intense desire to terminate the arms race and are willing to go to great lengths to achieve this.

Truth requires us to embrace every opportunity to discuss disarmament with the So-

viet Government at all levels, from the summit down. If such discussions are seized by the Soviet as opportunities to launch false propaganda, they should be welcomed as presenting even greater opportunities for the West to expose to the world the fallacy of Soviet propaganda and to demolish it with truth.

Even Communists will accept truth when a false position becomes sufficiently untenable. Witness their ultimate repudiation of Stalin's excesses. Some truths become so obvious that they must be accepted in a very short time. Thus the fact that a major nuclear war would ruin civilization seems now to be accepted by both sides. This is a great advance. It should lead to realization that neither side can gain its objectives by force of arms. Once this truth dawns, universal disarmament is in sight.

To "speak truth to power" successfully, we must recognize that error is the Achilles' heel of power. We must make our own action conform to the law that ultimate power resides in the truth. Once our policy proclaims our belief that right makes might, we shall find that this truth will keep us free.

The Interstate Highway System

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I asked unanimous consent which was granted me to include therewith a letter to me from Mr. John Butter, chief engineer of the Iowa State Highway Commission and a resolution passed by the Mississippi Valley Conference of State Highway Departments.

IOWA STATE HIGHWAY COMMISSION,
Ames, Iowa, April 8, 1959.

Hon. BEN F. JENSEN,
House Office Building,
Washington, D.C.

DEAR MR. JENSEN: I am enclosing herewith a resolution passed by the Mississippi Valley Conference of State Highway Departments requesting that the interstate funds be provided so that the interstate work in the Mississippi Valley may proceed as scheduled.

Iowa is a member of this conference, and the Iowa State Highway Commission by this fall expects to have under contract all of the Federal aid interstate funds allotted to us through the fiscal year of 1960.

Anything that you can do to continue the interstate program in the Nation and in Iowa especially will be appreciated.

Very truly yours,
JOHN G. BUTTER,
Chief Engineer.

[Enclosure.]

RESOLUTION ADOPTED BY THE MISSISSIPPI VALLEY CONFERENCE OF STATE HIGHWAY DEPARTMENTS AT 50TH ANNUAL MEETING, CHICAGO, ILL., MARCH 19–21, 1959

Whereas because of the constantly increasing vehicular registration and mileage traveled on the Nation's highways; and

Whereas deaths and injuries to people and property damage on the Nation's highways are continuing to increase; and

Whereas it is in the national interest to reduce death and injury on the highway at the earliest possible date; and

Whereas many States have committed themselves, both legally and morally, to vastly accelerated programs of highway construction in order to carry out the intent of Congress, as expressed in the Federal Highway Act of 1956 that the Interstate System be brought to simultaneous completion in all the States by 1972; and

Whereas several of the States, in order to provide their share of the cost of the Interstate System, must thoroughly review their State highway revenue position, and be in the position of knowing the Federal aid matching needs; and

Whereas any curtailment of any part of the program, or any cessation of allotment of finances to carry out the program as originally scheduled will cause hardship and serious financial and economic disturbance to the highway industry, including contractors, material suppliers, equipment manufacturers, labor, and trained engineering personnel: Now, therefore, be it

Resolved, That the Mississippi Valley Conference of State Highway Departments in annual meeting assembled in Chicago, Ill., March 19–21, 1959, urges and petitions the Congress to provide adequate financing for continuation of the ABC highway system; and for the Interstate System in accordance with the intent of the 1956 act; and be it further

Resolved, That the conference reassures the Congress and the public of the ability of the State highway departments to construct the Interstate System in accordance with the original schedule set forth in the Highway Act of 1956; and be it further

Resolved, That the conference firmly believes that any cutbacks, interruptions, valleys or peaks in the construction program will cause serious economic impacts and further that under such conditions the program cannot be efficiently planned and constructed; and be it further

Resolved, That copies of this resolution be sent to the chairman of each subcommittee of highways of the Congress of the United States and Members of Congress from the respective States of the conference.

The Nationalists in Action

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Nationalists in Action," published in the Economist of April 4, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATIONALSTS IN ACTION

If ever a country's foreign policy was dictated by circumstances it is that of Formosa, known to some as the Republic of China. And it must be allowed that it practices its foreign policy with single-minded rigor. That policy consists, basically, of two articles: To harass communism wherever it may be found and to maintain itself, in the eyes of a majority of the United Nations, as the legitimate Government of China. Another point, the "recovery of the mainland," is an article not merely of policy but of faith; but, from the Nationalist standpoint, it belongs to domestic rather than to foreign policy.

The second foreign policy aim of the Nationists is more visible in the implementation than the first. But the first is just as vigorously pursued. For instance, Nationalist aircraft have been dropping supplies to the Tibetan rebels, presumably from one of the airstrips still in Nationalist hands in the Burma-Siam border region. Several thousand Nationalist guerrillas stayed behind in this area after the bulk of them had been evacuated under United Nations auspices in 1954. Nationalist broadcasts from Taipeh have claimed that the Tibetan rebels were being helped by anti-Communists in a neighboring province of China. The Nationalist intelligence network in China is often well informed (it was first with the news of Mao Tse-tung's decision to abandon the chairmanship of the Republic); but in this instance it seems that the help reaching the rebels comes from Sikang, an ethnically Tibetan area, China's claims to which are dubious, and which Peiping incorporated into Szechwan Province come years ago.

On less obvious fronts, the Nationalists are also busy. There is no reason to disbelieve Communist reports that the Nationalists have resumed airdrops to the Indonesian rebels in Celebes and are training rebel pilots in Formosa. On the other hand, a Communist report that the Nationalists are attacking Yunnan Province from Laos, with Laotian assistance, is probably part of the Chineses Communists' current war of nerves against their American-protected neighbor.

As for the main front—the Formosa Strait—Taipeh has been at pains to point out that, contrary to western reports, it did not renounce the use of force to recover the mainland after Mr. Dulles' visit to President Chiang Kai-shek in October. Indeed the joint communique then merely made it clear that force was not the principal means to be employed.

A National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. FINO. Mr. Speaker, I am happy to note that the people in the State of Oklahoma finally got smart by wiping out hypocrisy after 51 years of prohibition.

The Oklahomans voted to repeal not because they could not get liquor. The bootleggers were there to supply them with all they could drink. The good citizens of that State decided that as long as people wanted to drink then the best thing to do would be to repeal the law, get rid of the bootleggers and legally tax this thriving industry.

Mr. Speaker, I hope this Congress will also get smart and realize that the urge to gamble is deeply ingrained in human beings and that by proper Government regulations, supervision, and control we can bring into the coffers of our Federal Treasury $10 billion a year in additional revenue.

Mr. Speaker, the enactment of my national lottery bill would not only satisfy the American gambling spirit but would, in addition, wipe out a large segment of our professional gamblers, legally tap a lucrative industry and provide enough money for a badly needed tax cut and reduction of our national debt.

A Workable Wheat Plan for America and the World Market

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, April 16, 1959

Mr. NEUBERGER. Mr. President, in the April 1959 issue of the magazine Farm Management there appears an article by Clancy Jean, executive vice president of the Oregon Wheatgrowers League, at Pendleton, Oreg., entitled "The Growers' Own Program: A Workable Wheat Plan."

Mr Jean points out that wheatgrowers are well aware of the need for a revised farm program to deal with the problem of surplus wheat production. He recounts development by the growers of the concepts contained in S. 1484, which was introduced by the distinguished Senator from Kansas on March 20, of which I am a cosponsor, and explains the operation and benefits of the plan. He indicates what adoption of this policy would mean to the taxpayer, to the wheat producer, and to the feed grain producer.

Because Mr. Jean's article represents such a cogent presentation of the justification for enactment of S. 1484, I ask unanimous consent that it be printed in the RECORD for the information of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GROWERS' OWN PROGRAM: A WORKABLE WHEAT PLAN

(By Clancy Jean)

The word "wheat" used to have an admirable meaning—"the staff of life." Today the same word has quite a different meaning. The mere mention of it is a reminder of what some people call a national scandal—the current wheat program that spends billions of taxpayers' dollars and encourages increasingly vast surpluses.

No one realizes this better than the wheatgrowers themselves. And one one has launched a more constructive effort to correct this than have those same wheatgrowers with a new bill they recently put before Congress.

Traditionally, organized wheatgrowers have advocated the domestic parity plan for wheat. Last December, when the National Association of Wheatgrowers met in Denver, growers developed and approved what they call a stabilization plan for wheat. It is a modification of the domestic parity plan and contains several features that should be given serious consideration as a new approach to the wheat problem.

BEFORE CONGRESS

The growers' proposal is now before Congress; in late February, Senator FRANK CARLSON, Republican, of Kansas, introduced the plan as Senate bill 1140. Senator CARLSON told the Senate that this bill offers some changes "* * * not simply changes in a new 1959 model of the old bill. They are changes in engineering, which result in a wheat price stabilization plan that deals effectively with the current excessive accumulations of wheat and feed grains." Joining with Senator CARLSON in cosponsoring the wheatgrowers' plan are Senators MORSE and NEUBERGER, of Oregon; MAGNUSON and JACKSON, of Washington; CURTIS, of Nebraska; and CASE, of South Dakota. Simultaneously, a number of identical bills were introduced in the House by western Congressmen.

In developing their plan, the wheatgrowers have kept four basic concepts in mind:

BASIC CONCEPTS

1. Wheatgrowers' net income must be maintained if they are to reduce production below the current level.

2. The buildup of CCC stocks must be stopped and gradually reduced to a normal level.

3. Further reduction in acreage of wheat must not be shifted to other crops.

4. Increased yields per acre must not be reflected in increased Government holdings of wheat.

What is needed, the growers say, is to stop the build-up of Commodity Credit's stocks and even reduce them while also reducing production through a program that takes increased yields into consideration and prevents diverted wheat acres from creating problems with other crops—do these things and maintain growers' income.

To accomplish this, the wheat producers are proposing a production and income stabilization plan.

BUSHEL ALLOTMENTS ADVOCATED

Eliminate acreage allotments and checking of compliance along with current marketing quotas—and substitute for these a marketing allotment expressed in bushels. They want marketing allotments based on the wheat base acreage for average of the 1952–53 planted acreage. Each farm would receive a bushel allotment. This would be arrived at by multiplying the base acreage by the normal yield per acre, factored to the county allotment. Normal yields, they say, should be based on the period that provides the most equitable relationship between counties and States.

NATIONAL ALLOTMENT IN BUSHELS

For example, it would work out this way for 1958 (millions of bushels):

1. Estimated amount used for food in the United States	485
2. Estimated amount of U.S. exports	+430
Estimated demand	915
3. Less amount of wheat to be moved out of CCC stocks each year	−75
National marketing allotment	840

The plan calls for price supports at 65 percent of parity for the national marketing allotments. This allotment, as shown, would be spelled out for each farm in bushels and there would be a price support on this amount of about $1.53 per bushel. Marketing cards, similar to those now used, would be issued to each grower for his bushel allotment. In addition, certificates would be issued on each grower's share of the 485 million bushels used for food in the United States.

CERTIFICATES

These certificates would be redeemable in an amount equal to 35 percent of parity on that portion of his production. Using 1958 as an example, food uses of wheat are equal to about 60 percent of the national marketing allotment suggested by the growers. Certificates would be sold to processors. This provision is taken from the domestic partity plan, long advocated by wheat growers. This would relieve the taxpayers of a major part of the costs of the stabilization plan. Wheat growers have long held that they are entitled to full parity for at least that portion of their crop that is used for food consumption in the United States. There is little relationship between the price of wheat and the price of bread. In the past 6 years, wheat prices have dropped 35 cents per bushel while the price of a 1-lb. loaf of bread increased 3.2 cents.

CONSERVATION RESERVE

But, in order to be eligible to receive these certificates, the grower would have to put at least 20 percent of his wheat base in the conservation reserve. This would increase the conservation reserve by 12 to 14 million acres of wheatland that now produce from 5 to 8 million tons of wheat or feed grains yearly.

While the stabilization plan would control the amounts of wheat to be marketed for domestic food uses and exports through its bushelage allotment and certificate features, there are no restrictions on the production of nonquota wheat. Neither is there any price support for this wheat. Anything in excess of the bushel allotment quota produced would have to be either fed on farms where produce, sold to other farmers or sold to bonded feed processors.

This feed-wheat provision would enable many wheat growers to return to producing their best crop. Under the present program, commercial wheat growers have been forced to produce feed grains as an alternative crop. This has caused serious production and economic problems for the wheatman and it has contributed to the feed grain producer's problem. In the west coast area, this would mean less barley produced on wheat farms; in other areas, growers would turn to wheat in place of sorghum. A supply of feed wheat on the west coast, for example, would contribute to a more balanced supply of local feed grains.

SAVINGS TO TAXPAYERS

Compared with present and projected costs of the current wheat program, growers' stabilization plan would save the Federal Treasury an estimated $788 million annually. This is to be accomplished through (a) lowering cost of price support operations, (b) reducing CCC stocks, (c) lowering export subsidies, (d) placing CCC stocks on 5-year storage contracts.

Presently about 200 million bushels are added to CCC stocks annually. The stabilization plan stops the buildup of CCC stocks and actually provides for a 75 million bushels removal each year for export. It is expected that export subsidies will be reduced about 20 cents per bushel. The growers' plan calls for setting aside 500 million bushels of present CCC stocks as a defense stockpile. By letting Government storage contracts out for competitive bids on a 5-year basis, there would be an estimated saving of 6 cents per bushel. As the accompanying table shows, these features would result in an annual cash saving of $178 million and achieve a net decrease in CCC stocks of $610 million annually.

INCOME SOURCES

To the grower, the proposed program offers income from four sources:

1. He would receive at least 65 percent of parity (about $1.53 at present) on his bushel allotment. The bushel allotment would provide that only 840 million bushels could be marketed in this manner nationally. By controlling amount moving into the markets, there is reason to believe that producers of high quality and specialty milling wheats who market effectively would receive more than this price for their wheat.

2. About 60 percent of a grower's bushel allotment would be covered by certificates which, when redeemed, would return him an amount equal to 35 percent of parity. Thus, on this amount of his wheat, he would receive 100 percent of parity.

3. As a prerequisite to receiving a bushel allotment, the grower would be required to put at least 20 percent of his base acreage into the Conservation Reserve, for which he would receive the customary payments.

4. Should his production exceed his bushel allotment, he could only market this wheat through livestock on his own farm, by selling to other farmers or by selling this wheat to bonded feed dealers—at open market prices.

The national bushel allotment of 840 million bushels appears to be quite realistic, particularly when compared with the 1958 wheat crop of 1.49 billion bushels. This plan would stop the buildup of present stocks and even reduce them. It provides for substantial savings in storing present Government stocks. It embodies many of the advantages of multiple pricing. Wheat growers believe it approaches the problem realistically.

Senator CARLSON said in introducing the bill: "This is a marketing control, not a production control program."

IN SUMMARY

What it is: A program developed to stabilize wheat marketing, thereby stabilizing the income of wheat producers and reducing Government stocks of wheat.

Who developed it: The National Association of Wheat Growers, recognizing the precarious position of the wheat industry, the drain on the Federal Treasury and the continuing accumulation of wheat and feed grains in Government stocks under the present program, is presenting this plan to Congress.

What it will do for the wheat producer: (1) Stabilize producers' income at reasonable levels, (2) allow freedom to plant and harvest crops best adapted without Government interference, (3) permit producers to carry reserve for short crop years, (4) prevent wheat prices from reaching disastrously low levels, (5) enable wheat producers to market best quality wheat in domestic food and export market, and lower grades in feed market.

What it will do for the feed grain producer: (1) Prevent shifting of diverted wheat acreage to feed grains, (2) materially reduce feed grain production on wheat farms, (3) make a substantial contribution to the balancing of feed grain supplies with demand, (4) aid in an orderly reduction of present surplus feed grain stocks.

Program that will save $788 million

	Present program	Wheat stabilization program
1. Price support operations:		
Amount taken over by CCC (annual increase)	200,000,000 bushels	Net reduction, 75,000,000 bushels per year.
Estimated acquisition cost per bushel	$2	
Total annual investment	$400,000,000	
Interest on investment at 2.5 percent	$10,000,000	
Storage charges at 17 cents	$34,000,000	
2. Reduction of CCC stocks:		
Annual reduction		75,000,000 bushels.
Present inventory value (acquisition costs and storage charge)	CCC stocks increased 200,000,000 bushels annually.	$2.80.
Reduction in present investment		$210,000,000.
Saving in interest annually		$5,250,000.
Saving in storage cost annually		$12,750,000.
3. Export subsidy costs:		
Estimated domestic price (terminal)	$1.90	$1.70.
Estimated world price (terminal)	$1.40	$1.40.
Export (bushels)	430,000,000	430,000,000.
Estimated total subsidy	$215,000,000	$129,000,000.
Totals—items 1, 2, and 3:		
Total difference in CCC inventory		$610,000,000.
Total cash savings		$148,000,000.
Total net difference in CCC inventory and cash savings.		$758,000,000.
4. Reduced storage costs on defense stockpile (recommended 5-year contracts on competitive bid basis):		
Storage rate per bushel	17 cents	11 cents.
Annual cost on 500 million bushels	$85,000,000	$55,000,000.
Cash savings in storage costs		$30,000,000.
Totals—Items 1, 2, 3, and 4:		
Total net difference in CCC inventory and cash savings (items 1, 2, and 3).		$758,000,000.
Cash savings (item 4)		$30,000,000.
Total cash savings plus net CCC inventory reduction.		$788,000,000.

NOTE.—The losses incurred in disposing of 200,000,000 bushels annually would average an estimated $250,000,000.

This We Owe to Our Country

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my answer to a letter recently received from Mr. Charles H. Percy, chairman, Republican committee on program and progress:

THIS WE OWE TO OUR COUNTRY

APRIL 9, 1959.

CHARLES H. PERCY,
Chairman, Republican Committee on Program and Progress, Washington, D.C.

DEAR MR. PERCY: I was pleased to have your letter of April 6. It states in part, "it is our belief that your own observations on the following questions would be invaluable to us in our efforts."

Your questions and my answers follow:

1. "What are the enduring principles by which Republicans must guide themselves now and in the future?"

Honest, efficient government. Oppose with all of our might, the wasteful spending of the people's tax dollar.

2. "What, in your opinion, are the chief dogmas we must discard?"

We have already discarded too many Republican dogmas. While those dogmas were operating, we built here the greatest Nation on earth. We must recapture many of those lost Republican dogmas.

3. "Trying to look ahead 10 or 15 years, what are the greatest problems you foresee for the United States and the Republican Party?"

Stay out of war, maintain a balanced budget, and prove to the so-called little fellow that he will suffer first and most from inflation caused by a constant unbalanced budget.

4. "In the same period, what are the greatest opportunities you foresee for the United States and the Republican Party?"

Broad publicity reaching into every home in America, reaffirming the Republican principles of the free private enterprise system for which we firmly stand; invite every loyal American to join hands with us, that they and their children may continue to enjoy the profits and blessings of liberty.

5. "Have you any other observations you think would be helpful to this committee in its attempt to state principles and objectives as well as analyze problems and opportunities?"

Yes, we should employ several of the very best editorial writers to be found. They should be scattered north, south, east, and west; they should take the offensive for our party. Publicize the virtues of individual Republican candidates from the courthouse to the White House, and nail the radicals, labor racketeers, and leftwingers in the opposition party to the mast with no holds barred. Use effective salesmanship for our party first, and then fight the lying opposition with truth and might. This we owe to our country.

Respectfully submitted.

BEN F. JENSEN,
Representative in Congress for the Seventh Iowa District.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. DAGUE. Mr. Speaker, there is not an American today with concern for our relationships on the international scene who has not experienced a benumbing shock as he hears the word that our top diplomat, and one of the greatest international figures of the generation, has been immobilized by a malignant disease.

The tears which our President could barely restrain fill the eyes of all of us who have been unwavering in our support of our great Secretary of State, and as he bows to the inevitability of his Maker's decree our sense of irreparable loss is well nigh overwhelming.

In every public address which I have delivered during the last 4 years I have underscored as heavily as I know how our dependence on this great and dedicated American. And I paid special tribute to his philosophy of "going to the brink" as the only practical summation of the principles of a sound foreign policy that have been enunciated since Theodore Roosevelt's admonition as regards "carrying a big stick."

John Foster Dulles—diplomat, statesman, churchman—a soldier battling in the cold war who has been stricken on the field of battle. Here is a compatriot whose place in the Hall of Heroes is assured and whose place in the hearts of his countrymen will be kept forever warm by an affectionate admiration. May Almighty God in His boundless mercy put His healing hand on our brother and ease his hurt. And may He give us strength to carry on in the spirit of this patriotic American.

"What Shall It Profit"

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 16, 1959

Mr. ROBERTSON. Mr. President, several weeks ago I asked permission to include in the CONGRESSIONAL RECORD a prize-winning editorial by Dr. L. Nelson Bell entitled "What of Tomorrow?" This editorial was based on a trip to Korea and a study of the report of a special committee of our own Army, analyzing and giving reasons for the alarmingly high percentage of our own boys who, when taken prisoner by the Communists, eventually succumbed to brainwashing and became collaborators.

Dr. Bell has written another prize-winning editorial entitled "What Shall It Profit?" which I herewith ask permission to have printed in the RECORD.

In this connection let me urge upon my colleagues the reading of a new book "In Every War but One," by Eugene Kinkead, one of the able editors of the New Yorker. This book and the two editorials have much in common although neither author is acquainted with the other. I would like to quote from the description of this book:

In every war but one that the United States has fought, the conduct of its servicemen who were captured and held in enemy prison camps presented no unforeseen problems to the Armed Forces and gave rise to no particular concern in the country as a whole.

Our experience in the Korean war, however, was different. Why? Why did 21 of the Americans captured as members of the United Nations forces decide to remain with the enemy? No other American captives— in all the wars in our history—had chosen not to return home because they preferred an enemy's form of government to our own. Why, in this war, had collaboration of prisoners with the enemy been so widespread that one out of three was known to have aided the enemy? Why were there so many instances of prisoners behaving brutally to their fellow prisoners? Why was the prisoner mortality rate higher than in any other war in which this country had taken part—while among prisoners of another nation that fought beside us in the U.N. line there was not a single death? Why did no single American prisoner escape?

Eugene Kinkead, one of the highly accomplished editors of the New Yorker—with the official permission of the Defense Department—has made a unique report on the intensive, 5-year study by the Army of the effect of Communist indoctrination of those of its men held prisoners of war in Korea—an overwhelming 90 percent of the total Americans so held. The highly disturbing and important findings produced by this investigation are here in this book—a fascinating study of vital interest to every American.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER PRIZE WINNING EDITORIAL
(By H. B. D.)

In 1953, our associate editor, Dr. Nelson Bell, received recognition by the Freedoms Foundation of Valley Forge for his Journal editorial "While Men Slept." For this he was awarded a George Washington Medal.

Last year Dr. Bell's editorial "What of Tomorrow?" was selected as the top editorial of 1957—newspapers, secular and religious magazines all being included in the survey. For this Dr. Bell was honored at a special convention at Valley Forge—Gen. Curtis LeMay, ex-President Herbert Hoover, Mr. Cecil DeMille, Rev. Frederick Brown Harris, and Gen. Lewis B. Hershey also receiving awards.

He received a lucite encased medal, a check for $1,000 and an exact replica of the watch George Washington carried at Valley Forge.

Just as this issue of the Journal goes to the press we have been notified that Dr. Bell's editorial "What Shall It Profit?" which appeared in the May 21, 1958, issue of this Journal has received special second-place recognition.

This editor is particularly gratified that this distinguished and dedicated foundation has selected this particular type of editorial as worthy of special recognition.

Our congratulations to them, and to Dr. Nelson Bell.

WHAT SHALL IT PROFIT?
(By L. Nelson Bell, M.D., F.A.C.S.)

The world is intrigued with the scientific progress which makes an assault on the moon a very real possibility. In almost every realm of human endeavor new discoveries and their exploitation open up vistas for the future, limited solely by the boldness of imagination and the willingness to explore.

To minimize present achievements or to question their ultimate dwarfing by those of the future is utterly foolish. In the writer's own specialty (surgery), the advances of the last dozen years have opened up fields at one time thought to be beyond the realm of successful approach. To illustrate: That which is being done in the area of cardiac, vascular, and neurosurgery is so startling that the public is but vaguely aware of it. For all of this we should thank God and take courage.

But it is imperative that we shall not become blinded either by that which man has accomplished, or that which yet lies in store for the future. It is desperately important that we maintain our proper perspective. Man has never discovered, nor can he, anything which the Creator did not put there in the first place. For this reason it is of primary importance that we accord to God His rightful place in His own universe. That He is so often ignored, or pushed into the shadows, by the assertiveness and blindness of man is but a reflection of man's sinfulness and need for redemption.

What shall it profit if we shall successfully conquer outer space, set up a station on the moon and attain domination of these hitherto unattainable areas of the universe if at the same time we do not learn of Him through whom alone the inner reaches of the soul are cleansed and disciplined?

For a generation we have worked to establish the highest living standards the world has ever known. Gracious living has become a reality for millions. Compared with the rest of the world we are wallowing in material prosperity. But what shall all of this profit us should we lose our national soul in the process?

No amount of religiosity, or pious affirmations or participation in church programs can compensate for the lust and selfishness and pride which is gnawing at the vitals of our moral and spiritual lives.

Enamored with the achievements of today, and the promise of yet more ease of living for tomorrow, we need to stop before it is too late and ask ourselves the question: "What does all of this profit if Christ is left outside the door?" How bleak and hopeless the future without Christ, and yet our desires seem so largely centered on the present.

We are concerned about the problems of education. We are frantically trying to recoup our lost supremacy in the realm of science. We recognize the very real danger of becoming a second-rate power from a military standpoint. These and many other problems highly deserve our concern and should enlist our support for every legitimate and fruitful effort to improve the situation. But at the same time let us remember that a nation's strength is to be found primarily in the character of its people, for it is righteousness which exalteth a nation and sin that drags it down. The trend in America, so far as moral and spiritual standards is concerned, is down and not up, of the flesh and not of the spirit.

Because of this it is of vital importance that the church shall maintain her vision and discharge her rightful function. We have no fault to find with those who would have the church exercise upon the contemporary social order her influence for righteousness, provided there shall be a comparable zeal to maintain the personal message of the church to sinners.

The Holy Scriptures leave neither to the imagination nor the interpretation of men just what is the content of the Gospel message and in the forefront of that message is the fact that men out of Christ are lost sinners, that they need His cleansing and redeeming salvation, and that while the wages of sin is death the gift of God is eternal life through Jesus Christ our Lord.

It is the dilution, the evasion of, or the substitution of something else for the message of sin, of righteousness and of judgment to come which is the most ominous sign on the horizon of contemporary Christianity. We are rightly concerned about Christian race relations; about a just social order; about a sense of world brotherhood which recognizes the needs and aspirations of the less fortunate. We long for just and durable peace, and sanction a multitude of humanitarian activities, all of which are good—and for which we should strive. But what shall the attaining of all of these things profit us, or those for whom we are concerned, unless at the same time Jesus Christ is received as their Saviour from sin and made the Lord of their lives?

The primary task of the church is to preach Christ, crucified, risen, and coming in triumph. What shall it profit in the church if she neglect this task or dilute the content of the message while helping usher in a world order still in the clutches of the Devil?

We are not being facetious but are desperately in earnest. We are in the gravest danger of continuing to treat world symptoms while we neglect the cause of those symptoms—sin in the human heart and for which there is but one course, and for the preaching of which we and we alone are responsible.

Looking through the astigmatic lenses of immediate problems we are in danger of losing sight of those which are ultimate and eternal. The Apostle Paul reminded the Corinthian Christians that he had put first things first: "For I delivered unto you first

of all that which I also received, how that Christ died for our sins according to the Scriptures" (I Cor. 15: 3).

It is because this is no longer the primary message of so many pulpits across America that we as people, and the church as the church, stand in jeopardy. God is not going to be mocked. The salvation He wrought out for mankind in the counsels of eternity and brought into effect on the cross of Calvary is God's way and there is no other.

In every activity and emphasis the individual Christian and the church as such should ask the sobering question: "What shall it profit if I carry this through to a successful conclusion—only to lose my own soul or the souls of those who need the message that Christ died for our sins?"

There is no better way to keep our perspective of time and eternity than to frequently ask ourselves the question: What shall it profit?

Get the Government Out

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a reprint of an article which appeared in the July 1958 issue of Farm and Ranch magazine, published in Nashville, Tenn.

Readers of Farm and Ranch were asked what they thought on several national issues. The figures shown below on the survey will be of interest to all of you. The article follows:

Get the Government out—"Farm and Ranch" asked: "What do you think about these national issues?"—Here is how our readers answered

	Number	Percent		Number	Percent
1. Cooperatives should be taxed, nationally and locally, on same basis as corporations.	1,402	72.2	1. Cooperatives should not pay Federal and local taxes on same basis as corporations.	540	27.8
2. Postal rates should be raised (including rates on magazines) to enable the Post Office Department to break even.	1,237	63.2	2. Postal rates should not be raised (including rates on magazines) to enable the Post Office Department to break even.	719	36.8
3. Government should guarantee support prices at 90 to 100 percent of parity, and control production on major crops.	521	26.9	3. Government should not guarantee support prices at 90 to 100 percent of parity, and control production on major crops.	1,416	73.1
4. Farming should return to a free supply-and-demand system, as soon as possible, with minimum Government control.	1,730	87.5	4. Farming should not return to a free supply-and-demand system, as soon as possible, with minimum Government control.	248	12.5
5. Public utilities should be developed and operated by private companies instead of by the Government.	1,652	85.0	5. Public utilities should not be developed and operated by private companies instead of by the Government.	291	15.0
6. States should run their own schools without interference from Federal Government, and Federal aid to schools should be stopped.	1,606	80.9	6. Federal aid to schools is good and necessary.	380	19.1
7. Integration in schools should be prevented by any legal means.	1,486	77.6	7. Integration in schools should not be prevented by legal means.	429	22.4
8. Federal aid to States means extravagance, high taxes, waste and Federal control. It should be stopped.	1,465	75.3	8. Federal aid is good because it helps the poorer States which can't help themselves. It should be continued.	481	24.7
9. Secretary Benson is doing a good job as Secretary of Agriculture.	1,027	55.0	9. Secretary Benson is not doing a good job as Secretary of Agriculture.	839	45.0

NOTE.—Figures above are based on a total of 2,016 returns. Individual totals may vary since in some cases readers did not indicate a choice.

HAVE SOUTHERN FARMERS RADICALLY CHANGED THEIR THINKING, OR HAVE THEY BEEN MISJUDGED?

The majority of Farm and Ranch readers who answered a recent survey in this magazine gave answers which were quite surprising to Farm and Ranch editors. And they may be considerably more surprising to some politicians who think they're voting the way the majority wants them to vote.

Farm and Ranch editors were anxious to know what our readers think on vital questions of the day. Unlike some surveys this one was conducted, not to prove something, but to find something out. As every statistician knows, figures don't lie but liars do figure. Forty bowlegged and 40 knockkneed women in a room average out 80 straight-legged women.

The startling facts: 72.2 percent of Farm and Ranch readers answering this survey think co-ops should pay the same national and local taxes as corporations; that an almost unbelievable 87.5 percent favor returning farming to a free supply-and-demand system, as soon as possible, with minimum Government controls; that 75.2 percent vote that Federal aid to States should be stopped.

We leave it to the reader—and to the experts—to explain this return. True, some of the questions are a choice between black and white, when many readers might prefer some shade of gray. On the other hand, to have included gray areas would possibly have complicated the survey and made clear-cut answers less likely.

Also, Farm and Ranch has previously editorialized on these problems, so perhaps the Farm and Ranch audience is preconditioned and does not represent the typical southern farm audience.

Perhaps the survey is partially a tribute to Farm and Ranch's literate, serious-minded audience. Or, perhaps it indicates a sharp change in farmer thinking which is as yet largely unrecognized in political circles.

Perhaps it indicates that people are awake to the dangers of a centralized Socialist-labor welfare state and are ready to follow the right kind of leadership; honest no-ax-to-grind leadership fighting for the best interests of America. Perhaps farm people are fed up with Government bureaucracy, waste, pork-barrel politics, foreign giveaway, inflation—fed up with farm programs which have piled failure on top of failure, mistake on top of mistake, and left the farmer worse off than if there had not been any program. There's no doubt that there's been a change in southern grassroots thinking—so much so that some southern Congressmen with their ears to the ground have asked Secretary Benson how they can get off the hook. They're now ready to renounce some of the ridiculous farm programs they've supported since the first little pigs were plowed under. They want to get back to supply and demand, commonsense, and the multiplication table without losing face and votes.

The results of this survey indicate the southern farmer once more reasserts his historic independence, his fear of government, his devotion to self-help, and his love of freedom. We would not be truthful if we failed to state that we are greatly surprised—and greatly gratified—by what the response showed. We plan to continue testing our readers' attitudes and convictions on other subjects. And we'll continue to report the results, whether bowlegged or knockkneed.

Report of Dr. William M. Hitzig on the Ravensbrueck Lapins

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks, I take this opportunity of placing in the RECORD a most significant report by one of the world's leading physicians, Dr. William M. Hitzig.

This distinguished American and humanitarian is once again acting in the case of humanity.

Dr. William M. Hitzig, of New York, served as medical consultant to the Hiroshima maidens project.

The volunteer band of Americans that brought 25 atomic bomb victims to the Mount Sinai Hospital, New York, for plastic and reconstructive surgery has recently been called upon to help in the rehabilitation of a group of Polish victims of Nazi medical atrocities, known as the Ravensbrueck Lapins.

On their behalf Dr. Hitzig proceeded in October 1958, to Warsaw, Poland. His purpose was to examine the survivors of these experiments with the view of bringing to America those who can be benefited by medical care.

What follows is Dr. Hitzig's report on his visit to Warsaw to Mr. Norman Cousins, editor of the Saturday Review of Literature. The greater part of the report was written while he was in Africa with Dr. Albert Schweitzer. It was completed on his return to New York.

The report follows:

LAMBARENE,
FRENCH EQUATORIAL AFRICA,
October 20, 1958.

Here amidst the relative peace and serenity of Albert Schweitzer's Lambarene, I have found the first opportunity since leaving

Warsaw to prepare a comprehensive report for you on the Ravensbrueck Lapins project. I believe I can safely say that the committee, which included Jeanne Benenson, Erica Anderson, and yours truly, performed well in a rather delicate situation. The fruit of our labors will probably first see light some months hence when the cornerstone we have laid during our two recent Warsaw visits will come into prominent focus—assuming, of course, that the project will meet no obstructions from any untoward (at present unforeseen) sources seeking to thwart its birth and development.

The Polish project, especially its genesis with its initial labor pains, has been a source of great satisfaction to our committee, if I may be permitted to speak for the entire group.

Working in the front alley of a confused world situation, with Poland's unique role as it relates to the East-West struggle not yet clearly delineated, this medical and public relations combine turned in an excellent performance in the art of creating and maintaining good will. This seemed a herculean task the moment we touched Polish soil, because we became aware very early of the contrasting forces involved in the Polish political upheaval. From our initial contacts with the distinguished Polish medical committee appointed by the health ministry and by ZBOWID (the Polish governmental agency for the care of concentration camp survivors) at a conference held on the day after our arrival, we realized that our future work with the Lapins had to take into consideration a much broader canvas than we had originally anticipated. As a result, we sought, and we were prepared for, new vistas which steadily unfolded themselves until our enthusiasm for the project eventually reached a much higher pitch than it had at the beginning.

Here I must confess that when Miss Caroline Ferriday first consulted me about the Lapins project in December of 1957, and even much later when you were already involved in its implementation, I was still uncertain about the feasibility of bringing the Polish ladies to the United States for medical care. At that time I could not foresee how such a project could possibly exert a beneficial influence in fostering brotherly love on the international scene, nor how we could find more than superficial justification for our own involvement as the original Hiroshima committee in a Polish reparations problem which, after all, concerned only that tiny segment of "Ravensbrueck" Poles who had survived Nazi barbarism under the plumage of experimental surgery.

After several days in Poland my uncertainties gradually vanished. My change of heart occurred when our committee began to document horrendous episodes of criminal surgery that were perpetrated from 1940 to 1945 in the concentration camp at Rovensbrueck, as well as other inhumanities that were directed against the Polish people everywhere, not only in other concentration camps throughout Central and Eastern Europe, but in every nook and corner of Poland. (Shelled facades of almost every old building still stand in Warsaw to bear silent testimony to those grim and heroic days of Nazi butchery.) Even then, I was still guarded about my complete approbation for the plan to aid only a selected group of Ravensbrueck victims. About 1 week later when I returned to Warsaw, following a hurried tour of Moscow, I was convinced that the Ravensbrueck Lapins project deserved our full-hearted and active support; even if it served as only a symbolic gesture. I knew, however, that several disturbing angles still had to be solved. My trans-Atlantic telephone call to you from Warsaw betrayed my earliest feelings. And my initial written report, submitted to Mrs. Benenson several days later, represented my unbridled thinking at that time.

To understand the broad significance of the Lapins project, it is not necessary to relive the human misery of a decade and a half ago nor view it against the background of Polish history today. Yet, being on the Warsaw scene and coming face to face with the many unsolved human problems that have persisted since the Nazi marauders willfully ransacked the minds and hearts and polluted the bodies of Poles in their carefully planned strategy of Poland's gradual extermination, helped me gather unforgetable impressions. I gained these not only from the agonizing, incredulous stories of broken, middle-aged women who still bore their visible and invisible scars of the bitter struggle for survival during years of confinement at Ravensbrueck, but also from casual meetings with every-day people in all walks of Polish life who still suffer emotionally from both the unsavory flavors of Nazi occupation, and from the ruthless Stalinist domination that followed.

Each and every Pole I met deplored the heinous crimes of the recent past as well as the present down-trodden spirit of the "People's Poland." I will never forget their whispers: "Look what has happened to our poor Poland," as they pointed shamefully, with tears, to the towering eyesore in the heart of Warsaw. "You can see it from every part of our beloved city. We call it our 'birthday cake.'" This architectural Babel, a gift from Stalin to the Polish people, is styled after Moscow University and is known as the Palace of Art and Culture. "It reminds us forever that our country is even now, as it has been throughout its history, a helpless buffer state molded at will by our powerful neighbors."

I gained my impression from meeting bureaucrats of the higher and lower echelons of Polish officialdom whose minds revealed a subtle kind of dichotomy in their cryptic thinking which was intended to hide from obvious view their basic patriotism toward the mother country.

I gained my impression from visiting the concentration camp at Oswiecim (Auschwitz), now a museum, and seeing firsthand the residual of the flagrant cruelties and of the ideological tramplings which man had imposed upon man—inhumanities that outstripped (quantitatively, if not qualitatively) the ancient barbarism of the orientals. This workshop of bestiality emphasized even more the incomprehensible dynamics behind the purposeless and pseudo-scientific experimentation of Ravensbrueck.

I gained my impression from heart-to-heart discussions with Polish medical men and women who practice their respective specialities of surgery and medicine under governmental control. However, their thinking, unlike that in the U.S.S.R., was not tainted either through fear or through constant exposure to ideological regimentation. They revealed, instead, a common heritage with the traditions of Western medicine, which brought joy in "doing for others," especially wherever there was a need for alleviation of human pain and suffering. When greater confidence on a personal basis was finally attained, they spoke to us freely of the present confusing Polish situation, of the need for these Lapins to go to America to represent, not only their own cause, but that of their countrymen who had shared similar (and some even more tragic) fates. (Almost every Polish family bore the cross of one casualty or another during World War II.) They made us understand the broad significance and the humane implications of America's open arms, of the great urgency for Poland to continue to create and maintain meaningful ties with the West, of their own personal harassments as professional servants of the state, and of the relentless role that their powerful neighbors play directly and indirectly in thwarting the fullness of their daily lives. They stressed the psychological benefits of renewed hope (in contrast to present despair) that would result from such a visit to America—and of untold rewards that would be heaped not only upon each Lapin, but upon Polish people everywhere. In this way, they pointed out, the world would not forget the infamy of recent Nazis medical and surgical experimentation, thus helping to insure that such atrocities could never be repeated.

The canvas broadened constantly during my two Polish visits. When I returned from Moscow, I became immediately aware, despite previous inconveniences and restrictions in Warsaw, that, relatively speaking, greater freedom did exist in Poland—a country now hopefully veering more and more toward Western standards. A sense of heaviness and exploitation seemed strangely lifted from my mind and body when I returned to Warsaw; I felt free to breathe more deeply once more—even to wheeze if I chose to do so. I realized that even in Communist ranks there had been a tendency to lean toward the West under a political modification called revisionism, as opposed to the dogmatism of old line Stalinism and that Gomulka was doing his utmost to clean house of both left and right wing elements to maintain the precarious balance of his avowed aim to lead Poland on the road to a form of moderate socialism. I had learned earlier from my attempt to contact revisionist thinkers and journalists that their wings had been clipped because Gomulka regarded revisionism as synonymous with bourgeois-liberal tendencies of a nature more sympathetic to the West.

It was in this political climate of verification and the abolition of revisionism that our committee visited Poland and which makes our work with the Lapins, to my mind, even more important at this time. The need for such contacts can readily be gleaned, for example, from my failure to establish a footing with Polish intellectuals. A journalist and prominent revisionist would not even talk to me on the telephone. She bluntly told my interpreter she could not be seen with an American no less talk to him on the phone since "One never knows whose telephones are being tapped and when." Her husband was recently transferred from an important editorial post to head an insignificant "Tageblatt" in the hinterland. I was shocked when she refused to accept a gift from an American friend for whom I had carried it this great distance unless I could quietly deposit it at a club for journalists in Warsaw. Even the poet Slonimski, I was told, could no longer maintain any obvious communications with people from the West, especially with Americans. I learned from visitors at the Bristol Hotel, as well as from members of the lesser intelligentsia, that Poland could at this time go no further toward Western standards of political freedom. That was why Gomulka was now forcing discontinuation of university student publications which were critical of government policy. That was why, in addition to clamping down on universities, he was stricturing the intellectuals, the journalists, the philosophers, etc.; he was extending the tightening up processes now to include even lesser Polish contacts with the West.

Despite all these cross-currents and seeming contradictions, I feel that Poland still holds a unique position as a nation behind the Iron Curtain and deserves our fullest consideration for the following reasons:

1. Its moderate socialism differs from its parent model, the U.S.S.R., in two outstanding respects:

(a) Private farming exists in Poland, as opposed to collective farming in the U.S.S.R. Available statistics state that about 80 to 85 percent of Polish farming is privately owned.

(b) There is a policy of co-existence or accord with the Catholic church. This, I think, is only a short-lived, transitory affair, despite the fact that Poland is regarded as the most Catholic country in Europe. Judging by an intimate conversation I had with our Communist guide who was presumably specially selected to accompany our committee to Oswiecinl concentration camp, the outlook for Catholicism in Poland is not too good. I quote: "Catholicism will eventually die with the death of the older generation. The younger generation is having a different bringing up. The piety that has existed, and still exists, in the old will never again be part of the young." I later learned that the government has already cracked down on formal religious teaching in state-supported schools and that even religious publications are censored. The uncensored ones are legally abolished.

2. It still has some connection with the West, but, as I have indicated above, this may dwindle in time—the tightening-up process progressing steadily from orders meted out by the upper echelon. Some remnants of old Poland, when it was steeped in the Western tradition, still remain—as in the Zelazowa Wola, the estate which marks the birthplace of Chopin, an hour's ride out of Warsaw. Here every Sunday during the summer months, between the hours of ten and twelve, outstanding concert pianists (employing the old Chopin piano) perform in the regality of the West. The doors and windows of the old house are opened to let the music reach the thousands who have gathered on the lawn to hear it. The shabbiness of the modern audience contrasts dramatically with the austerity and the capitalist splendor of the past, but both seem united by the universal bond that great music always inspires.

3. Despite recent restrictions there is nevertheless everywhere in Poland a sense of freedom of expression of which the Pole readily boasts when he discusses the days prior to October 1956. Although this may also lessen in time, I found that among the Polish professors, in particular, there was a sense of academic freedom, even though their outgoing opinions were only confidentially transmitted.

It was in this political climate, as dramatically revealed in both the relative freedom of the Polish mind to still speak out and in its hunger for western ties of any sort, that our project became suddenly urgent to me as a tiny voice for spreading the gospel at this unique period in world history. An interesting aside which may be revealing occurred at a dinner given for our committee by ZBOWID. There, while sitting beside Mr. Banach, the president of ZBOWID, I told him in all humility that our project was but a "drop in the ocean" in the longstanding happy relationship that has existed between our respective peoples since the birth of our Nation. He quickly disagreed with me and stated: "No, it is like a river flowing into the ocean." This contradictory thinking on the part of an alleged Communist was puzzling in the light of what was going on in Poland, but the enthusiasm with which Mr. Banach sponsored the Lapins project, under the aegis of ZBOWID, may nevertheless be significant.

Even if I repeat myself, indications for the project exist, and they are as follows:

1. To further diagnose and, if possible treat the direct and indirect ills of the Lapins, especially to exclude the possibility of amyloidosis, a complication that often results from longstanding suppuration, e.g., osteomyelitis. Most of their serious ills (if any) would fall within the realm of internal medicine or psychiatry and, in my opinion, can readily be treated anywhere medically and/or psychologically. But even just the visit to America, with all its byplay, hospitality, etc., might offer adequate psychotherapeutic benefits, as in the case of the Hiroshima maidens, where the psychological regeneration that took place while they were in the United States of America was perhaps even more effective than the act of lessening the physical scars through cosmetic surgery.

2. From a surgical standpoint, plastic or reconstructive surgery might be remotely indicated in a few badly mutilated cases, the mutilation being caused not only by the original surgical disfigurement of the Nazi pseudo-experimentation, but possibly by the attempts to drain bone abscesses or deep-suppurations within the operated extremities. It is not at all unlikely that subsequent unsuccessful Polish attempts, after the war ended, to improve the late sequelae of the initial criminal operations, may have added to the tissue distortion and scarring.

3. The issue may be debatable as to whether at this late date it would serve any useful purpose to remove from man's memory the weeds which have almost crowded out and erased the unforgivable cruelties and bestialities of Nazi medicine. Nevertheless I feel that there is great merit in recalling to the minds of the world's peoples the infamy that horrified mankind when it was exposed at the Nuremberg trials over a decade ago, and which has been so quickly forgotten. The Lapins bore living testimony against their torturers, and, although the scientific purposes of these surgical crimes have never come to light, it is assumed that they were expressions of national policy under the Nazi regime. These men of science were strangely employed either through fear or dedication as the instruments or puppets for permanently establishing the concept of the super race. In this way, the Nazi rulers hoped that perpetuation of Aryanism as a dominant people could be assured for all time—a dominance which would exist not only in Europe but throughout the rest of the world. The rekindling of such knowledge about human bestiality might deter future generations of the human race from committing similar crimes against man, a purpose which the presence of the Lapins in America would serve immeasurably.

4. The subtle handling of this delicate subject of Nazi criminal experimentation might achieve one of the most important hopes of the Polish people, including that of ZBOWID, namely the prompt settlement of the reparations claims against Germany which, to date, she has refused to recognize. The Bonn Government has offered as an explanation for this action the fact that there are no diplomatic relations between Poland and Germany at the present time. I am hopeful that such a good will journey of the Lapins to America, if properly handled, might help not only in causing Germany to reconsider the reparations problem, but in establishing also a better understanding on other subjects that are at present harassing the relations between Germany and Poland.

5. The Polish people who reside behind the Iron Curtain might feel the influence of the Lapins' presence in America. This nucleus of women could serve as a means to broadcast by word of mouth how good will and brotherly love operate through freedom and kindness. Experience has taught us, if we may borrow from the Hiroshima story, that our Polish visitors could be excellent ambassadors of good will to perpetuate the human story of America—just as the Hiroshima Maidens were when they returned to Japan 2 years ago.

6. To teach the Lapins some gainful occupation during their stay in America, which might aid them later in their battle for survival. Many of them have been disabled by disease and have lived in penury without some means of earning a livelihood.

At a tea given by Dr. Eleanora Reicher, the professor of rheumatology, she made a plea for American physiotherapists to come to Poland to teach the citizens the specialty of physical medicine which has reached a high degree of technocratic efficiency in the United States of America. The professor has been greatly distressed that so little help has been given to young people who suffer serious disability from Still's disease or from rheumatoid arthritis. Mrs. Benenson proposed that the Warsaw committee select from among those who will be coming to America a group whose interest might be to lessen the suffering of those less fortunate who will be remaining in Poland. She thought that arrangements could be made through cooperation with American institutions whereby they could observe and acquire some knowledge of either physiotheraphy or occupational therapy.

During my second visit to Warsaw, I repeated Mrs. Benenson's original suggestion to Dr. Dworakowska, who as assistant to Dr. Reicher was equally dedicated to this phase of the rehabilitation program for the disabled young. (I was told that Dr. Reicher was stricken with a heart attack on the eve of my arrival from Moscow.) I urged her to select a group of volunteers from amongst the Lapins and introduce them to the needs of rheumatology. They would thus become better versed in this field prior to their departure for America. I thought that in this way the Lapins would learn the rheumatology problem as it exists in their country and become fired with enthusiasm to see this problem through when they arrive in our midst. I also told Dr. Dworakowska that I would present this phase of the problem to our committee in New York and, if approved, we would solicit the cooperation of American rehabilitation centers such as that headed by Dr. Howard Rusk. In my discussions with Dr. Rusk prior to my departure for Poland, he assured me of his willingness to cooperate on a therapeutic level. I had no foreknowledge at that time of this possible phase of the project.

7. The humanitarian implications of the project are tremendous. They are obviously of great value for international consumption as an American expression of good will and of brotherly love, emanating from private citizens and not from governmental sources. I learned via cable from Jeanne Benenson that Ambassador Lacey, head of our State Department East-West contacts staff, had endorsed this project wholeheartedly. This bilateral endorsement from both Communists and Americans at this stage was most encouraging.

If certain suggestions are accepted, I hope the project will be executed as quickly as possible.

Thus far, I have discussed the contradictory forces that served as background for our project and have indicated the need for accepting the Lapins project even before I reported on the mechanics of our visit to Warsaw. Let me, therefore, take you now to the conference room at the Orthopedic Clinic of Professor Gruca on the morning following our arrival.

An assemblage of about 30 physicians met us when we entered the long room, and we found them sitting on both sides of a lengthy conference table at which refreshments were being served continuously. In adjoining anterooms, the women of Ravensbrueck waited patiently for the conference to begin. Professor Gruca, a distinguished orthopedist, made the opening address and then called upon each attending physician to present the case of the Lapin who had been assigned to his particular care. As each Lapin appeared, she took her place in a chair. They ranged in age from about 30 to 60 years. They sat motionless, as if isolated from the world about them, and listened to a scientific recitation of the genesis of their scars—the lengths in centimeters, the depths and how their organs were affected by the presence of pus that oozed from their wounds over a long period of

time. Theirs were pale faces, sickly faces, tortured faces, embarrassed faces, faces bathed in tears as they followed a minute recital of the cruelties they had suffered. Only a few looked upon their situation stoically, probably compelled by sheer pride not to betray the tragedy of their concentration camp days. Most of them, however, were unable to control their emotions.

One former prisoner related her story to me. It was a characteristic one that could apply to all members of the group. Her tragedy began in August, 1942, when she was among a group of Polish women from Warsaw and Lublin who were repeatedly tortured on the slightest provocation. Not infrequently, deaths from torture or from firing squads occurred before their eyes. It was part of their daily routine of being alive and of living.

"One day," she related, "I was suddenly pulled out of the barracks and, together with several of my girl friends, was brought into the camp infirmary. I was ordered to lie down on a crude operating table. I asked the purpose of the operation, since I had no complaints. No answer came, so I refused to obey their command. When they finally overpowered me, I was thrown onto the table and gauze saturated with ether was stuffed into my mouth. I feel asleep. I do not know when I awoke, but I found myself lying in bed shaking with terror. Both my legs and thighs were in casts extending up to the groin. Openings had apparently been cut into the casts at the level of the shinbones. I will never forget the agonizing pain I suffered that day. What was most horrible was that no one told me what had been done—and why. Naturally, I thought this was the end.

"On the following day, several Germans in SS uniforms covered with white gowns came to my crude bed. One of them, presumably a physician, injected some oily substance through the opening in the cast. The pain was excruciating, and I had the sensation after the injection that my calves had increased tremendously in size. My fever rose to over 40 degrees (over 104° F.). My stomach became upset and I vomited throughout that night.

"A week later, the casts were brutally removed, and the physician (may God forgive me for giving him that title) incised the swollen, pussy wounds with a scalpel, and disregarding my torturing pain, he continued to examine the wound for a lengthy period. I endured a hectic fever for a long time, and the wounds did not heal for months and months. I was only able to move about, with great difficulty, 6 weeks later. In the meantime, I learned that my Polish friends who had come to the sickroom with me on that fateful day had been similarly butchered.

"The pain and the fever continued, and it seemed my suffering would never end. Walking precipitated insufferable pain. For some strange reason, the physicians who had previously been concerned about my legs suddenly lost interest. Occasionally, when one did inquire about my health, it was not to discuss my physical condition, but only to sneer at me with disgust. Pus continued to drain as if from a faucet, and only after a year did the wounds begin to granulate slowly and heal. At the present time, long deep scars are present in both my calves and in the lower part of my thighs, which cause me great discomfort and disability—but I am thankful that I am alive."

The Medical Commission at the conference that first morning consisted of leading Warsaw professors and their staffs. It was headed by Prof. Dr. A. Gruca as chairman, and included Prof. Dr. Z. Askanas, Docent Dr. I. Hausmanowa, Docent Dr. Z. Molowski, and Dr. H. Dworakowska. After the presentation of each of the Lapins, including their histories, the physical findings, the X-ray examinations, and the recommendations for therapy, the meeting ended with a summing-up speech by Professor Gruca. He then called upon me to address the group for a few minutes. I told them the purpose of our visit was to help the victims of the criminal experiments and that it was our hope that the women who had suffered these bestial brutalities would enventually be invited by our committee to come to America. I assured the doctors that these women in Poland had had the best care that modern medicine anywhere could offer, and that we in America could not improve on any of the methods of therapy which they have already received in their own country.

That evening, a special meeting was organized at the Orthopedic Hospital where all the victims gathered. At this meeting, Jeanne Benenson and I talked to them individually. The women seemed most enthusiastic about our visit and exhibited great cheer. As each one of them came up to be examined (the examinations being limited solely to the neck, the heart, and the blood pressure), Mrs. Benenson asked them whether they would be willing to take the trip to the United States. Only about 35 answered affirmatively. One of the older women who has passed the sixth decade of life said, "I would like to go but I am too old. Better that I let my place go to a younger person." When the examinations and the meeting were over, the women stood up as a group and sang beautiful and warm Polish folk songs, songs that moved the spirit and the soul. They were unlike the tragic song which I still recall which the Hiroshima girls sang at the cenotaph in Hiroshima prior to their departure for America and which they resolved, once here, never to sing again. And they never did.

Here in Lambarene, I have thought a great deal about the fate of the Lapins' project. What will happen when we, the Warsaw committee, return? Will the project be endorsed by the whole committee? And what will be the reaction of the American public? Many more questions will probably be asked of us: "Will our Government approve the project?" Inasmuch as you head our committee, you probably more than anyone else will have to face these questions in your travels about the country. In that case, my medical evaluation of the Lapins' health as it exists today may be of help to you. Of course, my impressions are based on my own superficial or limited examination and mostly on the findings presented to our committee at the conference with the Polish Medical Commission. I will attempt to summarize them in a general way. These evaluations have already been tabulated on individual cards in joint session with Professor Askanas and are already in your possession.

The examinations as transmitted to us by the official Polish Medical Commission revealed that there was almost universal scarring of the lower extremities following the operative incisions. The latter involved one or both legs and either one or both thighs. In some, both thighs and legs were incised once or twice or on occasions three times. In others, the multiple incisions seemed illogically arranged. In four instances, only injections were employed in these pseudo-scientific experiments. The injections were presumably of infectious material (the bacteria of gas gangrene, and probably the bacteria of tetanus or of pyogenic infections), but the nature of these could not be determined. In a few cases, in addition to the incisions, manipulations or fractures, even removal of segments of bones of the lower extremities were carried out. It appeared also that experiments to graft bone tissue were on the Ravensbrueck agenda. German surgeons from a nearby military sanitorium (probably Hohenlychen) were supplied with sections of bone to mend bone deficiencies in soldiers. These healthy Polish women of Ravensbrueck were therefore designated to serve as a living bone bank. Small splinters or larger segments of the bones of the legs were removed for this purpose. Foot bones, and at times bones of varying size were removed from shoulder bones, collar bones, and even from the spine. I was told that an entire shoulder girdle with the attached extremity was removed from some Polish girls in the attempt to graft them on Germans whose shoulders were severed by war explosions, but that these victims never survived to tell their gruesome tales to the world.

In some, or possibly even in many of these incision cases, the infections that ensued following surgical manipulation were a consequence to the infectious material that was willfully introduced into the operated wounds. In others, the infections that ensued may have resulted from lack of aseptic technique, because the nature of the procedure was frequently complicated by mad violence which members of the Gestapo or of the SS exhibited in their attempt to overpower their unwilling victims. Anesthesia was just thrown into their faces without any mask.

As far as I can see, the degree of scarring and distortion of an operated extremity was dependent upon the following factors:

1. The severity, duration, and the nature of the suppurative condition (directly induced or accidental due to poor technique) at the operative site.

2. The integrity of the underlying bone when segments of bone for bone grafts were partially or totally removed.

3. The occurrence of soft tissue abscesses requiring incision and drainage or of recurring osteomyelitis with sequestration. In some cases, there were frequent recurrences even 13 to 15 years later. I was told that the latest recurrence occurred as recently as 1 year ago.

4. Depending upon the initial operative trauma, the following sequelae occurred which distorted the affected extremity secondarily:

(a) There was atrophy of muscles.

(b) There was atrophy of bones leading to foreshortening of the affected extremity and consequently, because of the poor posture that ensued, to secondary changes detrimental to the spine.

(c) There was osteoporosis (or softening of the bones) and periostitis of bones at the site of the infection.

(d) There was ankylosis (contractures of joints) at the site of the infection.

(e) There were peroneal nerve injuries, either those that followed direct incision of the nerve at the time of the criminal operations or secondarily due to damage by the suppurative processes or by constriction of neighboring scars that developed following long-standing infection. There were several cases of foot drop among the Lapins for this reason, and neuro-surgical repair was evidently carried out and may again be attempted in such instances after careful evaluation in our country.

(f) Other nerve injuries, such as damage to cutaneous nerves, either the direct result of incision at the time of the criminal operations or following long-standing suppuration, leading to all sorts of muscle aches and pains (myalgias), neuralgias, etc.

It appears that the involvement of the lower extremities may have led to secondary changes in the spine which, in a few Lapins, has caused considerable disability. These may be attributed to mechanical factors, such as postural defects secondary to foreshortening or atrophy of bones as occurs in the course of infection and disuse, or due to complications such as ankylosis of ankles and peroneal nerve injuries with foot drop. In some, the spinal alterations are further complicated by the development of chronic

spondylitis or osteoarthritis. Such changes probably owe their origin to the toxic effects of suppurative foci in the lower extremities. The history of hectic fever of long duration indicates that some of these survivors may have suffered from a septicopyemia which may have been complicated by secondary foci of suppuration in the spine and that these, on hearing, produced the secondary changes of those bones. Amyloidosis as a possible disturbance of protein metabolism incidental to long-standing suppuration may have to be implicated as a possible explanation for the arthropathies, but no laboratory means for such identification was available at the time of my examination of the Lapins. This laying down process of an abnormal protein in the connective tissues in prolonged suppuration will be studied in those who may come to America—but of course those most seriously affected may not be acceptable for the long journey.

It is not inconcelvable, however, that some of the medical conditions that these women presented were not due to the atrocities of Ravensbrueck but due to the "wear and tear" of life and of living. Malnutrition and avitaminosis often do accompany the famine of war and may lead to disturbances attributable to such conditions. But in these cases, known suppurations led to a variety of toxemias whose pathogenetic effects could not be denied as possibly playing prime roles in the genesis of certain diseases.

There were also the shocks to the nervous systems from which many suffered repeatedly, and these must have precipitated stress phenomena which played an etiologic role in the development of certain syndromes. I was impressed with several instances of Graves Disease (hyperthyroidism) due to toxic goitre, and of several cases of essential hypertension which may have followed the extreme emotional reactions of the Ravensbrueck horrors during the periods when they feared death or even when they dreaded survival following their various tortures.

I was impressed with the many disturbances of the involuntary nervous system which come under the medical label of "autonomic imbalance" (which is synonymous with dystonia neuro-vegetativa). There were instances of cardiac neuroses, characterized by atypical pains suggestive of pseudoangina.

Many of these girls, at the time of my examination exhibited extra systoles, which are extra heart beats that are of a relatively benign nature and are probably unrelated to Ravensbrueck. They often occur under happy conditions and simply represent an excessive irritability of the heart, but I cannot deny that in the case of the Lapins they bore no relation to the tragedies of the past. Yet, such psychosomatic disturbances could have been part and parcel of their daily lives as an expression of the difficult days that faced them after the cessation of hostilities and which were followed by the hardships of life under Communist rule. Due to language difficulties, I could not evaluate the psychogenic disorders which were manifested in varying degrees by some of the Lapins.

I was especially interested in the severity of a depression which occurred in a case of climacterium praecox who was sterilized at the age of 16 and who, following the sterilization in Ravensbrueck, was subjected to two more operations after the war in a vain and heroic attempt to restore her fertility. How sad that so early in life she was deprived of her right to womanhood. Following her marriage, she was even more disturbed that infertility removed all possibility of a complete life for her. A depression followed which required 28 insulin shock treatments, as a result of which she gradually became better adjusted to her situation and to her marital status. Because of his history of severe depression she was naturally rejected by this committe for transportation to America until, on discussing this problem with the professor of medicine, Dr. Askanas, I became convinced that her depression was more hopeful—that it was a simple reactive depression rather than a complex guilt-laden one. Moreover, the number of shock treatments was not an absolute index of the severity of her psychogenic disorder, since in Poland shock therapy is more readily employed than in our country. It was the opinion of the Polish professor of psychiatry that even though no surgical help could be given her in America, except possibly through some form of hormonal replacement, a change of environment simply by including her in the Lapins' group might be sufficient to restore her psychogenic balance so that on returning to Poland she would eventually lead a more useful and complete life.

The remote effects of longstanding suppuration as occurs in osteomyelitis, either through the mechanism of toxemia or of amyloidosis, was suggested by the Polish Medical Commission in many instances where the important body organs were alleged to be involved. For example, there were several cases suggestive of a postinfectious myocarditis, although I could not definitely exclude in such instances the possibility of secondary amyloidosis without resorting to laboratory aids. There were several very suspicious instances suggestive of renal amyloidosis, since the presenting albuminuria could not be attributed to a nonexistent hypertension. Unfortunately their exact diagnoses will not be known since they were automatically excluded from consideration by our committee.

There were atypical cases of "myocarditis" and also instances of bone and joint involvement which could not be readily explained by the electrocardiographic and X-ray findings, respectively. I think that these could be more fully evaluated later if the Lapins were eventually admitted to our country.

Postconcussion states due to head injuries following beatings by the Gestapo were, I was told, not too infrequent in this group. I could not ascertain at this late date whether some of the women suffered from earlier skull fractures or from possible contra-coup lacerations of the brain, secondary to traumatic blows upon the lateral aspect of their skulls. Headaches and dizziness were symptoms suggestive of postconcussion states in a few instances, but there were also instances of injury to cranial nerves, notably to the acoustic nerve and to the facial nerve in cases where the paralysis was also alleged to be directly related to head injuries that some of the Lapins received at the hands of the Gestapo.

Now that I have described the many ills with which the Lapins are possibly afflicted, you will probably wonder how I could describe at the same time their capacity to assume normal roles as they did on the night of our committee banquet. How can this be true, you might say, when on the morning of our initial meeting at the conference, they seemed such human wrecks? Mysterious as it may seem, that is exactly what happened.

You, as a nonmedical man, would have been even more amazed had you joined us at the dinner for the Lapins at the Hotel Bristol. You would never have believed that these were the same pathetic women of Ravensbrueck who had testified so eloquently at Nuremberg in 1945–47 about their rampant misery, their purulent wounds, their festering scars and their disabilities of gait. At this dinner, there was a happy combination of joviality and good fellowship. Smiles of a new-found happiness seemed to pervade the banquet hall. It was difficult for me to believe that this was the same group that on the preceding day had been represented with such professional austerity by the Polish Health Commission, and how, as most of the Lapins in turn took their places before the assemblage, they relived with heartbreaking tears, the savagery of Ravensbrueck. How did they hide their invisible scars and their psychologic ills?

But this is not too difficult to understand. They are women who possess a heroic quality. They were privileged to have received the best schooling in the theater of reality where life was dominated by hate. What they learned at Ravensbrueck was how to change rapidly from one role to another—and they knew that their ability to do so meant their ultimate survival. They knew that the slightest s'ip would mean their death. They survived only because they were the hunted animals who knew when and where to hide, when and where to laugh, to sing, to love and to hate. They escaped the gas chambers or the firing squads only because they trained themselves to understand the narrow marginal differences between life and death and they play-acted accordingly. That is why they survived, all except one.

That evening, in the course of my superficial examinations, I met Krystyna Iwanska, a young physician of 35 years, of charm and beauty. To my great amazement I found a little mass on the left side of her neck and its firm texture suggested that it was a cancerous nodule. It was a Virchow node, a finding described by the famed German pathologist as a late sign of gastric cancer although it often appeared as the initial finding. Noting that I had fussed too long with her neck, Krystyna smiled and looked up at me as if to inquire what it was all about. I reassured her, "You must have been told that you had a thyroid goitre?" She replied negatively. When she left her chair, I whispered to the committee that her days were numbered; she was suffering from a metastatic cancer. It had spread from her stomach.

That night, Krystyna was the last one to leave. She stayed with us until we were carefully deposited in the taxicab that drove us to the hotel. As if she had a premonition about herself, she seemed vitally concerned about our welfare and about our hospitality. We were all deeply touched by this generous soul and her noble spirits. "I want to go to America and take some postgraduate courses and be a better trained doctor," she said with a pleasant smile. I patted her on the shoulder, "It will be all right."

Krystyna came on the following night to our banquet for all the Lapins. She enjoyed the evening tremendously. Afterward she said to me, "I have never before had such a wonderful time. Does this always happen in America?"

Four days later, Khystyna became ill, and I offered to come to her bedside. She refused my visit. It was probably because of her humble surroundings. I did not see Krystyna again until my return to Warsaw about 10 days later, when Dr. Dworakowska told me that Krystyna had repeatedly asked that I visit her at the hospital to which she had been admitted for observation. A consultation was arranged with Professor Plocker and Professor Rutkowski. It was Sunday noon, an unusual hour for a consultation in Warsaw, but the professors came. It was only a few hours before my departure for Paris and Lambarene. I discussed Krystyna's case with them at great length. My diagnosis of cancer of the stomach was confirmed by X-ray, and by the physical examination which revealed extensive metastatic deposits in her abdomen. I advised against operation, since her condition was no longer operable. But Krystyna had apparently convinced the hos-

pital authorities that operation was the only thing left for her, since she was under the impression that her malady was a gastric ulcer. I reassured Krystyna that if the operation was completed and if the Lapins came to America, she could join them there for her long convalescence.

I was deeply touched by her charm and by the story of her lonely suffering, being separated from her Lapin sister, Nina Iwanska, whom she loved. She asked, "If you see my sister Nina in Paris, give her my love, but don't tell her anything about my operation."

In Paris, Caroline Ferriday greeted me with, "What's new about Krystyna Iwanska? Her sister Nina is very anxious to meet you." That afternoon Nina Iwanska came to my hotel. There was a tragic dignity to her face—a pleasant face that bore an eczema which extended to her extremities. Nina related the story of her escape from Warsaw aided by French diplomats. Here in Paris she was earning her keep as a journalist for a Polish-French newspaper. Being out of Poland she had received her reparations from Germany (with immense difficulty), but that did not last long enough to keep body and soul together. She had long ago used up that money in her attempts to cure her skin malady—and it wasn't even enough for that. Most of it had gone towards the extensive treatment, the so-called "cellular" treatment of the aged Swiss who used injections of fresh animal cells without benefit to her erupting skin. Why was she as a Pole so miserably cursed? These expensive injections were alleged to have helped the Pope and the German Chancellor. But now she was tortured even more by the separation from her critically ill sister.

"Is there any chance for Krystyna?" she implored, "tell me everything." Remembering Krystyna's warning not to communicate her problems to Nina, I hesitated, but Caroline Ferriday urged me to speak up. I told Nina everything—that her sister was suffering from cancer, that she was hopelessly inoperable, and that an operation was contemplated only because it was requested by Krystyna who was unaware of the accurate diagnosis.

"How long would you say she can live?" she asked, seemingly resigned. I told her, "Possibly 6 months at most if she was not operated upon but inasmuch as she was inoperable, surgery might shorten her life span considerably."

Why Nina suddenly changed the subject, I will never know. Now she was more concerned about her own skin problem. It was apparent that she was suffering from a neuro-dermatitis, a skin disease of psychosomatic nature that lent itself poorly to therapy. I prescribed some medication for Nina and urged her to let me see her again in Paris when I returned from Lambarene.

During our next visit she told me that her sister had been operated upon successfully and although extensive metastases were found in the abdomen, the liver was not involved, which made her now more hopeful and thankful. "Does this not mean that my sister still has a chance?" I nodded, not wishing to remove whatever hope she still had as her only reason for living at this time.

When I returned from Africa, Nina was emotionally disturbed. She told me about the medications she had purchased in Paris to help cure her sister in Warsaw. She spent all the money she earned and all that she could borrow for quack cancer medicines. I asked Nina what she thought of a visit to America if the Lapins came, inasmuch as she could not return to Warsaw to visit her dying sister. I thought that this might help her bear the tragedy of separation and perhaps neutralize her guilt feelings. Nina, without hesitation, replied that as long as her sister was alive she wanted to be near her, and Paris was so much nearer to Warsaw than New York. As she talked, Nina bubbled with tears, evidently deeply moved by the suggestion that she might join the voyage of the Lapins if they were invited to America. "I am very thankful to you and the committee," she sobbed.

I presented Nina Iwanska's name as a possible candidate for transportation to America because she had served the Lapins' cause with dedication by calling attention to this project through the Association of Deportees and Internees of the Resistance, a French organization known by the name of ADIR and also by her reports to the U.N.

I discussed Nina's impending visit unofficially with a few members of the committee and even Krystyna's eventual transportation, so that a reunion of the two sisters—impossible in Warsaw—could take place in New York. Then I wrote to Professor Askanas along these lines and asked him to engage Professors Plocker and Rutkowski in the evaluation of Krystyna's case. He was to let me know whether Krystyna's days were numbered or whether she had a long enough period ahead of her so that she could be transported to America for the reunion and for treatment. Here, I thought, with the aid of the miracle drugs and the long-awaited reunion, her days could be lengthened. This is a dramatic story of life and death, of a cruel separation for ideological reasons of two sisters who had suffered together as "experimental animals" in a concentration camp and who now were destined never to be together again. One committee member rightfully pointed out that if Krystyna died in our country it might detract from the strength of our project and probably even endanger it. What would have happened was not the issue. It is a heartbreaking human story, and I championed it only for its own intrinsic human values.

This problem finally resolved itself. News came a few days ago that Krystyna died but until her end came, she believed that a trip to America was waiting for her and that she would soon have her reunion with Nina in New York.

I recommend that Nina Iwanska should eventually come to America anyway if only to tell in her own words the story of Anise Postel-Vinay, known as the "Danielle" in the French Resistance and to romanticize the role that Danielle played in the story of the Ravensbrueck Lapins.

Who is this Danielle? I learned about her through sheer accident on the last day of my Paris visit and only an hour and a half before my plane departed for New York. She came from nowhere, but there she was at Gare des Invalides waiting for me.

"You are Dr. Hitzig," she said with a warm French accent. "I am Mme. Postel-Vinay, and I do the same work in Paris that Caroline Ferriday does in your country." She invited me to her home and without waiting for an answer, gathered my bags. I was still protesting when we arrived with my bags in her hands and I met her family.

My visit with Anise and her four children was in spirit as if I had known her all my life. It was one of the most exciting moments of my European and African journeys. She was like a breath of fresh air as she talked about her work in the underground during the occupation of France. "I did not know very much. I was an amateur. I was picked up early and sent to Ravensbrueck. My father was sent off to Buchenwald for similar activities in the movement, but when he was released several months later he was a physically broken man and died. My sister was shot by the Gestapo during the last days of the occupation and my brother was an internee of a concentration camp in France. At that time, I did not know my husband. He escaped from a concentration camp and had managed to land in the English Channel. There he was picked up and brought to England where he subsequently became active with General de Gaulle, and is still associated with his government, which he now serves as treasurer for French Africa."

When I asked her how she as a Frenchwoman became interested in the Ravensbrueck Lapins, she told me a fascinating story which had hitherto been unknown to me. In a soft, inspiring voice, full of modesty, she continued:

"There were thousands of women at Ravensbrueck, and amongst them were many Poles who had been members of the resistance movement in Poland. Amongst them was Nina Iwanska. We were both young. I was only 20, then, when I became ill with abscesses all over my body. One day Nina Iwanska came to my bed and said, 'You are a Frenchwoman so you're going to live. I'm a Pole and I'm going to die. Take this medicine, it will help you survive. I received it through the underground movement in Ravensbrueck. This medicine, I am told, has specific value against infection. My father sent it on to me. He heard about the infections in my operated legs and he thought this would help them heal. It's of no use to me if I am going to die—but I want you to have it so that you can live and tell the world our story. You must live to tell of the barbarism and cruelty of these experiments to which my people have been and are still being subjected at this camp.'

"What else was there to do? Nina was determined and I accepted the medicines, and the abscesses gradually disappeared. Fortunately, Nina survived, too. I vowed then, never to forget the story of the Ravensbrueck Lapins and that I would do everything in my power to bring it to the attention of the world.

"News of these experiments had previously been smuggled out to England, but the English had refused to believe that such experimentation was anything other than mere propaganda designed against Nazis. But we did more than that right at the camp itself. Through our underground at Ravensbrueck the news came that on a certain day all the Lapins were to be exterminated (to hide all traces of their existence) either by firing squads or in gas chambers and crematories. The Nazis were determined to leave no traces that such barbaric experiments were ever conducted at Ravensbrueck. We French are a determined lot, so we decided to help save the lives of the Polish girls, and that is what happened. We hid them, we changed their numbers and, as you can see, many of them survived later to bear witness in Nuremberg against the infamous Nazi surgeons of Ravensbrueck."

It has been rumored that some French women who took the numbers that belonged to the Ravensbrueck Lapins went to gas chambers as replacements for the Poles. From another source, I learned that Nina Iwanska, aware of the fact that some unknown French woman had given her life so that she might live, was guilt laden since then and depressed. It is not impossible to believe that her guilt feelings may be the root of the neurodermatitis from which she suffers and probably always will.

When the war ended, Anise Postel-Vinay managed through diplomatic channels to bring Nina Iwanska to Paris, where she underwent operations to save her badly butchered legs.

As long as I live, I will remember "Danielle," the dynamic, exciting young woman of 36 and that last night in Paris. It is my earnest hope that Mme. Postel-Vinay will come to America to join the Lapins if the project is approved and, if so, that such an invitation will be extended to her by our committee. I regard her as the godmother of the project and somehow I feel that Caro-

line Ferriday's inspiration had its origin in her courage and genius.

One last piece had to be found before the jigsaw puzzle picture of the Ravensbrueck Lapins story was completed. Why were these particular experiments conducted in the first place? During my examination of the Lapins, I was puzzled by the peculiar scars which resulted from the criminal experiments on the legs and thighs of these Polish women. I could not decipher the nature of the experiments, why then had been done, what controls were employed, what drugs had been titrated against the infectious organisms (gas gangrene bacilli, etc.) that were introduced into freshly made wounds complicated by tissue destruction.

In the early part of this report, which was written in Lambarene, I stated that the scientific purposes of the experiments were unknown. I was wrong; they were only not known to me at that time. Upon my return to New York I was supplied with the missing piece to my puzzle by Dr. Leo Alexander, of Boston, who had been a member of Medical Intelligence for the U.S. Army at the Nuremberg trials. I was astonished. It was as simple as it was dishonest.

Reinhard Heydrich, the hangman of Czechoslovakia and head of the Gestapo, has apparently earned the undisputed right to be called the father of Ravensbrueck's barbaric experiments. His death was costly to the Poles.

Dr. Alexander gave me information which pieced together fit into the genesis and body of our project as follows:

Professor Gebhardt of Hohenlychen, who was the chief surgeon at Ravensbrueck, became known through his surgical associates as the killer of high-ranking people in Germany whenever his friend Herr Himmler gave the go-ahead sign for their liquidation. Professor Gebhardt's colleagues were adept in their ingenious experiments which established the best way to kill an undesirable general or a high-ranking intellectual, who was in the way. At first, phenol or gasoline by vein were employed but the odor was too distinctive after death. Methods to cause a lingering death were then devised, in a way that these would not be readily detectible. To do so, they injected pyogenic organisms into the inner aspect of the thighs of victims. The pus that formed at the injection site was subsequently aspirated in a syringe and injected into their bloodstream—the idea being to simulate the conditions of a septicopyemia. When these experments failed to produce death, Gebhardt's associate, Hassmeyer, decided to employ, whenever a lingering death to simulate a natural death was requested, the intravenous introduction of live tubercle bacilli. Before his arrival at his post in Ravensbrueck, he was already well known for his group's masterful work at Hohenlychen of slowly killing many distinguished Nazis with live tubercle bacilli which required at least a month of ailing.

When Heydrich came to Czechoslovakia, where his back was ripped by a bomb thrown at him, Professor Gebhardt was flown there to save him. After all, Gebhardt was the specialist on surgical infections. He performed a debridement operation on Heydrich's wounds; but the hangman died from infection and from hemorrhage several days later. Professor Gebhardt, being the friend of Himmler who did not always see eye to eye with Heydrich, was suspected of foul play. He was called on the carpet by Hitler who asked him why he did not employ sulfonamides in the case of Heydrich. "Is it not definitely established that sulfonamides are of value in infections?" asked Hitler. "They are of no value, and that's why I did not use them in the case of Heydrich," Gebhardt pleaded. "Prove it," yelled Hitler, adding, "take some prisoners and, by using controls, determine whether they are or are not of value."

Gebhardt, who had just come to Ravensbrueck, preferred to use the healthy women who had been part of the resistance movement in Poland during the German occupation. He promised Hitler that he would execute these experiments and determine once and for all whether sulfonamides were effective against infections. And so, in 1942, these experiments began under Gebhardt. He introduced the organisms of gas-gangrene, tetanus, and the pus producers into the legs and thighs of these Polish women. And he did the most unusual control experiments. A thief at heart and under suspicion for the death of Heydrich, who did not receive the benefits of sulfonamides and died, he was hell-bent not only to establish the fact that sulfonamides were of no value against infection, but also to save his own life. He proved it. It was a perfect experiment, in which he demonstrated that many, if not most, of his victims that died met this fate in spite of sulfonamide treatment. It is alleged that those women who had received sulfonamides died because Gebhardt did not drain their tissue abscesses. He was thus able to prove unequivocally the fact that sulfonamides were useless chemotherapeutic agents and his records established to Hitler's satisfaction that Heydrich's death was "fate determined" (a favorite SS phrase) and that Gebhardt was not guilty of causing Heydrich's death.

By committing these heinous crimes against the innocent Polish women Gebhardt tied himself into a deeper union with his criminal organization through the mechanism of "SS blood cement." ("Blood cement" or "Blut-Kitt" is a principle which Hitler borrowed from the criminal writings of Genghis Khan.) He did even more than that. He involved the entire German medical profession in the same criminal hookup when he presented his Ravensbrueck report before a national medical meeting without objection being aroused by any of its members against the principle of human experimentation.

So the surviving Lapins of Ravensbrueck with their multiple incisions that mystified me, were not those who received the sulfonamides. Those who may soon come to America are probably the fortunate controls whose developing abscesses were carefully incised and drained because Professor Gebhardt hoped that by saving them he would save his own life. But he died with this secret which only later was unmasked by Allied Medical Intelligence. It is ironical how Gebhardt cleared himself of the murder of Heydrich in whose case he did not employ sulfonamides. Yet he was hung for murdering Lapins whose death helped him prove via phoney experimentation that sulfonamides were of no value in combating infections.

May I now, in concluding this report, propose that we should take the responsibility for a move which to my mind would serve our purpose of international good will in the spirit of human oneness. I am just a simple human being who knows how to play and feel the game of life, of love, and of hate. In the solitude of Lambarene, I thought about this continuously and it is not impossible that, sitting at the feet of a great theologian and physician, his philosophy of reverence for life rubbed off on me and soaked into my bones.

In the case of the Lapins, the basic situation is as follows: These women still bear the scars of Nazi bestiality. Applying the logic and the meaning of the Hiroshima maidens project, namely, the mutuality of the doer of the hateful deed and the victim of the deed, this is essentially a relationship between Germans and Poles. I am compelled to offer some working solution to this problem, but I doubt I will be successful unless men of good will join in the struggle.

What can be done is this: We must find a way either through some intermediary or through some diplomatic channel to convince the Germans to act in good faith with the victims of Ravensbrueck. It so happens that Theodor Heuss, the President of Germany, was married by Dr. Albert Schweitzer at Strassbourg. Could we not, through the world influence of Dr. Schweitzer, find some way to ask President Heuss to intervene in behalf of this project? The greatest concern the Lapins have borders on the question of whether reparations will be given or denied them by the Germans. They need these reparations so that they can continue to survive with decency during the lean years that lie ahead—lean years which are due mostly to the disabilities that were generated by the cruelties at Ravensbrueck. I feel that if this project is properly presented to the authorities at Bonn, reparations will be granted and we will bring prompt understanding out of chaos. If we could only convince the Germans that by making these financial arrangements, one great hope for the restoration of brotherly love, and international good will will have had its brightest day.

I enjoyed working with the Hiroshima Peace Center Associates, and especially with its representatives in Warsaw—Mrs. Jeanne Benenson and Mrs. Erica Anderson. It was their light that shone ever brightly and gave me insight into the problems of Poland and of her Ravensbrueck Lapins.

With gratitude for the faith you have had in my judgment throughout the initial phase of this project, I remain

Faithfully yours,

WILLIAM M. HITZIG.

The Tucker Sno-Cat Story Continues

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following article from the Washington Post and Times Herald of April 8, 1959. It describes the work of a U.S. team of polar experts which measured an Antarctic mountain range. The explorers used Tucker Sno-Cats, manufactured in Medford, Oreg., to make the hazardous journey.

The article follows:

IGY GROUP EXPLORES LOST POLAR RANGE

(By James Donavan)

A United States team of polar experts has found and measured a mysterious range of Antractic mountains whose location was an enigma for the past 20 years, the National Science Foundation reported yesterday.

The location was reported to the foundation by the 4-man group after a 3-week, 500-mile trek over the polar wastes that ended last month. The expedition was part of its Antarctic research program and its continued participation in the International Geophysical Year.

The mountain range was first sighted during an expedition in 1939–40 by a pilot on a flight from Little America. In 1947 two pilots estimated two peaks had heights of about 20,000 feet.

The four-man team, using three Sno-Cats, a tractor-like vehicle, located the 60-mile-long range in the heart of Mary Byrd Land. The party spent 2 days at the site measuring the peaks and making other scientific studies.

The smallest of the 10 peaks in the range was found to be 7,144 feet high, about 1,000 feet higher than Mount Mitchell in the Great Smokies, the highest mountain east of the Rockies. The highest was 13,856 feet, about 600 feet lower than Mount Rainier in Washington State.

The team reported that the range is volcanic and covered 90 percent by snow and glaciers.

According to T. John Pirrit, the leader of the expedition, a widely scattered array of volcanic rock was found strewn over an area stretching as far as 5 miles from the foot of the range. The rocks gave the appearance of having been scattered by an eruption.

Pirrit said the rocks "have every appearance of having been recently placed there," inasmuch as they were not covered by ice or snow.

Other members of the team were George A. Doumani, of Oakland, Calif., a glaciologist and geologist; William H. Chapman, of Sacramento, a topographic engineer; and Gerard A. Bennett, of Boston, a transport specialist.

"Mary Worth" Is 20 Years Old

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. HOLTZMAN. Mr. Speaker, I would like to include in the CONGRESSIONAL RECORD an article which appeared in the Long Island Daily Press of April 10, 1959, on the 20th anniversary of the comic strip, "Mary Worth."

The series appears in the Long Island papers and several hundred other newspapers throughout the country. Her creator, Allen Saunders, is past chairman of the Newspaper Comics Council, Inc., and has been president of the Toledo, Ohio, Board of Education, the Advertising Club, and the Community Chest. He takes an active role in community affairs, and, in addition, has publicized the American National Red Cross and other national organizations in his series.

The article follows:

"MARY WORTH" IS 20 YEARS OLD

"Mary Worth" the famed dramatic comic strip character, is 20 years old this week.

Her creator, Allen Saunders, isn't taking any time out for celebrations though.

The former college teacher is too busy working on future problems that Mary will solve for her daily audience of 30 million readers.

The serious, motherly oldster isn't a "funny" character in ordinary comic strip fashion.

She deals competently—and successfully—with an endless array of emotional problems faced by the younger and usually attractive young ladies that people her strip.

"Mary Worth's" huge mail proves to Saunders that the "romantic problems" strip is effective.

Many of the letters are from women seeking advice.

One piece of mail that startled him read: "Yesterday I gave up. I knew it was the coward's decision, but I came home fully determined to take the easy road out.

"Habit led me to your picture story and I found myself reading. It was as if you were speaking to me.

"Suddenly I realized you had given me the answers no one else had been able to put into words.

"Thank you, 'Mary Worth,' for saving my life."

Saunders won his master's degree at Wabash College, in his native State of Indiana. He taught French and other languages there for 5 years, before becoming a newspaperman on the Toledo News-Bee.

In 1939, he took over the writing of "Mary Worth," drawn by Ken Ernest.

Saunders gave the strip its unusual romantic flavor and the public quickly responded to the gentle, helpful ways of "Mary Worth."

Reevaluation of Federal Farm Programs Is Long Overdue

EXTENSION OF REMARKS
OF
HON. DANIEL B. BREWSTER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. BREWSTER. Mr. Speaker, during fiscal 1960 our Federal farm programs will cost U.S. taxpayers $6 billion. This cost represents almost 8 percent of the total 1960 budget.

I know that many of my colleagues are concerned, as I am, about the spiralling increase in the cost of administering a program which has failed to accomplish its primary stated purpose—to help the low-income farmer and preserve our heritage of small family farms.

The Baltimore Evening Sun recently carried a series of articles which pointed up some of the problems of the program and some of the glaring abuses which have occurred. These articles were summarized in an editorial in the Evening Sun of Monday, April 13. I find myself in complete agreement with the opinion therein expressed, and under leave to extend my remarks in the Appendix of the RECORD, I wish to have the editorial inserted in the RECORD:

FARM AID BREAKDOWN

For decades, Congressmen have tended to look on the farm problem as being the special province of Representatives and Senators from the major farm States. This is so no longer, from a very simple reason. The Federal farm programs now take such a huge bite of the Federal budget that no Congressman, no city dweller or suburbanite, can ignore them. As Mr. Ray Cave has been reminding us in an excellent series of articles in the Evening Sun, the Federal Government will soon hold $9 billion worth of surplus wheat, corn, cotton, and other crops, despite herculean efforts to get rid of the stuff in oversea programs. Interest and storage charges alone eat up $1 billion a year. The President, in a conservative estimate, suggests that farm programs during the fiscal year 1960 will cost $6 billion—$1,600 million more than in the fiscal year 1958.

The ironies in this tremendous overproduction and oversupply are many. The Republican administration came into office in 1953 hoping to pare the agricultural budget; it has risen astronomically. Farm policy is ostensibly designed to preserve a way of life, the family farm, or at least ameliorate the hardships of that life; instead, the greatest profits have gone to the highly mechanized industrial-type farming operations and to the businessmen who deal in storage of crops. Congress has given the Secretary of Agriculture some of the tools to try to bring the problem under control but has not given him all, nor has he used efficiently all he has received; yet the pages of the CONGRESSIONAL RECORD are filled with wondering questions as to why the farm programs don't work. Price supports are asked in the name of the farmer; yet poll after poll has shown that in principle at least the farmers don't want them, so long as there is some satisfactory alternative. People all over the world could use the food and fibers we don't want; yet to provide these commodities in quantity would upset the delicate balance of trade relationships on which governments, international relations and even the livelihood of millions rests.

There is no point in attempting to reproduce here the statistics and illustrations which show how clearly past farm programs have failed. They abound in awesome number in Mr. Cave's article. The point is, the failure stares every taxpayer, in every city, in the face. It is not only present failure to fashion workable programs for the coming year or the next one. As Mr. Cave points out, we can't even get rid of the surpluses left from our past failures. The interest and storage charges on the surpluses go on. A national effort must be made to prevent the drain from becoming worse. This newspaper has supported a good many attempts to correct aspects of previous farm programs. We have supported lower, sliding price supports; the soil bank, as originally conceived; surplus disposal overseas, if restricted so as not to constitute dumping. But it is clear now that these and other remedies have been only palliatives. The time has come for a complete reevaluation of the various farm programs and a fresh, sober attempt to reach a solution which is fair to taxpayers as well as to farmers.

For Docks and TVA?

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to include the following very timely and valuable editorial which appeared in the Decatur Daily, Decatur, Ala., April 12:

FOR DOCKS AND TVA?

Our old friend John Temple Graves, who writes a thoughtful column in many newspapers, gave us renewed vigor the other morning in the Birmingham Post-Herald when he wrote of rainfall and streams being our greatest asset, for he wrote, "Next to lnad, the prime asset of planet earth is water. Its flow, its fall, its boil, its float, its swallow, its resistances and yieldings, all these, plus increasing relative shortage as men and operations increase, give water an ultimate price above rubies and uranium. Yet the asset has been allowed too often and too long to mean only the disaster of floods, of erosion, of topsoil washed away, of red and yellow streams that hijack a sweet land of liberty in wastage to the sea."

Having read that far, we were certain Mr. Graves was making a case for Alabama and the South and the TVA. He would certainly be backing the development of State docks on the rivers of Alabama and the further development of the great State docks at Mobile, for men are attempting to make the

most of these streams. They were given a mandate by the people of Alabama to do so with the passage of a $10 million bond issue. This precious water was not going to flow forever to the sea without serving man, providing jobs, adding payrolls, increasing the tax income of the State, the counties, and the cities of Alabama.

But shucks, Mr. Graves wasn't writing about that at all. He was just generalizing in a gentle fashion. Then he got down to the heart of the matter in praising the Alabama Power Co. for exceptional business statesmanship in conceiving a comprehensive program for the complete development, by the use of private investor capital, of the water resources of the Coosa and Warrior River systems. We wonder if there would ever have been such exceptional business statesmanship had there not been a TVA pattern drawn a long time ago now on the Tennessee River system?

Mistake us not. We are proud of the Alabama Power Co. for having taken this step which will mean so much to Alabama. The important thing is that they took it and all the lessons learned from the only controlled river system in the world, the Tennessee River system. So Mr. Graves will at least concede that splendid lessons have been taught on the Tennessee by men who knew what they were doing and where they were going. This is a lesson that has been accepted throughout the world for the good it has accomplished for millions of people in the Tennessee Valley in particular and in the United States in general.

And now comes the punchline of Mr. Graves' comments. He says, "Something else that went unsaid but has been in many minds is the oneness of our people behind the private enterprise Coosa-Warrior plan, and the near oneness for maintaining the present equitable divison between TVA and private companies. In spite of the demagogs whose dream-target it was for so long, a new day has dawned for the private companies and the Government are delineated, accepted and supported. Only a few holdover demagogs still undertake to stir up the natives."

Beautifully said once again, but alas an untrue statement of the situation as it exists today between TVA and the private power companies. A long time ago an agreement was made between the private power interests and the TVA on property lines. That agreement has been honored, at least by TVA. But we have only to refer to the Dixon-Yates attempt to know that the private power companies have not honored that agreement. Only the uncovering of the stench in back of it forced the Eisenhower administration to forego the planned invasion of TVA territory through Dixon-Yates.

Even now every private electric company in the United States, including the Alabama Power Co., is fighting with every means at hand to forestall the passage of a self-financing measure through the Congress which would allow TVA to meet at least some of its obligations to serve the people and the Federal Government in the Tennessee Valley.

The private power companies use the pretext that they cannot properly finance their own expansions unless a territorial halter is put about the neck of TVA. To this argument we would ask only one question—What is the true story of private power company financing?

So, we were all wrong. Mr. Graves was not writing about the need for developing the rivers of Alabama. He was not speaking of the great and lasting values of TVA. He was singing an old song, a song which has been heard for many years and will be heard in the years to come. He was singing a song for a purpose, the TVA self-financing bill is about due to come before the House of Representatives.

And that's why we are answering him just now, in the hope that our story from the other side of the fence will reach just as many people at this crucial time.

Statement by Hon. Cornelius E. Gallagher, of New Jersey, Before House Ways and Means Committee on Unemployment Compensation, April 15, 1959

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. GALLAGHER. Mr. Speaker, under leave, I would like to insert in the RECORD the testimony which I gave yesterday before the House Ways and Means Committee on unemployment compensation:

Mr. Chairman and members of the committee, I am grateful for the committee's kind invitation to appear here today and the opportunity afforded me to express my deep and growing concern over the serious inadequacies in the unemployment compensation programs administered by our States. I have equal concern for the failure of the Federal Government to bring about much needed improvements in this badly neglected area of our economy.

I am heartened by the studied approach the members of this committee have taken to this important problem and I am confident the fruit of its attention to unemployment compensation matters will be a vastly improved program benefiting the millions of American workers who are now, or who may be in the future listed in the unemployed column.

I suggest that the legislative vehicles that will most efficiently and most expeditiously bring about the improved program we are all seeking is H.R. 3563, a bill for which I am privileged to be a cosponsor.

Passage of this bill would not only place the Federal Government in its rightful position of leadership in the field of unemployment compensation by providing for a standardization of State programs and fiscal guarantees, but it would, in addition, eliminate the inadequate provisions of this State's programs.

Most important, passage of H.R. 3563 would bring an end to the Federal Government's patchwork approach to the serious problems stemming from programs which pay the unemployed too little for too short a period.

As you may know, when the unemployment insurance programs were conceived in the depression years of the 1930's, 3 percent of payrolls was agreed upon as a proper rate to finance benefits. Since the very inception of the programs there has been a steady decline in the percent of payroll level to finance benefits.

The unemployment insurance programs were established with a view to paying an unemployed worker approximately 50 percent of his wage loss. In the early years, following the establishment of the program, there was near attainment of this goal.

Today, as this committee well knows, the percentage of loss of income made up by unemployment insurance payments is little over one-third of income lost through unemployment.

Among other shortcomings which H.R. 3563 seeks to overcome is the decline in the benefits received by the unemployed. It stipulates, as you know, benefits of not less than 50 percent of weekly income lost. This is the same goal established in the early thirties and here we are 20 years later still seeking it. I hope, and I am confident, that this time we will make it. However, this will be only if the standard is set by the Federal Government.

I hesitate to discuss provisions of the bill with which I know the members of the committee are thoroughly familiar. I do so only for emphasis in the record of points I consider to be pertinent.

It is most distressing that in this age of jet propulsion we have moved toward improvements in so vital an area of our national economy at a horse and buggy pace. In voting the extension of the Temporary Unemployment Compensation Act recently, we merely made another patchwork effort. The bill now being considered by this committee will bring an end to such crash measures as those the Congress has been compelled to enact in the past to keep our unemployed from near starvation.

We are seeking little more than the standards which were felt necessary when the unemployment compensation program was established more than 20 years ago. We are assuring a uniformity that will be fair to all of our States and work a hardship on none.

H.R. 3563 will take the tangle of State programs, with their great diversity of standards, rates levied, benefits paid, and the duration of payment, and apply a standardized program that will benefit the unemployed workers and give assurance of better protection to the worker who may someday find himself in the ranks of the unemployed.

This bill will go a long way in better equipping the Nation to combat another recession, for by providing sufficient and more realistic benefits there is stimulation of the economy through the maintenance of purchasing power at proper levels.

It is obvious to those familiar with the antiquated provisions of many State programs and the inadequacy of these programs that improvements are long past due. The changes advocated by this administration which would deny Federal leadership in this important field and leave the burden and initiative for improvement with the individual States, offer neither a solution to the problem nor the guidance and support for the States that are found in the bill presently before this committee.

There is, unfortunately, no evidence that unemployment particularly in the more distressed areas, will decline sharply enough in coming months to reach a normal level. Unless the Congress takes action to approve a standard and stabilized program of unemployment compensation, we may expect to be called upon at the next session to apply another patch in the form of further extension of the Temporary Unemployment Compensation Act.

In the Newark, N.J., labor area, which encompasses my own congressional district in Hudson County, unemployment increased by 13,000 in a recent 2-month period and now stands at 8.9 percent of the total labor force. There is a 10-percent increase in unemployment over this same period last year.

These are figures that cause great concern. Ours, like so many others with which the committee is familiar, is a distressed labor market.

The committee is conscious of the interest of our State Governors in this problem. A number of these State executives have called on the Congress to set up minimum standards for all States such as are provided in the bill you are considering.

The distinguished chief executive of my State is one of those so concerned. He has

come to Washington at the invitation of the committee to discuss this very important matter. I am privileged to present to you, Mr. Chairman, and the members of the committee, Gov. Robert B. Meyner, of New Jersey.

Gettysburg's Battle of Neon

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. QUIGLEY. Mr. Speaker, as many of our conferees in the other Chamber know, a good many people are more interested in seeing Gettysburg preserved as a part of our historical heritage than as part of our souvenir-hunting mania. I will not say that my office has been deluged with mail, but I will say that we have received a good many copies of letters written to various Members of Congress in connection with the battle to save Gettysburg from being snowed under with postcards and custard. Most of these letters have been from outside my district, and outside the State of Pennsylvania. Not that support for the restoration of the funds for land acquisition is lacking from within our Commonwealth either, as I think Senators CLARK and SCOTT can testify. And solidly in the ranks to prevent encroachment of further commercialism upon the battlefield are all of the newspapers of the area. As a further example, I submit this fine editorial from the Harrisburg Evening News of April 11, 1959. The editorial follows:

GETTYSBURG BATTLE OF NEON LIGHTS

The second battle of Gettysburg is racing toward a decision.

And unless the U.S. Senate saves the day in a last-minute show of firmness, vision, and responsibility, the battle will be lost.

The issue is simple. Either the Government gets enough money to buy enough strategic land on the battlefield to preserve it as a national shrine of immense meaning—or commercial interests will encroach still further upon the historic grounds—with more suburban developments, more diners, more beer parlors, more trailer courts.

Already, as any visitor to the battlefield can see for himself, some of the atmosphere and dignity of the grounds has been jeopardized. The progress of the modern age is painfully evident where some of the fiercest fighting between the States took place nearly a century ago.

True the Government now owns 2,700 acres, keeping the tracts inviolate from commercial exploitation. But many crucial portions of land are privately or county owned—and may soon be developed in a manner profitable to individual interest but detrimental to America's heritage.

The battle came to a head when the House, by voice vote, approved a $1,250,000 slash in the 1960 Interior Department budget. Some $750,000 of the appropriation was to have been earmarked for the National Park Service's plan to purchase about 600 additional acres of battlefield at Gettysburg.

Representative JAMES M. QUIGLEY protested the appropriation slash by the House and then persuaded Senator JOSEPH CLARK to make possible a full-scale hearing when the item reaches the Senate.

This important hearing will be held some time after April 15.

As Representative QUIGLEY warns, this may be the last chance for the Nation to acquire historic battlefield tracts at reasonable cost. Obviously, once those areas are developed commercially, the land price will skyrocket.

"When the Nation and the world observe the 100th anniversary of the Battle of Gettysburg in 1963," said QUIGLEY, "it will be discovered—too late and to our sorrow—that commercialization has destroyed much of the historic area."

The battlefield of Gettysburg stands as a timeless reminder of American values that cannot be measured in terms of money. On that field brave men fought and died for what they believed right, and a new Nation grew upon their sacrifice. On that field, Abraham Lincoln quietly spoke words that will not be forgotten so long as mankind cherishes freedom, tolerance, and respect.

The Senate—without dickering, without politicking and with regard for the future—should restore the appropriation and save Gettysburg battlefield.

To do less would place upon the American scene and character a blight that would far outlive the memory of dollars and cents that were saved in the 1st session of the 86th Congress.

Restoring the Integrity of REA

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BRADEMAS. Mr. Speaker, many of the farm people of Indiana, including thousands of the citizens I have the honor to represent who live in LaPorte and Marshall Counties, depend for their electricity on the Rural Electric Membership Corporations, the REMCs.

The Rural Electrification Administration program has for many years contributed enormously to American life by bringing the blessings of electricity to the farm families of our country and by stimulating the business and industry which produces and sells the appliances, machinery and equipment needed by REA users.

Unfortunately, the rural electric systems of Indiana have been under severe attack by both the Handley administration in Indianapolis and the Eisenhower administration in Washington.

Yesterday the House of Representatives, by a margin of nearly 2 to 1, voted to uphold the integrity of the REA program by restoring to the Rural Electrification Administrator sole authority to pass on rural power and telephone loans. The bill, which has also been passed by a similar margin in the Senate, would thus reaffirm the original intent of Congress that the Administrator of REA, who is appointed to office for a term of 10 years, should be free from political influence. Since 1953, however, the Secretary of Agriculture has had the last word on the approval or disapproval of loans over $500,000.

During the 1958 campaign I stated my conviction that the REMCs should be permitted to operate without having to engage constantly in political and legislative battles merely to defend their right to exist. REMCs are nonpartisan and should be permitted to remain that way. This is the reason I was glad yesterday to join with the great majority of my colleagues in Congress in voting to restore to the Administrator of REA the full authority to pass on loans independant from the control of the Secretary of Agriculture.

Mr. Speaker, with the passage of this legislation rural America can again have confidence in the integrity of the loan procedures of the Rural Electrification Administration, and the farm families of Indiana and the Nation who use REA can continue to enjoy the benefits of modern electric service.

The U.S. Army Field Band of Washington, D.C.

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. MACDONALD. Mr. Speaker, there are many facets to the conduct of our foreign relations, and by no means the least of these is the remarkable manner in which the serviceman overseas represents his country as a citizen-ambassador. Similarly, the commendable efforts abroad, as well as at home, of the superb musical organizations of the Armed Forces is worthy of comment. One such fine group is the United States Army Field Band, commanded and directed by Maj. Chester E. Whiting, who formerly presided over instrumental music in the public schools of Malden, Mass., and a man whom I am proud to call a friend. All the citizens of Malden, which comprises a part of my congressional district, are proud of Major Whiting. Major Whiting and his talented and disciplined bandsmen have extended the friendly hand of American culture and tradition to eager multitudes throughout the world.

Considered by music critics to be one of the most proficient and distinctive musical organizations now appearing before the public, this band has traveled more than a million miles in recent years and is internationally famous as "The Kings of the Highway."

The Army's most-traveled band is composed of more than 100 of the finest musicians in the Army. Several are bandmasters themselves, and a number have played with leading symphonies. More than a dozen have been with the band since it was organized.

The Army Field Band was organized as the Army Ground Forces Band in March 1946, by Major Whiting, commanding officer and conductor since then. Capt. Robert L. Bierly, a native of Clearfield, Pa., has been executive officer and assistant conductor for almost as long. He is a graduate of Ithaca College, New York, and was director of music in Lynchburg, Va., at one time.

The Soldiers Chorus of approximately 30 bandsmen-vocalists is featured on every program. Formed with a nucleus of six musicians in 1947, the chorus is now rated as one of the best male voice groups on the concert stage.

Specialist 7 Eugene W. Coughlin directs the Soldiers Chorus, and is also the band's principal baritone soloist. Before entering military service Coughlin performed with organizations in the Los Angeles, Hollywood and San Francisco Bay areas. He majored in music at Concordia College, Moorhead, Minn., and completed study at the Los Angeles Conservatory of Music.

Paul V. Henry, member of a family long prominent in music circles in New England, is narrator of the U.S. Army Field Band, and is the possessor of a rich baritone voice, well known to millions of concert goers in all 48 States as well as Mexico, Canada, the United Kingdom, and Europe. A native of Malden, Mass., his musical career began as a violin prodigy.

The Army Field Band has criss-crossed the United States each year for the past decade. Concerts have been given in small communities as well as in major cities, bringing the world's great music to audiences in areas never before visited by famous bands. On tour more than 6 months each year, the soldier-bandsmen have appeared in all 48 States as well as in Canada and Mexico.

The band has also made three extensive overseas tours, sponsored by the Department of the Army and the State Department, where, official reports indicate, the Army bandsmen made an important contribution to President Eisenhower's people-to-people program to foster better international good will.

Praised by high Government officials as "America's musical ambassadors," the Army musicians went overseas for the first time in the late summer of 1952. Eight countries in Europe and the United Kingdom were on the itinerary. Major concerts in Great Britain were given at the opening of the Edinburgh music festival, in Royal Festival Hall in London and in Shakespeare Memorial Park at Stratford-on-Avon. In Europe the band performed in the concert hall in Amsterdam, the Luxembourg Gardens in Paris, and the Olympic Stadium in Berlin.

Spanish bull rings, French provincial market hall, Riviera seaside parks, and Scandinavian amphitheaters were crowded with audiences totaling an estimated 350,000 during the 12,000-mile good will tour of Europe in the spring and summer of 1957. Traversing the Continent from Oslo to Seville and from Lisbon to Belgrade, "the kings of the highway" played 43 concerts in 12 countries.

It was the first full-strength U.S. service band ever to appear in Yugoslavia, Portugal, Norway, Monaco, and Denmark, and the first to play in Spain since 1929. Highlights of the tour were an audience with Pope Pius XII, a concert at the royal palace for Prince Rainier and Princess Grace of Monaco, and a special performance for the officers and men of Tito's army in Belgrade.

During the spring of 1958, the U.S. Army Field Band made its first tour of Hawaii and the Far East, the first all-airborne trip since it was organized in 1946. The field band played a total of 45 concerts in 41 days.

The 7-week tour opened in Honolulu in May and ended there in mid-June, with 11 concerts presented in the Territory en route to and from the Orient.

During the 27-day tour of Japan, Korea, and Okinawa, the band played in 34 concerts before an estimated total audience of 150,000. In addition, it was reported that upward of 4 million viewed a concert televised nationwide by Station HNK, Tokyo. The next day, in Yokohama, the band received the first standing ovation ever given a visiting musical organization, according to city officials. Following concerts at Camp Zama, the bandsmen were airlifted to Korea.

Nearly 50,000 were entertained by the band at two concerts in Seoul. President Syngman Rhee and Mrs. Rhee as well as Korean Government officials were guests. Performances were also given in Pusan, Inchon, Tongduchon, and Munsan, the last two for U.S. and U.N. troops.

Six concerts in 4 days were played in Okinawa, including performances at the Stillwell Field House and the University of Ryukyus.

Returning to Japan, concerts were presented in Fukuoka, Yawata, Hiroshima, Tokyo, and Nikko. The largest indoor concert crowd of the tour, more than 13,500, attended the Nikko concert and 12,000 had heard an indoor performance in Tokyo the previous day.

The band's repertoire ranges from classical arangements to popular tunes and novelty numbers, including a drum act which has been praised by professional jugglers as well as musicians. Vocal and instrumental solos are part of all performances. Each program is opened and closed with military marches.

The Army Field Band normally travels in a 10-vehicle motor convoy made up of four large buses, four heavy trucks and two sedans, all painted infantry blue. All equipment needed for a concert is carried and the bandsmen can set up and be ready to play within 30 minutes after arrival at a site.

The Army dress uniforms are worn for all major concerts—blue for fall and winter performances and tropical worsted for spring and summer engagements. Music critics have commented on the crisp appearance of the musicians as "befitting the perfection of the performance."

The primary mission of the Army Field Band is to tour, as directed by the Secretary of the Army, and to present free public concerts as the representative band of the Army, both in the United States and abroad. In carrying out its assignment, Major Whiting estimates the band has entertained approximately 10 million persons, including radio and television audiences, in the past decade.

Major Whiting was assigned by the Army to form the band in 1945, and has been commanding officer and conductor continuously since then. Each member is a top-caliber musician, handpicked by Major Whiting personally.

As a result of the band's outstanding performance, he is recognized as one of the most distinguished conductors in the Armed Forces.

Major Whiting studied at the New England Conservatory of Music, in his home city of Boston, and for more than 35 years has been organizing and conducting Army bands.

In 1923 he was appointed a warrant officer bandmaster by the Governor of Massachusetts to organize and conduct the 110th Cavalry Band of the National Guard. The last mounted band in the Army, it was called into Federal service before this country entered World War II. Redesignated the 180th Field Artillery Band, it was en route to the South Pacific theater when Pearl Harbor was attacked.

Under Major Whiting's leadership, the bandsmen served in the lines during the battle of Guadalcanal. He then reorganized units into the American Division Band, and took part in operations on other islands. The major served almost 3 years in the South Pacific, and was awarded the Legion of Merit and the Bronze Star Medal.

In the fall of 1944, the Army assigned him to organize and conduct the first combat infantry band. Composed of musicians, who were also combat infantrymen, it toured the Nation during war-bond drives and was known as "The Million Dollar Band." Musicians from this and other wartime bands formed the nucleus of the U.S. Army ground forces band, organized by the major in 1946. This was redesignated the U.S. Army field band in 1950.

Major Whiting is well known as a versatile composer of both military march music and popular tunes. The excellence of his concert arrangements has won the band a featured spot at a number of national band clinics. In 1956, the band was awarded the Midwest National Band Clinic's bronze plaque for "music which has been an inspiration to soldier and civilian alike."

The conductor is a member of the American Bandmasters' Association and an honorary member of Phi Beta Mu, national music fraternity. He is the second conductor to be named an honorary lifetime leader of the Zembo Temple Shrine band of Washington, D.C. This distinction is shared with John Philip Sousa. The major is also the only U.S. Army Band director to appear as guest conductor of the famous Guarde Republicaine Band of France.

Red China Proves Dulles Was Right

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the RECORD an editorial which appeared in the Cleveland News on March 8 entitled "Red China Proves Dulles Was Right":

When Red China repudiated its treaty with Tibet, it lost all the good will it had earned among Asian nations and now it stands exposed as an aggressor. It also further jeopardized its chances for admission to the United Nations.

In the Korean, Quemoy, and Indochina military adventures, Peiping put out excuses that sounded plausible to the people of Asia. Even such enlightened a leader as Prime Minister Nehru of India accepted the Communist excuse that the fighting was provoked by the imperialists of the West.

Mr. Nehru probably knew better, but he was committed to a policy of neutralism, which to him meant getting along with the Reds of Russia and China. Year after year, India led the fight to get Red China into the United Nations. But Secretary of State Dulles warned that the Peiping regime could not expect to shoot its way into the U.N.

Now the Communists have not only broken their word to Tibet but have pulled the rug out from under Mr. Nehru, proving that Mr. Dulles was right and India was wrong. By its own actions, Red China has shown itself unworthy of U.N. membership, a fact that must distress Mr. Nehru, for he has been an outspoken defender of men in Peiping and Moscow.

Corrupting a Nation Through Newsstands and Mail

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. SAYLOR. Mr. Speaker, the problems of Congress and the executive department become more acute, more complex with each passing year. Today we are confronted with the growing Communist menace, a domestic economy afflicted with persistent unemployment, the conquest of space, radioactive fallout, and a host of other matters that can never be resolved without the assistance of a most sympathetic Providence. We must have God's help in attacking our Nation's difficulties, but we cannot expect it if we overlook considerations that should be as important to us as they are to Him.

One of our responsibilities is to make the laws needed to uphold the highest moral standards, and a vital step in that direction was made last year with the enactment of legislation designed to curb distribution of obscene literature. Law-enforcement agencies, religious leaders, and social agencies have long ago established that indecent literature is a prime influence in the corruption of adolescent character; that it leads to bestiality, perversion, and narcotic addiction. Even in the absence of professional scrutiny and statistical analysis, however, social consequences of permitting lewd photographs and printed materials to be obtainable by juveniles are apparent enough to alarm the most apathetic citizen. Whether, in fact, objectionable items of this kind are distributed for an audience that is either young or old is disgusting enough to rouse every respectable man and woman to take action against the practice.

The bill which we passed to counteract distribution of obscene literature was recently commended by the Catholic Standard, published in the Archdiocese of Washington, which observed that the "New, tougher mail indecency law is working." The newspaper pointed out that a California man and his wife has each been sentenced to 10 years in prison in the first legal action under the law. The couple was charged with sending obsence material from points in California and Oregon to Idaho. Under the new law they were arrested in California on a warrant issued by the U.S. attorney at Boise, Idaho, who previously could have taken no action against the offenders.

This development is most encouraging, yet we obviously have a long way to go to clean up our mails and newstands. The House has directed its committee to explore the situation as it now exists, and further legislation may be found necessary. The Department of Justice has advised parents and other responsible citizens to get in touch with either the local postmaster or the local FBI agents when suggestive material is found to be entering a locality. Unfortunately, there has been some reluctance on the part of individuals to report such activity, an attitude that has precluded prosecutions similar to the California-Idaho case.

It is my pleasure to report that Johnstown Post 90, Amvets, is intensifying a crusade aimed to cleanup reading material on local newstands. These fighting Americans have no fear of any attempts at retaliation on the part of offenders, and they intend to make reading material safe for youngsters regardless of the tactics of the depraved newstand operators who for personal gain are willing to corrupt their own neighbor's children. I would suggest that anyone who hesitates reporting a violation of the Federal law on obscene literature to the postmaster or to the FBI merely get in touch with Commander Tom Muldoon. You can be sure that you will get the action that is needed.

The Amvets are to be congratulated on this new patriotic activity. Their example, followed in other communities, can go a long way in wiping out one of the most vicious merchandizing abuses to which a nation can be exposed.

Bill To Exempt All Members of the Armed Forces From the Tax on Transportation of Persons

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. BALDWIN. Mr. Speaker, yesterday I introduced in the House of Representatives H.R. 6411 which would exempt all members of the Armed Forces from the tax on transportation of persons. This bill will amend the Internal Revenue Code to remove the discrimination which now exists against the serviceman on furlough who desires to go home by air.

In its present form section 4263(e) of the Internal Revenue Code provides an exemption from the transportation tax for furlough travel by servicemen in uniform provided that the fare paid for such travel is not more than 2.5 cents per mile. This limitation denies servicemen the use of air travel, tax free, since airline fares are higher than 2.5 cents per mile.

There are approximately 1,600,000 servicemen stationed in the United States and the average serviceman is stationed approximately 860 miles from home.. These servicemen made, during 1957, approximately 1,200,000 trips home on official leave, furlough or pass. Of this total only 450,000 of such trips were made by air. In view of the substantial distance that the average serviceman is from home, it is obvious that more servicemen would travel by air to their homes were it not for the fact that if they did so they would have to pay not only the higher fare charged by the airlines, but also the transportation tax as well. It is estimated that the average tax payment on furlough and pass travel amounts to about $8 on the round trip. In view of the limited finances of servicemen this is a serious deterrent to their use of air travel.

Since military furloughs and official leaves are frequently of short duration, to require them to travel only by ground transportation, if they are to receive tax exemption, in many cases prevents them from spending their furloughs at home. This is certainly contrary to the public interest and an unwarranted discrimination against servicemen. Many of the men in military service are away from home for the first time. Certainly everything should be done to enable them to return to their homes and spend their furlough time with their families wherever possible. My bill would accomplish this result. It does not involve a substantial amount of revenue. On the basis of the data released by the Department of Defense and studies conducted by the Air Transport Association the total revenue loss which would result from deleting from section 4263(e) of the Internal Revenue Code the 2.5 cents per mile limitation would be approximately $4 million.

Hon. John Foster Dulles

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. WALLHAUSER. Mr. Speaker, the resignation of Secretary of State John Foster Dulles brings to an end the remarkable public career of a man dedicated to the service of his country, who, because of unusual ability and strength

of character, has made an imprint on the pages of our history that will last for all time. His service in the administrations of both political parties is a clear indication of the esteem in which he was held by those in high positions. The citizens of our great Nation will forever be in his debt for his many and positive achievements in our behalf.

What Inflation Will Do to Us

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. DIXON. Mr. Speaker, inflation is immoral. Furthermore, it steals from the people who can least afford it; from old people who have small fixed incomes based on careful saving or retirement programs; from widows who are living from fixed annuities or insurance left by their husbands; from students who have little or no income but must pay ever higher costs as they study; from teachers because their proportionate income has fallen way behind during the inflation of the last two decades; it penalizes the thrifty by stealing from the dollars saved. I would like to include the following editorial from the Deseret News, Salt Lake City, April 2, 1959:

WHAT INFLATION WILL DO TO US

The reader who is tired of worrying about the Berlin crisis and the number of Russia's missiles might try thinking a bit about America's economy instead.

Few facts of national life are more sure than that, unless we change our economic thinking and actions, we are heading for certain, very serious trouble.

Nor does there appear any promising hope that the trend will be changed soon. President Eisenhower's Budget Director, Maurice H. Stans, said yesterday he expects the fiscal 1961 budget will be $2 or $3 billion higher than the 1960 budget. And Senator WALLACE F. BENNETT predicted the other day that when Congress gets through with the 1959 budget it will be $13 or $14 billion in the red. That would be the biggest peacetime deficit in the Nation's history.

(Americans toss that word "billion" around pretty loosely these days. But can you actually visualize a billion dollars in comparison with a million? Stack crisp new $1,000 bills up a foot high, we're told, and you have a million dollars. Stack them as high as an 83-story building—12 feet to a story—and you have a billion dollars.)

This road is ruinous. Inflation is an insidious, destructive monster that feeds on many causes. But of all the causes, the one most obvious and that most stimulates other causes is Government's deficit financing. As long as the national debt continues to grow we will not stop inflation, whatever else we may do.

If we do not stop it, America's future is uncertain at best. How is the Nation's economy to survive if:

1. The industrial and business investment dollar shrinks because people lose confidence in insurance programs, bank deposits, Government bonds and other long-term savings programs?

2. The pendulum swings more and more violently between economic recessions and booms, which is inevitable as inflation gathers speed?

3. The loss of economic security by tens of millions of persons because of losses in savings, pension and insurance programs puts more and more pressure on Government to assume the obligation of caring for those millions?

4. America's world markets shrink away because inflation prices us out of them?

We are beginning to see evidence of each of these results of inflation. Perhaps none is more dramatic than the last. American industries, unable to compete on the basis of this country's high costs, are falling over each other in their rush to establish branch plants abroad. The cars manufactured abroad by American-owned plants and then shipped back to America—or into other markets where American cars used to go—is typical of the dramatic change of world markets in many other less-obvious industries.

As this trend continues—as it inevitably will unless we halt inflation—American unemployment will increase. Federal spending will rise further as a result, our balance of payments will get worse and worse, and eventually we will see a pell-mell flight of capital abroad.

What, then, are we to do? Several reforms have been suggested. Restraint by both labor and management in wages and prices has been urged. A sensible farm program ending the steady drain of tax dollars is imperative. Pressure is growing—but is still slight—for a regular, planned reduction of the national debt.

Without question, this is needed. But how are we to accomplish it when we still have a deficit-minded Congress—which represents, by and large, a Nation more concerned with immediate comforts and services than with long-range damage to the economy?

We need a nationwide education program on the dangers of inflation. We need a change in the Employment Act of 1946 stating that protection of the integrity of the dollar is a paramount national concern. We need a balanced budget—or even a surplus budget—in times of peace and prosperity.

Otherwise, America's years as the world's economic leader are numbered.

A Special Tribute to the Idlers and the U.S. Army Band for Their Wonderful Contribution to the Joint Session of Congress, February 12, 1959, Commemorating the 150th Anniversary of Abraham Lincoln's Birth

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. SCHWENGEL. Mr. Speaker, since the joint session of Congress on February 12, to commemorate the 150th anniversary of Lincoln's birth, I have heard much praise for the quality of the musical portion of that program which did much to establish the proper mood for this historic occasion.

It is in order, therefore, under leave to extend my remarks, to better acquaint you with the artists who performed on that memorable occasion.

Most of us are familiar with the U.S. Army Band. Units of this outstanding organization appear regularly at functions of this type. Their contribution to the joint session was another one of their fine performances under Maj. Hugh Curry. The choice of selections: "Adoration," "Spirit of Independence," "Man of the Hour," and "All-American Soldier" was most appropriate. I commend them for this wonderful music.

Few of us, however, know much about the choral group, the Idlers, so I would like to make a few facts known about these young men.

The vocal portion of the joint session was presented under the supervision of Bandmaster Donald L. Janse, who led the choral program by the 21-member Idlers, as they are most familiarly known.

They are cadets at the Coast Guard Academy in New London, Conn. Their program, as you know, included a medley of Civil War songs and a special rendition of the Gettysburg Address. Peter M. Thall of New London composed the selection of the Gettysburg Address as it was set to music. He was 11 years of age at the time he began the composition.

As performed, it was not pretentious music; however, the solemnity and character of the text had been respected from its musical conception. The setting began with a short canon, which simply stated in all voices, the opening phrase of "Taps." The rendition of other Civil War songs gave additional meaning to the entire ceremony. The Idlers have also appeared on radio and television shows and plans are being made for their renditions to be broadcast this year over Radio Free-Europe as a contribution to the Lincoln Sesquicentennial. Also, a musical program similar to that presented at the joint session was given on the occasion of the Lincoln Sesquicentennial Sabbath program at the Lincoln Museum—Old Ford's Theater—on Monday, February 15, 1959.

A Tribute to Nantucket on Its 300th Anniversary

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. KEITH. Mr. Speaker, Nantucket Island this year is celebrating its 300th anniversary.

This country needs, as surely as it does the physical might that research and technology continuously furnish us, the moral and spiritual revitalizing that great events in history provide.

The chronicle of Nantucket's past is a series of such events. As this island's Congressman it is my privilege, by way of paying tribute to its patriotic and hardy citizens, to recount here today some of the contributions Nantucket has made to the founding and progress of America. For this purpose may I quote from W. Ripley Nelson, chairman of the island's historic districts commission. I hope that his description of this isle will encourage you to visit Nantucket

and to take part in the festivities there this summer:

Nantucket is renowned as having been the leading whaling port of this country for many years. It had before the Revolutionary War more than 150 vessels in its fleet and in 1760 was producing more oil than all other American whaling ports combined.

It is renowned in history in other ways. Its shipmasters were explorers as well as whalers. In 1791 Capt. Paul Worth was the first to "double" Cape Horn, thus opening the Pacific. Subsequent voyages explored even the most remote parts of the Pacific, charting islands, reefs, and shoals theretofore unknown, taking them to Greenland, the Arctic, the coast of Africa, the Indian Ocean, the Red Sea, and the Japanese coast. Capt. Christopher Burdick of Nantucket is credited with having been the first person to recognize as a continent land now known as the Antarctic Continent.

Timothy Folger, a whaling master, gave to Benjamin Franklin, whose mother was a native-born Nantucketer, data which led to the charting of the course of the gulf stream. "Sunset longitude" was discovered by Owen Spooner in 1745.

Export trade was started in 1745 when a vessel from Nantucket, ladened with whale oil, was sent to England.

During the Revolutionary War some 1,600 Nantucket men were captured, killed, or lost at sea. It is doubtful if any other community of the times sacrificed one-third of its population. In addition its shipping losses were appalling, for at the beginning of the war the island had 150 vessels whereas only two or three old ships remained at the end.

Nevertheless, at the earliest moment after peace had been declared, the ship *Bedford*, under Capt. William Mooers, with 487 butts of oil was dispatched by Nantucket to London. It was the first vessel to fly the U.S. flag in any British port. From that start Nantucket ships carried the American flag to ports throughout the world.

At the outbreak of the War of 1812, Nantucket had rebuilt its whaling and export business and its fleet. The island suffered a repetition of the struggle for existence and the losses of the Revolution. The Nantucket spirit brought quick recovery, and by 1820 the fleet numbered 72 whaling ships, besides brigs, schooners, and sloops, which continued to increase in numers during the following years, known as the golden age of whaling.

The discovery of petroleum ended Nantucket's mighty industry of the sea, the last whaling ship sailing in 1869. But in 1872 Nantucket's reputation and popularity as a summer resort began. Today not only is it a leading resort but one of the most unusual. Its old rambling streets and lanes are still just as they grew, some paved with their original cobblestones. Its hundreds of homes, the majority over 100 years old and many over 200 years old, are not only perfectly preserved but truly livable.

Preservation of its antiquity is assured through the legal control exercised by the Nantucket Historic Districts Commission over the exterior architectural features of all buildings, structures, and signs in an area of over 230 acres in the center of town and a smaller section in the Siasconset area.

In World War I, Nantucket was headquarters for a large and very active Naval Reserve Force. In World War II Nantucket Airport was taken over by the Navy as an operations and training base.

The tercentenary celebration started January 5 and carries through to September 12.

Mr. Speaker, with a year-round population of only 4,000, this island is host during the summer season to more than 120,000 persons. It is my hope that my colleagues in Congress and those who read the CONGRESSIONAL RECORD will take time out from their busy schedules to visit Nantucket this summer and to join with citizens of the island in commemoration of this achievement—300 years of service to the Colonies, the Nation, and the world.

Kentucky's No. 1 City

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. NATCHER. Mr. Speaker, for the third consecutive year Franklin, Ky., is the recipient of the annual Kentucky Chamber of Commerce award for civic improvement. Presentation of this award is contingent upon two factors: The winning city must have enhanced its desirability as a place in which to live as well as become more attractive to industry and business.

The friendly city is richly deserving of this honor. Its physical accomplishments during the past year include a new junior high school building, the opening of two industrial plants, Potter & Brumfield and Kendall Polyken, the development of five residential subdivisions, and numerous stores.

In addition, the residents of Simpson County has manifested their understanding of community spirit by exceeding the goal of the United Givers Fund by $2,000 and by approving an alltime record budget for the schools.

The various civic clubs, elected officials, chamber of commerce, Franklin Favorite, radio station WFKN, and the Franklin Industrial Board have been instrumental in bringing these accomplishments to pass. These organizations set their course 4 years ago, and they have not deviated from their original goal. And as in all great achievements, the women have proved themselves indispensable. In behalf of the business and professional women's club, Miss Rowena Sullivan, president, accepted the honor and accompanying check for $1,000.

The primary motivation, the incentive which has inspired the residents of Franklin and Simpson County is not so much the desire to improve the financial standing of the county as to enhance its cultural values and make Franklin a more interesting place in which to live. The retention of her young people, especially the well educated, had become a problem of the first magnitude. In the beginning, a small group of men undertook consideration of this dilemma, but reaction to this movement was favorable, and in short time the project was community property.

Franklin, in most respects, is not unlike many other small towns in Kentucky. But her people possess an invaluable and unmeasurable commodity. They have great pride in their community, and their ambition will not tolerate anything else than the very best for Simpson County.

Mr. Speaker, being recognized as the No. 1 city in Kentucky for 3 successive years is an admirable feat. I feel deeply privileged that I am able to represent Simpson County in the Congress of the United States, and I know that her residents will work to continue Franklin's unparalleled successes.

Changes in China Policies Are Imminent and Over Due

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. PORTER. Mr. Speaker, it is difficult to ignore that which does exist. Sometimes it takes our great Nation longer than many of us feel is necessary to become aware of a blind spot.

For several years I have felt one such blind spot to be our policy of ignoring the Chinese People's Republic, both as a trading area in nonstrategic items such as now are exchanged with the U.S.S.R., and as a member of the United Nations.

Had that nation of more than 600 million people been in the U.N. it would have been a logical place for United Nations action during the Tibetan incident. Under existing circumstances, the free world watched, deplored, discussed. Tibetans fought, fell, died.

Nationally known columnist, Doris Fleeson feels the resignation of Assistant Secretary of State for Far Eastern Affairs Walter S. Robertson may indicate a change in State Department feeling. Under leave to extend my remarks in the RECORD, I include her column which appeared in the April 10, 1959, edition of the World, of Coos Bay, Oreg.

ROBERTSON'S LEAVING WAS LONG OVERDUE

WASHINGTON.—The impending departure of Assistant Secretary of State Walter S. Robertson, who has been like the boy with his finger in the hole in the dike, steadfast against either a flood or a trickle of change in our attitude toward Communist China, may portend a modicum of change in U.S. China policy.

As Assistant Secretary of Far Eastern Affairs, Robertson has come to personify the granitelike quality of American dealings with both the Formosan and Communist Chinese. Nothing was too good for Generalissimo Chiang Kai-shek in his eyes. And there was nothing whatever good about the Chinese on the mainland.

Now suffering from ulcers, Robertson has a compelling reason to leave his job. In fact, however, events have been leaving him in an isolated position, the latest being the severe illness of his longtime patron, Secretary of State John Foster Dulles.

Robertson, in the first years of the Eisenhower administration, was the darling of those right wing Republican Senators who chose to lay the blame for the loss of mainland China to inept, or, as they sometimes charged, treacherous Democratic policies.

This alliance, if nothing else, was enough to lose for Robertson the favor and friendship of the new generation of Senators which moved in so spectacularly in last

November's election. The deepest blow to the effectiveness of his ideas and policies in the Congress was the decision of Senator William F. Knowland, the unfailing champion of his ideas, not to run for the Senate again.

While Robertson has been so signally identified with the Nation's inflexible China policies as to make them appear almost his personal possession, there is no question but that he was reflecting the views of his superior, Secretary Dulles. Dulles on several occasions forestalled earlier resignation attempts by his assistant. There is no such rapport between the new Herter-Dillon team currently operating the State Department and Robertson.

Robertson will be succeeded by his deputy, a career officer, J. Graham Parsons. He is by no means as well known either to Congress or the public and at the outset will carry neither Robertson's weight nor his burden of opposition.

The attention of this country and much of the world is now centered on Europe. Foreign Ministers and military leaders of NATO nations are meeting in Washington now to discuss the threat to peace in Europe and means of meeting it. But the past has proven that when the Soviet Union is stymied in one place, it seeks diversion elsewhere. The trouble over Quemoy and Matsu is quiescent at the moment, but it can be turned off and on like a light.

The Eisenhower administration has often been charged with living from crisis to crisis, devoting attention only to that immediately at hand and ignoring those crisis-prone conditions which might be changed for the better under more peaceful conditions. It is notable that nothing politically or militarily has been done in relationship to the Quemoy and Matsu position in this period of relative quiet in which hopeful changes might be made.

Mrs. Harden Pioneers High Role for Women in Postal Sphere

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an article that appeared on April 10, 1959, in the Washington Evening Star concerning the appointment of Mrs. Cecil M. Harden, of Indiana, to the position of Special Assistant to the Postmaster General. Mrs. Harden has an outstanding record as a Member of the House of Representatives. Mrs. Harden's experience as a member of the House Post Office and Civil Service Committee will contribute greatly in her new assignment. We know she will perform her duties with credit to herself as well as to the Department. The Postmaster General used good judgment in selecting her for this important position.

The article follows:

MRS. HARDEN PIONEERS HIGH ROLE FOR WOMEN IN POSTAL SPHERE

(By Ruth Dean)

Women will have gained another foothold in high Government office with the swearing in today of former Representative Cecil M. Harden of Indiana as special assistant to Postmaster General Arthur Summerfield.

In the 4 o'clock ceremony today, Mrs. Harden will become the first woman to hold such a job in the hitherto all-male higher echelon of the Post Office Department.

Postmaster General Summerfield was to administer the oath. One of the interested witnesses expected is Mrs. Harden's husband, Mr. Frost R. Harden, himself a former postmaster in her home town of Covington, Ind., during the Hoover administration.

The Indiana Republican, who served for 6 of her 10 years in Congress on the Post Office Committee, was appointed last month to the new post which the Civil Service Commission had granted the Post Office Department but which has been vacant for over a year.

ADVISER ON WOMEN

Mrs. Harden will be principal adviser to Mr. Summerfield for the 55,000 women in career positions in the postal service. This includes the 16,000 women who serve as postmasters in the smaller offices throughout the Nation, out of a total of about 37,000 postmasters.

In announcing her appointment last month, Mr. Summerfield pointed out that "for the first time we have recognized the need for a highly capable woman executive who will make certain that adequate facilities and career encouragement are provided for the thousands of women employees in the field as well as acting for me on certain legislative liaison problems."

Hailing her qualifications, he added that "I know of no individual who enjoys more prestige and respect with her colleagues or is more ideally suited for this assignment than Mrs. Harden. Just as women are playing an increasingly important part in private business, so has their role in postal service become more significant."

The new appointee admitted yesterday that it is hoped her job "will offset discrimination by postmasters against hiring women, and that such women as can reasonably be used will be hired at the proper time."

At the same time, Mrs. Harden said she wished to correct "an impression gained by the public that men and women postal personnel were to be hired on an equal ratio."

"There has been no directive to that effect," she declared.

URGES MORE WOMEN CLERKS

Mrs. Harden explained that one of the objectives or her new job would be to implement the suggestion already made by Postmaster General Summerfield to postmasters, to give more consideration to the hiring of women clerks in the larger offices.

Selection is made from eligible registers, one containing the names of men, the other of women, who have taken an examination at a stated time and have made a passing grade, Mrs. Harden explained. The registers are issued by the Civil Service Commission to postmasters on request, she pointed out, but "it was found that in many areas the postmaster simply did not ask for the female register because he felt the work of lifting heavy packages and mail bags was not a woman's work."

"But, with mechanization," Mrs. Harden suggested, "women can be instructed in how to use the machinery now being installed in our larger offices for heavy handling. And I think they can do it more efficiently and with more patience. It has also been proved that women are more willing to do repetitious jobs than men."

Mrs. Harden said she also would seek to carry out another of the Postmaster General's suggestions to postmasters in areas where there is no female register "to encourage women to take the civil service examination and establish a female register."

"I'm always interested in qualified women, chosen and selected for these positions," she emphasized.

At the same time, Mrs. Harden promised she would also seek to remove the cause for another excuse given by postmasters for not hiring women by seeing that adequate facilities for the comfort of women employees are installed in the large postoffice buildings.

FORMER TEACHER

A former schoolteacher, Mrs. Harden began her political career in 1934 as a precinct committee official. By 1944 she had become so well known in party circles in Indiana that she was named Republican national committeewoman from the State.

Her chance to run for Congress came in a Democratic year in 1948 when a fellow Republican, the incumbent Representative Noble J. Johnson, resigned after being renominated in order to accept a judgeship. She defeated a Democrat, Jack J. O'Grady of Terre Haute, and a Prohibitionist, Ernie Beck of Noblesville, to become the Representative from the 6th district. She was defeated in the 1958 election by Democrat FRED WAMPLER.

The Hardens have one son. Dr. Murray Harden of West Lafayette, Ind., and three grandchildren. Although they had hoped he and his family might be here today, they understand why he couldn't come when he wrote them and explained he had just delivered four babies in 3 days.

And how does former postmaster Harden feel about his wife's new job? "He thinks it's a nice honor," she said.

Unity of Purpose in the Coal Industry

EXTENSION OF REMARKS
OF
HON. JOHN M. SLACK, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. SLACK. Mr. Speaker, the Members of this House have heard frequent reports during this session regarding the problems of the coal industry, and we have had introduced a number of measures designed to establish a long-range program of coal research in an effort to stabilize this basic industry. The leadership of the coal industry on both the management and labor side has always been characterized by a high degree of realistic and independent thinking, and it is gratifying to note that their sense of realism has again asserted itself to bring about the formation or an organization which will give them a proper vehicle by which they can seek answers to industrywide problems. I refer to the recently formed National Coal Policy Conference created as a joint effort of the coal producers, union leaders, rail carriers and utility users. As a commentary on this new organization I would like to call your attention to the following syndicated column by the noted labor writer Victor Riesel which was published this week in several hundred newspapers:

Where blood once flowed and heads rolled in thin black dust, cabbages now roll in in truckloads, symbolic of man's ability to be decent to man after all.

It's time now to talk of those cabbages and kings, too—namely coal and John L. Lewis. It is time to talk of hunger in what once was bloody Harlan and in the other mine patches where husky men

must sit jobless and weep inwardly while their womenfolk find work.

While bus and trainloads of AFL–CIO demonstrators from the big cities poured in on Washington the other day, gift truckloads of cabbages poured in on mine-laden Harlan County, Ky. The unemployed miners needed food; not demonstrations.

While other labor leaders talked from the podium to the "March On Washington," the mine union chiefs sat around tables talking with the leaders of the coal-carrying railroads, the coal-burning utilities and the coal-digging companies. These men talked of the common good—saving their industry.

Their time to talk aloud and in public will come on April 27. That evening the venerable white-haired giant, whom I have called other things in past years, will stand on the dais amidst the men of industry. And despite his 78 thunderous years, John L. Lewis will be heard from again.

This will be the banquet of the new National Coal Policy Conference. Its director is Joseph E. Moody, head of the Southern Coal Producers Association, the man who did most to turn a gun-filled dynamite-laden, civil-war-torn industry into a vale of peace. There are other models of cooperative labor-management efforts, but this is more model than the rest.

John Lewis and his friends of mining and transport and power know they have a sick industry. But they want no subsidies, no handouts. They want to help themselves. That's why these giants, such men as George Love of the Consolidated Coal Co. and Philip Sporn of the American Electric Power Service Corp., have been conferencing with the United Mine Workers' chiefs.

Where once over 600,000 men hacked at the coal veins, now less than 185,000 go into the pits—and not each day at that.

Those were the days when no president had his morning coffee before reaching for his paper to glean whether he'd have an afternoon coal crisis. Today that industry needs to sell at least another 100 million tons a year to stay alive. In Kentucky alone, land of Old Bloody, there is a surplus of more than 40 million tons.

Yet if Old King Coal totters just a little more, what will happen to the fuel power needed by this Nation to defend itself? If the men of helmet lamps and pickaxes realize they will be working less and less and tell their sons to get the hell out of the mine patches forever, who will dig coal? There is no machine that can do it all either. Just as I have heard John L. growl that you cannot mine coal with bayonets, you cannot mine all coal with automatons

Leaders of the National Coal Policy Conference know that the industry will come into its own in two decades. Then the big atomic energy plants will guzzle the black stuff.

But how to survive through the first 20 years of the spatial age? That is why Lewis and the industry have gathered. They have been ignored by the Government—which has special commissions for natural gas, for atomic energy and for oil, but not for coal.

Dulles and the Triumph of Principle

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Sun-Times of April 16, 1959:

DULLES AND THE TRIUMPH OF PRINCIPLE

The resignation of Secretary of State John Foster Dulles is a cruel blow not only to America but to the entire free world as well. It creates a void that will be difficult to fill, for men of his courage, boldness, resolve, and dedication to the cause of freedom are few and far between.

So great was the Nation's dependence upon his skill and talents that most Americans, President Eisenhower included, were hoping against hope that a miracle would spare him from the ravages of the cancer that struck him down. But the miracle did not occur. Yesterday, with tears welling in his eyes, the President sorrowfully announced the news he had prayed to avoid. Foster Dulles could no longer carry on.

In allied capitals, no less than in America, the news created consternation and a sense of almost insurmountable loss. For while honest men differed with Mr. Dulles honestly, there were none who would not give him his due for his devotion to principle over expediency. In an age when diplomatic triumphs as such are rare indeed, Mr. Dulles, with a singleness of moral purpose, was able to score one triumph of principle after another.

When other foreign ministers and their heads of state were tempted to sacrifice principle to reach an accommodation with the Communist world, it was often Mr. Dulles who pulled them back from such a suicidal course. It was this trait that brought him close to Chancellor Adenauer and to General de Gaulle who, despite personality differences with Mr. Dulles, admired him as a man of honor, which to de Gaulle is the highest human attribute.

Even those who disagreed with Mr. Dulles most had the greatest respect for his steadfastness of purpose. He will remain a highly controversial figure for many years to come, but it is a measure of his stature that when his illness laid him low earlier this year many of his critics were among first to pay tribute to him as an indispensable statesman.

The task of selecting a successor is not an enviable one for Mr. Eisenhower. He would perhaps prefer to name someone who is personally close to him, such as General Alfred Gruenther. But the President's term has less than 2 years to run and it has been pointed out that it probably would take Gruenther that long to familiarize himself with the labyrinth of foreign policy.

Moreover, the responsibility for heading the American delegation to the Geneva foreign ministers' meeting already had fallen on Acting Secretary Christian A. Herter a few hours before the matter of the Dulles resignation was finally resolved. This raises the question whether the President could name anyone other than Herter as Secretary without seriously impairing Herter's effectiveness at Geneva.

Yet, Herter is not a well man. He suffers from crippling arthritis. He might possibly disqualify himself, and thus clear the way for the President to pick someone else without damaging his prestige unduly.

Beyond any doubt—no matter who the choice is—it will have to be someone who will adhere to the basic Dulles policies. It is likewise clear that the President will have to be his own Secretary of State to a greater degree than ever before. This places a doubly heavy burden on him.

In any event, the American people will not forget the personal tragedy of Mr. Dulles. They will ask a merciful providence to spare him the great pain that is all too common to cancer. But they may be sure he will endure his lot with the tremendous inner strength that has sustained him and the Nation in many hours of the gravest crisis.

National Allergy Month

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. FOGARTY. Mr. Speaker, I have today introduced a joint resolution authorizing the President to issue a proclamation designating the month beginning August 15 and ending September 15 as National Allergy Month. Its purpose is to urge the people of this Nation to cooperate in the fight for the prevention, treatment, and cure of allergic illness and to invite the communities of the United States to mobilize and extend their health resources to more adequately take care of the growing number of our citizens afflicted with these diseases.

The allergic diseases include both common and rare conditions. Some are so serious as to threaten life, others are no more than annoyances. But, all impair health, happiness, and productivity and many decrease longevity. While most of us are familiar, at least by the name, with bronchial asthma, hay fever, allergic eczema, allergic headaches, abnormal reactions to drugs, and the contact skin eruptions so common in industry, we are less familiar with the diseases of an allergic nature which affect the heart and circulatory system, the blood cells, the gastrointestinal tract, the kidneys, and nervous system. Among the important systemic diseases suspected of having an allergic basis are rheumatic fever, ulcerative colitis, certain types of nephritis, and that group of conditions which are know collectively as the "collagen diseases."

The allergic diseases are a leading cause of acute disease and chronic disability among individuals in every decade of life, but especially among children since the initial symptoms of allergy appear more often in the first two decades of life than at any other time. Allergic diseases are also among the leading causes of death among children.

Long neglected because they do not have the reputation of being killers, the allergic diseases are now recognized as major causes of disability, invalidism, and absenteeism from school, business, and industry. It is conservatively estimated that a minimum of 17 million Americans suffer during their lives from an allergic disease, ranging from annoying hay fever to severe, crippling and often incapacitating asthma. Minor

allergic episodes, such as isolated attacks of poison ivy dermatitis, affect more than half our total population at one time or another.

The two most common distinct allergic diseases are asthma and hay fever. So far as our civilian population is concerned, the U.S. Public Health Service ranks hay fever and asthma third in prevalence among the chronic diseases—following diseases of the heart and circulation and arthritis and rheumatism. Together, asthma and hay fever account for more than 25 million work days lost each year.

ALLERGY IN CHILDREN

The overall incidence of allergies in children is about 14 percent. In a study of 1,225 children, aged 1 to 14 years, chosen at random from a general population, no fewer than 175 children were diagnosed as definitely allergic and 220 as probably allergic. Multiple allergies were found to occur in slightly more than 3 out of 4 allergic children. Three-quarters of the patients with eczema had respiratory allergies and/or asthma.

Food allergy, especially that to cow's milk, causing gastrointestinal symptoms and infantile eczema is the most common type of allergy in early infancy. In children, respiratory allergies are the most troublesome disorders. In this group, food allergy is somewhat replaced by sensitivity to pollens, animal danders and hair, and bacterial infection. Studies show that more than 50 percent of children with eczema develop asthma. More than 40 percent with respiratory allergies eventually develop, bronchial asthma.

Prophylaxis and treatment of major allergies in early childhood may not only prevent asthma and hay fever but also reduce the frequency of recurring upper respiratory infections.

Patients under 20 have a much better prospect of obtaining marked relief from most types of allergy than do older people. Early diagnosis and competent allergic, medical, dermatologic, and sometimes psychiatric management can prevent both the troublesome complications that arise from long-standing allergy and some of the secondary changes that produce recurring disability.

ASTHMA

While asthma may begin at any age, the majority of cases begin in childhood. If neglected, the disease tends to recur and become chronic so that it may lead to serious, disabling pulmonary disease in adult life. Infants with eczema and children with hay fever are apt to develop asthma. The popular belief that the asthmatic child will outgrow his condition is a dangerous one. The asthma is neglected, it tends to persist. Even if it does subside spontaneously, it may leave its victim handicapped physically and psychologically.

Asthma is one of the more frequent causes of referral to pediatric outpatient clinics and children's hospital wards each year. It has been stated that the odds are 8 or 9 to 1 that a child with asthma will grow out of it. Unhappily, without the assistance of early preventive measures, many asthmatic children develop severe complications difficult to treat.

Perhaps the most common complication of asthma is emphysema, or overdistention of the lungs. The lungs become voluminous; they have very little mobility. Oxygenation of the blood is impaired. The patient becomes short of breath on even light exertion and, sometimes even at rest.

There is extra risk for asthmatics from surgical procedures. Medico-actuarial studies consistently show that a great part of the excess mortality among asthmatic persons is due to high death rates from respiratory complications of the disease itself and from pneumonia, heart disease, and tuberculosis. Insurance experiences would indicate that asthmatic victims are relatively less resistent to diseases involving the respiratory system then are non-asthmatics. Insurance studies indicate that the mortality rate for patients with asthma, taken as a group, is appreciably greater than for nonasthmatics and consequently their average length of life is somewhat less. The presence of asthma in an individual is not compatible with a high level of general health and efficiency.

ALLERGY IN INDUSTRY: OCCUPATIONAL ALLERGIES

In our system of free enterprise, the unimpaired health of the worker is essential to the continued growth and expansion of the national productive effort and so, to the Nation's welfare. Our national productive capacity is reduced, not only by the great killing diseases of man, but also by conditions which sap our national vitality through insidious inroads on the health of the worker, be he an executive, a craftsman, or a laborer. The allergic diseases are among the chronic conditions which lead to substandard work performance, excessive absenteeism, and a continuous demand for medical attention.

The allergic diseases reduce longevity. They kill many individuals prematurely and contribute to other deaths by predisposing to heart and lung disease. But their importance lies in the toll they exact from our working population, day by day and year after year. Where allergic conditions arise from occupational exposures, and increasingly frequent situation in this age of chemicals and synthetic products, compensation awards add to the financial losses.

The incidence of allergy among the general population exceeds 10 percent. It is double this in many industries where workers are exposed to allergens by contact or inhalation. At least 20 percent of occupational conditions are allergic, and these are largely conditions which recur again and again.

Industrial progress has intensified the problem of allergy. There is widespread evidence of sensitization to industrial chemical agents, including the constantly increasing number of new compounds used in our modern technology.

Allergic contact skin disease is one of the most common diseases in industry today. It is frequently seen, for example, among workers who handle dyes and dye intermediates, photographic developers, rubber accelerators and antioxidants, soaps, mercury solutions, plants and plant derivatives, insecticides, plastics, and antibiotics.

DRUG SENSITIVITY

Allergic reactions are provoked in sensitive individuals by many of the drugs commonly used in medical treatment, including such well-known drugs as aspirin, quinine, arsenic, the barbiturates, the bromides and iodides, and sulfa drugs. Biological products such as insulin, liver extract, other hormones, and serums, also may produce allergic reactions. The numbers of persons affected year by year is in the thousands. While many such reactions are mild and are terminated by the withdrawal of the drug, others are extremely serious and even fatal.

The problem of drug sensitivity has become increasingly important during recent years since the multiplication of new compounds used in medical treatment has led to a proportionate increase in the number of drug reactions. Among the most common offenders today are the antibiotics.

Allergic reactions to the antibiotics have increased in proportion to the extended use of these agents. Penicillin is particularly apt to produce allergic reactions and, because penicillin is the most commonly used antibiotic, reactions to it have been reported in great numbers. A survey made in 1956 revealed the thousands of reactions to penicillin annually, with deaths numbering in the hundreds.

While the antibiotics have saved thousands of lives and reduced the length and severity of infections in millions of people, allergic reactions are sufficiently frequent and serious as to pose an important medical problem.

THE ALLERGY PROBLEM TODAY

At present, large sums are being expended for research in infantile paralysis, tuberculosis, rheumatism and heart disease, cancer, multiple sclerosis, prematurity and so forth. Allergy affects as many children as do any one of these, yet there is practically no money being expended on its study. The reason for this is that death seldom results from an allergy despite its incapacitating and chronic character.

Despite the amount of disability they cause, the allergic diseases have received relatively little attention in the development of specialized facilities for treatments, in research and in medical education. Even in cities with the best of general hospitals, it is often difficult or impossible for the asthmatic patient of modest means to obtain adequate care. Severe asthma requires the most intensive medical and nursing service, yet may persist far longer than the acute stage of most other diseases. As a result, hospitals treating acute diseases are often reluctant to admit such patients and institutions offering chronic care are poorly equipped to handle them.

The number of allergy patients seen in outpatient clinics of hospitals and in the offices of physicians is sufficiently striking, but even more so is the number of patient visits. Statistics provided

by the United Hospital Fund of New York City reveal that allergy sufferers require on an average three times as many clinic or office visits per year than do those suffering from all other types of illness.

What is being done to help the millions of Americans suffering from allergic diseases? The Allergy Foundation of America, a voluntary health agency established under the sponsorship of the two national professional societies, the American Academy of Allergy and the American College of Allergists, has developed a broad program of public information and education intended to guide the allergic individual in obtaining the best possible medical care. This agency attempts to bring to the public reliable information on the latest scientific knowledge about allergy, and the management and treatment of the allergic diseases.

In order to accelerate efforts in the field of allergy, the foundation complements the expanded program of research and training of the National Institute of Allergy and Infectious Diseases by offering opportunities for specialized training for medical students, graduate physicians and research scientists in the form of scholarships, fellowships, and grants.

The Allergy Foundation of America initiated National Allergy Month 2 years ago with the purpose of disseminating as widely as possible information concerning allergy as a growing health problem. For each of the past 2 years the educational campaign conducted during this month has been highly successful and several hundred thousands of informational pamphlets have been distributed to the public in an effort to inform and educate our citizens. The Allergy Foundation of America plans to sponsor a National Allergy Month again this year, August 15–September 15. To this end, the joint resolution which I have today introduced in conjunction with Senator LISTER HILL, will seek to obtain Presidential proclamation urging Americans to support this program through voluntary gifts and services in their communities.

Westinghouse Air Brake Co. Suffered in Every Segment of Business During 1958 Except in Sales to Government—Boss Complains of U.S. Spending

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PRICE. Mr. Speaker, we have heard a good deal of late from businessmen who seem to think that the Government of the United States is in the hands of enemies of the people, wild-eyed so-called spenders whose desire is to compel price inflation and throw the economy into ruin. From these sources, we also hear a great deal about how businessmen must get into politics to save the Nation.

An example of this attitude recently came to my attention in the form of a communication from the president of the Westinghouse Air Brake Co., of Pittsburgh, addressed to employees of that firm. This gentleman, one A. King McCord, explained why the company did less business, hired fewer people, and made less money in 1958 than in 1957.

You must not believe that Mr. McCord had the slightest feeling that anything might have been wrong with his direction of his company's affairs. Indeed not. He seemed convinced, from his letter, that everything was somebody else's fault. It was the fault of the Government—the "spenders," both Federal and State. It was the fault of wage and salaried employees who, he suggested, had somehow gained "arbitrary" increases that were "not compensated for by increased productivity." And it was the fault of the geniuses at the Department of the Treasury. Even in the present administration Mr. McCord of Westinghouse Air Brake Co. is not satisfied; he thinks that our Government's debt management policies are "improper" and that the Humphrey-Anderson long-time "tight money" policy has really been a loose policy designed to provide "cheap money."

There is a bitter irony embedded in the heart of this McCord letter, Mr. Speaker, and I shall call attention to that irony in a moment. But first let me talk about Mr. McCord's general approach.

I do not see the slightest objection to Mr. McCord's suggestion that the citizens employed by his company should interest themselves in public affairs. Indeed, that is their right, and I hope they will feel it is their duty.

We who are in political life could benefit from the participation of more and more Americans in the business of governing the country. I have been under the impression, from history books and the reports of campaign contributions, that businessmen of the status of Mr. McCord have been active in politics for many generations, but if the base can be broadened by getting other Westinghouse Air Brake employees active in public affairs, I think the country will be very much better off. All of us here are responsible to the people, and despite the theories of some, there is not a Member of this House who does not recognize his obligation to the people.

I think it no more than fair, however, to point out that Mr. McCord's idea of practical politics is to issue a set of shrill complaints about what he calls "spending" in general.

He does not say what programs he thinks the Government should abandon. He doesn't say whether he thinks we should cut off our Defense Establishment, or knock out our investment in defense highways, impacted school areas, hospitals, public health, cancer and cardiac research, services for veterans or interest on the public debt. He does not say we should destroy federally financed research that improves the chances of industry for service.

He echoes the gentlemen now in charge of the executive branch of the Government by being against "spending" in general. He adopts the political viewpoint of those whose attitude was repudiated by the people last November and calls for an attack on inflation.

Never once does he suggest, in his communication, that maybe the 6 million people left jobless or only partially employed by the recession are any responsibility of his or of the country's. He does not raise a question about the policies that have discouraged the full economic growth of this Nation in the past 6 years. He simply rails at spending.

Now let us get to the irony, Mr. Speaker. It is the cream of the jest. Mr. McCord acknowledges in his letter to his employees that the only way their company gained last year was in sales to the Government.

Westinghouse Air Brake Co. lost business from the railroads. It lost in every other section of its business, also, except in the one classification of sales to the Government.

I am not going to suggest that if Mr. McCord thinks all Government spending is terrible, it would be patriotic for him to stop bidding on Government contracts. I do suggest that it is peculiar for him to assail the policies decided upon by the elected representatives of the people, to suggest that all his troubles are due to these policies, and brag in the same letter that these policies saved his own company from larger losses in business.

To let the House read the communication to which I refer, I insert the full text of Mr. McCord's letter in the RECORD:

WESTINGHOUSE AIR BRAKE CO.,
Pittsburgh, Pa., March 6, 1959.

To All WABCO People:

The general business recession, experienced in the United States during 1958, adversely affected, in serious degree, employment by the company and profit from operations. We were hit hardest in sales to the railroad industry. Other segments of our business, except Government sales, also suffered, but not to the same degree. Government sales, and employment and earnings resulting therefrom, exceeded our 1957 experience.

Net profit per dollar of sales fell from 5.1 percent in 1957 to 4.3 percent in 1958, and total profit decreased 27.2 percent. Were it not for the diversity of WABCO products and markets and the increase in Government sales, our employment and profit experience in 1958 would have been much worse.

Nothing causes so many economic hardships to employees and business managers, or is more threatening to national security, than boom-and-bust gyrations of the national economy. Why is it not possible for overall general business to operate on a gradually ascending scale, with short leveling-out periods rather than abrupt and severe declines? The answers being given today are many and diverse and, in too many cases, are slanted because of special or selfish interest. We at WABCO have an answer—it's considered old fashioned—but we believe it has the support of most impartial economists.

Our answer is that inflation is the major contributing cause. An inflationary boom has always been followed by a bust—the bigger the boom the bigger the bust. In the process everyone is hurt—not only workers

and stockholders, but all who have savings accounts and those who are living on past savings or depending on insurance or pension payments.

What causes inflation? We think we know; we believe inflation is caused by:

1. Spending by Governments—Federal and State—resulting in unbalanced budgets or taxes so high that they become a contributing inflationary force.

2. Arbitrary increases in wage rates and salaries not compensated for by increased productivity, and,

3. Improper Government debt management and interest rate policies designed to provide so-called cheap money.

If this is so—and we believe it is—what can we do, as individuals associated in a mutual enterprise, to help ourselves, our neighbors and our country?

We can, by our own conduct, in personal budgeting and work standards, improve our lot and set an example for others to follow. We can support people in public life who are not advocates of high spending and high taxes and who do not support a cheap money policy. We can make our influence felt in our social, civic, and fraternal organizations; in our work and business associations, and in our governments. If we, if the people of America, do not do these things—then inflation is the forecast for the future bringing higher prices, higher taxes, and bigger booms and busts.

Those of us charged with managing WABCO's business are going to exert our best efforts to resist inflation. Your help in this approach—your understanding of the economic problems of today—is solicited because we know that by giving this help you will be helping yourself.

Sincerely,

A. KING MCCORD,
President.

United States Fails To Reward Contributors of Vital Ideas

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, the following article, taken from the New Bedford, Mass., Standard-Times, goes to the very root of our Nation's problems, whether they are in oceanography or any other truly creative field. In the United States, trained scientists and technicians are not sufficiently rewarded for their contributions to our society. Too often they are not given the recognition they so richly deserve. In addition, Government spending is not directed into the most productive channel, that of basic research.

Everyone seems to recognize these facts, but too little is being done to improve our research program. Unless we shake off our apathy, unless we begin to reward creative minds commensurate with the ideas that they produce, our country faces the danger of becoming a second-class power. The United States did not become great by stifling initiative but by encouraging it. Increased spending for oceanographic research is urgently required, but expansion of our present research system is also basic to our national survival.

The article follows:

UNITED STATES FAILS TO REWARD CONTRIBUTORS OF VITAL IDEAS

(Whether it be for war or peace, the oceans of the world probably hold the secret to humanity's future. The nation that unlocks those mysteries first will direct the future course of mankind. One of the world's outstanding ocean-study centers is the Woods Hole Oceanographic Institution. There and at other marine-science research centers in the East, The Standard-Times conducted a 2-month study to determine who is ahead. These stories tell the results of that research.)

(By Everett S. Allen)

In West Germany, which lost the biggest war the world has ever known and had to rebuild itself, a full professor earns three times as much as a mechanic. In the United States, generally regarded as a world leader and a land of opportunity, a full professor earns only twice as much as a mechanic.

The German professor is not happy, because before the war he earned six times as much as a mechanic. The American never occupied such a favored status.

This is one way of saying that America has succeeded in becoming a nation in which those who make and sell refrigerators, TV sets or autos make more money than the men whose original basic research made these products possible.

FOUR MILES OF OCEAN STUDY

The 10-year record of U.S. Government expenditures to advance science shows that we have spent $100 billion on production, $20 billion on development (noncreative research), and only $100 million on creative personnel.

All of the money spent by the U.S. Government last year on oceanography amounted roughly to only the cost of 4 miles of highway.

This is because, with few exceptions, top-level Washington has had a tendency to consider oceanography a "little" subject, impractical and not worthy of national interest.

With Russia forging ahead in this field—and in the light of its obvious major importance—a shift in policy at the White House level which would give marine scientists proper support is indicated.

Up to now, the American public has been given an ill-conceived picture of the true scientist, and the American Government has spent most of its money on engineering, instead of research.

SCIENTIST SELLS NOTHING

Listen to the thoughts of an oceanographer on the staff of an eastern university: "A scientist, contrary to public opinion, does not wear a white coat and appear on television to point out smoke from a certain cigarette will mess up a handkerchief.

"The real scientist isn't trying to sell anything. All he asks for is the chance of studying things that interest him. I think it is vital that for engineering advances of any kind, we maintain a backlog of information such as these thinking scientists can provide.

"Universities, which traditionally have 'pushed' science, are losing their basis of support. The purchasing power of endowments is down; enrollments are up. If a university loses money on every student, think how much worse off it's going to be when it has twice as many students.

"To some extent, universities have been subsidized by their own faculties. Without complaint, their faculties have borne the problem of salaries that just never have kept up with the rising price of hamburger.

COST SKYROCKETS

"Meanwhile, science has grown from the kind of thing you carry on in a little space next to your office to something that requires cyclotrons and other substantial equipment. As complexity increases, the size and cost of basic research grows enormously. As a consequence, many universities have given up altogether their support of science.

"Where do you go for support? Philanthropists are scarce; industry probably isn't interested unless what you're doing has some immediate bearing on their own problems—despite the fact that industry is much dependent on the results pure scientists are puting out; their engineers need them.

"Go to the Government? Most Government money is for applied science, not for research; for engineering, not ideas. So, all pure scientific effort has to scramble for funds. Maybe this isn't entirely bad, because you have to justify what you're doing, but science is difficult to do in an atmosphere full of distractions.

RESULTS UNKNOWN

"Besides, in research, you never quite know in what direction you're going; you work on hope, hunches, and things that strike your interest. You need time for undisturbed deliberation rather than being forced into the hurly-burly of battling for existence money, as most of us do.

"Why isn't it possible, in oceanography for example, to get Government support in a continuing way, so we don't have to spend so much on 'progress' reports and seeking new contracts?

"As it is, before you can get any financial support, you almost have to know the answers to begin with, and how can any research be new, if you have to know in advance what results you must come up with?

"Pure science ought to be pure investigation of the nature of the world. As it is in this country now, we have to bend our efforts in the direction of various side issues; otherwise, we won't have a salable product, which will permit us to get a renewal of contract and the necessary funds to go on.

"A scientific result comes not from a committee vote, but is the fruit of patient pioneering by an individual. The present public attitude toward this kind of thing, including much of television's presentation of science, is reprehensible, and inclined to hold scientists in low esteem."

LEARNING IS UNPOPULAR

"Long ago in this country, it became necessary to hide a love of learning if one wanted to run with the gang. Scientists today have no flashy cars. They have trouble getting a loan on a house because they don't have a stable future. What can I tell a brighteyed young man about going into science for a career when he sees the new Cadillac the bricklayer drives and compares it with my modest, 8-year-old sedan?

"How can you sell the excitement and the intellectual value of doing something you like to do in the face of a social philosophy that says such a concept is idiotic?

"You can't make heroes out of these people with whom I work (oceanographers), who take serious risks at wet, dangerous, uncomfortable work for long hours, and for long spells away from home, who forego big salaries, retirement benefits, security, comfortable living—not because they want to advance the human race or for any other great moral reason, but just because they are curious about the world.

"How can you tell anyone who doesn't know or doesn't believe it that an idea is a beautiful thing, just in itself?"

DANGEROUS TIMES

"Congressional studies, sputnik alarms—all of these things may help pure science to get some of the financial help, on a steady, long-range basis, that it needs if this Nation is to stay ahead in ideas—as I think it must.

"We live in dangerous times. To fall behind in sicentific thinking is to jeopardize

all that we have of value, including life and liberty.

"But even more than money, we need to recreate an atmosphere in this country in which men are measured by ideas, rather than the number of autos they own, and in which men are compensated for creative contribution. We need to change our goals from pursuit of money alone to the search for moral and intellectual values.

"If we want Americans to think, and think they must, if we are to survive, we have to stop penalizing economically and socially those who do think—we have to make thinking popular."

What Price Deterrence?

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. BOYLE. Mr. Speaker, earlier this month Gen. Thomas D. White, Chief of Staff, U.S. Air Force, appeared as the speaker before the Fifth National Military-Industrial Conference held in Chicago, Ill. General White's speech, largely unheralded at the time, has been attracting a great deal of attention. His subject was "What Price Deterrence?" There has been a large amount of discussion about the subject of deterrence—what it is, how to obtain it, what it costs, for example. General White has lucidly and succinctly defined deterrence in a military sense. Furthermore, he has pointed out with a great deal of clarity what is needed to insure that we maintain an adequate deterrent power. General White's Chicago speech is extremely significant. I feel it is one which should be brought to the attention of every thoughtful American citizen. For this reason and with your leave, Mr. Speaker, I ask unanimous consent that the address be printed in the Appendix of the CONGRESSIONAL RECORD:

WHAT PRICE DETERRENCE?

General Rawlings, gentlemen, I was very honored to receive your kind invitation to be here today. It is always a pleasure to come home, and I am home when I am back in Illinois. As some of you may know, I spent my boyhood days in Springfield, more years ago than I care to remember.

I particularly value this opportunity to appear before such a distinguished audience and to participate in this important military-industrial conference.

I have chosen as my subject today, "What Price Deterrence?" It seemed to me that this subject would be appropriate in view of the purpose of this year's conference, "The formulation of specific recommendations for action to strengthen the free world position."

Deterrence of the hot war and the conduct of a successful cold war have a significant and vital impact upon one another. In fact, all actions taken by this country today, whether they be diplomatic, military, economic, or political, are interdependent—each one affecting the others to a greater degree than ever before. This also applies to our actions as individuals both at home and abroad. It is true with regard to our newspapers, our periodicals and other methods of communicating the American way. Thus, the recommendations formulated by this conference could well influence military considerations as well as the economic, the political and the diplomatic.

WHAT IS DETERRENCE?

All of us are well aware that deterrence today is an expensive proposition. Further, the increasing aggressiveness of world communism and its great technological achievements can only lead to the conclusion that deterrence will continue to be expensive. What the exact dollar cost will be in the future, is difficult to say. To answer the question proposed in the title of my talk, I propose to define "deterrence" and tell you what I feel is necessary to deter the Soviets militarily. Therein will be the price and—to repeat what I said a moment ago—the price will be high.

Deterrence—in the military sense—if it is to be truly effective, must be based upon three important factors. First, substantial forces, ready and available for immediate action, are needed. We can no longer depend upon time and distance as allies. We must be prepared to meet the threat immediately. Second, we must possess the national will and determination to develop and provide these forces and to use them when required. And third, our forces and our determination must be credible in the eyes of any potential enemy. I might add that if we are to maintain solid alliances with our friends, all these things must also be apparent to our allies.

I would now like to discuss each of these factors in detail. When I use the term "substantial forces," I am talking about forces which have the undeniable ability to destroy the enemy's warmaking capacity and to prevail in case war should occur. Nothing less can be an adequate deterrent. Possession of such forces does not require matching a potential enemy, gun for gun, man for man, ship for ship, aircraft for aircraft or missile for missile. It does require the capability to apply substantial and selective firepower against decisive targets.

Because the Air Force is my particular business, I will dwell primarily on how it fulfills its share of this requirement. However, I would like to point out that the U.S. Army, Navy, Marine Corps, and Air Force comprise a defense team of over 2½ million men in uniform. Each service contributes to the team effort in its own way and their combined forces form a well coordinated, power packed military capability. Added to the strength of the U.S. defense team is the significant power of our allies on land, at sea, and in the air. In 1958, these allied forces consisted of 5 million men, 14,000 jet aircraft, and 1,700 combat vessels.

Air Force offensive strength today is available in our strategic bombing force, our tactical fighters and missiles. Initially strategic missiles are being used to augment our bombers. As we learn more about missiles and prove them out as effective dependable weapons we want them to promptly replace a portion of our piloted force. This I feel sure will appeal to the imagination of those aircrews who are training hard and standing by right now to conduct an attack if called upon to do so. Most of the aircraft commanders in the Strategic Air Command, for example, have had the experience of attacking heavily defended targets before. They didn't like it then and I doubt very much if they would like it again.

From what I have just said, you may have deduced that the Air Force is approaching the missile age with enthusiasm tempered by a certain degree of caution. This is true and for good reason. The manned systems we have in the Air Force today are dependable and we know they can do the job. One reason we know they can perform their missions is because they have an emergency system aboard called man. With this emergency system whether it be in a bomber, a fighter, a ship or a tank, equipment failures or design and production deficiencies can oftentimes be compensated for by on the spot human judgment and skill. When automatic features fail, men are there to crank the bomb bay doors open, free the jammed guns or make minor repairs. Unmanned weapon systems present an entirely different problem. They must operate perfectly to be effective—they must be completely reliable. This puts a greater burden of performance upon missile design, development and production processes. The manner in which the men behind the weapon systems—the engineers and the production workers—do their jobs, will have a greater impact upon our combat effectiveness than ever before. I cannot stress this point too strongly—particularly as increasing numbers of ballistic missiles enter our weapons inventory and represent a larger portion of our total combat capability. This is a most vital problem—one which should be understood by every man associated with our weapon systems. Every individual—civilian or military—who has anything to do with our weapon systems must recognize their individual responsibility for the ultimate performance of these systems—and assume a personal pride in their contributions to our national effort.

Assuming superior reliability in our manned systems of the future, the Air Force approach to the problem of mixed forces; i.e., missiles and aircraft, will follow the pattern already set in our choice of weapon systems over the years—mission performance. If missiles can do a job better, they will be used. On the other hand, if manned aircraft can do a better job, they will be employed. From what we can see right now, it appears that we will have to combine the best features of each system to guarantee optimum mission accomplishment. In this way we can capitalize on the strong points of each system, thereby using one to complement and fill in the weak points of the other.

The second factor of deterrence I mentioned was national will and determination. Military strength without public support—that is not backed by strong national will—cannot be fully effective. Today, when time is so critical—and decisions so far reaching—our national determination must never waiver. Just as important, it must not be hidden. Its existence in direct support of national policy must be there for all to see.

And this leads me to the third factor of deterrence, the credibility of our forces and our determination in the eyes of an enemy. The effectiveness of our forces and our determination to use them if necessary are of little value as a deterrent if an enemy does not fear the consequences to him of an aggressive move on his part. He must believe both in our capability and in our will to employ it. There must be no doubt in an enemy's mind that what we have is good, that we can and will use it if necessary, and that if we do use it we will prevail.

Any lesser deterrent capability is to all intents and purposes inadequate. A lesser capability would not, for example, accomodate for limited conflicts getting out of hand due to unforseen developments. It would not allow for mistakes or miscalculations on the part of either opponent. Neither would it prevent the brutal tradeoff of millions of casualties by those who have no regard or concern for the importance of the individual as a human being.

To define effective military deterrence then, I would say it is the capacity to wage war on a scale sufficient to prevail in event of war—backed up by the national will and determination to develop and employ this capacity in support of national policy—with

all of this recognized and believed in by friend and foe alike.

WHAT IS THE PRICE?

Now, as to costs: Like anything else, the price of our deterrent effort depends upon its quantity and quality. To match an opponent gun for gun, aircraft for aircraft or missile for missile could turn out to be a numbers game—it could turn this country into an armed camp—and would eventually undermine our economic foundation and our standard of living. I have no doubt that this country could match any opponent in quantity of materiel—that we could build forces of every conceivable kind and shape to meet every possible situation—if this were what we wanted. However, I am equally convinced that this would not only be unwise but that it is unnecessary. We can provide the deterrence we need at lesser cost, always bearing in mind what the ingredients of deterrence are.

This is how the Air Force is going about its share of this overall task. Over 90 percent of this country's retaliatory effort—the primary general war deterrent—is contained in the Air Force's Strategic Air Command and in its tactical air forces at home and abroad. Over the last 10 years, these forces have been procured, maintained, and trained for slightly over 20 percent of the annual Department of Defense budget. The sum involved has bought and maintained the aircraft and missiles, built the bases and operated the forces which have served and still serve today as the free world's primary deterrent to general war.

Contained within the primary general war deterrent is the Air Force's strength for limited war. Our tactical air forces, worldwide, are dual capability forces, with a particular adaptability to limited conflict. Of the 105 wing force, planned for the end of the current fiscal year, 35 wings will be in the tactical category. These wings and their supporting units comprise over 125 squadrons of various types including tactical fighters and bombers, reconnaissance aircraft, tactical missiles and transport and tanker aircraft. These units can, either from in place overseas bases, or after rapid deployment from domestic bases, engage in limited war without seriously detracting from the backbone of our general war strength. Their high mobility was demonstrated twice during this past year during the Lebanon and Formosan situations. In both instances, tactical aircraft were dispatched from domestic bases and arrived at the scene of the action in a relatively short period of time. In fact, in the Mideast situation, F–100's from Myrtle Beach, S.C., touched down at Adana Air Base, Turkey, after a nonstop flight of less than 13 hours.

The Strategic Air Command also plays a dual role. Although its primary purpose is the deterrence or successful conclusion of general war, it acts as the strong right arm backing up the employment of free world forces in limited conflict. Ground, naval, marine and tactical air forces can move promptly and openly into trouble areas, firm in the knowledge that their developments are covered by the invisible but ever present might of our strategic power.

Another important part of our deterrent posture is the air defense capability backing up our offensive forces—that capability which would provide the warning of incoming attack, protect our own forces and direct the aerospace battle. Approximately 75 percent of the capital outlay for the facilities and equipment currently devoted to the air defense effort of this country has been purchased with funds allocated to the Air Force at a cost of less than 10 percent of the annual Department of Defense budget over the last 10 years. This money has developed and purchased the radars, the communications, the fighter interceptors, the missiles and the control network which comprise the area air defense of this country and enables us to destroy enemy attackers at long distances from their targets on this continent.

From the figures I have given you, you can see about one-third of the Nation's overall defense budget has served to provide the great proportion of this Nation's general war deterrent posture. What the cost will be in the future, however, is difficult to estimate. Rapid technological advances are continually imposing new and expensive requirements. One of them, of course, is the necessity for better warning—that key to the speed of our reaction in case of surprise attack. Although our current warning system against air breathing missiles and aircraft is 90 percent complete, it must be continually improved to keep pace with the ever increasing performance capabilities of the newer air breathing weapons. In addition, the advent of ballistic missiles creates an urgent requirement for the development of an extensive ballistic missile early warning system—construction of which is now underway.

As you well know, however, warning is not the whole answer. Even with an effective missile early warning system we will receive less than 30 minutes' warning of an incoming ballistic missile attack. Thus we must devise other methods of protecting our own forces. A variety of such methods is being developed. In the case of Air Force weapons, for example, we can disperse and are dispersing our offensive forces. This requires the enemy to attack more targets and also has the advantage of providing additional locations from which we can launch our forces more quickly. Dispersal of our strategic bomber force is being expedited. Construction of our strategic missile sites has been programed to emphasize both dispersal and hardening. Hardening—going underground—is particularly adaptable to missile systems. However, in order to attain the earliest possible ICBM operational capability, we are not hardening our first sites. Later sites will be hardened and dispersed and thus much better protected.

In addition to affording better protection to our own forces, dispersal and hardening also have a significant impact upon an opponent's force requirements. Naturally, the accuracy, reliability, and warhead yield of an opponent's weapons all affect his capabilities. But even assuming a high degree of reliability, accuracy and yield, the degree of our target hardening comprises another factor which he must take into consideration. For example, with a given degree of accuracy and warhead yield, where 1 weapon is needed to attain a 90 percent probability of destruction against an unprotected target, approximately 4 weapons are needed to attain the same probability of destruction against targets hardened to 25 pounds per square inch and some 13 weapons are required against targets hardened to 100 pounds per square inch. Thus, our dispersal and hardening of strategic missile sites greatly compounds an enemy's attack problem. Should we be able to incorporate mobility into the system—a measure which is under serious study for the latest generation solid propellant missiles—the enemy's chances of successful attack will be further degraded.

Another course of action available to us is to increase our alert capacity. At this very moment, substantial numbers of our strategic bombers are on a 15 minute alert, that is, they can be off the ground and on their way to their targets within 15 minutes of an initial warning. Naturally, the more weapons and crews we have on alert, the better will be our reaction when warning is received. Additional facilities are now being constructed to increase our current capability.

Whenever enemy ICBM capabilities force us to counter the shorter warning time available, we also have the capacity to maintain a significant portion of our strategic bombers on airborne alert. This type of alert is made possible through employment of air-refueling operations and carefully scheduled and precisely flown flight routes which permit the strike aircraft to be diverted to their targets while in the air. Such forces would be invulnerable to surprise ballistic missile attack and capable of immediate retaliation.

The courses of action I have outlined to you will all cost money—a lot of money. There is, however, one ray of sunshine in an otherwise dark fiscal picture and that is the development and eventual deployment of the Air Force solid propellent intercontinental ballistic missile called the Minuteman. This weapon which we expect to have in an operational configuration in the early 1960's will greatly improve our strategic position. Its adaptability to hardening, the fact it can be left unattended for long periods of time and its fast reaction through remote control firing make it an excellent weapon irrespective of purely economic considerations. On the other hand, this weapon can be procured at cut rate prices as far as ballistic missiles go. Our forecast is one in the hole for a million dollars. This means that one Minuteman, hardened and underground and capable of almost instantaneous reaction will cost $1 million. This is a large sum of money, but in contrast with other ballistic missile systems and in consideration of its very reduced manpower and operating costs, the Minuteman is the cheapest yet.

CONCLUSION

In discussing the price of deterrence today, I have primarily stressed the costs of equipment and facilities. But the price will also be high in human effort and time on the job. Already, thousands of our warning radar and our fighter and bomber crews are on alert around the globe. These men and the men backing them up are putting their jobs and their country above personal convenience. So far, it isn't a shooting war—but these men know that the better they do their job, the less likely it is that there will be a shooting war. The point I want to make is that thousands of men in the military services are, at this very moment, and during every hour of every day throughout the year—on guard, many of them in remote and isolated locations. They are not getting extra pay for their minimum comforts, nor overtime for the long hours—it is part of their job and their duty to their country. If their task are to be meaningful, it occurs to me that our entire Nation must also put forth extra effort comparable to their—effort, comparable to that which built this country.

All of us know, but we sometimes forget that this wonderful country of our is the result of the effort and drive of millions of Americans before us. They succeeded in their struggles against hostile Indians, colonial masters, the elements, famine and disease—problems which, in their time, were as serious as those that we face today. They succeeded because they were determined and willing to exert additional effort to achieve their goals. If we are to continue to survive as a free Nation, this feeling, this philosophy, cannot be allowed to die.

I am confident that with resolute public support the military services can continue to provide the military security required for this Nation's survival as a member of the free world. Strong military power will continue to furnish the answer to the Community military challenge. But military security is only one part of the national task that lies ahead. If we are to overcome the total Communist threat, national determination and effort on all fronts is required. In this way we can guarantee the continuance of the principles for which this Nation stands.

Western Capitals Mourn Loss of Dulles

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. DOOLEY. Mr. Speaker, the tragic loss of the full-time services of former Secretary of State John Foster Dulles has been recognized the world over as one that is well nigh irreparable.

His extraordinary talents, acknowledged wisdom in international affairs, and his intense dedication to the well-being of the United States and of mankind in general cannot easily be duplicated. An inveterate traveler, a gifted statesman, and a man who loves peace above all things, Secretary Dulles' patience was tried constantly in his conferences with the leaders of other countries. Always he maintained a quiet and nobel dignity which contributed much to the stability of the world.

The testimony of world leaders is a tribute to his stature. I feel that the statements from London and Paris and other places should be incorporated in the Appendix of the RECORD:

WESTERN CAPITALS MOURN LOSS OF DULLES—MACMILLAN LEADS BRITAIN IN TRIBUTE—NATO OFFICIALS FEAR EFFECT OF RESIGNATION ON COMING CONFERENCE WITH SOVIET

[From the New York Times, Apr. 16, 1959]

LONDON, April 15.—Britain's leaders, past and present, paid warm tribute today, to John Foster Dulles' contributions to Western leadership. They mourned his loss at a critical juncture in Western affairs.

Mr. Dulles often opposed British policy, notably over the Suez adventure in 1956. But praise for him was general and unstinted.

When Sir Anthony Eden resigned as Prime Minister in January 1957 Mr. Dulles' hostility was considered a major cause. Today Sir Anthony said:

"I have followed the course of Mr. Dulles' illness with the deepest sympathy and greatly admire his brave fight for health. The world will deplore the cause of his resignation and his friends regret the loss of his knowledge and counsel at a critical time."

MACMILLAN STATES REGRET

A statement issued on behalf of Prime Minister Harold Macmillan said:

"This is, indeed, sad news. President Eisenhower once referred to Mr. Dulles as a dedicated man. From my long experience of him I know how true this is."

Foreign Secretary Selwyn Lloyd said he profoundly regretted Mr. Dulles' retirement.

"Mr. Dulles brought to his office brilliant intellectual gifts, a high sense of duty and tremendous physical endurance," Mr. Lloyd said. "He has been a close friend and colleague. His retirement is a heavy loss to the West."

At the Foreign Office officials said that Mr. Dulles would be missed most during the coming weeks, when the Western Powers are alining their policy approaches for the Foreign Ministers' talks with the Soviet Union at Geneva, May 11.

British diplomats said that on Mr. Dulles' last visit to London during the first week of February they got the impression that the Secretary of State was moving toward a new appraisal of the Soviet Union not far different from that formed by the Prime Minister after his Moscow visit.

They believe that in the preparation of the Western position and in its negotiation with the Soviet Union, Mr. Dulles would have been far more flexible than he had been in the past. Moreover, it was pointed out, the Secretary of State's prestige would have won over Chancellor Konrad Adenauer of Germany and President Charles de Gaulle of France to a more flexible Western position.

Hugh Gaitskell, leader of the labor party, said that although most of the Socialist leaders disagreed with Mr. Dulles from time to time they admired his "profound knowledge of world affairs, his superb intellect, his unflagging courage and, above all, his great strength of purpose."

His resignation was a "most serious loss to the West," Mr. Gaitskell declared.

The British press, which on many occasions has been less than kind to Mr. Dulles paid warm tribute to him in editorials that will appear tomorrow.

DE GAULLE SENDS MESSAGE

PARIS, April 15.—The decision of Secretary Dulles to resign produced expressions of regret and tributes to his courage, tenacity, and lucidity here today, even from Frenchmen who often found themselves at odds with some aspects of his policies.

President de Gaulle learned of the news during a meeting of the Cabinet and immediately thereafter sent a private, personal message to Mr. Dulles.

Foreign Minister Maurice Couve de Murville, echoing less formal declarations by others in government, declared:

"The departure of Mr. Dulles is, for the Western World, a loss which will be, in present circumstances, felt in a special way."

Premier Michel Debré, often in the past a fiery critic of U.S. foreign policy epitomized by Dulles, and President de Gaulle, who has had occasion to test and admire the Secretary's strength of character while vehemently disputing some of his opinions, both expressed in the Cabinet meeting their regrets at his departure.

These regrets were all the more lively here for the fact that in the current Western debate over tactics for dealing with the Soviet Union, Mr. Dulles is regarded as a symbol of the firm line approved by France and West Germany.

Both French and North Atlantic Treaty Organizations officials agreed that the main lines of U.S. foreign policy would remain unchanged with departure of Mr. Dulles, however deeply he was identified with those policies. But there was regret that Mr. Dulles' skill as a negotiator would be missing in the tense period of negotiations about to begin.

"It is with great emotion and much regret that France receives news that Mr. John Foster Dulles has found himself forced to give up the duties of Secretary of State of the United States that he has carried on for more than 6 years with so much competence and energy," M. Couve de Murville said late today.

The news was received in Paris too late for the final editions of most afternoon newspapers. Only the mass circulation France Soir carried a headline "Dulles Has Resigned" across five columns and printed the major portions of news agency dispatches in boldface type on its front page.

LOSS TO WEST GERMANY

BONN, GERMANY, April 15.—The retirement of Secretary Dulles was a great loss to the German people, a Government spokesman said tonight.

"It is above all the Federal Republic which looks back upon many years of cooperation with Secretary Dulles, years full of understanding and confidence," the spokesman said.

Chancellor Adenauer, who is on vacation in northern Italy, was immediately notified by telephone. Official sources said he had held out little hope that Mr. Dulles, his close friend, would be able to return to the State Department.

Realization of this prospect is believed to have weighed in Dr. Adenauer's decision to abandon the chancellorship.

A spokesman of the opposition Social Democratic Party said that even though the party disagreed with Mr. Dulles' policies it recognized in his resignation "a personal tragedy."

Heinrich Krone, leader of the Christian Democratic Parliamentary faction, said successful maintenance of the interests of the free world had rested in significant measure on close association between Dr. Adenauer and Mr. Dulles.

In Berlin a spokesman said the West Berlin Government was convinced the resignation would mean no change in the attitude of the United States on Berlin.

In government quarters here there were words of confidence that Acting Secretary of State Christian A. Herter would carry on the close and trustful association between Bonn and Washington. Officials carefully avoided any expression of opinion whether they would welcome the appointment of Mr. Herter as Secretary.

France's Prospects With General de Gaulle

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an objective and interpretive article in relation to the new France under the able leadership of General de Gaulle. The article has been written by Prof. Nicolas de Rochefort, of the department of political science, American University, Washington, D.C. It appeared in the spring issue, 1959, of World Affairs magazine:

FRANCE'S PROSPECTS WITH GENERAL DE GAULLE

(By Nicolas de Rochefort)

Throughout the long and dramatic history of France its political aspirations oscillated between two main, although often contradictory, goals: freedom and progress on one hand, stability and security on the other. For many centuries, the instability of the internal situation, which caused the nation to welcome and support the slow rise of a strong central power, assuring internal security and order and defending expanding frontiers, culminated in the absolutism of Louis XIV.

The great Revolution of 1789 exploded the long-restrained aspirations for freedom, but when its excesses endangered internal and external security, the sobered-up and fearful nation readily accepted Napoleon.

The violent social agitation which arose in the wake of the revolution of 1848 caused a frightened people formally to accept by a plebiscite Louis-Napoleon Bonaparte, first as President, then as Emperor of the French, thus submitting again to an authoritarian regime. The downfall of the second empire

at a time when it was developing a liberal evolution was due to its inability to live up to its very raison d'être, national security. After Sedan, the empire made no sense.

In 1914, as in 1870, the regime collapsed on the battlefield, held responsible, quite unreasonably, by public opinion for the defeat. Again the nation accepted, indeed welcomed, an authoritarian regime in whose hands the disintegrating institutions of the Republic suicidally abdicated the powers entrusted to them. That was Pétain.

Economic instability and the Parliament's impotency in the 1930's accounted for the growth of various rightist movements, whose agitation culminated in the riots of February 6, 1934. The Republic survived, but only in the indifference and contempt of many.

The Fourth Republic, envisaged by its initial planners in the resistance as a renovation of the nation, was molded in the old, loose forms of the Third. It rapidly displayed the same invertebrate impotence. The military setback and loss of Indochina in 1954, and the loss of the North African Protectorates drastically increased the feeling of insecurity which was developing at the sight of functional disorder of the institutions. The bloody and inclusive struggle in Algeria brought this feeling to a quasi-hysterical pitch.

Once again the nation veered to the right; that is, to authority even at the expense of some freedom. It would be senseless to reduce the significance of the May 1958 events to the size of an attempted putsch. The operation would not have been launched. It certainly would not have verged on success had it not contained an appeal to the masses and found a favorable climate in the nation.

As always in such cases, the craving for a strong protective government materialized in a call for an outstanding leader. This time it was the hero of the liberation, Gen. Charles de Gaulle.

The National Movement had already achieved partial success. A rebel, rightist, quasi-government was shaping in Algeria and was receiving pledges of allegiance from various parts of the metropolitan territory. If General de Gaulle had accepted the role planned for him by the plotters, France now would be under a dictatorship, possibly complicated by civil war. By refusing to come to power by a coup d'etat, and by stipulating unequivocally that he would accept power only under the due process of constitutional law, de Gaulle saved the prospects of democracy in France.

It is truly amazing how both the May plotters and France's sincere friends abroad, particularly in the United States, misjudged de Gaulle. The former expected him to become the leader of a coup. The latter at first viewed his acceptance of the Premiership as the establishment of a reactionary dictatorship. The whole past of the man, who said, "No" to the defeat in 1940, vouchsafed for his staunch attachment to republican legality and democratic process.

In his active exile and struggle for liberation De Gaulle repeatedly averred that his aim was not only the restoration of France's sovereignty and independence, but also the reestablishment of the Republic. As head of the Committee of National Liberation in Algiers, soon to evolve into the Provisional Government of the French Republic, he hastened to re-create such forms of democratic institutions as were possible under the circumstances. Thus, the Consultative Assembly, a quasi-parliament, was established.

On the provisional government's transfer to Paris, when De Gaulle's prestige and power would have permitted him to exercise dictatorial authority for as long as he wished he prompted the elections to the constituent Assembly. Although an outspoken partisan for a restoration of the Third Republic, with its constitution dating back to 1875, he let the nation choose freely between this solution and a new democratic regime. France preferred a supposedly new constitution.

After the elections, De Gaulle, now vested with executive power by a unanimous vote of the constituent Assembly, could have again forced his will on both that body and the nation. Instead, he resigned from office and returned to private life when he found himself in disagreement with the majority of the Assembly.

In refusing in May 1958, to assume the leadership of the rebellion, and thus thwarting the coup d'etat in embryo, he remained entirely consistent with his ideals and his past. The "Committee of Public Salvation" (which is a more correct translation than "Safety" for "Comité de Salut Public") made another momentous blunder in counting on de Gaulle to carry out their program when he assumed a legally proffered power. It was unrealistic for the Committee to revert unconditionally to a policy of domination in Algeria, which was considered as an integrated part of the State, and to deny any personality to this territory and its Arab population. In clamoring for "De Gaulle to power," they evidently expected him to endorse and follow these reactionary policies.

However, the liberal views of De Gaulle on colonial problems, in general, and on Algeria, in particular, were well known from his historymaking speeches in Constantine, Algeria, and Brazzaville, West Africa, in 1944. At that time he was hated in Algeria and was denounced as little less than a traitor by some of the very die-hards, like Alain de Serrigny, who launched or joined the Algerian Committee of Public Salvation and called for De Gaulle to seize power. The reorganization of the French oversea possessions to bring about an articulate association of autonomous states, which started under De Gaulle's direct inspiration and prompting, was bound to disappoint the diehards.

What is the balance sheet of De Gaulle's administration at this writing, now that he has been swept into the presidency by popular enthusiasm?

The constitution, which he proposed and which was adopted by an unprecedented majority, drastically limits the actual power of the legislative. It was the evils of legislative omnipotence which were the very cause of the near-collapse of democracy in France and which had brought the nation to the brink of political chaos. The reaction led to the strengthening of the executive in the new constitution, which was both understandable and urgently needed. Quite conceivably, there are potential dangers in the strength of the executive, but it is essential to end the abuses of an ataxic, yet all-powerful legislature.

Liberal terms of association were offered to and accepted by the oversea territories, with the single exception of Guinea, which took advantage of the offered right to secession. The main problem, Algeria, remains unsolved. However, sincere efforts are being made to bring about a solution in a manner which would have been inacceptable to the French under any other government.

The National Assembly election results are but a mixed blessing for De Gaulle. However, they had the positive effect of pulverizing the Communist Party which will be represented by a mere handful of Deputies. But contrary to De Gaulle's candidly expressed wishes, the constructive moderate Left was also trounced. The Executive might find that "la mariée est trop belle" (the bride is too beautiful) as happened to the restored Bourbon Monarchy in 1815 with its Chambre Introuvable and its majority of ultras, who were "more royalist than the King." Brandishing De Gaulle's banner, a Rightist majority was swept into the National Assembly, so strongly rightist that concern is expressed here and there lest De Gaulle be forced to withdraw from his own liberal position.

For the voters, pledges of fidelity to De Gaulle by the candidates meant and counted for more than platforms and programs. This, together with the provisions of the new constitution, such as the right of dissolution giving an upper hand to the Executive over an excessively recalcitrant legislature, will supply De Gaulle with both psychological and technical means for curbing the ultras. There is no doubt that he will permit any rightist extremism now, since he refused its patronage in May. Even later he put an end to their activities by vigorously recalling the army to its duties of servant to the civil authorities. Another indication was the decisive manner in which he ended the rabble-rousing Algerian Committee of Public Salvation. General de Gaulle is in a position to exercise a moderating influence on the legislature. This writer believes that he will do so.

Prospects of liberalism and moderation under De Gaulle offer the hoped-for chance of the French nation. Previously, when France searched for stability and security, it inevitably conjured ruthless, ambitious leaders whose character and philosophies excluded any notions of such principles of freedom, popular will, and democracy.

This time a unique historic conjuncture was made available to France at a time of dismay and quest. De Gaulle, endowed with the necessary strength of character and dedication to the mission entrusted to him, is inspired by liberal principles. Instead of leading the nation on the road to dictatorship, he will endeavor to preserve its democratic institutions and structure—possibly even despite itself.

Beyond the present accomplishments, which are still in projection and can be but speculated upon, there is a striking, hopeful psychological phenomenon brought about by De Gaulle's reappearance at the helm of state. This phenomenon is unity in confidence. Men, who yesterday refused any strength and stability to the executive, lest it open the door to some Bonaparte-like adventure, now accept a constitutionally strong executive, because they trust De Gaulle.

Moreover, men who branded as traitors statesmen who attempted the slightest liberal gesture toward Algeria, not to mention an emancipation of oversea territories, confidently followed De Gaulle when he proposed his revolutionary reform of the French Union. A Guy Mollet or a Pflimlin proposing this would have been stoned on the steps of the Palais Bourbon. The phenomenon, which made a broad national reconciliation possible, is faith—faith in a man who so well expresses the will for survival and the ideals of the nation.

In the field of international relations, De Gaulle is still probing his way. However, his fidelity to the West to which, spiritually and politically, he belongs, should not be questioned. This includes continued French participation in NATO. The first cautious probes launched by De Gaulle's government in this direction seem to indicate that he will seek more active participation in the deliberations of this body. This may produce headaches in the future and the United States may well have to exercise forbearance and restraint in dealing with De Gaulle's France.

However, is it not better to have to deal with a somewhat demanding and temperamental, yet reliable associate on whose word one can depend, than with one who reverses himself every few months or one who would be constitutionally unable to live up to his assumed obligations?

Fears have also been expressed that De Gaulle's war and resistance record might bias his attitude toward Germany and cause him to drift away from the French-German rapprochement developed by the

Fourth Republic. The two Adenauer-De Gaulle encounters and their results, whether in the economic field or on the weighty problem of West Berlin, should by now dissipate these fears.

The first moves of De Gaulle's cabinet, notably the consultation with several European governments which his Minister of Foreign Affairs undertook almost immediately upon his assumption of Premiership, would seem to indicate that this former professor of history at St. Cyr is inclined to resume the traditional policies of France; uniting and coordinating the international action of the so-called secondary powers in which France often was, and more often tried to be, the champion or spokesman. Circumstances are different. France no longer is the dominating power in Europe it was under Louis XIII of Louis XVIII; nor is she in a position to aspire to domination. Indeed, with Germany, her traditional rival, she comes close to being a secondary power herself on the new world scale. Her claim for European leadership can no longer be but a claim for spokesmanship or, at best, a role of coordinator. She can be neither tempted to seek supremacy nor even be suspected of it. This may facilitate De Gaulle's quest, and if he succeeds, he will sublimate France's role.

That the new conditions of the European situation are realistically appraised and well understood by De Gaulle's government is exemplified by its concern for achieving close cooperation with Germany. This cooperation, if it develops, will assure an era of stability and through this cooperation the unification of Europe may be achieved. Far from dimming this prospect, the restoration of France's self-confidence and self-respect with De Gaulle as her leader will remove the inferiority complex which would make the European unification policy of France hesitant and half-hearted in the future as it frequently was in the recent past.

A small picturesque detail may be significant in this respect. The French Postal Administration is circulating a stamp which displays a name new in its official use: "Europe." Thus for the first time, on French initiative, "Europe" becomes more than a geographic expression.

The sense of Western solidarity, facilitating the concept of a unified Europe and transcending it throughout the free world of Western civilization, is sharpened in De Gaulle by his stanch Catholicism, backbone of that civilization. Not by accident, for the first time in over a century, in addressing the official congratulations of the French Government to the newly elected Pope John XXIII, Charles de Gaulle assured the Sovereign Pontiff of "his filial respect."

Hiring the Handicapped in Our Town

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. RODINO. Mr. Speaker, each year the President's Committee on Employment of the Physically Handicapped conducts a national essay contest among 11th and 12th grade students. It is a contest which has attracted wide attention. For 11 consecutive years this has been the only Government-sponsored essay contest approved by the National Association of Secondary-School Principals and the National Catholic Education Association. Any 11th or 12th grade student in public, private or parochial high school in any State, Territory, or the District of Columbia is eligible, including those students at an equivalent educational level in public or private institutions, that is, handicapped students taking separate training. The prizes are personally awarded by the President of the United States. This year, Miss Barbara Joan Zimmer of Glen Ridge, N.J., placed first in the national essay contest. Miss Zimmer is to be congratulated on having won this outstanding honor. This is a coveted and much sought after prize and as such a great distinction for Barbara Joan Zimmer—for among the many fine essays submitted in this national contest, hers has been adjudged the best of the lot. We, of the 10th Congressional District, and the people of the State of New Jersey, her schoolteachers, her classmates, her family and her friends, are proud of Miss Zimmer's achievement, and the plaudits and prizes she has won for herself are richly deserved as anyone reading her essay on "Hiring the Handicapped in Our Town" will readily recognize.

Miss Zimmer's moving and eloquent essay written in vivid story fashion dramatizes the need for a full and sympathetic understanding of the problems of the handicapped and their ability to fulfill job opportunities if given a chance. The story Miss Zimmer tells is not a unique one, except that it is uniquely told and so capably portrayed. That someone of Miss Zimmer's young age has been so capable of understanding human values is a great and significant lesson. But let Miss Zimmer tell her story, Mr. Speaker, in the following, her prize-winning essay, "Hiring the Handicapped in Our Town":

HIRING THE HANDICAPPED IN OUR TOWN

Mr. Robert Howell, of the Howell Machine Corp., wearily pushed his buzzer. "Who's next, Margaret?" he asked?

"A Mr. Sherman."

"Steve Sherman? Send him in." Howell rose to greet his visitor.

"Hello, Steve."

"How are you, Bob? How's business?"

"I'm fine, but business isn't good. It's getting harder to find workers in our town. After we train them they find other jobs. This is the beginning of a new year, and here we are with 10 vacancies. A big firm offered jobs out West and off they went. Ten of them. We can't fill our orders."

"Well, what are you doing here, Steve? I heard that you were helping a charity group or something like that. I hope you don't want a contribution. With things as they are, I can't give a penny."

"That's what I'm doing, Bob. But, the people I represent don't want charity. They want a chance to work, not a handout."

"What do you mean, 'a chance to work'? Anybody who wants a job can get one here."

"Bob, these people are from our town. They tried to get jobs, but no one will hire them."

"Look, I'll take anyone. Who are these people?"

"These willing workers are handicapped," explained Mr. Sherman. "That's why they can't get jobs. I'm a member of the Employ the Handicapped Committee."

"Now just a minute," growled Howell, "I'm not putting unfit workers in my factory. Our insurance rates are high enough now because of our type of work. We can't afford inefficient workers."

"That's where you're wrong, Bob. Insurance rates don't increase because you hire a handicapped worker. The rates depend on the type of business, the hazards, and your safety record.

"I know your next question. They can work as fast as your other workers. They would have to learn to operate your machines, but statistics show that impaired workers, as a group, produce a slightly higher pace than unimpaired workers on the same job."

Steve Sherman took pamphlets from his pockets. "I don't have time to describe all the information in these but I can prove that your company will profit by hiring the handicapped of our town. Look at these figures, 'Days lost per 100 scheduled working days, 3.8 for impaired workers, 3.4 for unimpaired workers.' Not enough difference to matter. 'Disabling injuries per million exposure-hours, 8.9 for impaired to 9.5 for unimpaired.'[1] That difference is in your favor.

"Bob, if you're still not convinced, let's take a few minutes to go into your factory. I'll show you where you could put our handicapped to work."

Mr. Howell reluctantly entered the factory with Mr. Sherman. Walking along a row of machines Mr. Sherman stopped before one which was punching out small computer parts. "Look, this operator is using only one arm and one leg. Why not hire a man who has only one arm and one leg?"

"All right," Howell replied, "but that's only one case. Here, what about this one?" The machine he pointed to was more intricate.

"I'll admit that a man with one arm couldn't work there, but not all handicapped persons are amputees. Some are deaf, blind, have arrested tuberculosis, or heart disease. There's a man with heart trouble who lives just a few blocks from you; he could do a good job on this machine. There is a man attending your church who is having a hard time finding a job. His back is deformed, but he can work sitting down. He could do that job over there. Look. Those workers sorting tabulator keys, they're all sitting down."

Bob Howell laughed. He now saw that his business could be helped by hiring the town's handicapped. To himself he said, "Just think, I thought there were no workers available."

Then he thought of something else. "You know, Steve, a disabled veteran named Paulson lives down the street from me. My little daughter said the family is having a hard time because the father can't find a real job. The Paulson girl told me her father is doing typing at home. One of my typists is leaving to get married. I'll bet Paulson could take her place."

"That's the spirit, Bob. Let's figure out how many workers you need."

They finally decided on eight workers, six men and two women. Before Sherman left, he said, "This will mean a lot to your new employees. The human factor is what counts. They will do a good job because they'll appreciate the chance you gave them."

Many changes were soon made in the Howell Corp. Machines were adjusted so that handicapped workers could control them; a ramp was built for a man who used a wheelchair; a machine part was painted red to warn a veteran with a paralyzed leg that he could be burnt without his realizing it if he leaned against it.

The morale of all employees improved. Old hands showed the new workers easier ways to run the machines. They drove their new friends to work. The wives of some of the men went to visit the others. The com-

[1] Time magazine, "Hiring the Handicapped," April 25, 1955, p. 96.

pany bowling team discovered two near-champions who helped win the community tournament. Strangers became friends by taking part in know-your-fellow-worker parties.

Not everything went along smoothly. One of the men had trouble learning to operate his machine. Parts were rejected again and again. But when he conquered a fear that his handicap had made him unfit for a job, his work improved, and there were no more rejects.

Steve Sherman returned in May. A new secretary was in the outer office, Mr. Paulson, who proudly told that he now supported his family properly. Paulson also told that he is chairman of a company picnic in June. Sherman gladly consented to attend.

A new Mr. Howell ushered Steve into his office.

He happily told Steve how his production rates had increased. "Look at these graphs—production up, injuries down, less quitting, less absenteeism. Oh, I could show you a hundred ways this place has improved."

"Yes, Bob. But there is an important something you cannot graph. Don't you remember what it is?"

"Of course, Steve, the human factor. These people are great. I never thought my old staff wanted to have picnics before, but they're out to show their handicapped friends a good time.

"Steve, you can't know how much this has done for the workers, the factory, and the whole town. News of our good record has spread; almost all the handicapped people in town are either in jobs or are in training for them."

"Bob, I know what this is like. I've seen it before. And, it can happen again—anytime an employer realizes that handicapped workers can work efficiently for his good, their good, and for the good of their town."

Planning for Tomorrow's Needs

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. HARDY. Mr. Speaker, on Saturday, April 11, the Woman's Democratic Club of Norfolk held its annual Jefferson-Jackson Day luncheon. The members and guests of the club were greatly honored by the presence of our charming and able colleague the gentlewoman from Missouri [Mrs. SULLIVAN], who addressed the meeting.

Mrs. SULLIVAN's remarks were not only appropriate to the occasion, but extremely timely, interesting, and thought provoking. I commend the reading of them to my colleagues:

SPEECH MADE BY THE HONORABLE LEONOR K. SULLIVAN AT THE JEFFERSON-JACKSON LUNCHEON GIVEN BY THE WOMEN'S DEMOCRATIC CLUB OF NORFOLK, VA., APRIL 11, 1959

I do not guarantee that the talk you are about to hear will be anything unusual or special, although, of course, I will try to make it interesting if I can—but I cannot guarantee it will be special. On the other hand, the circumstances of my speaking here are a bit special, and you might be interested to know what makes them so.

First of all, I make it a standing rule not to accept speaking invitations of this nature so far removed from my own home district in Missouri. It is not that I am opposed to speaking outside of my district—or outside the House of Representatives. I enjoy occasions of this kind, joining with fellow citizens from other sections of the country to celebrate our mutual admiration for the Democratic Party. But the invitations cascade down upon us in such volume that it is impossible to accept them all and thus the better part of wisdom is to attempt as gracefully as possible to regret them all. And, frankly, my working schedule is so heavy that I almost have no choice in the matter.

In the 7 years I have been in the Congress I could probably count on one hand the number of such appearances I have made outside my district at other than Democratic national conventions or regional Democratic affairs, including Missouri.

As to this particular weekend, my being here is special in another way: I just returned to Washington a few days ago after 2 weeks in St. Louis. Naturally, I found my desk piled high with urgent problems—including things I could not have worked on while I was in St. Louis even if they had been mailed to me, and other things which I would have worked on in St. Louis except that they arose after it was too late for my office to get them to me by mail. In other words, even though the congressional recess was by no means a vacation—far from it—I returned to Washington to find as many pending problems there for me as if I had been on vacation. You all know what a vacation does to your work schedule—it ruins it. And in my case I'm having all of the headaches of coming back from a vacation without having had the vacation.

Much of that mass of stuff which was smirking up at me from my heaped-up desk is still there and what I have cleared out and taken care of in these last 3 days has more than been replaced by new crises and problems and assignments and urgent pleas of one kind or another. I represent a problem district, you see. Everyone seems to have problems, and most of them seem to think I have a magic wand to solve them all.

All of this is to say that under normal circumstances I would not normally consider coming down to Norfolk, and under the abnormal circumstances of the moment, with such a deskload of postrecess headaches facing me in Washington, I could not possibly consider coming here.

There are two explanations for the special circumstances of my being here, then. One is the high regard in which all of us in the House of Representatives hold your outstanding Congressman, PORTER HARDY—he is one of the most highly respected and effective Members of the House—and one of the most persuasive, too. And when he made a particular point of urging me to attend your Jefferson-Jackson luncheon, I found it extremely difficult to insist it was impossible for me to come. That was reason No. 1.

The other reason involves an even more illustrious Virginian—yes, even more illustrious than PORTER HARDY. I refer to your Thomas Jefferson, whom you join in honoring today along with the man I think of as the Harry Truman of the 1820's, Andy Jackson. I am sure Andy would be pleased if he were alive today to be likened to Harry Truman of my own State of Missouri in attitude and outlook and fierce devotion to the public good, and I know I couldn't say anything more flattering to Mr. Truman than to tell him I had compared him to his own idol of democracy, Jackson.

But Thomas Jefferson is particularly meaningful to us in St. Louis because, frankly, we owe our existence as Americans to him. Your ancestors here in the East fought for your freedom and they had a lot of help from ancestors of present-day midwesterners fighting alongside them. But, unless Jefferson had shown the kind of imagination and boldness we want and expect in our Chief Executives, there is no telling what flag would be flying today over St. Louis, and the whole vast area west of the Mississippi River.

In our most valuable downtown area bordering the Mississippi in what will be our most spectacular river vista—we in St. Louis, with the cooperation of the National Park Service, are building a dramatic memorial to Thomas Jefferson and to the territorial expansion of the United States accomplished through his Louisiana Purchase. This spectacular river park, overlooking the Father of Waters, near the point where Lewis and Clark began their heroic trek through the wilderness vastness, will be one of the truly impressive scenes of our Nation's many breathtaking views when present plans for the Jefferson National Expansion Memorial are completed in 1964, on the 150th anniversary of United States acquisition of the land. Dominating the park will be a huge stainless-steel arch designed by the world-famous architect Saarinen, symbolizing the role of my city as the entrance way to the west, an arc matching in concept the splendor of an America stretching majestically from sea to sea.

We are understandably proud of this joint Federal-local parks program in St. Louis; we are proud to dedicate it to the memory of one of our greatest of all Americans, your fellow Virginian, Thomas Jefferson. For we, too, also revere him. And I feel that in coming to Norfolk to participate in a good Democratic celebration of Jefferson's 216th birthday 2 days early—I think I'm right in my arithmetic that it's 216 years as of next Sunday when Jefferson was born—in any event, in coming into Virginia to talk Democratic politics to Democratic women I feel I am making an appropriate pilgrimage for a St. Louisan.

These, then, are some of the reasons why I have set aside my usual practice and have accepted your warm invitation to come here today. And, now that I am here, I am glad the circumstances were special enough to get me here. For I am enjoying my visit tremendously.

The reference I made a few moments ago to Jefferson's action in acquiring for the United States the vast territories west of the Mississippi is as good a point of reference as any to contrast the difference between political philosophies as represented by our two great political parties.

I understand that here in this area of Virginia the Republican Party is not unknown—although I am sure it is quite ineffective—but at least you do see an occasional Republican and you do have to contend with Republican arguments and Republican propaganda in your campaigns. Therefore, I know you will agree out of personal experience in politics that there are differences—and major ones—between the parties.

Undoubtedly, Jefferson's courage in committing the infant American Republic to an expenditure of such magnitude as $15 million—in a day when a million meant far, far more than billions mean today—was one of the great political decisions of our entire history. I can think of one or two Republican Presidents who might, in similar circumstances, have made a similar decision—but no Republican President that we have known in our time, certainly. How long can a great political party continue to go along without, at least once in 50 years, coming forward with a single political leader to match the political skill and courage of a Teddy Roosevelt? And poor Teddy, as you recall, finally had to give up on the Republican Party himself and start his own third party nearly a half-century ago. Since his day as Chief Executive, the Republicans have elected a number of Presidents—but not a single one of them has made a single

dramatic decision of such far-reaching significance to America's future and the world's advancement as almost every Democratic President, at some time in his administration, has made at least once.

Going back—not to ancient history, but to the recent past—we have the examples on the one hand of a Truman galvanizing a disorganized and fearful world into a solid stand against Communist expansion which saved first, Greece and Turkey, and then all of free Europe, and served notice that freedom would not be bargained away or surrendered. No political project in all history has been of more significance than the Truman doctrine and the Marshall plan—the latter conceived by your illustrious Virginia soldier-statesman and put into effect by a courageous President from my State.

Think of the Roosevelt years—of the great decisions—bold, dramatic, incomparable in imagination and in effectiveness. Tomorrow it will be 14 years since Franklin Delano Roosevelt laid down his life for his country and for freedom. As long as any of us shall live who remember that day and that era, we will mourn for and revere him—and feel fortunate in our hearts that we had the privilege to be Americans at a time when his inspiring leadership restored our faith in our country, in our economic system, and, most important, in ourselves.

Woodrow Wilson's widow still lives and thus reminds us—in her occasional participation in Washington in ceremonial or social events—of the Democratic Party's saint-like political philosopher of 1913–20, also a Virginian, who breathed new life into Jeffersonian concepts and who dreamed the dream and saw the vision which today guides free nations everywhere in the pursuit of a secure world in which free peoples can live with their conscience and, yet, with each other.

On the other hand, we have had some Republican Presidents, too, in that period since Teddy Roosevelt left office in 1909. We had a Taft, a Harding, a Coolidge, a Hoover, and now Mr. Eisenhower. Except for the sorry choice out of the smoke-filled room of the Republican Convention of 1920, when Harding was selected, these men have all been regarded as conscientious Presidents, if perhaps inept in the demanding role of the Presidency, that is in the role of leading a dynamic Nation to new greatness.

As Republicans, these men regarded themselves as Presidents in the classic Republican mold of conservatives. And that's all right. But they—including Mr. Eisenhower, practiced their conservatism in the role of conservators—that is, to try to hold tight not only to that of the past which is good but to the status quo, to change nothing, to cling to the past no matter how moth eaten, to trod no new paths or pioneer no new concepts in government.

There are times when the American people think they need that kind of President as a sort of breathing spell from dynamic, dramatic, imaginative government. And of course 1952 and 1956 reflected the yearning for calm, for complacency, after the stress and noisy clashing of the political battles of 20 years and the horror of war.

Consequently, for 6 years we have had a don't rock the boat, don't do anything new, don't worry, don't experiment kind of National Government, and we have stagnated. The American people have now had enough of it—and have repeatedly said so—the most dramatic reiteration coming last November in that simply incredible Democratic sweep. And next year, well, the die is cast.

I have mentioned the Louisiana Purchase several times. Let me ask this—and I believe it is a fair question. Can you imagine our present Republican President and his present and former stand-pat advisers having the decision Jefferson made? I can just imagine the discussion which would have gone on in an Eisenhower Cabinet of 1803.

Mr. Benson would have said that we already had all the farmland we needed on this side of the Mississippi, much of it wild and uninhabited. Who could possibly eat the food grown in the new territories? Mr. HUMPHREY would have said it cost too much to buy the millions of acres of land and would cause inflation which would curl everybody's hair. Mrs. Hobby would have said that the whole idea was just socialism—and who could possibly foresee the use of any such vast territories as the Louisiana Purchase? We remember her as the lady who could not foresee the almost hysterical demand for Salk vaccine—although now that we have all of it we need, there are still mothers in this country who expose healthy little children to a crippling future by neglect in getting their children inoculated. This is criminal negligence, and a public whipping would hardly be overly severe punishment for any mother who neglects this important duty of protecting her children against polio.

But I digress—I didn't mean to go off on that tangent. But the original fiasco of vaccine distribution under Mrs. Hobby, plus the criminal negligence of those mothers who do not today take advantage of the present availability of the vaccine make me boil in indignation each time I think of it—and nothing reminds me of it so much as mention of the name of our first Secretary of Health, Education, and Welfare. A woman in politics should bring to political life the warmth and humanity which are the greatest contribution to political thinking and governmental affairs that women can make.

In any event, to go back to 1803, I think you will agree with me that if the Eisenhower administration had been in office at the time and had been faced with the decision which confronted Thomas Jefferson, there would have been no Louisiana Purchase. This thought might cause you to lose little sleep, but to us in St. Louis, believe me, the idea is quite intolerable.

Seriously, though, the analogy is politically important, I believe. Under Republican administrations, as we have known them in our lifetimes, our country has been led always on a policy of drift—avoiding hard decisions—floating on a tide of circumstances which seem inevitably to have resulted in economic hardship verging 30 years ago on national bankruptcy. Even today, with so many enthusiastic statistics pouring out of the White House and Commerce Department on production, profits of big corporations, declining unemployment, and so on, the fact remains that we are still deep in an unemployment recession, and the outlook for millions of Americans—particularly for middle-aged workers and for those approaching retirement age—is so grim as to be alarming.

Yet Mr. Eisenhower announces he is very happy over a slightly more than seasonal decline in unemployment, while more than 4 million remain on the unemployment list. And we are told that by October, the number of unemployed might even be down to around 3 million. That is put forward as a statistic to cheer. Actually, it is one to fear.

For we are now turning out everything people want and can afford to buy. We are producing in abundance. Which member of the Eisenhower administration was it who commented during the 1954 recession that freedom is also the right not to have a job—you know, take the bad with the good, keep a stiff-upper-lip and so on. This is Republican dogma, as long as it affects somebody else.

No Democratic administration worthy of the political party label would stand by as complacently and idly as this one is doing in the face of a serious national crisis in employment and in purchasing power.

This Congress, believe me, is not going to accept such supercilious complacency from an administration charged with governing for the good of all Americans.

Congress, under our system, cannot administer national affairs. We cannot name any of the Cabinet officials or administrators; we cannot force the President to do much of anything if he refuses to see the need or act on it. We can provide the tools, we can provide the funds. We can point to the need. We can alert the public to the danger. We can even hobble the administration to keep it from doing terribly wrong things—if we hear about them soon enough. But we cannot as a Congress force affirmative action.

But as a people, we can—all of us insisting on action and making our voices heard. And that must be the role of every forward-looking American—particularly all of us who regard ourselves as Democrats—more particularly all of us who pride ourselves on being Democratic women.

Be a Patricia Henry—and demand that our leaders meet our problems head on. Old Patrick called for liberty; you, his descendants, must call for leadership from a weary and unimaginative national administration.

Mr. Eisenhower could easily find good administrators who can do the job if he wants it done. We have plenty of experienced Democrats who served magnificently in the Roosevelt and Truman administrations who could, with Ike's backing, get our economy off dead center—get Norfolk booming again—and St. Louis—and restore America's greatness and promise.

Mr. Eisenhower has only a little over a year-and-a-half to get things back into shape—or at least to get a good start on restoring real prosperity and confidence to the American economy—before the job will no longer be his.

After that, the problem will be ours. Whether it is handled by an Adlai Stevenson, or a Hubert Humphrey, or a Jack Kennedy, or a Pat Brown, or a Missourian I think a whole lot of, named Stuart Symington—or whoever our nominee is next year—I think I can assure you good Democrats of this fact:

The problems he faces will be met forthrightly and courageously—whatever they are. They will be tackled as a challenge to devise effective solutions, not to merely avoid rocking the boat.

The boat has been rocking—violently at times—in these past 6 years, largely because of the reluctance of the helmsman and the rest of the crew to head into the deep waves and plough through them.

What might have been mere swells on our economic sea have done us irreparable harm year after year because our national administration tried more to avoid them than to overcome them.

Let us look our national problems straight in the eye, whatever they are, size them up, analyze them, and overcome them. Only in that direction lies the progress we seek for our country, and for the free world.

Our party has always—since the days Thomas Jefferson conceived of it and gave it meaning—our party has always stood upright and unafraid against any challenge to America's progress. Our leaders have neither panicked in the face of nor hidden from, challenge. It's true that we do a lot of fighting among ourselves, we Democrats, and for what we often consider good cause. But when it comes to facing unafraid the challenge of tomorrow, we unite and close ranks and move ahead full speed into the thickest of the political fray.

Progress can come to America only in proportion to the willingness of our national leaders to stick their necks out for principle. Jefferson was maligned, abused, despised by

the standpatters of his day. Jackson's name was anathema to the same group. Roosevelt was "That man in the White House"—a term spoken with venom and hate. Truman was ridiculed, as no national figure in our time has ever been depreciated and laughed at.

Our next president—whichever Democrat he may be—probably faces similar abuse such as was heaped on the men I have mentioned. That is because he will—whoever he is—if he is a true Democrat, insist on planning for tomorrow's needs rather than yesterday's.

Supported by people like you—by Democrats who want our country to continue to grow and not stagnate—the next president, whichever Democrat he may be out of our abundance of outstanding candidates—will have the opportunity to be a great president.

For that's the only kind we Democrats are used to.

Went to a Mighty Fine Fellow

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Decatur Daily, Decatur, Ala., on April 13.

I know this editorial will be applauded by the people of Alabama for there is no one more dedicated to the public good than Mr. Marc Ray Clement. He is deserving of this high award, and both he and the Alabama Medical Association are to be congratulated:

WENT TO A MIGHTY FINE FELLOW

The second annual William Crawford Gorgas award goes to Attorney Marc Ray Clement, of Tuscaloosa, and from personal knowledge we can testify that the award, made annually by the Medical Association of the State of Alabama, went to a mighty fine fellow who has done more as a layman for the general health improvement of Alabamians than any other citizen. Here are just a few of the things done for people and done without any thought on the part of Mr. Clement other than to serve his fellowman:

He served four 1-year terms as chairman of the legislative committee of the Alabama Tuberculosis Association. He undertook this work because of knowledge that hundreds of Alabama people were dying each year for lack of hospitalization and proper medical attention after being admitted to hospital and sanitoria.

Mr. Clements realized that the answer to this problem began with educating our people. He set out to organize Christmas Seal Associations in every Alabama county.

When this work was started, Alabama was authorizing $1.50 per day for tuberculosis patients in our hospitals, but was appropriating only 75 cents a day.

Evidence of success in selling an urgent need is indicated by the fact that in recent years the Alabama State appropriation for maintenance of TB hospital patients has been raised from 75 cents per patient day to $6.25 per patient day.

In addition to many days of travel all over the State in organizing Christmas Seal Associations, Mr. Clement has spent many other days in Montgomery promoting health programs with the legislature.

Mr. Clement became aware that the Mental Health Association was raising each year only about $15,000 and that more than half of this was used in expenses of the campaign. As State fund drive chairman for fiscal year 1954–55, he succeeded in raising $100,000 for the Association. The fund, under the leadership of others, has increased gradually since that time, and it is anticipated that future drives will produce even larger gains for the Association. At the present time he is honorary vice president of the Alabama Mental Health Association.

During the one year in which Mr. Clement was State fund drive chairman, he visited 47 counties in the State and talked to more than 100 different groups in every section of Alabama. All of this was done at his own expense.

Mr. Clement has worked closely with university officials and the State advisory board to the Medical College of Alabama. He is now serving on a steering committee whose duty it is to work out programs, legislative and otherwise.

He is capable, he is thorough, he is dedicated, he may know more key folks in every county in Alabama than any other man. He won't call on anyone for a task in which he won't do 10 times as much. The Gorgas award couldn't have gone to a nicer fellow, a man who we think of as Alabama's No. 1 citizen.

Prayer of Dr. Frederick Brown Harris at Dedication Ceremony of the Taft Memorial Tower

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. KEARNS. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I wish to include the following prayer of Dr. Frederick Brown Harris, the Chaplain of the U.S. Senate, at the dedication ceremony of the Taft Memorial Tower, on Tuesday, April 14, 1959. It was an inspiration to all of us who loved Robert Taft:

God of our fathers and of their succeeding race, in this National City abounding with monumental symbols of heroic yesterdays, we come to offer thanks for the life and service of one whose name shines in the annals of the Republic among those renowned for their power, leaders of the people who gave counsel by their understanding; who were richly furnished with ability and who were the glory of their times—men who have left a name behind them that their praises may be reported. Their bodies are buried in peace but their names liveth forever more.

O Thou Master of all good workmen, give us we pray in this high hour a sense of history, and of destiny, as we dedicate to its ministry of memory this towering white shaft, so close to the glistening dome of the Capitol, in this city which belongs to every American, that it may henceforth speak to the multitudes of a statesman lofty in character, diligent in the Nation's business, tenacious in his convictions, scornfully heedless of expediency. As from its pinnacle from generation to generation, like bells at evening pealing, dulcet tones chime out the cadences of a patriotism pure and undefiled, may it ever speak of the deep concern for the Republic's welfare of the one who will be here held in sacramental remembrance.

May the sculptured likeness of a valiant servant of the Nation—Robert A. Taft—standing here, within sight of the Senatorial Chamber which he so passionately loved, symbolize to the millions who gaze with understanding upon his form, the qualities and principles which, in any public servant, make for greatness.

We beseech Thee that the America he loved and served may be more and more a Nation which Thou canst bless, and canst make a channel of blessing, for this distraught world, as on this hallowed ground we this day raise an altar dedicated to fidelity, sincerity, integrity, and liberty.

We ask it in the dear Redeemer's name. Amen.

Cleveland Again Host to International Youth Program

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mrs. BOLTON. Mr. Speaker, once again the city of Cleveland is proud to be sponsor and host to an exchange group of foreign youth leaders and social workers. Under this year's program 71 young people from 18 countries in Europe, the Middle East, and Latin America will be brought to the United States for 4 months of study, work, and participation in American family life.

First initiated in 1956 the program is conducted under the auspices of the Cleveland International Program for Youth Leaders and Social Workers, Inc., a voluntary citizens' group dedicated to the promotion of international understanding. As in previous years, the people of Cleveland have generously contributed to the cost of the program and volunteered their free hospitality. During their 6 weeks in Cleveland the visitors will attend classes at Western Reserve University, where lectures will be especially designed to provide an insight into the dynamics of American group work.

Believing that the operation of this unique program will be of wide interest, I include a statement from the State Department press release of April 13, 1959, in the RECORD with my remarks:

SEVENTY FOREIGN YOUTH LEADERS AND SOCIAL WORKERS TO BE GUESTS OF CITY OF CLEVELAND UNDER JOINTLY SPONSORED EXCHANGE PROGRAM

For the fourth consecutive year, the citizens of Cleveland, Ohio, are sponsoring a unique international exchange program that will bring a group of foreign youth leaders and social workers to the United States for 4 months of study, work and participation in American family life.

This year's group of 70 participants from 17 countries in Europe and the Middle East is scheduled to arrive in New York City on April 22 to begin their visit under the auspices of the Cleveland International Program for Youth Leaders and Social Workers, Inc., a voluntary citizens' enterprise devoted to the promotion of mutual understanding between the people of the United States and the peoples of other countries.

Through its International Educational Exchange Program, the Department of State is cooperating in the Cleveland program by providing for the international travel for most of the participants as well as tuition for a special 6-week course at Western Reserve University.

The citizens of Cleveland have made financial contributions to support their program and have volunteered free hospitality, room and board for the participants during their stay in Cleveland. The Governments of Germany and Belgium are paying for the round-trip transportation of seven of the participants.

After a 2-day stay in New York City, the visitors will travel to Cleveland to spend 6 weeks attending classes at the School of Applied Social Sciences at Western Reserve University. The lectures will be designed to give the visitors an introduction into the dynamics of American group work with special emphasis on the diversity of cultural factors.

While attending school in Cleveland, each visitor will live in three different private homes. The host families will represent a cross-section of the different social, racial and religious groups of the United States.

After their 6 weeks of study, the youth leaders and social workers will disperse to different cities in the Middle West to work as camp counselors or group workers in social agencies, community centers and children's camps. These assignments are designed to provide the visitors with close personal and professional contacts with American college students, youth leaders, and social workers, and to give them working experiences in group leadership with American children and adults.

At the end of August, the group will be reunited in Washington, D.C., at the invitation of the State Department for 2 days of discussions of their experiences and visits to Federal agencies prior to their return home.

The Cleveland International Program was initiated in 1956 with 25 youth leaders from West Germany. In 1957 the program was enlarged to include 52 youth leaders from 8 European countries, and last year, there were 61 participants from 9 European and 3 Middle Eastern countries. This year, one visitor from Brazil will bring Latin America into the program for the first time.

The American Embassies and the United States Educational Commissions and Foundations in the participating countries cooperated with the Cleveland International Program in the selection and orientation of the grantees.

A Monument to Senator Taft

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of April 14, 1959:

A MONUMENT TO SENATOR TAFT

A most unusual event is taking place in Washington today.

A bell tower on the grounds of the Capitol is being dedicated to the memory of the late Senator Robert A. Taft. This is unusual because Senator Taft has been dead less than 6 years. Ordinarily statesmen are not honored with memorials of the type of the Taft tower for many years after passing from the scene.

The location of the memorial also is unusual. There have been only three memorials, besides the Taft tower, on the Capitol lawns and none of them pay honor to a Senator or Representative.

One is the Naval or Tripoli monument; another was a statue of George Washington which is now in the Smithsonian Institution, and the third is a seated statue of Chief Justice John Marshall. Further indicating the unusualness of the Taft tribute is the fact that the Marshall statue weighs 2 tons. The largest of the 27 bells in the 115-foot Taft tower weighs 6½ tons.

It is no wonder, therefore, that some Members of Congress have had reservations about the Taft memorial. Senator GREEN of Rhode Island brought out the fact in 1955, when the memorial was authorized, that the Capitol Grounds could be saturated with monuments if every State were permitted to memorialize its favored sons as has been done in Statuary Hall inside the Capitol.

Despite these reservations, however, no vote was cast against the Taft memorial. The Ohio Senator also recently has been honored by being included among the five outstanding Senators whose portraits were hung in a Senate hall of fame last March 12.

We must recognize that here was an unusual, an outstanding man whose colleagues did not hesitate to set aside precedent to pay him honor. We should have appreciated him more when he still was with us.

Maine Will Be Host to First International Medical Conference on Mental Retardation

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. COFFIN. Mr. Speaker, I would like to call the attention of the House to a conference of worldwide importance to be held at Portland, Maine, from July 27 through July 31, 1959. The First International Medical Conference on Mental Retardation will take place during those 5 days and I take deep pride in the fact that leaders in the field of medicine and welfare in the State of Maine have initiated, organized and sponsored this significant meeting which is the first of its kind. I believe it is worthy of the widest possible attention.

Although I have no expert knowledge in this field, I am informed that within the last few years various important conclusions have been reached through research and informal observations of retarded children. The primary objective of the conference is to focus attention on problems that can be attacked scientifically. The participants will be eminent physicians from various parts of the United States, Canada, and Europe. The sponsoring committee, recognizing that the challenge surmounts international differences, is attempting also through proper channels to extend invitations to physicians beyond the Iron Curtain.

Those who are interested in this forthcoming conference may request information from the conference secretary, division of maternal and child health, Statehouse, Augusta, Maine. It is being organized by the Maine chapter of the American Academy of Pediatrics, Pineland Hospital and Training Center, Pownal, Maine; the division of maternal and child health, State department of health and welfare, and the Maine Medical Association.

Peter W. Bowman, M.D., Pownal, Maine is serving as general chairman of the conference. Edmund N. Ervin, M.D., Waterville, is chairman of the liaison committee. He is assisted by C. E. Benda, M.D., Arlington, Mass.; George Stevenson, M.D., New York, N.Y.; J. Rees, M.D., London, England; P. Plum, M.D., Copenhagen, Denmark; G. Frontali, M.D., Rome, Italy; Richard Maseland, M.D., Bethesda, Md. Ella Langer, M.D., Augusta, Maine, is chairman of arrangements and finance.

The program committee, of which Hans V. Mautner, M.D., Pownal, Maine is chairman, comprises Malcolm J. Farrell, M.D., Boston, Mass.; Howard V. Bair, M.D., Parsons, Kans., and Ella Langer, M.D., Augusta, Maine.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. LEVERING. Mr. Speaker, under leave granted to me, I am inserting in the RECORD an article from the April 11, 1959, issue of Business Week, relating to the St. Lawrence Seaway and the impact its opening will have upon inland cities and towns.

My own 17th District of Ohio, whose citizens never dreamed years ago that the time might come when freighters and passenger steamships from far-off countries might dock virtually at their front door, are extremely interested in the St. Lawrence Seaway and how it will affect them economically and culturally. I believe that this recent article in Business Week is a very thorough account of what the impact of the seaway's opening likely will be on the late region.

The article is as follows:

WHO GAINS, WHO LOSES AS SEAWAY OPENS?

On April 20—unless the ice acts up—the first large ocean-going cargo ships will steam up the St. Lawrence River headed for the ports of the Middle West. The St. Lawrence Seaway, built after long years of wrangling and the spending of vast sums, will have opened up an alternate route linking the markets of the world to the American heartland. The Great Lakes will have become the fourth U.S. seacoast.

It's a stupendous project that's reaching its climax. The 27-foot navigation from Montreal to Lake Erie has cost $471 million, of which Canada spent $340 million. Channels have been widened and deepened, new canals cut, the number of time-consuming locks boosting ships up the 551-foot rise has been reduced to 14 from 25.

In 3 more years, 27-foot navigation will have extended to the head of the lakes.

Army Engineers have been working since 1957 on the $141 million job of deepening the uplake channels.

Smoke clears

Now that the seaway has become a fact, some of the smoke is clearing away from the long battle for and against it. Passionate supporters are beginning to tone down their estimates of the boons it will confer. The railroads, which fought it every step of the way, are preparing to live with it and threatening dire competitive rate cuts. Those other heated foes, the Atlantic and gulf ports, are returning more to the old sport of competing with each other, rather than with the lakes.

Many factors contributed to the crumbling resistance to the seaway, with two of them standing out sharply:

The discovery of iron ore in Quebec and Labrador.

The building by New York and Ontario of a $650-million power project. This provided facilities that would otherwise have had to be built by seaway agencies, at a cost of higher tolls.

Guesses on how heavy the seaway traffic will be are still on the variable side. The old 14-foot St. Lawrence canals carried 13 million tons in smallish ships last year. With the seaway now able to accommodate general cargo carriers with 5 times greater capacity and with bulk cargo carriers that can carry 10 times as much, the sky was the limit on some early estimates. Originally, the St. Lawrence Seaway Development Corporation—the U.S. agency for seaway affairs—predicted that 1959 traffic would be 36.5 million tons. More recently, the agency has toned this down to 25 million tons, but many critics still say it is too high. The same critics are even more skeptical of the agency's 1968 projection of 50 million tons for the seaway and 60 million tons for the older, Canadian-owned Welland Canal linking Lakes Erie and Ontario. They claim that Welland would have to double its facilities to handle that much.

Bulk cargo

Whatever the seaway total, it will probably show 85–90 percent of bulk cargo, according to SLSD figures. United States and Canadian grain will provide the biggest share. Hitherto, grain has been shipped down lake to ports at the eastern end for transfer to ocean-going ships or to railroads linked to Atlantic ports. Now, big bulk carriers from Duluth-Superior will be able to go the whole way—though they may be discouraged by the possibility of traveling empty one way.

Iron ore will run a good second to grain, making up perhaps a third of the total. Since the Quebec-Labrador development, carriers have been bringing ore up the St. Lawrence to the steel mills. The rest of the bulk cargo will be a miscellany of coal, coke, petroleum products, nonferrous ores, and pulp.

If you accept the 25-million-ton estimate, that leaves 3 million tons for general cargo. For it, all the ports will be scrambling; it's more valuable than bulk, provides more jobs.

I. WINNERS, BIG AND LITTLE

The U.S. lake ports that will be fighting for the new cargo are no strangers to handling big tonnages. For years they have shipped huge loads to one another—iron ore downbound, coal and limestone both up and down—engaged in general trade with Canadian ports.

It's the overseas trade that will be new—million of tons of it, compared with today's annual total of around 800,000 tons for United States and Canadian ports combined.

The lake ports won't share equally in the new bonanza. Ship operators won't find it worthwhile to stop at every port, what with the $1,500-a-day cost of operating an 8,000-ton vessel. Some ports just haven't gotten ready to handle the new trade, some shippers will be slow to shake off old routine patterns.

Big five

It's generally agreed, though, that five U.S. cities—Chicago, Milwaukee, Detroit, Toledo, and Cleveland—will pick up more foreign trade than their rivals. These five, with Green Bay, already account for 80 percent of the overseas trade to lake ports. The ship lines have already scheduled them as ports of call. Here's a rundown on the prospects of the five and what they have done to get ready:

Chicago seems certain to get the bulk of seaway traffic, thanks to its industry and the vast hinterland it serves with ample rail and truck connections. The port should be heavy on general cargo, both imports and exports, with plenty of bulk cargo in grain and oils.

To welcome the business the regional port district has invested $26 million from revenue bonds at Lake Calumet Harbor, southeast of the city. Two 6.5 million-bushel grain elevators were built, along with four transit sheds and docks. The city itself is investing $4 million in refurbishing the old navy pier north of the Loop.

Milwaukee, mainly a general cargo port with many of the locational advantages of Chicago, has been getting ready for the seaway for years. Just since 1955, it has spent $11 million on a general-cargo pier, a passenger terminal and pier, 20 acres of land fill for later development, and a new highway approach. It plans to buy five more cargo cranes in 5 years.

Detroit has been stymied in setting up public facilities by voter rejection of bond issues, but private handlers say they have excess capacity for general cargo. Chrysler expects a 3–4 percent saving in the seaway; so it plans to use it more for exporting cars and trucks, along with machines and machine tools for its assembly plants abroad.

Toledo, mainly a coal port in the past, is counting on some general cargo to supplement the predominant bulk. The Toledo-Lucas County Port Authority plans a 5-million-bushel elevator for Buffalo's Continental Grain Co., while the Andersons of Toledo this week announced a 10-million-bushel elevator. Cargill, Inc., of Minneapolis has bought land for a second elevator. Industrial Molasses Corp. has broken ground for a $500,000 storage tank project. For general cargo, the port authority plans a new terminal, has already awarded a contract for a transit shed. Toledo Marine Terminals, Inc., is expanding the only existing general cargo terminal.

Toledo hopes—and other ports fear—that it will get a big share of military and aid shipments, thanks to its selection by the Army as headquarters for the Great Lakes Terminal Detachment.

Cleveland will have a city-built passenger and cargo terminal and enlarged private facilities, but some people feel it will not be enough.

As for other ports on the U.S. side of the lakes, their prospects are diverse. Buffalo is considered too near the Atlantic—by both train and barge—to profit much. But the city has dropped its early antiseaway stand, and its Niagara Frontier Port Authority is using a State loan to take over waterfront buildings and dredge the harbor. Duluth-Superior, at the far end, is considered too remote for what would have to be predominantly one-way traffic, since the area has little to import. Still, Duluth has built a $10 million terminal, and private investors have picked up 135 acres for possible development.

On the Canadian side, Toronto should profit substantially from the seaway, especially since inbound goods will no longer have to be transshipped at Montreal. But the city has less to export and has scant prospects as a bulk port, though it will be getting sugar for a new Canada & Dominion refinery.

Montreal, the last port on the ocean side of the seaway and the end of 35-foot navigation, stands to both gain and lose. It expects larger loads of bulk to make up some of the expected lost transshipment business. And the biggest ships will still have to stop at Montreal to lighten cargo on the way in and to stop off on the way out to deeper water. The National Harbors Board has recognized the importance of Montreal's stake by spending $66 million, half of it for grain facilities. But the city itself had dragged its feet, doing nothing to improve street access to the port.

II. SOMEBODY HAS TO LOSE

Whatever gains are made by the seaway ports will have to be at the expense of other coastal ports, with the cities on the Atlantic probably hit harder than those on the Gulf of Mexico.

The North Atlantic ports are used to losing business. For years their business has been drained off to South Atlantic and gulf ports simply by the shift of the Nation's economy. But loss to the seaway will hurt more because it's closer to home. Philadelphia, Baltimore, and Hampton Roads are certain to lose in bulk, while New York will be the big loser in general cargo.

In New York, the port authority concedes that ultimately it will lose upwards of 1 million tons—partly such exports as autos and farm implements, partly such imports as autos, bauxite, rubber, sugar, coffee, steel, glass, and liquors. Philadelphia is little worried about losing general cargo, for 73 percent of its volume originates at or is destined for points within 50 miles of the port.

Baltimore feels quite chipper, expecting to hold its huge volume of iron ore imports, mostly from Venezuela, and even talks of "cornering" the market for imported cars.

These ports have substantial improvement programs underway, but they are aimed at one another, rather than at the seaway menace.

III. THE FINAL ARBITER

In the final analysis, it's the shipper who will decide what the seaway will do to U.S. ports. What route will the Belgian glassmaker pick to send his products to Illinois? What route will the Minnesota wheat exporter choose to get his grain to Germany?

Compartive cost

For the shipper, of course, cost will be the deciding factor. He must make complex comparisons of steamship rates from lake, Atlantic, or gulf ports, matching them up with overland rates and with combinations of all methods. He also must figure on seaway tolls, which will be levied to carry the $28 million annual burden of operation and service.

With few exceptions, all-water rates from the lakes will be higher than from the Atlantic even when actual distances to foreign ports may be shorter.

There are "open" rates on some high-volume items such as grain, but most commodities are covered by conferences of shipping lines, which are supposed to charge uniform rates. The picture is expected to hold true, regardless of how many lines stay in the seaway business. Some 20 foreign lines are expected this summer. Last year, with few lines and bitter competition, there was some talk of chiseling on the conference rates, but he industry expects this to disappear—if it ever existed—when the shippers' "varsity" takes the field this summer.

Rail rates

A more important factor in the cost picture is the overland haul. Rail rates still have not jelled. Arthur E. Baylis, a New York Central vice-president, has cited four ways that the rails can approach rate cutting:

Low rates during the seaway's navigation

season—on bulk commodities—but higher rates in winter.

Year-round rates made in contract with shippers who will agree to give railroads their business.

Spot adjustments covering a particular commodity such as autos, from a particular spot such as Detroit.

Short-haul adjustments to lake ports. Once the railroads have lost the long haul to the Atlantic, they want to keep the short haul to lake ports away from trucks.

So far the roads have talked specifically of only one cut—20 percent on grain during the navigation season. They are considering others on petroleum, coal, iron ore, and general cargo. By July 1, they may have made cuts in unison or individually.

Baylis figures there is no sense in competing with every spot nuisance, but he is determined to make effective cuts. At a time such as now, when the ship charter market is soft, he would force the ships to leave the lakes empty. When the market is tighter, and ships are less inclined to meet railroad competition, he supposes they'll be less eager to ply the lakes.

Other factors

The undecided shipper must weigh other factors as well as the all-important costs:

Time. Although the seaway's new locks may cut the old lake turn-around time by 3 days, the seaway trip will be 6 days or more longer than a combination overland-ocean haul.

Sailings. A shipper wishing to scatter his goods among a wide assortment of ports may find that the seaway sailings are not inclusive enough.

Service. Factors of waterfront skills and of racketeering and pilferage must be weighed, along with such factors as credit facilities and marine insurance.

Facilities. Does the lake port have the equipment to handle a particular type of cargo?

Winter. Unless some utopian defrosting system is developed the shipper will always have to abandon the lake ports during the winter, which means a radical shifting of business patterns. (Cargill is trying to beat the freeze by building a huge elevator below Montreal.)

Foreign flag

The shipper who does decide on the seaway is likely to find himself using foreign bottoms, simply because a smaller percentage of U.S. ships can use the 27-foot navigation. So far, seven U.S. lines have asked the Maritime Board for the subsidy contracts that would let them engage in the trade. The only one yet to receive an O.K. is the Grace Line, for sailings to Caribbean ports.

Although its application is still pending, American Export Lines has a ship coming up the St. Lawrence from the Mediterranean. Actually, without a subsidy, this ship can come and go as it pleases. Once the Maritime Board grants a subsidy, the line must carry out scheduled sailings, whether or not it has any cargo.

J. C. Penney's Interest in Agriculture

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. LEVERING. Mr. Speaker, as most of us realize, James Cash Penney, who is more familiarly known to millions of shoppers as "J. C. Penney," is a great merchant, with stores in every part of the United States. His chain has become one of the 25 companies with the greatest volume of sales in the United States today.

But Mr. Penney has been a man with many interests. Noted as a religious person, he has addressed many laymen's groups in all parts of the Nation.

Not so well known as the fact that he has had an abiding interest in agriculture, and it seems to me, in reading a little booklet entitled "My Interest in Agriculture," which Mr. Penney wrote, that there are several statements which my colleagues and constituents also would like to see.

I wish to underscore what Mr. Penney says about prosperity for the farmer meaning prosperity for all of us; as well as his remarks pointing up the importance of preserving our soil and the improvement of the various breeds of livestock.

Under unanimous consent, I insert in the RECORD quotations, which were copied from J. C. Penney's little booklet on agriculture.

The quotations are as follows:

Agriculture and the rearing of livestock as a means of livelihood are coexistent with the human race. Adam, having been thrust from the Garden of Eden under the stern decree to earn his keep "by the sweat of his face," engaged in both. What he learned about these pursuits he taught his son, Abel, who became a keeper of sheep.

Back in the days when the world was young, and for a long time afterward, a man's position in life was determined by the size of his flocks and herds. This was because cattle, sheep, camels, and horses represented wealth and were the universally accepted medium of exchange.

Also, the people of those early ages were, in the main, pastoral in their mode of life and dependent upon cattle and other animals for daily sustenance. Always the life of man has been so closely associated with domestic creatures of various kinds that one may well say he cannot live without them.

My own interest in agriculture and livestock dates from my earliest years upon the Missouri farm where I was born. I cannot remember when it first began. At a tender age I shared the ordinary chores and the care of animals. My father, James Cash Penney, was an old-school, or Primitive Baptist minister, who preached without pay and earned his livelihood upon a farm of 400 acres 2 miles east of Hamilton, Mo. My father, being a Kentuckian, loved fine horses and cattle. My love for the same kind of animals is therefore a natural heritage.

* * * * *

Although I wholeheartedly devoted myself for many years to the task of building a business which became nationwide in its scope, my interest in agriculture, livestock, and the farmer's way of life never abated. One reason was that my business, with stores located in small towns, was, and is today, dependent in great measure upon rural people. I had not been in business long before I discovered that prosperity for the farmer meant prosperity for us. The farmer's problems were, in the last analysis, our problems also. Some 1,600 stores, located in every State of the Union, provided a unique vantage point from which to view agriculture in all its phases.

* * * * *

I believe that too much emphasis cannot be put on the necessity for saving our soil. We have done quite a job of terracing on all of my farms, including 320 acres on the Hereford division at Breckenridge. Terracing this land enables us to raise more of our own feed and roughage, which could not be done on such rolling land without a good water-management program. We are in an era of good land usages and productive pastures, and all who would succeed must realize it. We must be interested in our communities and in the Nation in the development of good citizenship, and good citizenship cannot possibly be developed on poor and sterile land.

Ten miles north of Gallatin, Mo., on gravel road K, is my Pre-Eminent Guernsey farm operated by Harold Appley, under the supervision of William A. Rhea, former county agent for Ralls County, Mo. Mr. Rhea has charge of the construction work in building terraces on the several J. C. Penney Missouri farms.

* * * * *

The three commercial farms are run on a partnership basis, with the managers receiving no salary. They pay for all the help and are equal owners in the livestock, machinery, and products of the farms.

When speaking of my farms I always try to make it clear that farming is not a hobby with me, even in the remotest sense. It is a business, and I am in earnest about it. The ideal my partners, managers and I bear in mind is that each farm must not only stand upon its own feet financially—it must also make money for us. Where my purebred Guernsey, Aberdeen-Angus, and the Hereford interests are concerned, I constantly feel the challenge of creating better livestock. Of course I wish to make money out of my investments and work. What sane man does not? But money for its own sake was never my primary object. I always aimed at making what I did a benefit to others and today I rejoice over the fact that to some degree I have attained that aim. If through my efforts my fellowmen have better animals with which to work, I am content.

I should say that the challenge which inspired me to undertake the breeding of pure-bred cattle was the creative one of producing better livestock. And, it is creative in the highest sense. I wanted to plan, to work, and to accomplish results which would be both permanent and beneficial. As Ignace Jan Paderewski, the great pianist, said, "Creative work, take it where you will, is the only thing in life that gives supreme satisfaction." This, I think, is the challenge to which every breeder of any kind of pure-bred creature responds.

In this he is akin to the sculptor, who, being thrilled by an ideal of perfection in his mind, seeks to materialize it in stone. Likewise, the breeder of pure-bred animals envisions a perfect animal and blends his efforts toward producing it. Although he knows full well that at this stage of the process he will not fully succeed, his solace and encouragement lie in the fact that he can make some tangible contribution toward that end.

* * * * *

Still another encouraging factor is the inspiring thought that whatever progress the breeder makes is a benefit to mankind. This lifts him above the sordid level of selfish greed and endows him with the qualities of a philanthropist. It is a matter of vast encouragement for a man to know that when he has produced a better cow, horse, sheep or any other creature, he has made as substantial a contribution to human welfare as though he had endowed a hospital or built a library.

It has been my observation that men engaged in this work, especially if they have stuck to it over a long period of time, are incurable optimists.

* * * * *

In addition to being optimists, men working in this field are possessed of dogged, indomitable patience.

* * * * *

Best of all, men who labor in this field are imbued with a desire to share their success with others. In this business there are no copyrights, exclusive patents or trade secrets. The great end toward which all bend their efforts is not simply the improvement of their own herds but the grading up of that breed throughout the Nation and the world.

* * * * *

I say with firm conviction, born of many years of experience and observation, that the only sane basis for good human relations is the Christian religion. My faith in God, taught me by Christian parents, convinces me that justice, fair dealing and right are His will for men, that prayer is a means of power and guidance, and that the twin laws, love for God and love for one's neighbor, will always lead men in the right way. Humble obedience to these assures in the abundant life Christ promised and fills the heart with deep, abiding spiritual satisfaction.

Too Many Out of Work

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Life magazine of April 13, 1959, which points up the vital need for passage of the Flood-Douglas area development bill which is now before the Congress:

TOO MANY OUT OF WORK

The paradox shown on the preceding pages—unemployment in the midst of plenty—is darkening the otherwise sunny slopes of a broad and growing recovery.

As Secretary of Labor Mitchell points out, unemployment may be expected to diminish soon and steadily. With industrial production close to its 1956 alltime peak, employers have just about reached the limit of stretching the workweek of employed workers, and will soon have to start hiring others in order to keep pace with the recovery. Mitchell may be overoptimistic in predicting a drop to as low as 3 million (or about 4 percent, the 1955 level when the auto industry turned out a record 9 million units), but if 4 percent could be achieved that would be tolerable in a country this huge—provided the unemployment is chiefly "frictional" (men moving, or changing jobs) rather than chronic, like the permanent disemployment of the mountain miners.

Walter Reuther, as might be expected, overstates the case for big-spending remedies, just as Industrialist Sligh may be underrating the case for Government concern. Promoting full employment is the official policy of the U.S. Government, and has been since the Full Employment Act of 1946 created a standing committee of Congress to help effectuate it. It is the Government's proper role to do whatever it can to keep the economy expanding and fully employed.

There is certainly room for debate on what measures are needed. Since the recovery is already strong, no pump-priming public works seem called for, save the new schools, hospitals, and urban renewal which are justified on grounds of social neglect. Since the chronic unemployment is so pinpointed, equally pinpointed measures are called for to attack it. The shifting of Government contracts and extension of unemployment assistance will help. But to a large extent many of the unemployed have lost their jobs forever, don't have the skills now needed to change, and often can't afford to move. Moreover, it would be a social waste to make ghost towns out of existing communities with their established schools, plants, roads, and other facilities. The real answer is to get new industries into these communities, and to retrain their unemployed workers in skills that are needed.

Such a program is the objective of two bills (by Democrat DOUGLAS and Republican DIRKSEN) now before Congress, which differ principally as to the amounts to be spent and to the extent of Federal participation with State and local area development programs.

Although this type of program should have had top priority when the recession was at its worst, it was aborted last year because the Democratic Congress authorized more than President Eisenhower was willing to allocate to it, so he vetoed the measure. Since action is needed, and pronto, the President ought to exercise his own leadership on the No. 1 domestic problem confronting him, and make good his 1952 promise in New England that any threat of major unemployment would be met by the full power of government, instantly marshaled, instantly concentrated and localized. Let him get the opposing sides together to work out some compromise that he would be willing to sign if passed. Much can be accomplished by such programs, as trailblazing efforts by groups like the New England Council have already proved, and could be greatly increased by the availability of assistance loans for new development.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.
First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.
Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.
Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.
Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.
Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.
Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.
Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.
Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address by Hon. Estes Kefauver, of Tennessee, Before the National Independent Dairy Association

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered last Tuesday before the National Independent Dairy Association, at its meeting in Washington, D.C.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR ESTES KEFAUVER, DEMOCRAT, OF TENNESSEE, BEFORE NATIONAL INDEPENDENT DAIRY ASSOCIATION, WASHINGTON, D.C., APRIL 14, 1959

In asking me to come here today and talk to you, Mr. Daniel, your executive seceretary and general counsel, told me that the meeting would mark the second birthday of the National Independent Dairy Association. I eagerly accepted because, as I told him, I had always liked lusty and growing youngsters and that I had also always liked birthday parties.

Mr. Daniel is an old friend of mine. He is a native Tennessean, an excellent lawyer, and well qualified by education and experience to serve you. He is a real fighter, and small businessmen need real fighters.

I want to congratulate all of you on the magnificent progress you have made in such a short time. It speaks volumes for the management of independent dairies, for their objectives, and for their leaders. In the true spirit of the occasion, I most sincerely wish for you many happy returns of the day.

That this day will return most happily many, many times seems almost certain. Small businessmen in your industry, as in others, need to speak with the full power of all of their voices. You are that voice. That voice must speak not only with power but also with knowledge, with dignity, and with the public interest as a guide. Your voice has spoken in such a way. Continue as you have begun, and the years will not only add to your age but also to the respect in which you are held.

The unfair methods of competition and monopolistic practices prevalent in your industry which you so diligently strive to remove, are fairly representative of those which continue to undermine the structure of the competitive system generally.

Such methods and practices, both as they prevail in your industry and in industry generally are, therefore, the concern of the Senate Judiciary Subcommittee on Antitrust and Monopoly, of which I have the honor of being chairman.

This subcommittee operates under a Senate resolution which authorizes it "to make a complete, comprehensive, and continuing study and investigation of the antitrust and antimonopoly laws of the United States and their administration, interpretation, operation, enforcement, and effect, and to determine and from time to time redetermine the nature and extent of any legislation which may be necessary or desirable for (1) clarification of existing law to eliminate conflicts and uncertainties where necessary; (2) improvement of the administration and enforcemetn of existing laws; (3) supplementation of existing law to provide any additional substantive, procedural, or organizational legislation which may be needed for the attainment of the fundamental objects of the laws and the efficient administration and enforcement thereof."

It was under this charter that in March 1958 the Antitrust Subcommittee made an investigation of milk marketing by the Adams Dairies in Missouri, Illinois, and Kentucky. The results of that investigation are contained in a report of the subcommittee dated November 15, 1958, entitled "Case Study of Incipient Monopoly in Milk distribution."

The Adams companies sell milk to Safeway Stores, Inc., the Great Atlantic & Pacific Tea Co., and Kroger Co., and in concert with these three great chain organizations, Adams worked in various communities to capture the market.

The five main characteristics which made the Adams scheme of operation profitable to the two dairy companies and which were ardently supported by the chains were listed as follows:

1. An enforced differential between home delivery and chainstore sale.
2. A guaranteed markup to the chains.
3. The use of promotions to reduce the price.
4. The preference given to Adams by chains in display space and promotions.
5. Promotional allowances given to the chains.

The effect of these practices was to relegate the local dairies to supplying the ever-diminishing home delivery market and serving as secondary suppliers to those retailers which still suffered them.

The subcommittee noted that the effects of the Adams program "may have been to restrain trade or tend to monopoly and should be considered in the light of the Sherman Act, the Federal Trade Commission Act, and the Clayton Act, as amended by the Robinson-Patman Act."

Regarding the Sherman Act, the subcommittee stated that the evidence leaves the impression that Adams and the chains, acting in concert, used their position to impose on local markets by such area price discriminations a price structure injurious to competition and affording a continuing market advantage over others. In this connection, the applicability of section 5 of the Federal Trade Commission Act should also be considered as well as the Clayton Act because of price discriminations and payments for promotional service involved in the Adams operations.

Stating that the record was being sent to both the Federal Trade Commission and the Department of Justice, the report concluded that a failure by these agencies to find any violation of existing laws would suggest that such laws are ineffective. Neither agency has yet reported that it has found any violation.

I am satisfied that many small-business men, including some of you, are convinced that existing antitrust laws are inadequate both from the point of view of their coverage or interpretation and of their enforcement. The Antitrust Subcommittee is trying to do something about both of these aspects of the problem. As an example, I should like to tell you briefly what it is trying to do about price discriminations, one of the monopolistic practices present in the Adams case and which I know you are trying to destroy.

I refer, of course, to S. 11 which I introduced in the 84th and 85th Congresses and which I have again introduced in this, the 86th Congress, on behalf of myself and several colleagues.

This bill would amend the Robinson-Patman Act, enacted in 1936 to amend section 2 of the Clayton Antitrust Act which became law in 1914. In each of these three Congresses Representative WRIGHT PATMAN, of Texas, coauthor of the Robinson-Patman Act and a life-long friend of small business, introduced a similar bill (H.R. 11) in the House of Representatives. By a special provision in the bill the existing law applicable to freight absorption is not altered or affected.

Briefly, the bill would change the statute as interpreted by the Supreme Court by providing that meeting in good faith the equally low price of a competitor is not a defense to price discriminations which are affirmatively proved by the Government to have the probable effect in any line of commerce of substantially lessening competition or tending to create a monopoly. Such meeting of a competitor's price would, however, continue to be an absolute defense to any price discrimination which was proved to have only the probable effect of injuring competition among competitors. The basic thought underlying the bill is that price discriminations which substantially lessen competition or tend to create a monopoly are as detrimental to the public interest when accomplished in good faith as they are when done in bad faith.

The problem of price discrimination is not new, but on the contrary is quite old. In economic theory and in observed business conduct, price discrimination is evidence of the existence and exercise of some degree of monopoly power. Prohibition of price discrimination in rate making was one of the necessary basic provisions of the first railroad regulatory statutes in 1887. Price discrimination was also a favorite weapon of the early trusts at which the Sherman Antitrust Act of 1890 was directed. The Sherman Act only became operative, however, when monopoly had been attained, and for that reason in 1914 Congress passed the Clayton Act, in section 2 of which it was sought to outlaw price discrimination before its anticompetitive effects were so serious as to bring the practice within the Sherman Act.

Section 2 of the Clayton Act prohibited discriminations in price in interstate sales of like goods where the probable effect in any line of commerce was (1) substantially to lessen competition, or (2) to tend to create a monopoly. The same section, however, provided that certain price discriminations were not prohibited and among them were these made in good faith to meet competition and those on account of differences in quantity.

Efforts of the Federal Trade Commission to enforce section 2 of the Clayton Act turned out to be almost wholly ineffectual. One difficulty was that price discriminations

which hurt only one or a few competing purchasers were held not to threaten substantial lessening of competition in a line of commerce. A second was that any difference in quantity was held to justify any difference in price even though there was no corresponding difference in the seller's costs. Finally, and of paramount importance, meeting of competition in good faith was so broadly interpreted as to be readily demonstrable, with the result that the exemption it provided was virtually as broad as the prohibition.

With an antiprice discrimination statute full of loopholes, the practice of price discrimination thrived as did its beneficiaries. Investigations by both the Federal Trade Commission and congressional committees showed, for example, that large chains not only paid prices materially lower than their small retail competitors but sometimes even lower than wholesalers. As a result the giant retailers prospered at the expense of their smaller rivals to the extent that during a relatively few years their sales increased from less than 2 percent to more than 25 percent of total retail sales.

The public interest demanded that something be done, and in response Congress in 1936 enacted the Robinson-Patman amendment to eliminate the defects in the antiprice discrimination section of the Clayton Act. The amended statute retained, of course, the prohibition of price discriminations where the effect in any line of commerce may be substantially to lessen competition or tend to create a monopoly, but it went further and also condemned price discriminations where the effect may be to injure competition with the seller, or the favored buyer, or the customers of either of them. Thus the law was amended so that individual competitors as component elements of a line of commerce were protected as well as the line of commerce itself. The old provision which wholly exempted discriminations on account of quantity was changed so as to permit differentials on account of quantity to the extent of the actual savings in cost to the seller. In this manner efficiency properly became the basis of quantity differentials.

Most importantly relevant to this discussion, section 2 of the Clayton Act as amended by the Robinson-Patman Act no longer exempted discriminations in price made in good faith to meet competition. The amendment introduced a new subsection 2(b) which provided that the seller could show that his lower price was made in good faith to meet the equally low price of a competitor merely for the purpose of rebutting the preliminary or prima facie case made against the seller by the Commission.

The meaning and effect of this change with respect to meeting competition is made clear by its legislative history. The Robinson-Patman Act was the product of a conference committee of the Senate and the House which reconciled the differences between the Robinson bill as passed by the Senate and the Patman bill as passed by the House. When introduced, neither of these bills even made any reference to meeting competition, but as passed by the Senate the Robinson bill contained the old exemption, and as passed by the House the Patman bill contained a section similar to the one finally adopted. In conference, the old exemption in the Senate bill was rejected, and the House version was approved in the language in which it was finally enacted. Referring to the old exemption incorporated in the Senate bill, the report of the House conferees stated:

"This language is found in existing law, and in the opinion of the conferees is one of the obstacles to enforcement of the present Clayton Act. The Senate receded and the language is stricken. A provision relating to the question of meeting competition, intended to operate only as a rule of evidence in a proceeding before the Federal Trade Commission, is included in subsection (b)."

Referring to the new language, a report submitted by the chairman of the House conferees stated:

"It is to be noted, however, that this does not set up meeting of competition as an absolute bar to a charge of discrimination under the bill. It merely permits it to be shown in evidence. This provision is entirely procedural. It does not determine substantive rights, liabilities, and duties. They are fixed in the other provisions of the bill. * * * If this proviso were construed to permit the showing of a competing offer as an absolute bar to liability for discrimination, then it would nullify the act entirely at the very inception of its enforcement."

In 1945 the Supreme Court in the well-known Staley case had its first opportunity to interpret the meeting-competition proviso of the Robinson-Patman Act. In that case the Court affirmed a decision of the Federal Trade Commission which rejected the defense of meeting competition, and in doing so seemed quite clearly to indicate that the amendment had secured the results which Congress intended. This is the language the Court used:

"It will be noted that the defense that the pricing discriminations were made in order to meet competition, is under the statute, a matter of rebutting 'the Commission's prima facie case.' Prior to the Robinson-Patman amendments, section 2 of the Clayton Act provided that nothing contained in it 'shall prevent' discriminations in price 'made in good faith to meet competition.' The change in language of this exception was for the purpose of making the defense a matter of evidence in each case, raising a question of fact as to whether the competition justified the discrimination."

Despite this encouraging development in 1945, the law with respect to meeting competition as a defense to price discrimination is now back where it was prior to the enactment of the Robinson-Patman Act. For in 1951 the Supreme Court held in the Standard of Indiana case that the Federal Trade Commission was wrong in rejecting Standard's defense of meeting competition even where it had been shown that the discriminations had a substantially adverse competitive effect among distributors. Once again, then, meeting competition became an absolute defense to discriminations in price regardless of the magnitude of their anticompetitive effects among retailers and wholesalers. Moreover, the doctrine of the Standard of Indiana case seems to have been extended in subsequent decisions by lower Federal courts to the extent that it now appears likely that even the limitations indicated by the Supreme Court are of little if any substance.

As a result of these decisions, the Robinson-Patman Act has been seriously weakened. It now affords no real protection to competition at the wholesaler or retailer levels. The public interest in protecting competition at all levels has been subordinated to the individual manufacturer's or seller's private interest. The act has become largely a declaration of the right of sellers to discriminate in price to accommodate large buyers even though the injury to small buyers is so serious that competition in their line of commerce may be substantially lessened.

The public interest again demands that something be done to repair the damage. S. 11 is a moderate effort to do just that. The bill restricts but does not eliminate the availability of the defense of meeting in good faith the equally low price of a competitor. Where it is shown that the discriminations may merely injure competition between individual competitors, the defense continues to be absolute. Where, however, it is shown that the discriminations are so serious that their effect in any line of commerce may be substantially to lessen competition or tend to create a monopoly, the defense is eliminated.

Hence, if S. 11 becomes law a seller who finds it desirable to lower his price to one customer in order to meet in good faith the equally low price of a competitor may not have to lower his price to all competing customers or even to any of them in order to avoid an unlawful price discrimination. It is enough that he lower his price only to the extent necessary to prevent substantial lessening of competition or tendency to create a monopoly and not to the extent necessary to prevent injury to competition. The significance of this difference is that, under the bill, such a seller would not be obliged to lower his price to a customer like the one who sought damages from his supplier in a recent case. In that case the court held that the small discrimination complained of could not have substantially lessened competition or tended to create a monopoly, as was alleged, but at most could only have injured competition between the complaining customers and his competitors, as was not alleged.

S. 11 should be especially welcomed by manafacturers who see a threat to themselves in the establishment and growth of large and powerful buyers. Without the bill, suppliers, under the guise of meeting competition, will continue to vie with each other to satisfy the voracious and insatiable demands of large buyers for preferential prices. This implies not only the sacrifice of the many small buyers but the suppliers dependence upon the few mass buyers.

Much has been said both by and on behalf of management about the difficulties of making decisions to comply with S. 11. I am confident that any such difficulties have been magnified by posing hypothetical situations which include imaginary horrors. True, S. 11 does not define with mathematical precision the white area in which meeting competition is a defense and the black area in which it is not, for precision of that kind is not possible in a moderate approach. It can exist only where there is either complete prohibition or unrestrained permission.

Being moderate in its approach, S. 11 naturally contains a small gray area where the white meets the black. To businessmen who are heedless, if there are any, this gray area will present no problem—they will view it as white and assume unnecessary risks. To businessmen who are timid, if there are any, this gray area will likewise present no problem—they will see it as black and accept needless restrictions. To businessmen who are prudent, as if there are any who are not, the shaded area will also present no problem—in the light of the facts in each case they will see a line running through it which will be drawn by their willingness to resolve any doubt by what they know to be the public interest. Just as it is easy to distinguish between being stumbled over and being kicked, so it should not be difficult to differentiate a price discrimination which may economically maim the many small merchants from one which will clearly fall short of having that result.

In the 84th Congress the measure passed the House by a vote of 393 to 3 but was not considered by the Senate because it was caught in the rush of the closing days of the session when unanimous consent was required to bring it up.

In the 85th Congress the bill was reported to the Senate in modified form, but the Senate adjourned without having taken any action.

In the present Congress hearings have again been held on the bill, and the record is being prepared for the printer. We were fortunate in having your counsel, Mr. Dan-

iel, testify on your behalf at these hearings in favor of the bill. The support of this organization was indeed welcome, and your position was forcibly presented by Mr. Daniel.

Above all else, we must not get discouraged in this battle for the preservation of our free competitive system, for it surely will be a never-ending one. With your help and support, and the assistance of all of the other good people in all industries and in all parts of the country, much can be accomplished.

Thank you for being so kind as to let me be your guest.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 17, 1959

Mr. MURRAY. Mr. President, on Monday, April 13, my distinguished colleague, the Senator from West Virginia [Mr. RANDOLPH], appeared before the Subcommittee on Education of the Committee on Labor and Public Welfare, of which I have the privilege of serving as chairman. Although I was unable to be present at that session, I have had the opportunity to read his statement; and I believe it is one of the best and most eloquent arguments for Federal aid to education which has been presented.

I ask unanimous consent that the full text of the Senator's statement be printed in the RECORD, so that all my colleagues will have the opportunity to read it. I congratulate my colleague from West Virginia on the cogency and eloquence of his presentation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, BEFORE SUBCOMMITTEE ON EDUCATION, UNITED STATES SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, ON S. 2, A BILL TO PROVIDE FINANCIAL ASSISTANCE FOR THE SUPPORT OF PUBLIC SCHOOLS BY APPROPRIATING FUNDS TO THE STATES TO BE USED FOR CONSTRUCTING SCHOOL FACILITIES AND FOR TEACHERS' SALARIES

Mr. RANDOLPH. Mr. Chairman, I appreciate this opportunity to come before you and your subcommittee to testify on the school support bill. You are to be commended, sir, for your persistent and devoted efforts in introducing this measure, and I am pleased to have been one of its early cosponsors.

Before discussing the evidence which substantiates the critical need for this legislation, I would like, Mr. Chairman, to address my comment to a point which has been raised by its opponents.

I refer to the often-voiced fear of Federal control, which follows inevitably—it is supposed—upon Federal aid to education. We are all aware of the importance of the American custom of local responsibility and control of public education. But let us at least be clear in our understanding of the origins and the reasons for this tradition. Let us not be confused by the invocations of the rhetoric of the Founding Fathers, or raising the spectre of an omnivorous and power-hungry Federal police state.

Without going into historical detail we can acknowledge that the practice of local support for public education has been one of the fundamental marks of the American system from its outset. But let us also acknowledge that this practice was not based upon any hallowed principle of democratic idealism, but rather on the simple and understandable resistance of the citizens of one community to paying taxes for the education of the children of another.

The struggle for universal public education in America was not won overnight. The merchant and propertied classes resisted strongly the economic, political, and social ferment we associate with the Jacksonian period, and the chief tribute they won from the champions of public education was the principle of local support of the schools. The principle was thus motivated by self-interest as well as idealism.

But this is not to condemn it. Within the context of an agrarian society, a loose Federal structure, and the sectional jealousies and rivalries of the individual States, such a point of view is easily understandable. But, Mr. Chairman, it is important, when we listen today to the critics of Federal aid to public schools invoke some supposedly time-honored American tradition, to know that that tradition has nothing to do with the fear of Federal control.

On the contrary, in the field of higher education the practice of Federal support is almost as old as our tax-supported universities themselves. Three years from now the great land-grant colleges and universities of America will celebrate the centennial of the Morrill Act, which set aside Federal lands for the support of agricultural and engineering colleges. In 1862 Congress passed this epoch-making act, which for the first time established the policy of Federal aid, not only to the newer States but to the older ones as well—offering each State the proceeds from the sale of 30,000 acres of Federal land for each Member of its congressional delegation. The sole measure of Federal control in these colleges has been the supervision of the Reserve Officers' training corps established therein—hardly an example of a burgeoning police power of the national state.

In recent decades the Federal Government has entered the field of education in a variety of ways—the public schools built by the WPA in the 1930's, the tuition-payment program of the GI bill, and the grants-in-aid and the underwriting of research programs at many of our colleges and universities—in none of these has the Federal Government encroached upon the control of local authorities.

The threat of Federal control, Mr. Chairman, is a myth, and the fear of it is spun from fantasy and a misreading of our history.

The question, therefore, is not whether or not we shall have Federal control—but whether we shall have Federal aid—and if so, how much, what direction it will take, and how best to utilize it in a coherent manner to lift our public school system to the level that a thriving democracy demands and one that our young people deserve.

Senate bill 2 offers a significant contribution in alleviating two of the most critical problems in the educational scene—the inadequacy of teachers' salaries and the shortage of classroom space.

Let me refer first to the long-range problem of the shortage of classroom space. The figure of 142,000—reperesenting our present classroom shortage—has been repeated so frequently in recent discussions that we are likely to overlook the more enduring features of our problem.

For example, from 1780 to 1955 our population grew from 40 million to 165 million. During this same period, while our general population increased 4 times, our public school population increased approximately 80 times.

Under our present rate of population development the bulge of the future will press even more heavily on our already burdened facilities. The elementary school enrollment of 22 million of last year will rise to about 34 million by 1960–61. By 1969 our high schools will be flooded with 50 to 70 percent more students than they can now handle. By 1975 our colleges and universities will face a doubling and in some cases a tripling of enrollment. Now these are only the bare bones of statistics that comprise one aspect of the problem. There are others.

For one, there is the problem borne of the mobility of our society. We are a people on the go—34 million of us change our address every year, and there are long-term currents of movement to the North and West. Thus, the effects of education offered in a given school may be registered in a State far removed from where the education was acquired.

The quality of education in the United States is therefore a national issue, rather than a merely local one. And yet it is the only national problem that we have not attempted to solve on a national basis.

Let us turn now to a consideration of the shortage and recruitment of teachers. It is authoritatively estimated that in order to maintain the present student-teacher ratio, between one-third and one-half of all 4-year college graduates would have to enter school teaching in the next decade. Since only one out of five college graduates customarily enters school teaching, one can appreciate the magnitude of the problem involved.

Not only is the number of teachers inadequate, but the preparation of many of the present teachers is in need of improvement. According to the National Education Association, 33 precent of our elementary schoolteachers do not hold A.B. degrees, and more than 21 percent of all public schoolteachers have less than 4 years of college. A similar condition prevails, according to the NEA, at the college and university level, with the holders of doctor's degrees among full-time teachers having decreased by 25 percent since 1953–54.

The reasons are apparent: business industry, and government are out-bidding the teaching profession for the talents of many of its best qualified and most able men and women. Nor is it small wonder, when one observes that the average State salary of classroom teachers ranges from a high of $6,400 to a low of $3,070 per year. While in my own State of West Virginia the beginning salary for a teacher with a master's degree is $3,060.

Now admittedly, we cannot reward, and I do not believe the American teacher expects to be rewarded, with the chauffeur and summer homes that we are told some of his and her Russian counterparts have at present. But we can and we must reward our teachers with salaries more consistent with their professional status and their dedication of purpose. The necessity for many of our teachers to have part-time supplementary jobs is, to put it in its mildest terms, inconsistent with the responsibility that a democratic society has placed upon them. Our teachers' salaries can and must be raised immediately and substantially if we are to attract able young men and women and retain those we have.

According to the Rockefeller Report, we spent, in 1955, a total of just under $14 billion for public and private education at all levels—slightly more than we spent last year on alcohol and cosmetics. Against a gross national product of $391 billion for that year our expenditures for formal education amounted to 3.6 percent. The same source estimates that by 1967 the increased

demands that I referred to earlier will require an expenditure of $30 billion, or 5 percent of an estimated gross national product of $600 billion.

Such a sharp rise in expenditures calls for a determined departure from traditional methods of school financing. Historically, Americans have preferred to finance their schools at the local and State levels. But there has already been a shift of responsibility from the local and to the State level; in 1930 under 17 percent of the cost was borne by the State, in 1954 this had more than doubled to over 37 percent.

However, local and State tax systems in many instances are not adequate to the tasks, partly because they depend so heavily on the real property tax—where everywhere lags behind rising incomes and the increased cost of education, and partly because local and State governments are reluctant to raise taxes and thereby place their communities in an unfavorable competitive position with other States.

The problem is especially acute in such a State as West Virginia and some of the Southern States where great inequalities exist in the income of different school districts. And the same condition exists on a higher level in terms of the difference between the States in per capita income and the relative proportion of the tax dollar spent on education.

West Virginia, for example, with a per capita income in 1957 of only $1,480, was spending $218 a year for every child in school. From the total State revenues of $285,996,653 the school received over 36 percent, leaving less than two thirds of every tax dollar for all the other State governmental services combined. Thus, if we were to try to match the per capita dollar expenditures of such States as New York or California we would more than exhaust our total revenue on schools alone.

According to figures compiled by the National Education Association, the average per pupil expenditure among the individual States ranges from a high of $535 a year to a low of $164, with a national average of $340 per pupil.

This gross disparity in expenditure between our richest and our poorest States can be rectified only with Federal aid. For, to illustrate again by reference to my own State of West Virginia—even with proposed new tax levies and a statewide reappraisal of property, our school revenue per pupil would still be more than $60 below the national average and approximately $175 below that of New York State. Mr. Chairman, I reiterate, these inequities can be redressed only with Federal assistance. Let us not be deluded by the ideas of a century ago—ideas which at that time had some validity. For we are no longer a loose federation of quasi-independent States. We are a Nation of highly mobile people, a Nation in which the welfare of one section is inextricably involved with that of all. And as a Nation we have only one future—a future that will in substantial measure be determined by the degree of our devotion to the cause of strengthening our system of public education.

None of us is so naive as to believe that money alone will solve a deepseated and pervasive cultural problem such as this. But the extent to which we will apply our financial resources is in part a measure of our purpose in other respects as well.

It is not encouraging, therefore, to note that we spend almost as much on alcohol and cosmetics and more than twice as much on advertising as we do on education.

Such a disparity would indicate that as a society we are in need of fundamental and soul-searching reevaluation of our aims and values. And it is one of the sadder ironies of our time that this reexamination of education in a democracy has gained national support largely because of the educational achievements of a police state. As Dr. Robert Hutchins recently stated:

"History will smile sardonically at the spectacle of this great country getting interested, slightly and temporarily, in education only because of the technical achievements of Russia, and then being able to act as a nation by assimilating education to the cold war and calling an education bill a defense act.

"We might as well make up our minds to it. If our hopes of democracy are to be realized, every citizen of this country is going to have to be educated to the limit of his capacity. And I don't mean trained, amused, exercised, accommodated, or adjusted. I mean that his intellectual power must be developed."

In closing, Mr. Chairman, I would suggest—in keeping with the tenor of Dr. Hutchins' remarks—that we approach our duty here, not in the spirit of a cold war with Russia, but in the spirit of fulfilling our own destiny as a democracy.

This means that the fundamental issue in education as in government today is no less than the assessment of the basic values of a democratic society. The making of the image of what we want to be, the determination of the kind of greatness we hope to achieve—these are the choices that confront us now.

The kind of greatness that we produce in the years ahead will be nurtured by the values that we as a society cherish and transmit, in large measure, through our formal education system. And if we fail now, Mr. Chairman, to supply the means for the best system possible our children and grandchildren will have little cause to be grateful to us.

At the foundation of our values is the principle which more than any other distinguishes American culture from the older cultures of Europe and from the new totalitarian societies; that is, the extent to which we are guided by our faith in the dignity and integrity of the individual. This is the faith which states that man should live in the light of reason, be free to exercise his own moral choice, and develop to the full the latent possibilities within him.

As this faith is translated into the practical problems of our school system it presents a double-barreled challenge—the challenge of maintaining equality of opportunity for all while, at the same time, stressing the achievement of excellence for those capable of it. The challenge is to maintain both quantity and quality in education—to expand the one and improve the other.

Many people of late—laymen as well as professional educators—have posed the problem in terms of a choice between quantity and quality, a choice between equality and excellence.

I say that we have no choice. We must, if we would survive, have both.

We must have a generally informed citizenry capable of making intelligent decisions on matters of the public good. And we must have the highly trained specialists as well as the men and women of broad gage learning that our modern, complex society demands. This is the chief problem in the field of education before us.

The early and unanimous endorsement of S. 2 by this subcommittee, Mr. Chairman, will help significantly in providing the means to solve this problem. We must have an educational program to match our times.

Federal Encroachment on State Water Rights

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. CURTIS. Mr. President, an excellent address on "Federal Encroachment on State Water Rights" was delivered by Mr. Clarence A. Davis, an attorney of Washington, D.C., and Nebraska, former Solicitor and Under Secretary of the Department of the Interior, before the section of mineral and natural resources law of the American Bar Association. This address relates to a problem now pending before the Congress, and notwithstanding the fact that the Public Printer informs me the cost of publication would be $384.75, I ask unanimous consent that the address by Mr. Davis be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL ENCROACHMENT ON STATE WATER RIGHTS

(Address of Mr. Clarence A. Davis, attorney, Washington, D.C., former Solicitor and Under Secretary of the Interior, before the section of mineral and natural resources law of the American Bar Association, August 25, 1958)

This is the most controversial subject in the field of natural resource law. The feeling about it is so intense that some people will say that even the title of this address is stated prejudicially, for it should be "State Interference With Federal Water Rights."

This controversy is only one segment of the great conflict in basic political philosophy regarding the respective rights and responsibilities of the States and the Federal Government, which is dividing both of our political parties, and by many is regarded as evidence of the continuing drift toward the centralization of power in Washington and the erosion of State and individual rights—except some kinds—for the benefit of asserted national needs or the "general welfare"—whatever that undefinable term may mean.

We used to say that a man's house was his castle, that he owned the land from the center of the earth to the roof of the skies, but we are far past that. We have already determined that he does not own to the roof of the skies, and that the air above him is not his but is an artery of commerce. Is the same thing to happen to the water under his land?

We are now debating whether we may drain the moat around his castle, without compensation, in the name of Federal constitutional powers, of which the landowner has never heard.

Our view on the question of whether the title is an honest statement of the problem probably depends a great deal on our individual background, the sections of the country from which we come, and the problems which confront us in our individual lives. The view of the rancher or the farmer in the West with reference to the right of the Fed-

eral Government to interfere with his water right is apt to be quite different from the view of the village along the Atlantic seaboard when the town wells are dry, the municipality which wants "free" money to improve its water system, or the viewpoint of an industrial community compelled to live alongside a badly polluted stream.

All this illustrates, if nothing more, the fact that this is a very large country; that each area, if not each community, has separate problems regarding water; and that its views of the rights of the Federal Government and of the States respectively are colored by these local conditions.

When I promised the chairman to make this address, I made it clear that I would not undertake a detailed analysis of the cases, but would confine myself to the consequences, as I see them, that flow from the various legal theories under consideration. As a matter of fact, there have been several most excellent bibliographies prepared on this subject, which include the citations which are the background of this address.[1]

Furthermore, I am a little embarrassed, because my friend Clifford Fix just 2 years ago, before this same section, discussed substantially this same problem, in a most comprehensive and authoritative manner, and raised most of the unanswered questions which I shall attempt to discuss.
